The experience of the Central Asian republics and Kazakhstan also shows that deserts can be zones of stable agricultural production. Cotton, wheat, vegetables, grapes, fruit and other crops are now being cultivated on millions of hectares of previously infertile sand. The development of such areas is not always a straighforward and inexpensive business. But one very important quality has to be borne in mind--like no other, this land is supplied with heat. And the imperceptible vegetation of the desert has always been a source for the keep of millions of head of sheep and camels. Economists have calculated that the animal husbandry product in a desert zone costs half as much as in an average belt of the country. And the possibilities of its development in this region are still far from exhausted. The scientific task of the enrichment of the natural fodder resources of desert pasture was posed only comparatively recently. Progressive methods have already been found and verified and are being introduced in production extensively. They do not require big capital investments and make it possible to increase the yield of the fodder land several times over.

A great deal of experience has also been accumulated in the development of desert territory. Scientists have passed on to the production workers a number of tested recommendations. But they are as yet being used insufficiently. Yet the benefits from their introduction are obvious: invested capital is recouped quite rapidly.

The main thing necessary for the development of the desert is water. It is said in Central Asia: "It is not the earth which gives birth but water." With the help of irrigation it is in this region that it is possible to reduce agriculture's dependence on the elements to a minimum, obtaining big harvests of the most varied crops.

However, the desert is extremely poor in fresh water. According to scientists' calculations, in the next 10-15 years the entire flow of the main rivers of Central Asia--the Amudar'ya and Syrdar'ya--will be channeled fully into irrigationand other hydroeconomic needs of the Aral' basin. But even given this condition it is impossible to solve the age-old problem of the shortage of water over vast territories which are promising for industry and agriculture. And it is with good reason that the possibilities of diverting part of the flow of Siberian rivers to Central Asia and South Kazakhstan are being studied.

But the scientists are confronted with a difficult question: what will the consequences be and how will this influence the ecological and socioeconomic conditions of the regions? And while the debate and search for the best version of the project are under way it is necessary to look for opportunities to improve the water balance of the desert itself.

There are two methods here: using fresh ground waters and collecting atmospheric precipitation. The first is already being employed to a certain extent. For example, the industrial complex of West Turkmenistan consumes water found by hydrogeologists in the Karakumy. The second method is being employed on a limited scale and, frankly speaking, has yet to emerge from the crude stage. Since time immemorial cattle breeders have collected rainwater by the simplest means from clayey areas, giving it a chance to accumulate in underground wells. Thus a certain store of moisture is formed: 1 hectare can provide enough for a year's watering of 1,000 sheep. The scientists have perfected this ancient folk method and developed engineering installations. It is possible by applying these to obtain even more cheap fresh water. Unfortunately, the innovations are not being introduced quickly enough.

The brackish drainage water which is run off from the fields annually and in huge quantities should also be an important resource. Not only is it as yet not being used but it is causing damage. It is simply discharged into the desert, destroying certain components of the ecological system. Yet such water could water livestock, for example. Furthermore, it is easier to freshen than sea water and, given this, could be an important source of the desert's water supply.

Energy and resources have to be spent for this, of course. But developing and working the natural resources of the desert are altogether inconceivable without electric power. But there are as yet no power facilities in the Karakumy and Kyzyl-Kumy in practice. But the possibilities for their organization exist--power stations in comparatively densely populated areas could be built on the basis of oil and gas deposits.

Things are a little bit more complex when it comes to the stockbreeders. The pasture land is scattered, and every point of operation needs a little power. It is most profitable to obtain electricity here by forcing the wind and sun to "work". There are already test generators converting solar energy into electric power. Specialists believe that they are still imperfect, it is true: they are of low performance efficiency and are quite costly. But these shortcomings are secondary in small power plants. Thus it is time to begin broad experiments on the practical use of solar installations for the desert's small centers of population.

Wind-driven power generators were a problem that was solved long ago. But it is amazing that people who have spent their whole life working in the desert rarely see these most simple mechanisms anywhere. Yet in many areas of the Central Asian desert a steady wind is guaranteed almost daily. Wind-drivenpower stations of 1-30-kilowatt capacity could provide the power minimum in small centers of population. It is good to use them on pasture land for hoisting water from the wells, irrigating the attached plots and freshening the water. In a word, it is possible to switch to the mass electrification of desert animal husbandry. This would be a big contribution to the development of sheep breeding on desert pasture.

In the complex, multi-aspectual task of development of the desert it is necessary to look far ahead otherwise fascination with the solution of one problem engenders another. For example, the use of a large part of the flow of the

Amudar'ya and Syrdar'ya for irrigation has led to a sharp decline in the water reaching the Aral' Sea. Specialists believe that in time it could disappear altogether. Preventing this will be difficult, given the present acute shortage of fresh water. It is therefore essential to have an accurate forecast of the possible changes in natural conditions in order to adopt precautionary measures in good time.

Man is confronted with the need to transform natural conditions. But he is obliged here to learn to foresee the possible consequences of his actions. Scientists, engineers and other specialists are currently performing painstaking work on the redistribution and rational use of the water resources of Central Asia and Kazakhstan. I would like to be sure that the task will be tackled competently and that we will not go beyond the limits of permissible changes in the natural environment.

In logical connection with the future of the Aral' Sea a further ecological problem is troubling us currently. Two years ago a solid dam spanned the strait linking the Caspian with the Kara-Bogaz Gulf. The path for 6-7 cubic kilometers of water annually reaching Kara-Bogaz from the Caspian and evaporating from its surface was cut off. Without speeding the fall in the level of the Caspian, this measure made it possible to take from the rivers running into it approximately the same quantity of water for irrigation. But, naturally, the gulf itself has begun to gradually dry up. Its bottom is becoming increasingly exposed, and the wind is spreading the salt which is appearing on the earth's surface. The gulf's unique chemical wealth is disappearing. We now have to ponder how to combat this extremely unpleasant phenomenon.

The above example shows for the umpteenth time how carefully we have to study the possible consequences of "surgical intervention" in nature in order that the gain in one place not lead to a loss in another. No transformation is effected for the sake of the transformation itself but to strengthen the economic might of our country as a whole. It is necessary here to attach particular significance to the long-term forecasting of natural processes in places of man's active impact on the environment. It must always be remembered that the desert is not an enemy whom man has to defeat but his good partner, to whom he should adopt a kindly attitude.

When one thinks about the desert and about what it could provide for man, anxiety also commingles with the feeling of joy. After all, every department is operating independently here, failing to take many things into account. And this sometimes leads to unnecessary outlays which do not produce tangible results. It is finally time to have a single scientifically substantiated strategy of desert development. It is hardly possible to hope for further appreciable successes without a comprehensive plan.

Not enough canals for irrigation and watering holes are being built, and the sand is being stabilized insufficiently. It is essential to plan the development of farming as a whole, in a harmonious correlation, and then outlays will be considerably less and economic efficiency will increase many times over.

More has been done to develop the desert in our country than anywhere else in the world. But if we compare what has been done with what is possible and with the tremendous results which could be obtained from the desert (it occupies 250 million hectares in our country--more than the country's entire arable land), we will have to recognize what has been done merely as successful exploration. Our deserts are essentially yet further virgin land awaiting their intelligent developers.

GRISHIN ADDRESSES ARCHITECTURAL PLANNING ADMINISTRATION

Moscow MOSKOVSKAYA PRAVDA in Russian 31 Mar 82 p 2

[Article: "The Motherland's Award Obliges One"]

[Text] As was reported yesterday in our newspaper, a solemn meeting was held in the Hall of Columns of the House of Unions. That meeting was devoted to the awarding to the collective of the GlavAPU [Main Architectural Planning Administration of the City of Moscow] of the Order of the Red Banner of Labor. The award was made to that main administration of Mosgorispolkom in recognition of the successes achieved in designing the rayons in which there has been a massive amount of new housing, and in the comprehensive development and remodeling of the capital.

First Secretary of the Moscow City Committee of the CPSU, V. V. Grishin, spoke at the meeting.

In the name of the USSR Central Committee, the Presidium of the USSR Supreme Soviet, and in the name of Comrade Leonid Il'ich Brezhnev he cordially congratulated the collective of GlavAPU on the high governmental award they had received and wished the architects, designers, and planners new creative success in their work of further improving the architectural outlook of the city and creating the most favorable conditions for the fruitful labor and recreation of Muscovites. The awarding to the Main Architectural Planning Administration of the City of Moscow of the Order of the Red Banner of Labor is new testimony of the constant concern shown by the party and government, and by General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev, for the development of the capital, for converting it into an exemplary Communist city.

The entire history of the origin and growth of GlavAPU, V. V. Grishin noted, attests to the fact that it plays an important role in the life of Moscow, its formation, remodeling, and development. At first there existed disorganized construction-planning shops at Mossovet, the ministries, and departments, which, by the 11 February 1932 decree of Mosgorispolkom, were united into a single architectural planning administration, which corresponded completely to the tasks of modernizing and developing the city. That administration worked out the first General Plan for the remodeling of Moscow, which posed the scientifically substantiated task of assuring the harmonious social development of the city in order to provide the best living conditions for its residents.

A whole generation of experts in Soviet architecture linked their creative life with the construction and remodeling of Moscow during the years of the first five-year plans and during the postwar period. The names of the architects who made a large contribution to the job of remodeling the capital are widely known: Comrades Semenov, Shchusev, Kholtovskiy, Fomin, Shchuko, Gel'freykh, Iofan, the Vesin brothers, Alabyan, Vlasov, Burdin, and Chechulin.

During the years since the formation of the architectural planning administration, there has been a considerable increase in the tasks of developing the city and increasing the quality and effectiveness of construction. That has required the creation of a powerful construction conveyor line in Moscow and the organizing of a number of main administrations in construction. In 1961 the architectural planning administration was reorganized into the Main Architectural Planning Administration of the City of Moscow. Currently it is the country's largest association of planning-and-research and scientific-research organizations, and employs more than 13,000 architects, designers, planners, and engineers.

At the present time, V. V. Grishin remarked, the GlavAPU has 14 construction-planning, scientific-research, and production subdivisions, 78 construction-planning shops, including such collectives as the Mosproyekt-1 and the Mosproyekt-2 Administrations; the Moscow Scientific-Research and Construction-Planning Institute for Standard and Experimental Planning; Mosinzhproyekt; and Mosgorgeotrest. A large amount of work to elaborate the construction-planning documentation for the construction of apartment buildings and structures intended for the providing of cultural and everyday services in rayons of mass urban development is being carried out by the Mosproyekt-1 Administration; and and for construction plans for one-of-a-kind public buildings, by Mosproyekt-2 Administration.

The creation of the latest standard construction plans on the basis of modern scientific elaborations is provided by the Moscow Scientific-Research Institute of Standard and Experimental Planning. The largest-scale project of the institue was the creation and introduction of the system of the Single Catalogue of Industrial Construction Articles. In recognition of that work the collective of construction planners and construction workers was awarded the Lenin Prize. Among the creative shops one call mention Shops 11 and 15 of Mosproyekt-1; Shops 3 and 8 of Mosproyekt-2; Shops 2 and 4 of the Moscow Scientific-Research and Construction-Planning Institute for the Planning of Projects Intended for Culture, Recreation, Sport, and Public Health; and Shop 1 of Mospromproyekt. Architects who enjoy a well-deserved reputation are Comrades Loveyko, Andreyev, Posokhin, Rozenfel'd, Lebedev, Etchin, Aldonina, engineers L'vov, Kondrat'yev, Talalay, Zalenskiy, and many others.

V. V. Grishin expressed to all the architectural-planning collectives and to all the architects, designers, construction planners, and engineers his profound gratitude for the large labor contribution to the development of the capital and wished them new creative successes.

At the present time the collective at GlavAPU is working persistently to implement the long-term program for the formation of the outward appearance of the city in conformity with the General Plan for the Development of Moscow which was approved in 1971 by the CPSU Central Committee and the USSR Council of Ministers.

the basis of new progressive standard plans from articles contained in the Single Catalogue. For purposes of improving the living conditions of Muscovites in the new housing areas, it is necessary to change over to the planning, financing, and organizing of operations that guarantee the simultaneous activation of apartment buildings and the necessary projects intended for cultural and everyday services.

For the comprehensive completion of the urban development it is necessary to assure the further development and introduction of the Single Catalogue in Housing, Cultural-Everyday, Industrial, and Engineering Construction. The extension of the Single Catalogue system to all types of construction and its further improvement will make it possible to increase the industrial nature and quality of construction.

During the current five-year plan GlavAPU is confronted by large tasks involving the systematizing of the central part of the city. First of all it will be necessary to achieve a substantial improvement in the reliability of its engineering support. It is necessary to implement in a purposeful manner the construction plans for the creation of reserved zones, central squares, and main streets. The development of the central part of the city should be carried out with the unconditional observance of the peculiarities of Moscow, so that every new building fits organically into the overall appearance of the capital. It is necessary to determine the first-priority operations for developing the center of the city and to concentrate the efforts in executing them.

The efficient use of the land during construction is a task which was advanced by the 26th CPSU Congress and which at the present time is taking on special importance for the further development of Moscow. Architects, designers, and economists of the Main Architectural Planning Zdministration must direct their efforts toward the resolution of the task posed by the party and the government: the reduction of the cost of construction, the raising of the level of its industrial nature, and the reduction of the material- and energy-intensity of construction. Another problem that requires special attention is that of providing transportation services for the new areas of urban housing development.

Moscow is rich in its revolutionary and cultural past. The capital's architects are confronted by a task, jointly with the artists and sculptors, and the means of monumental propaganda, of perpetuating our glorious traditions. It is necessary to accelerate thecreation of memorials and monuments to the oustanding figures of the revolution, history, and culture. It is necessary first of all to develop the recommendations for the erecting of a memorial to Vladimir Il'ich Lenin, the Freedom Obelisk, and monuments in honor of the 50th Anniversary of October and Victory in the Great Patriotic War.

At the present time the Main Architectural Planning Administration has been given the responsibility of establishing the technical-economic principles for the development of the capital for the new period being computed. This work must contain a definition of the paths for the further formation of the city, its industry, and its scientific-research and administrative institutions, as well as a determination of the volumes of housing, cultural-everyday and other types of construction that are necessary for the complete satisfying of the varied needs of Muscovites.

During the first decade of the implementation of the new General Plan, a large volume of work was carried out to develop Moscow's national-economic complex. Considerable successes were achieved in industry, science, and the engineering and transportation support of the city.

A large amount of work was done to modernize and technically re-equip the enterprises of Moscow industry. The volume of activation of new industrial-production areas during the Ninth and Tenth Five-Year Plans was 10.3 million square meters. Apartment buildings have been constructed with a total area of 48.5 million square meters and the housing conditions of many Muscovites have been improved. A large volume of capital work has been carried out, making it possible to achieve a considerable rise in the level of cultural-everyday and municipal services provided for the residents of the capital.

The period of implementation of the current General Plan has been marked by the creation of architectural ensembles, of new large-scale housing areas. A large number of sports structures were erected in connection with the holding of the 1980 Olympic Games in Moscow. A large amount of work has been done to remodel the main streets and squares and approximately 350 architectural monuments have been restored.

Summing up the results and commenting on the successes in the planning and urban development of Moscow, V. V. Grishin noted, it is necessary to mention the tasks which will have to be resolved by the architects and construction planners, and the GlavAPU collectives during the Eleventh Five-Year Plan to fulfill the decisions of the 26th CPSU Congress and the November 1981 Plenum of the CPSU Central Committee. L. I. Brezhnev said at the 26th CPSU Congress, "The new five-year plan will be a serious examination for construction workers. A typical feature of it is the complete concentration of efforts on the most rapid completion and activation of those enterprises which are capable of guaranteeing the largest increase in production and of eliminating bottlenecks." A large amount of attention to questions of capital construction was paid at the November 1981 Plenum of the CPSU Central Committee. L. I. Brezhnev called it the decisive sector of the five-year plan.

A large program of capital construction during the Eleventh Five-Year Plan has been planned for Moscow. That program provides for the appropriate volume of industrial-production, housing, and cultural-everyday construction, and the maximum concentration of capital investments, labor resources, and material-technical means at projects slated for activation in the next reporting period. Hence it follows that large tasks during the Eleventh Five-Year Plan confront the collectives of the Main Architectural Planning Administration of the City of Moscow.

It is necessary to think out more carefully the questions of placement of enterprises and institutions of industry, science, and housing and cultural-everyday buildings, in order to find the most economical resolutions and to reinforce them with a real industrial base, thus providing the opportunity to avoid unjustified reworkings of the construction plans.

A very important social task, it was noted at the party congress, is the improvement of housing conditions. During the current five-year plan it will be necessary to fulfill a considerable volume of housing and cultural-everyday construction on

Announcing the Ukaze of the Presidium of the USSR Supreme Soviet concerning the awarding to GlavAPU of the Order of the Red Banner of Labor and presenting the order to representatives of the collective, V. V. Grishin once again expressed his heartfelt congratulations to all the architects, construction planners, and designers at GlavAPU on their having won the high award and expressed his assurance that the collective at the main administration would achieve new creative successes and would continue to make a worthy contribution to the development of Soviet architecture, would multiply the successes of traditional Moscow architecture, and actively contribute to the execution of an historic task -- the conversion of Moscow into a model Communist city.

SHCHERBITSKIY INTERVIEWED ON PARTY LINKS WITH MASSES

Moscow PRAVDA in Russian 14 Feb 82 p 2

[Interview with V. V. Shcherbitskiy, first secretary of the CC of the Communist Party of the Ukraine, by N. Odinets and A. Chernyak, PRAVDA special correspondents; date and place not specified]

[Text] The continuous, organic link that our Leninist party has with the broadest masses of the workers is one of the first and indispensable conditions for its successful work. Speaking from the rostrum of the 26th CPSU Congress, Comrade L. I. Brezhnev stated once again, in the most convincing manner: "In unity with the people lies the party strength! In unity with the party, in the party's leadership, lies the strength of the nation!" How are these principles being implemented? That question was discussed by PRAVDA correspondents with V. V. Shcherbitskiy, a member of the Politburo of the CC CPSU and First Secretary of the Central Committee of the Communist Party of the Ukraine.

[Question] Vladimir Vasil'yevich, where does one see, first of all, the manifestation of the link the party and its organizations have with the masses? What is being undertaken in the republic to reinforce that link?

[Answer] It is necessary to talk about the principle of things: Everything that the CPSU does, it does for people. The motto of our program, as everyone knows, is: "Everything in the Name of Man, For the Good of Man." And the party cannot conceive of its existence without the most solid link with the broad masses of the people. They are the blood vessels which nourish the party with life-giving force and provide it with inexhaustible energy and practical experience. The reinforcement and development of the link the CPSU has with the masses are promoted by the party composition itself, by the constant increase in its ranks by drawing on the best representatives of the nation. For example, today, amid the detachment of almost three million communists in the Ukraine, more than 1,792,000 are workers and kolkhoz workers. On the whole, 75.4 percent of the republic's party organization consists of people who are employed in the material production sphere. In other words, there are communists everywhere where our people live and work. And in practically every labor collective there is a party organization or party group: In the Communist Party of the Ukraine today there are almost 67,500 primary organizations, more than 67,000 shop organizations, and more than 122,000 party groups.

And, of course, the indispensable, or, if you wish--decisive--condition of the vital link between the party and the masses is the purposeful and rich work of every party element and the personal example and lofty political and moral qualities of the communist. It is natural that concern about this is always at the forefront with us.

Upon what is the link between the party and the people built, what is at its basis? Leninist truth. The truth of practical actions and of the evaluation of the results which are obtained. The party speaks honestly about its successes and its shortcomings. It has nothing to hide from the people. The decisions of the 26th Party Congress once again directed us toward truthful appraisals and self-criticism in work, and this is what is taught by Leonid Il'ich Brezhnev's profound speech at the November (1981) Plenum of the CC CPSU.

Obviously, it is important not only to understand the need for the constant analysis of one's work, for an objective evaluation of it. One must always study it. But sometimes one hears a manager discussing the state of affairs in the sector assigned to him, and one is led involuntarily to the conclusion: Yes, self-criticism is truly the most difficult type of amateur performance. It would seem that the comrade is speaking correctly in touching upon all of the miscalculations, but when it comes down to discussing his own fault, bravery is lacking. The notorious "objective" reasons are put into action. Thus, the truth in the evaluations is, as it were, replaced by verisimilitude, and even, I am afraid, by something that sounds practically like justification.

We need not only explanations of the reasons for shortcomings, but also, and primarily, persistent, practical actions, in order to improve the situation and eliminate the shortcomings as quickly as possible. But even better than that is preventing them. At a recent plenum of the Central Committee of the Communist Party of the Ukraine we discussed sharply the unsatisfactory work being done by a number of coal mines and enterprises in ferrous metallurgy. Without a doubt, there are many difficulties there. But there is also no doubt that the party committees and managers at various levels must improve the economic work, must guarantee in all sectors the acceleration of scientific and technological progress and the introduction of advanced experience, and must think about the future prospects.

[Question] How are the demands for strengthening the link with the masses being realized in everyday practice?

[Answer] For example, during the recent reports and election meetings in the party organizations members and candidate members of the CC of the Communist Party of the Ukraine, and of the party obkoms, gorkoms, and raykoms, and responsible party committee workers visited 60,000 meetings. How many meaningful and frank discussions there were with communists, and how many interesting, good suggestions were made! And it is very important that they are being given attentive consideration, and that everything that is concrete and sensible is being realized.

The name of Ivan Sidorovich Tereshchenko, blast furnace worker at the Dneprovsk Metallurgical Plant imeni G. I. Petrovkiy is well known in the Ukraine. A Hero of Socialist Labor and a delegate to the 26th CPSU Congress, he and his comrades are feeling it sharply, as workers do, that for the first time in 15 years last year the glorious Petrovka lost its footing and did not fulfill its plan. I just cannot, he says, make peace with that. We can, of course, Ivan Sidorovich says, refer to the related enterprises upon which we depend: They failed to give us enough raw materials--that is the way it really was. But in today's production we are all related enterprises. And did we ourselves do everything we could to make better use of raw materials and to increase the yield of the smelting units and rolling mills? No, not all. That means that we also let our comrades in labor down, since we failed to supply them with metal. This is our direct fault.

This statement reflects the high consciousness of our workers, and their exacting approach to work and to evaluating the results of their labor.

In the 11th Five-Year Plan the republic is confronted by extremely complicated, colossal tasks. One of the especially important ones is the resolution of the food supplies problem. The key to this problem lies in the intensive development of the agro-industrial complex. The average annual grain production in the republic must reach 51 million tons--that is, it must increase by 8 million tons as compared with the past five-year plan. We can achieve that goal if we can increase the harvest yield by 3.9 quintals--that is, raise it to 30 quintals per hectare. That is a noticeable step.

But the weather does not pamper the farmer: Every 2 or 3 years, and in a number of oblasts every other year, the grain crops are threatened alternately by droughts and by excessive rain. But we also have farms and entire rayons which, even under these conditions, have been getting steady harvests! I remember well the words of the famous kolkhoz leader, Makar Anisimovich Posmitnyy, which he used to love to repeat: "Stones could even fall out of the sky, but we still have to bring in the grain." That is how every labor collective must work, and how every manager must be responsible for the word he has given.

Among the many indicators of economic activity, there is none like the manager's understanding of the degree of his own responsibility. And, if one thinks carefully about this, it is the chief indicator. It is also the chief one in consolidating the link between the party and the masses. Incidentally, the word that has been given by the communist manager must be an authoritative one, since, in the eyes of the people, he represents the party.

Let us apply that thought to the real situation. During the current five-year plan it is planned in the Ukraine to build 80.7 million square meters of housing. When we build it, that will mean that approximately 2.5 million families will have a house-warming party: They will receive new apartments or ones that have been released by people who have moved. But just think about it this way: What if, for even one family, this happy event does not occur on time? Do you not think it will undermine the trust that people have in the plans that have been set down? That is why the Central Committee of the Communist Party of the Ukraine made strict inquiries of the managers of Nikolayevskaya, Kirovogradskaya, and Chernovitskaya Oblasts, where the plans for the activization of housing were not fulfilled during the past five-year plan.

Unfortunately, one still encounters an occasional manager who does not completely sense his own responsibility for the fulfillment of plans, and who does not treasure the word that he has given. People do not want to follow "leaders" like this, and the party organizations bring them to strict accountability.

An initiatory, responsible attitude toward the job, concern for people and for their daily needs--these constitute the touchstone on which one verifies both the goals and the results of our entire work. And in this regard there are no petty details, because "wherever one is talking about millions of people, about the conditions for their life, labor, and everyday situation," L. I. Brezhnev emphasizes, "that is where the most serious policy begins for communists, and where the mainline of their organizing and ideological work runs."

Quite a few enterprises could be named where production and concern for people are really inseparable. These are the Kiev Association imeni S. P. Korolev and the "Khar'kov Tractor Plant imeni S. Ordzhonikidze" Association, the Southern Machine Building Plant, the Zaporozh'ye Titanium and Magnesium Combine, and the Dneprovsk Machine Building Plant.

[Question] But in some places, as the PRAVDA mail testifies, this is forgotten about. . . .

[Answer] Unfortunately, such things will happen. In such cases the party committees are uncompromising. For example, in studying how trade and domestic services for the public are organized in the Poltavshchina, we established that in a number of rayons the level of services has fallen behind the increased needs of the workers. It also became clear that party and government agency workers rarely visited the collectives of trade enterprises and did not give them help in eliminating shortcomings. There were serious work failures, for example, by the obkom secretary A. Myakota. He had to be corrected, helped, and warned. The deputy chairman of the oblispolkom M. Ogorodnik also did poor work with the job that had been given him. The oblast party committee and the oblispolkom drew the necessary conclusions and have strengthened this sector.

[Question] Lenin's demands upon leading cadres and party workers are well known: Live in the thick of the people. Know its feelings. Know everything. Understand the masses. Know how to approach them. To win their absolute trust. . . . Tell us, how are they being embodied in the practice of the Ukraine's party organizations?

[Answer] I would say that these demands are for every leader and for every party worker, if you wish, a party-moral norm. "Live in the thick of the people"--this means to be in the rapids of life, to be in labor collectives as often as possible, to mobilize people for the fulfillment of their tasks. There are many leaders who know both their work and people, and I will not be mistaken if I say--the vast majority. You simply wonder at their fine work. Such people are always valued.

Several years ago Ivan Pavlovich Kurchenko came as director to the lagging mine No. 1 "Voroshilovgradskaya." The inheritance that had come to him was nothing to envy: The enterprise was in a neglected state. What was there to grab onto, where to begin? The first thing that the new director did was to go to the people, turn to them for their advice, and express his own ideas and suggestions. Together they worked out a plan of action. The party and the trade union organization actively supported the new director. From morning to night they worked on organizing a normal production process at the sections. The director took an interest in literally every worker. In a short time he found out the concerns and needs of every family. And the people appreciated that, and followed him. Today the mine has come out at the marker of 3,750 tons of coal a day and is working stably.

The fact that he himself had a long schooling in life and labor is of great help to Kurchenko in understanding people and living with their interests. He himself from the beginning worked in the mines at various jobs. After graduating from the institute he again mastered several labor degrees and grew from a mine foreman to chief engineer.

You are joyful that there are more and more such leaders who have come out of the thick of the people. Today the absolute majority of obkom, gorkom, and raykom workers, ministers, and other leaders are people, as they say, from the lathe and the plow.

Labor primogeniture is a reliable basis for the formation of cadres and for the education of leaders who are the flesh of the flesh of the party and the people. A well-conceived, clear system of work with cadres which is in the spirit of Lenin's demands has been set up, for example, in the Kiev gorkom and in the Donetskaya, Denpropetrovskaya, Zaporozhskaya, L'vovskaya, and Khar'kovskaya obkoms of the party.

We shall attempt to extend everywhere the best experience in personnel work. And we give the appropriate evaluation to those instances where the manager, as the expression goes, "has divorced himself from the masses." Although it happens infrequently, it does indeed happen. Once a new director, I. Spesivpsev, arrived at the Avdeyevskiy Coke and Chemical Plant. Naturally, it was expected that he would roll up his sleeves and begin to resolve the cardinal production tasks and improve peoples' working and everyday living conditions. Actually, however, he became concerned about the everyday living conditions for himself only. Within a short period of time he built a house--which, in essence, is a villa--by misusing his official position. The "link with the people" also was arranged in his own peculiar style: He surrounded himself with yes-men and relatives, illegally assigned apartments to them at the plant's expense. . . .

Spesivpsev was taken off the job and removed from the party. It was a completely logical finale, a just punishment. We apply the strictest measures to workers who have not justified the trust that has been placed in them and who have put their personal interests above state interests. A person who has divorced himself from the masses, who disregards the interests of the workers, cannot be a manager. That is a basic truth that has been confirmed many times by life itself.

[Question] Vladimir Vasil'yevich, and what does contact with the workers give to you personally? What forms of intercourse with them have become established in the Ukraine?

[Answer] Every visit to a labor collective, and every meeting and discussion with people enriches one and charges one with energy. How many genuine natural talents, as they say, academicians of the people's life, there are among our people. . . . Have a talk, for example, with the Zhdanov steel worker Grigory Yakovlevich Gorban', with the worker Anatoliy Akimovich Donchenko, or with the mechanization specialist Aleksandr Vasil'yevich Gitalov. You hear the truth of life itself, a new idea and advice, and you will feel a state concern for our common cause.

I have named people whom I know well. But, you know, every person is wise from his laboring life. And it is necessary to visit more frequently among workers, kolkhoz workers, scientists, and cultural workers. We pose the task in this way for the managers at all levels. We mention this at plenums of the Central Committee, and at meetings of the party and of economic activists. And we strive persistently to achieve a situation in which the manager's personal communication with the masses is the norm of life.

As for the forms of communication, there are many of them. In our opinion, the united political days are a good thing. They are held, as a rule, not in auditoriums or offices where the audience is assigned a passive role, but, rather, in shops, in laboratories, at animal farms, and at field camps.

The benefit derived from the united political days, if they are prepared well, in a manner that is devoid of formalism, is indisputable. They were begun in individual cities and rayons, and then confirmed on an oblast scale. No united political days are held on the scale of the entire republic. In the course of the united political days, many questions arise which pertain to the domestic and foreign policy of our party and state, as well as various aspects of the activities of the local party, soviet, and economic agencies, and critical comments are also expressed. The Central Committee, and the oblast, city, and rayon committees of the Communist Party of the Ukraine study them and take the necessary steps on a time-responsive basis.

Something else that is indisputably of benefit and that gives a good charge of energy is the holding of meetings at party committees with representatives of various spheres of economic and cultural life and with advanced workers in production. Recently the Central Committee of the Communist Party of the Ukraine held business-like meetings and discussions with party and war veterans, managers of a number of labor collectives, secretaries of party organizations in various branches of the national economy, youth advisors, warriors from student construction detachments, propagandists, literary and artistic figures, and journalists.

It has become a system that the party workers and the managers of ministries and departments, when visiting the outlying locations, participate in the work of the plenums of the party committees and the party, trade union, and workers meetings, and speak to the workers, kolkhoz members, and the students. For every manager this daily communication becomes a verification of the effectiveness of his work and provides the opportunity to look into the mirror of people's opinion. But if the manager himself does not visit the plants, animal farms, construction sites, night shifts, dormitories, or dining halls--in a word, "in the thick of life"--if he does not have a personal interest in the state of affairs locally, you cannot expect him to be intelligently informed. We are taking decisive steps to rid ourselves of persons who adhere to this unfit style and who manifest complacency, self-conceit, and arrogance.

[Question] An effective means of reinforcing the link between the party and the masses, as was mentioned at the 26th CPSU Congress, is publicity about the work of the party organizations, the improvement of the manner in which the workers are informed. But people write to PRAVDA that this situation has not always been set up properly. A decision is made, but the communists and the workers do not always know about how it is being fulfilled. It happens that the manager is taken off the job, but people do not know why. And so all kinds of rumors start flying around the collective and there is all kinds of gossip. . .

[Answer] And a mountain is made out of a molehill. That does happen. Or, for example, a Communist manager is punished at the rayon party committee, but the primary party organization is not informed about the decision. We are decisively combatting this practice. Sometimes, unfortunately, it happens that people are better informed about the situation around the world and events throughout the country--everyone listens to the radio and watches television--than about what is happening in their own settlement, rayon or city.

Implementing the goals of the congress, recently the Ukraine's party committees have improved the practice of providing information about their work and about their decisions, including on cadre matters. The mass information and propaganda media have begun to treat the life of party organizations and labor collectives more extensively.

A great deal is being done here, but even more could be done by the selected party aktiv whose membership is more than 830,000 people, that is, every third or fourth communist in the republic party organization. You will agree that if every one of them were to regularly give an account in his party organization and labor collective, about the work of his party committee and its bureau, and about how decisions, criticisms, and suggestions are realized, then there would be much more publicity in party life.

[Question] In our day there is probably not an issue and not an event in the life of the party or people which does not find a reflection in the letters and telegrams which come into party and state agencies.

[Answer] Of course, this is a very important channel for the link between the party and the masses, rich information coming from below, from the thick of the masses which is permeated with the workers' concern for improving our common work.

It is important to keep an account of every business proposal, to take into consideration in one's work every fresh idea. Obviously, it is also necessary to analyze every complaint and to check out every critical message that comes in. One must learn how to look at a letter not only from the viewpoint of the person who wrote it--was he satisfied with the answer? It is also necessary to look at the letter from the point of view of the party agency: What beneficial ideas have been practically extracted or can be extracted? This approach to workers' letters yields its results. In particular, many recommendations and businesslike advice were taken into consideration by us when developing the organizational-political measures of the Central Committee for carrying out the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine.

In examining letters the emphasis is put on the realization of practical suggestions and criticisms, and the discovery and elimination of the causes which give rise to complaints. This is helped by analytical work with the letters. And the chief thing here is a high level of exactingness in such matters, and the punctual examination and correct resolution of problems which arise in the localities.

It cannot be said that everything is good here. Some time ago the CC received a letter from the village of Krupitsa in Berislavskiy Rayon in which there was information about mismanagement on a local sovkhoz. The letter was sent for examination to the Khersonskaya oblispolkom. Soon after its chairman V. Metlyayev informed the CC: The shortcomings were being corrected. However, a subsequent check showed that practically nothing had been done there. Such instances are always given the necessary evaluation.

An attentive, businesslike approach to workers' letters should be established everywhere. The Central Committee has studied how this work is being done in all the republic's ministries and departments, in the party agencies and the state institutions. We are eliminating the shortcomings that have been revealed.

[Question] One of the ways of strengthening the link between the party and the masses is an increase in the role of the soviets, trade unions, Komsomol, and other mass organizations. . . .

[Answer] Yes, the soviets and the mass workers' organizations serve as conductors of the directing, mobilizing, and educational influence of the party on the people, and are an important school in which the consciousness of people is formed. They make it possible for the party to have a better knowledge of how all of the strata of the population are living, and help to more fully satisfy their interests and needs.

Guided by the principles of the CPSU Central Committee and the requirements stated in the USSR Constitution, the Central Committee of the Communist Party of the Ukraine and the republic's party committees are showing constant concern for improving the activities of the mass organizations of the workers and are supporting their initiative, thus contributing to a situation in which they perform their work in a purposeful and effective manner. At the present time the soviets are working more actively and persistently to resolve the questions of economic and social development and are effectively monitoring the comprehensive development of their rayons, the building of housing, schools, hospitals and children's institutions, and the production of consumer goods.

Today, when the tasks of our economic and cultural construction are becoming more complicated and the ideological struggle on the international scene is becoming aggravated, there has been an even greater increase in the importance of the multifaceted activities of the broadest organizations of the workers--the trade unions. Life, the entire practice of building a new society, has completely confirmed the correctness of the Leninist theory concerning the role of the trade unions as a powerful means for developing socialist democracy, and for involving the workers in the administration of the state. The organizing of the competition, the educating of people, concern for the improvement of their working and everyday living conditions, the reinforcement of discipline--all these things are exceptionally important jobs in which the trade unions engage every day.

Under the leadership of the trade union bodies, workers' control has given an extensive development to its activities in the republic. The workers themselves, prestigious people who are respected in the labor collective, keep an eye on the dining rooms and stores, domestic services enterprises, city transport, and municipal services so as to have them improve their work. This greatly increases the authority of the trade union organizations. The issues of the practical activities of the trade unions and of the Komsomol, of an improvement of the work style and methods of their leading agencies, and of a strengthening of their links with the masses are constantly in the field of vision of the CC of the Communist Party of the Ukraine and of the local party committees. These issues, in particular, were the subject of detailed discussions in the CC of the Communist Party of the Ukraine with leading workers from the republic and oblast trade union and Komsomol agencies.

Summing up what has been stated, it should be emphasized that truly thousands of reliable threads link the party with the masses. By their persistent daily work the party committees reinforce these ties. And an example is provided to us by the combative Leninist headquarters of our party--the Central Committee of the CPSU and its Politburo, headed by Comrade L. I. Brezhnev. In the indestructible unity of the party and the nation lies the source of the strength of the CPSU and the guarantee that all the party's plans will be implemented.

'PRAVDA' VIEWS ROLE OF SOVIET PHILOSOPHERS

PM080803 Moscow PRAVDA in Russian 24 Mar 82 p 2

[Article by academician F. Konstantinov, president of the USSR Philosophical Society: "A Philosophy of Peace and Social Optimism"]

[Text] The third congress of the USSR Philosophical Society opens in Moscow today, in the October Hall of the House of the Unions. The society is a voluntary public scientific organization under the USSR Academy of Sciences. Its main aims are the all-round promotion of the development of scientists' creative activity in the sphere of philosophical sciences, the theory of scientific communism and methodological problems of modern science, the strengthening of philosophy's ties with the practice of communist building and the progress of scientific knowledge, the broader involvement of Soviet philosophers in the propagation of a Marxist-Leninist world outlook and the pursuit of contacts with philosophical societies in foreign countries and international scientific organizations in the sphere of philosophy.

The society currently unites 67 departments in all the union republics. They have more than 10,000 individual members and some 500 collective members.

What tasks now face Soviet philosophers belonging to the USSR Philosophical Society? What are the main aspects of their social and scientific activity?

If the subject matter and content of Marxist-Leninist philosophy is viewed broadly, from the viewpoint of world outlook, it is quite obvious that our philosophical science must answer the great problems of today.

Guidelines for a broad sociopolitical and philosophical interpretation of the most urgent problems both of mature socialism and of world development can be found in party documents and in Comrade L.I. Brezhnev's speeches and writings. Particular significance is attached to the 26th CPSU Congress decisions and the Central Committee's report at the congress, which gave a clear, concrete, scientifically substantiated answer to the burning issues of today. This outstanding political and theoretical document vividly indicates the fruitful creative development of Marxism-Leninism and the inseparable unity of theory and practice.

Direct significance for improving the work of Soviet social scientists attaches to the criticisms aimed at them which were voiced at the 26th CPSU Congress--criticisms which clearly revealed the most characteristic shortcomings in the activity of scientists in this sphere. Much work has to be done in response to this justified criticism and we must rid ourselves more decisively of the shortcomings indicated by the party. We must mobilize all our forces to resolve a threefold task: To study social practice more profoundly and promote its positive development; to continue to generalize the data of the natural and social sciences on the basis of Marxist-Leninist ideology; and to be more assertive in the struggle against our ideological opponents and resolutely expose slander against Marxism-Leninism and real socialism.

The society's members and all Soviet philosophers are called upon to stimulate thought, to be truly forward-looking, to formulate new creative questions for discussion more boldly and to be more active in interpreting vital problems and helping to solve them. The 26th CPSU Congress decision on elaborating a new edition of the party program is an important, inspiring stimulus in this activity.

The significance of Marxist philosophy in modern social development is steadily increasing and Soviet philosophers' responsibility toward the party and people is growing. The 26th CPSU Congress posed great issues which concern mankind. Revolutionary changes have embraced all aspects of life in our era: Production forces, science, technology, politics, class and national relations, spiritual life, the people's culture and everyday life. No single particular science, however great its significance, can answer the vital questions of today. These are questions of world outlook and philosophy, and it is Marxist-Leninist philosophy which is called upon to answer them and does answer them. It alone can satisfy the growing demand for the generalization and synthesis of social and scientific thought, and this demand is becoming more and more intense in this era of rapid development of scientific knowledge and growing differentiation between particular sciences. What is required is the further profound, creative development of Marxist-Leninist philosophy and dialectics as the pivot of the scientific, communist world outlook.

Marxist-Leninist philosophy is called upon to ensure the further development and spread of vigorous communist ideas, utilizing to the full their superiority of world outlook and their methodological and moral superiority in the struggle against bourgeois ideology and rightwing and "left" revisionism. Our party calls on us to do this and our times require it of us. Scientific fact, historical truth and the might of social justice are on our side. Our ideological opponents fear the implacable laws of social development. They are governed by uncontrollable fear in the face of the growth of the strength and potential of real socialism, which asserts the triumph of reason and humanism on earth.

One of the most dangerous manifestations of imperialist madness is militarism, which, in our day, has become a threatening, destructive force, oppressing the peoples with all its weight. An accelerated militarization of the economy and all aspects of life is under way in the capitalist world.

Efforts are also being made toward what may be called the militarization of thought. The development of this process provides convincing confirmation of Lenin's tenet that under imperialism "states with a military apparatus strengthened as a result of imperialist competition have become military monsters..." (Complete Collected Works, Vol 33, p 119).

The question of war and peace is posed today in a way in which it has never been posed before. Thermonuclear as well as chemical and biological war, which imperialist forces--U.S. imperialism above all--are seeking to impose on the peoples, would mean worldwide catastrophe and the destruction of all world civilization.

The supreme fruits of human reason and the achievements of science are increasingly directed against man and mankind by reactionary forces in the capitalist world today. All this is causing feelings of disappointment in progress and social pessimism in the West. Seeking to blacken the real prospects for social development and distract the working people in capitalist countries from the burning tasks of the class struggle, bourgeois ideology is imposing and cultivating catastrophism, fear, irrationalism and mysticism. Apocalyptic prophecies are intermingled with statements about the unpredictability of the future and acknowledgements of the West's moral weakness and inability to respond to the "communist challenge."

Bourgeois ideology, aware of the growth in the prestige of real socialism and the worldwide growth of interest in Marxist-Leninist philosophy, is striving to neutralize the influence of Marxism and minimize the attractive force of the socialist way of life. As was noted at the 26th CPSU Congress, our ideological opponents are learning from their mistakes and the forms and methods of their activity are becoming increasingly refined.

Our opponents' perfidy must not be underestimated. But the future is not up to them. A growing awareness of the real prospects for social development is encouraging all honest people in the world to say a resolute "no!" to the instigators of thermonuclear war. The progressive world public warmly supports the foreign policy program put forward by Comrade L.I. Brezhnev at the 26th CPSU Congress and the USSR's new peace initiatives, including those recently heard from the platform of the 17th Soviet Trade Unions Congress. Socialism and peace are indivisible. Our philosophy is a philosophy of peace and social optimism and boundless faith in the triumph of universal justice.

One philosophical problem of paramount importance which is the subject of an acute ideological struggle is the problem of educating a new, comprehensively developed person free from vestiges of the past and remnants of bourgeois views and morals. Here very much work lies ahead. The cause of the communist education of working people is based by the party--as is all its revolutionary transformational activity--on the firm foundations of a dialectical materialist understanding of objective reality. The party regards the communist education of working people as an important front in the struggle for communism.

The core of the party's ideological work has been and remains the molding of a scientific, Marxist-Leninist world outlook in Soviet people. Its main aim is to ensure that knowledge becomes conviction, becomes the active life stance of the fighter for a communist tomorrow, opposing any manifestations of an ideology alien to socialism. This is only possible where there is profound, all-round assimilation of the unshakable tenets and pricniples of Leninist teaching on the laws of social development and understanding of the historical perspective of that development and of the dialectics of socio-economic, political and cultural processes.

Our era is complex, great, magnificent. There are many philosophical, sociological and political theories which seek to answer the most difficult questions of today. But one philosophy alone has withstood the severe tests of our turbulent, dynamic times--Marxist-Leninist philosophy. It really expresses the modern era with all its contradictions, antagonisms, intervals of gradual development and revolutionary surges--its revolutionary nature. Marxist-Leninist philosophy gives a truthful, profound, genuinely scientific answer to the burning, vital issues which concern man and mankind, answering its high purpose--that of being the spiritual quintessence of its time and providing theoretical guidance to the practical communist transformation of the world.

The CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation" instructs us to convincingly reveal the great transformational force of Marxism-Leninism and the ideas of proletarian internationalism and the great creative contribution made by our party and Comrade L.I. Brezhnev to the theory and practice of scientific communism. All our work must be aimed at promoting the further improvement of the working people's ideological, political, patriotic and international education and their class tempering and promoting a new upsurge in the Soviet people's historical creativity.

Soviet philosophers will spare no effort to resolve urgent problems of philosophical science in inseparable association with practical requirements, the demands of the further improvement of the developed socialist society and the struggle for the triumph of peace and communism.

ACADEMICIAN ON 'NEW HISTORICAL COMMUNITY'

PM191449 Moscow PRAVDA in Russian 9 Apr 82 pp 2-3

[Article by Acad P. Fedoseyev under the rubric "60 Years of the USSR": "A New Socialist and International Community"]

[Text] For centuries mankind suffered social inequality and slavery and national and class oppression. The splitting of society into exploiter and exploited classes was supplemented by the division into dominant and oppressed nations and races and was accompanied by national and racial discrimination. Great October smashed the chains of social and national oppression in one-sixth of the world, stirred all the peoples of our country to independent historical creativity and opened up for them the path to true equality and fraternity.

With the birth of the USSR--a unified multinational state--favorable conditions were created for the development and strengthening of cooperation and friendship among working people of all nations and ethnic groups in our country. "The idea of Soviet organization," the CPSU Central Committee resolution on the 60th anniversary of the formation of the USSR notes, "was close to the hearts of the working masses of all the peoples of Russia; it was straightforward and applicable to the most diverse living conditions."

On the basis of the Leninist principles of proletarian internationalism the CPSU brought together the country's nations and ethnic groups in an indissoluble alliance. In their joint struggle for the socialist and communist transformation of Soviet society and for the defense of revolutionary gains there emerged the great fraternity of working people and a new social and international community--the Soviet people--was formed.

1. The birth of the new historical community was based on profound objective changes, both material and spiritual, in the country's life which occurred as a result of the building from scratch of the foundations of socialism and then the formation of a mature socialist society. It is particularly important to note the following fundamental traits of Soviet reality: The universal establishment of social ownership of the means of production, the merging of the economies of all the union republics in a single national economic complex and the process of bringing them to the same level of economic development; the transformation of the alliance of

working class and peasantry into the solid political and ideological unity of these classes with the people's intelligentsia; the development of a unified international culture on the basis of Marxist-Leninist ideology and the best traditions of the national cultures of all the USSR peoples; the attainment of a highly mature social consciousness and significant results in the solution of tasks relating to communist education and in the molding of Soviet people's active life stance.

A notable feature of the new historical community is the fact that it represents not only the unbreakable alliance of the working class, kolkhoz peasantry and people's intelligentsia but also the international unity of all socialist nations and ethnic groups and embodies all the universally significant and Soviet-wide elements wrought by them during the building of socialism and communism.

The maturity of national relations becomes increasingly apparent at the stage of developed socialism in the USSR. Cooperation among all the country's nations and ethnic groups steadily strengthens with the intensification of social uniformity. As was noted at the 26th CPSU Congress, the family of Soviet people has become even more cohesive and is even more harmonious.

Internationalism is undergoing consolidation here in everyday life, in the creative labor and everyday life of Soviet people. People of different nationalities live and work together like brothers in all oblasts and rayons, in all republics, at all enterprises, in kolkhozes and in establishments and institutions. This helps them achieve more and more successes in communist building.

But it would be wrong to suppose that the Soviet people, as a new historical community, have acquired specific ethnic traits, that its birth signifies the formation of a special nation. The development and strengthening of this community certainly does not lead to the disappearance of existing nations and ethnic groups. Our party has provided an exact scientific interpretation of this question, establishing that the Soviet people, as a new historical community, are not an ethnic or special national community but a social and international community of people.

In his report on the USSR draft constitution Comrade L.I. Brezhnev criticized attempts to introduce the concept of a "single Soviet nation." "The sociopolitical unity of the Soviet people," he said, by no means signifies the disappearance of national distinctions. The new historical community neither abolishes the existing nations nor erects some kind of superstructure over them; in fact, it is a model way of uniting people of different nationalities while preserving the nations and ethnic groups, their distinctive features, languages and cultures. Moreover, the Soviet people as a new historical community are an organic and effective form for the development and flourishing of the material and spiritual forces of the individual nation and ethnic groups.

In this connection it is important to remember V.I. Lenin's instruction to the effect that international does not mean nonnational. An international community is inconceivable without national components, without the nations and ethnic groups which constitute it.

The flourishing and rapprochement of nations are not separate, parallel processes but interconnected processes. The conditions and means of national development and of the rapprochement of nations are created simultaneously, on the basis of interaction. This is true also of the material, social and spiritual prerequisites of the formation, functioning and strengthening of the new social and international community.

They are primarily the processes of building the material and technical base of communism and improving the unified national economic complex which represents the material foundation of the friendship of the USSR peoples. At the stage of mature socialism the task of bringing together the Soviet republics' economic development levels is already basically resolved. The economy of each republic occupies an important place in the all-union division of labor and is making an ever-increasing contribution to augmenting the country's resources. In conditions of mature socialism the role of all nations is enhanced in the solution of all-union tasks, and individual nation's interests are combined more closely with the interests of the Soviet people as a whole. The dynamism of our economy and the implementation of such majestic national economic programs as the assimilation of the fuel-energy and raw material resources of Siberia and the Far East, the construction of the Baykal-Amur railroad, the transformation of the RSFSR's nonchernozem zone and the creation of the Angara-Yenisey complex are inconceivable without pooling the efforts of working people of all republics and mobilizing their material and labor resources. Our party's policy is to further build up the material and spiritual potential of each individual republic and, at the same time, make maximum use of this for the harmonious development of the country as a whole. The party sees this as an indispensable and vital condition of the progress of Soviet society, the strengthening of the USSR's economic and defense might and the growth of the working people's well-being.

The socialist internationalization of production is also intensified by the scientific and technical revolution which objectively demands the further development of cooperation among nations and ethnic groups in the economic sphere and in the field of scientific research. Under its influence the material foundations of the life of our country's peoples are strengthening and production specialization and concentration are deepening. New industrial sectors are growing rapidly in the union republics and, at the same time, the cultural and technical standard and professional skills of working people of all nations are improving.

The internationalization processes in all spheres of our life unquestionably demand the constant improvement of scientific management of social development--above all, centralized planning combined with the broad initiative of union and autonomous republics; the intensification of the masses' creative activity; the growth of their consciousness, the raising of their cultural level and a determined struggle against all manifestations of parochialism and narrow departmental interests.

2. Socialist society has always been characterized by the close interdependence between the refinement of its social structure and the strengthening of the international unity of nations and ethnic groups. But it is, perhaps, today, at the modern stage of communist building, that we see particularly clearly the interplay of trends and natural patterns which, on the one hand, determine the direction of the development of individual republics, nations and ethnic groups and, on the other hand, characterize the progress of society as a whole. The movement of Soviet society, under conditions of mature socialism, in the direction of ever-increasing social uniformity is a general law. But, at the same time, it is a development trend for each individual Soviet national and ethnic group.

The formation of a classless social structure will be an important milestone in the further rapprochement of nations on a truly democratic and truly internationalist basis. The conclusion that it can take shape by and large in the historical framework of mature socialism was arrived at by the 26th CPSU Congress. The rapprochement of socialist classes and social groups is taking place in each of the republics both from the viewpoint of their relationship to the means of production and from the viewpoint of the nature of their labor, the form of payment and the amount paid, the cultural and technical standard and general living conditions. Particularly indicative in all this is the leveling of the social structure of the population in all union and autonomous republics and the increase in the working class' percentage of the population. Interesting also is the fact that the number of native workers among the republics' working class is steadily increasing. This is due, in particular, to the further growth of industrial enterprises and sovkhozes. A notable trend is the considerable increase in the number of skilled cadres in the republics--large detachments of the technical engineering, scientific and artistic intelligentsia, teachers and doctors have been established and are continuing to grow in each republic. The social makeup of the peasantry and its living conditions have qualitatively changed on the basis of the development of kolkhoz and sovkhoz production, interfarm cooperation and agrarian-industrial integration.

In the 70's, as a result of the implementation of the broadest social program in the country's history, the well-being of working people improved in all union and autonomous republics; their working and leisure conditions improved and new steps were taken in the development of housing construction and the improvement of the system of social security and medical and consumer services. In short, there was a substantial leveling of living conditions for working people in union and autonomous republics, although the differences inherited from the past remained to some extent. As is known, the task of erasing social differences on a territorial basis was seen by the 26th CPSU Congress as a serious problem of the further strengthening of the international cohesion of Soviet society as well as its socioclass cohesion.

When discussing the qualitative characteristics of the new social and international community it is important also to note that Soviet people, irrespective of their nationality, are united by a common spiritual life, a common world outlook and moral and cultural values. For the first time in the history of civilization socialism totally eliminated illiteracy and gave the multimillion-strong masses and every working person access to the riches of national culture and human culture in general. The unified international culture of the Soviet people established in the USSR absorbs the best spiritual achievements and values of each individual nation and ethnic group. In turn, the flourishing of the national cultures is possible only on the basis of their rapprochement and mutual enrichment. The contribution of the individual nation and ethnic group to general Soviet culture steadily increases as their socialist national cultures develop.

The strengthening of the new historic community is assisted by the spread of the Russian language, which forges the friendship and fraternity of all USSR peoples. At this point one must mention again the erroneous nature of the assertions sometimes made to the effect that the Russian language is an ethnic feature of the single Soviet nation which is allegedly taking shape. In fact, Russian, as the language of the most populous nation, served, even in prerevolutionary days, to some extent as the medium of economic and cultural intercourse between people of different nations in our country. Now, in the mature socialist society, with the unified national economic complex and in conditions of very close economic, scientific and technical and cultural ties, Russian has become, out of necessity, the medium of communication between different nations and ethnic groups.

In present-day conditions, while national, local and group peculiarities, traditions, forms of social intercourse and so forth have remained, a way of life common to the entire Soviet people has been established, one which determines the most significant and most important manifestations of people's life and activity and cements their international fellowship.

3. The Soviet people are not simply an agglomeration of nations living side by side in one state under one roof, so to speak. Our compatriots, irrespective of their nationality, have many common features which unite them in a single whole. And it is in the national and through the national that internationalism, as a way of regarding surrounding social reality and as a norm of USSR citizens' behavior, exists. All that is common to and typical of the Soviet people is present in the specific features and forms of life of the nations and ethnic groups.

The processes of the consistent rapprochement and all-around cooperation among all Soviet peoples and the strengthening of their fraternal friendship are intensified in the mature socialist society. And this in turn leads to the further flourishing of the socialist nations, helps the more profound revelation of their creative potential and creates the requisite conditions for national development. These are the dialectics of national relations at the stage of mature socialism.

As the ideological inspirer and political organizer of the Soviet people, the Communist Party ensures the unity of goals and actions of working people of all nations. It unites Soviet people beneath the banner of proletarian internationalism, develops in them the ability to approach any national problem from class positions and seeks a high standard of internation intercourse.

While creating conditions for the ever-greater rapprochement of our country's nations and ethnic groups, the CPSU organically combines their interests with the interests of the Soviet people as a whole and makes a point of taking national features into account in its policy. The Communist Party resolutely opposes trends aimed at artificially erasing these features and, at the same time, regards any artificial exaggeration of them as impermissible.

True to Lenin's behests, the CPSU is educating Soviet people in the spirit of respect for the national feelings and national dignity of each individual. The party resolutely combats phenomena alien to the nature of socialism, such as chauvinism and nationalism, and any nationalist kinks, national narrow-mindedness, blinkeredness and aloofness, national egotism and conceit and the preservation of backward forms of existence and outdated customs and traditions.

Through all its creative theoretical and practical activity the leading force of Soviet society, the Communist Party, relying on the Leninist principles of the nationalities policy, is promoting the patriotic and internationalist education of the working people and the development of the political and labor activeness of citizens of all nationalities.

Speaking at the celebrations in Tashkent in aid of the presentation of the Order of Lenin to the Uzbek SSR, Comrade L.I. Brezhnev pointed out that in the conditions of our multinational state internationalism today is, primarily, the honest, conscientious and all-out labor of all the country's peoples for the common good; it is the ability to place statewide interests above narrow departmental and local interests and to ensure that the unified national economic complex operates efficiently; it is the prompt and high-quality fulfillment of all interrepublic deliveries, the maximum utilization of resources and active participation in the solution of problems on which the improvement of the economy and the entire people's well-being depend.

In implementing the party's domestic and foreign policy Soviet people are keen to multiply the labor successes for the good of the motherland, in the name of strengthening world peace.

BRIEFS

PHILOSOPHICAL SOCIETY ENDS CONGRESS--The third congress of the USSR Philosophical Society completed its work in Moscow 25 March. It discussed the society's activity for 1977-1981 and set philosophical science new tasks in the light of the 26th CPSU Congress decisions. The delegates' reports and speeches emphasized that the congress promoted a critical appraisal of the state of philosophical science and the mobilization of Soviet scholars to the elaboration and solution of topical scientific problems. The congress elected the society's new leading organs. Acad F.V. Konstantinov was reelected president. [Text] [PM080931 Moscow SOVETSKAYA ROSSIYA in Russian 26 Mar 82 p 2]

INSTITUTE PRESENTED WITH AWARD--The academician N.N. Burdenko, Scientific Research Institute of Neurosurgery has been awarded the Order of the Friendship of the Peoples. On 17 March a ceremonial meeting of the institute's collective was held in the Hall of Columns of the House of Unions. V.N. Makeyev, deputy chairman of the USSR Council of Ministers, attached the order to the institute's banner. [Excerpts] [PM310801 Moscow IZVESTIYA in Russian 19 Mar 82 Morning Edition p 2]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

EEC INTEGRATION OFFERS NO HOPE FOR SOLVING ECONOMIC PROBLEMS

Moscow APN DAILY REVIEW in English 15 Apr 82 pp 1-5

[Article by V. Potapov]

[Text]

The EEC, European Economic Community -- the largest Western integration group -- marked a quarter of a century earlier this spring since the signing of the Treaty of Rome which launched it.

The anniversary, as the British Guardian newspaper pointed out, was celebrated in what it described as a stuffy and gloomy atmosphere. The heads of state and government of the ten EEC nations, assembled at the Brussels Palace of Academies, heard little comforting speeches by the Chairman of the Commission of the European Communities, Gaston Thorn, and the Speaker of European Parliament, Pieter Dankert.

Both sounded pessimistic notes which echoed the view now current in the West that the Common Market is living through its hardest times since it was created. The burden of a wasteful agricultural policy, far from perfect "free" circulation of goods and a practically non-existent common market of services have been increasingly handicapping all compromise arrangements within the Community so essential, if only, to preserving the present status quo, local commentators have been pointing out.

As if to provide yet another case in point just in advance of the anniversary celebrations, the EEC had a further relapse of its old disease which shed light on the state of affairs in the so-called "European Monetary System" (EMS) covering the Common Market countries except Britain and Greece. An emergency session of the Community's finance ministers last February had to decide on a devaluation of the Belgian and Luxemburg francs by 8.5 per cent and of the Danish crown by 3 per cent. However, in recent weeks the French currency has turned out to be shaky as well.

Financial upheavals are but a reflection of most serious economic troubles. One can see that from the curtailment of production in a number of industries, traditional for Western Europe -- iron and steel, shipbuilding, textile, as well as from the almost 11 million-strong army of unemployed in the EEC countries, and double-digit inflation. It is indicative that the "belt-tightening" tactics the monopolies used to apply against the working people under similar circumstances on earlier occasions and wholesale layoffs have failed to produce a proper effect this time. This led to some of the EEC member states departing from the classic methods of capitalist crisis "management".

London and Bonn remain the partisans of the "tough" line in economic policies within the Community. They are suspiciously watching the efforts of the left majority government in France, with Communists in it, to loosen the grip of the crisis by nationalisation and a series of social reforms. What adds to their anxiety is that a similar course has been chosen by Greece where the Pan-Hellenic Socialist Movement (PASOK) won the latest parliamentary election.

The governments of the Ten are unable to work out a common approach to resolving the paramount problems of their economies because of the very character of capitalist integration.

The attempt to introduce a common EEC agricultural policy is a typical case in point. It has been running up against insurmountable contradictions between the members of the Community. Lulls have been alternating with sporadically erupting "mutton", "wine" and other "wars". Instead of stimulating mutual purchases of agricultural products, the "preferential system" now operating in the EEC (providing, notably, for the Community's budget to absorb the means "saved" through the purchase of agricultural products outside the Ten) keeps passions running high. Great Britain, for example, has been most vocal in speaking out against this machinery, which had taken shape before she joined the EEC, and has been continually complaining about what she describes as unjustifiably high deductions into the community budget.

Britain's mainland partners feel, however, that she has herself to blame in this particular case since--because of the "wrong" orientation of her monopolies--she continues largely to bring in foodstuffs from countries which were British colonies and dominions once.

Squabble among agricultural companies does not prevent them from acting jointly against small producers. The French Minister of Agriculture, Edith Cresson, admitted that in 1981 alone the incomes of the French farmers went down by 7 per cent. They continue to fall for the eighth year in a row. The purchasing prices of major farm products, fixed within EEC framework every year, grow slower than farmers' inputs.

Contradictions in the agricultural field become intervowen with budgetary difficulties, since over 62 per cent of the Common Market's funds is spend on subsidies connected with farm produce. At meetings convened one after another representatives of the Ten vainly try to patch up the community's budget which is cracking at seams, particularly by shaping a reform of agricultural policy. However, the present situation suits the agricultural monopolies which use all means at their disposal to preserve their positions.

Facing serious economic, commercial and financial contradictions among the EEC countries, the architects of "minor Europe" decided to accelerate the political integration of the community. For this purpose, changes were introduced into the status of the European parliament almost three years ago. At present elections to the European parliament are held by direct ballot and the number of its deputies was increased. Until June 1979 they numbered 198 and today there are 434 of them. Britain, France, West Germany and Italy are represented by 324 deputies.

The bigger industrial countries now command even more votes compared with the smaller members of the community.

Monopoly capital adroitly exploits rivalry between the various links of the EEC cumbersome and intricate machinery. To achieve its aims, it also plays on the increased ambitions of the European parliament.

One of the latest scandals, brought about by these ambitions, is connected with the endorsement of the 1982 budget by the European parliament. The new budget exceeds the previous one by 240 million dollars. In a bid to arbitrarily establish itself as the main supranational body of the Ten, the European parliament decided on the final size of the budget without waiting for the end of the debate in the EEC Council of Ministers. The European monopolies also benefited by this decision because the Common Market's funds go to the European companies, in the final run although its swelling budget is financed by the working people.

Of late the West European community has organised a number of joint international operations. Thus, some EEC countries participate in the multinational peace-keeping force in the Sinai. They are also involved in actions and issue statements grossly interfering in the domestic affairs of Poland. Despite the European camouflage of this political activity, it unmistakably smacks of Washington's hegemonistic policy.

The current attempts of certain EEC forces, connected with the military-industrial complex of the Ten, to turn the community into NATO's European branch also promote US aims. Thus, late last year the assembly of the West European Union, uniting seven of the Ten Common Market countries, proposed that the EEC member-countries or prospective members should join the agreements which were used to establish that bloc. The EEC countries extensively practice the joint production of weapons and participate, along with the United States, in increasing the stockpiles of arms in Europe.

The burden of Washington's expansionist policy lies heavily on its European allies. A major element of Washington's general strategy is its desire to make the West Europeans pay for the American adventurist policy by resorting to a whole number of economic mechanisms.

After 25 years of propaganda efforts aimed to extol the "advantages" of bourgeois integration, the community is facing mass public discontent in the EEC countries with the policy of the community. This discontent covers not only the working people, but also spreads to the small and middle bourgeoisie. On the one hand, the latter sees ever more clearly that the EEC is a mechanism ensuring the domination of big capital and the expansionist plans of the major European monopolies. On the other hand, the community's inability to curb crisis phenomena and maintain social peace obviously undermines the appeal of the slogan of "united Europe".

It was not accidental that 52 per cent of the participants in the referendum held in Greenland in February this year said that they were for their country leaving the EEC.

Crises permanently shaking the community show that no tricks by the promoters of capitalist integration will be able to hush up the contradictions tearing the Common Market apart.

WESTERN INTEREST IN MYSTICISM, YOGA, KARATE DECRIED

[Editorial Report] Moscow KOMSOMOLSKAYA PRAVDA in Russian, 28 April 1982, carries on page 2 an 1100-word article titled "Backward to Mysticism?" by Ye. Anisimov. Written in response to a reader's inquiry, the article surveys the current interest among Western youth in Eastern religions, yoga, and karate, explaining this new trend as the consequence of the "sharpening ideological struggle" and the "growth of reaction." Although the article is ostensibly about these developments among Western youth, it concludes with the observation that "Today, as never before, we must develop in youth the ability to see each new phenomenon in all its fullness and complexity, the ability to assess ideologically and soberly philosophical trends of various kinds, and the ability to take the useful and to reject the reactionary."

SYMPOSIUM ON GENOA CONFERENCE--A symposium on the subject of "The Genoa Conference and the World Today" was held in the Diplomatic Academy of the Foreign Ministry, Moscow, on April 9. It was opened by Deputy Foreign Minister Victor Stukalin. Academician Sergei Tikhvinsky, rector of the Diplomatic Academy, delivered a report on "The Experience of Genoa and Present-Day International Relations." The international and political importance of the Genoa Conference and the Treaty of Rapallo was discussed by Lev Tolkunov, chairman of the Novosti Press Agency board, Vladimir Petrovsky, a member of the Foreign Ministry's collegium, and scholars of the Academy of Sciences institutes and the Diplomatic Academy. An exhibition of foreign-policy and diplomatic documents relating to the preparation and holding of the Genoa Conference and the conclusion of the Treaty of Rapallo was organized in the Diplomatic Academy. GRISHIN ADDRESSES MOSCOW PARTY AKTIV 15 MARCH

PM290909 Moscow PRAVDA in Russian 16 Mar 82 p 2

[TASS report: "Fitting Greetings for Jubilee"]

[Text] The organizational and political work of the capital's party committees is geared to fashioning within every Muscovite a patriotic striving to augment his contribution to the implementation of the decisions of the 26th CPSU Congress. This work is proceeding under the profound influence of preparations for the 60th anniversary of the USSR. This was stressed at the meeting, held on 15 March, of the AKTIV of the Moscow City CPSU organization, which discussed the tasks for the fulfillment of the party Central Committee resolution "on the 60th anniversary of the formation of the union of Soviet socialist republics."

V.V. Grishin, member of the CPSU Central Committee Politburo and first secretary of the Moscow CPSU Gorkom, delivered a report. He noted that history knows of no other state which has done so much and in such a short space of time for the comprehensive development of nations and ethnic groups as has the USSR. In the joint struggle for a new and just world there emerged a great brotherhood of working people and a feeling of being a united family, and the indestructible Leninist friendship of the peoples was fashioned. In greeting its glorious anniversary, the Soviet Union stands before the whole world as a harmonious family of equal republics, jointly building communism under the leadership of the CPSU.

Talking of Moscow's role in rallying the Soviet republics and in forming our union state, the keynote speaker noted that the capital of the USSR has become a symbol of indestructible friendship among the Soviet peoples, a symbol of loyalty to the Leninist peace-loving foreign policy. It convincingly embodies the achievements of developed socialism. Thanks to the constant concern of the party, government and of Leonid Ilich Brezhnev and thanks to the help of the whole country, the task of transforming Moscow into a model communist country is being consistently implemented.

The meeting of the party AKTIV gave an assurance that communists and all Muscovites will rally still more closely around the CPSU Central Committee led by Comrade L.I. Brezhnev and will display even more initiative and creativity, selflessness and persistence, organization and discipline in the struggle for the radiant communist goals and will fittingly greet the 60th anniversary of the USSR.

Ye.M. Tyazhelnkkov, chief of the CPSU Central Committee propaganda section, took part in the work of the meeting.

RSFSR SUPREME SOVIET PRESIDIUM PROMULGATES UKASE ON ILLEGAL KARATE INSTRUCTION

Moscow VEDOMOSTI VERKHOVNOGO SOVETA RSFSR in Russian No 45, 12 Nov 81 p 891

[Ukase No 1517 of the RSFSR Supreme Soviet Presidium on Introducing Additions to the RSFSR Criminal Code]

[Text] The RSFSR Supreme Soviet Presidium resolves:

To add Article 219^1 with the following content to the RSFSR Criminal Code:

Article 219^1. Illegal Karate Instruction.

A violation of the established rules for opening a karate sports section or for recruiting citizens into them, instruction in the sections on methods forbidden by the sports regulations, and the unwarranted -- without the permission of the appropriate organs -- instruction on karate methods performed after the application of an administrative punishment because of such violations --

are punishable by imprisonment for a period up to two years or a fine of up to 500 rubles.

The same actions, which are committed by an individual who had been previously convicted of illegal karate instruction or which are connected with the receipt of material benefits of a considerable size, --

are punishable by imprisonment for a period of up to five years with or without the confiscation of property.

Chairman of the Presidium of the RSFSR
Supreme Soviet M. Yasnov

Secretary of the Presidium of the RSFSR
Supreme Soviet Kh. Neshkov

CURRENT SOVIET DEFINITIONS OF 'NATION,' 'NATIONALITY' SURVEYED

Moscow FILOSOFSKIYE NAUKI in Russian No 2, Mar-Apr 82 pp 90-98

[Article by A. Ye. Zharnikov: "National and International and Dialectics of Their Interrelationship"]

[Excerpt] In developing scientific theory of national relations, the founders of Marxism-Leninism have substantiated and convincingly proved the primary determining significance of social interests and the subordinate role of the national feature. Regarding nation as one of the manifestations of public life, they have proved that its emergence and further development is entirely determined by the level of development of productive forces and the corresponding level of production relations. This position in Marxist science is initial, basic. But while recognizing the final conditionality of the national feature as a social class one, Marxist-Leninist science at the same time does not deny its relative independence manifested in quite a number of instances. "Compared with the workers question, V. I. Lenin noted, "the subordinate significance of the national question is beyond any doubt for Marx. But as for disregarding national movements, his theory is as far apart as heaven and earth."[1] V. I. Lenin turned his attention to this position later on. "If we say," he noted in 1919, "that we do not recognize any Finnish nation but only the workers masses, it will be utter nonsense."[2]

What is the explanation of the relative independence of the national feature? Marxist-Leninist theory considers that one of the main reasons for this is the presence of an ethnic component in national communities. Moreover during the past decades a firm tradition has been formed to understand under ethnic the language of one or other group of people, their territorial community, traditions formed over centuries, the way of life, definite peculiarities of culture, consciousness, beliefs, features of physical appearance, certain psychological traits and so forth.[3] In the final analysis the existence and development of ethnic factors also depends on the social ones and therefore ethnic never exists in its purest form. In this sense the understanding of "ethnic" is conditional in many respects. However, division of its specific character into parts and the old tradition of its application make its use permissable. Ethnic relations are more stable than economic, social and political ones and in the historic plan are more lasting.[4]

On the whole the presence of ethnic in national is regarded as universally recognized. But the place it occupies here, the forms of its manifestation and its relative importance and role remain a subject of scientific discussions. The first half of the sixties marked their beginning and before Soviet science they also posed the problem of structural analysis of human and particularly of national common character. This problem found its most striking expression in the discussion on definition of understanding "nation," which appeared in the journal VOPROSY ISTORII and other publications in the sixties.

One of the first to take a differentiated approach to the analysis of a nation was M. S. Dzhunusov. In the course of the aforementioned discussion he expressed an idea that it is not only necessary to reveal the main signs of a nation but also to divide them "in two groups: 1) signs of a nation, conditioned by the nature of capitalism and socialism and 2) ethnic signs of a nation."[5] In his opinion, since "in a nation there are a nonethnic (social class) and ethnic"[6] he recommended defining nation itself as a "social-ethnic" phenomenon. Moreover it was especially stressed that social signs have a determining significance in relation to ethnic and condition intranational propensity [mezhnatsionalnaya tyaga] and international trends.

This view has won certain support among scientists and obviously during that period (marked by intensive search for new solutions) had a positive meaning. The approach to signs of a nation as two correlated but differentiated groups was methodologically useful as a whole. In this way attention was accentuated on their different direction and on the main bearer of international in national. Establishment of the unquestionable priority of social signs did not conceal certain autonomy of the ethnic and this revealed new aspects of the problem.

In the course of further discussion, some researchers recommended other solutions and approaches. One of them consisted in distinguishing two sections in the life of a nation: internal and external. "The structure of national relations," T. Yu. Burmistrova wrote, "is extremely complex and differs in volume and content. In spatial relation the life of nations proceeds in two spheres: 1) internal and 2) external (interrelations between nations)."[7]

Drawing attention to itself here was, first of all, a situation where the subject of research was being considerably expanded and the opinion about it was made more precise. In essence, not a nation, as a separate datum, but its entire life in "spatial relation" and a wealth of interrelations was subjected to analysis. Therefore the question was not so much about the structure of a nation itself but about the analysis of its manifestations, mutual influence and relations in their totality. Of importance was also the fact that the division of life of nations into two spheres was not raised to the absolute. The internal and external spheres, in the opinion of the authors of this conception, are mutually interlaced. Social factors exert a decisive influence not only on the external, international fields but also to a considerable degree on the internal.[8]

At the same time, broad discussion of the aforementioned approaches was not without criticism which indicated a need for certain prudence in their specific application. In the first case it was noted that the definition of a nation as a "social-ethnic formation" has to some extent concealed the social character of ethnic and has unwittingly resulted in an opinion of a dual nature of nation, thereby opening the possibilities for its interpretation, on the one hand, as a social phenomenon, on the other hand, as an ethnic. Therefore, despite the fact the supporters of this concept especially stressed the leading role of the social factor, proportionate separation of ethnic signs of a nation from the social evoked considerable doubt.[9]

In the second case, the division of life of nations into internal and external spheres was in many respects conditional. The boundary between the designated spheres is extremely flexible and yields comparatively easily to changes. Therefore its specific definition is difficult. Difficulties of no lesser degree can be caused by attributing those or other components of national life to any of the two spheres. For example, in the field of culture, national traditions and so forth it is not always simple to single out proper national, peculiar and general socialist traditions developed during the years of Soviet power.

The subsequent search, which has yielded an important result, has been conducted by researchers in the direction of semantic distinction of the conception of "nation" and "nationality." The distinction of these conceptions is based, in the opinion of S. T. Kaltakhchyan, on the definition of "nation" as an entirely social phenomenon. "Nationality," he believes, indicates ethnic features of a specific nation and in some cases may appear as a comparatively independent historic phenomenon.[10]

Supporters of this conception justifiably believe that the essence of a nation as a qualitatively new social phenomenon cannot be reduced to a sum of separate signs alone. Definition of the conception "nation" must indicate not the distinction of one nation from another (for example, the difference in language) but the distinction of a nation as a particular social formation from other social phenomena (for example, classes) for which community of language is optional. This approach also makes it possible to show the fundamental distinction of a nation from others that preceded it prior to national unions (family, tribe, nationality).

During emergence and development of a specific nation, ethnic relations must not be left without attention. If the essence of a nation is revealed in social development, then the distinction of one of them from another is manifested in its nationality (ethnic relations). Nationality, as a rule, is very stable and lasting. A nation may undergo considerable social changes, including in the class structure and yet preserve its nationality, its ethnic features. Of course, social changes also influence ethnic factors but this does not occur immediately and is not straightforward.

As a whole the conception of "nationality" as an expression of ethnic is more narrow than the conception of "nation." But since ethnic goes back into distant past, nationality may also date back not only to nation but also to the human communities that precede it. In this sense "nationality" is a more ancient conception than "nation." "To distinguish these conceptions," S. T. Kaltakhchyan believes, "is so much more necessary because "nationality" characterizes ethnically not only nations but people as well. Moreover, in this capacity nationality appears as a general designation of all national formations."[11]

Formerly the term "nationality" was basically assumed to mean the belonging of a specific man to some nation. Therefore researchers should have assigned a place to the ethnic component either in certain signs of a nation or among one of the spheres of its life. But the interpretation of nation as an entirely social phenomenon has led to regarding nationality as a stable ethnic formation.

This solution of the question, of course, does not reject the opinion of nationality as a determinant of man's belonging to some nation. But this is not its only function. Of course, many people on the planet live within the territorial-economic limits of their nation and their nationality therefore is a sign of their belonging to it. In this sense a Ukrainian living in Kiev is a Ukrainian as regards nation and nationality. But what is to be done with the Ukrainians, Armenians and hundreds of thousands of representatives of other people in general who have been living abroad for generations? After breaking links with their people, for a long time, for many generations they have preserved one nationality with them, which, however, has already stopped being a sign of their belonging to the nation. "By itself, the nationality of individual persons or groups," writes P. N. Fedoseyev, for example, "does not speak of their organic belonging to a particular nation. As a rule, people of one or other nationality are members of a corresponding national community. But it often happens that they live among people of other nationality and even in another country, which in fact does not have any relation to the nation whose name they claim."[12]

In this manner, such groups of people, without being nations, appear as nationalities. This is one example when the conception of "nation" and "nationality" do not coincide. Attempts to "ignore" this lack of coincidence and to identify such conceptions always and everywhere, have acquired a strikingly pronounced political character at present. The ideologists of German fascism proceeded from such identification in an attempt to unite all Germans on the planet, regardless of their citizenship, within the framework of "Great Germany". The present Zionist propaganda is being built on this basis. Also there are the theoretical premises of the "hua quiao" conception advanced by Maoists with the aim of subjecting all persons of Chinese nationality who live outside the PRC to Maoist leadership.

The semantic distinction of the conceptions being examined also sheds light on some other questions. It clears up many moments of formation of single nations from various ethnic and even racial communities as well as the opposite process of breakup of major ethnic groups into various nations. It makes it possible to understand more clearly the significance and profound meaning of the Leninist position that "there are two nations in every modern nation... There are even two national cultures in every national culture.[13]

By preserving a single nationality, the capitalist nations are class divided, dichotomous.

Distinguishing the aforementioned categories makes it also possible to correctly elucidate the dialectics of continuity and interruption in the development of human communities. Only they make it possible to understand why a nation, in making a transition from one community organism to another and fundamentally changing its social nature, basically preserves its nationality, that is its ethnic features even if they are developing.

The proposed conception is widely used in philosophic as well as in ethnographic literature at present. Thus the well-known Soviet ethnographer Yu. V. Bromley, in speaking about the necessity of making a distinction between the conception of "nation" and "nationality," wrote: "Such terminological discrimination will undoubtedly help in differentiating even the most similar, yet not completely identical phenomena. In a similar way it is expedient to secure to the narrow meaning of the term "ethnos" the word "ethnikos."[14] The term "ethnikos" introduced by Yu. V. Bromley in scientific usage is, in essence, a definite analogue of the conception "nationality." Their linguistic distinction is explained only by the difference in the categorial system [kategorialnyy apparat] used in philosophy and ethnography.

This point of view has received resolute support among scientists of the GDR. Only by relying on the conception of semantic division of aforementioned categories is it possible to scientifically explain the fact of existence of two German nations which preserve one nationality. It permits elimination of false interpretations and confusion that exist here.

German scientists have also undertaken further steps in a plan to develop this conception further and creatively. Thus, A. Kozing, academician of the GDR Academy of Sciences, also points out another meaning of nationality in the development of mankind. He regards nationality also as a phenomenon which has historically preceded nation. "It may be said," he writes, "that in western as well as central and later also eastern Europe, nationality, which has been developing on the basis of feudal socioeconomic formation, represented in itself /a form which historically preceded a future nation/ [in italics]. In the present case," he explains, "the conception of nationality is used in a sense of a feudally organized people."[15]

In this way nationality in individual cases may appear as a conception that is very close to people. This has also been given attention to by A. G. Agayev, who in examining national communities of modern Dagestan, writes: "they are Kumyks, Lezgins, Avars and so forth as regards national character (nationality) but Dagestanians as regards nation."[16] At a certain stage of society's development, nationality becomes a forerunner of nation, creating specific conditions for its formation. This addition to the examined conception confirms once more the correctness and fruitfulness of the path traversed in the past several years by research in the field of analysis of human communities.

At the same time, various conceptions of "nation" and "nationality" make it possible, in our opinion, to approach the analysis of a conception such as "national" as a whole more deeply and to some extent in a newer manner. An opportunity opens for uncovering new facets of dialectic unity of national and international.

Actually the conception of "national" on the one hand reflects nation as a historic phenomenon and on the other hand as nationality. But at the same time it is considerably broader than each one of them. It cannot be reduced to a single economic factor, and especially to ethnic relations alone. Attention of Soviet authors has already been drawn to the great volume of "national" categories. "In distinguishing the conception of "nation" and "nationality," writes S. T. Kaltakhchyan, "it is necessary to give attention to the fact that the term "national" may be used and is often used as a derivative of "nation" and also as a derivative of "nationality."[17]

In such a case, being of a much broader category, "national" may also appear in a category that synthesizes and consolidates the conception of "nation" and "nationality." Being at a much higher level of scientific abstraction, the category of "national" does not represent a substantial formation in itself. It can only exist as a form of uniting nation and nationality, as a manifestation of their organic unity. In this manner, it may be said that the term "national" consists of two components--"nation" and "nationality." At the same time in the linguistic plan the conception of "national" may be, course, also used in relation to nation and in relation to nationality. Such use has a long-standing tradition and in principle does not contradict the consideration of "national" as a broad synthesizing category.

Researching the structure of national helps in understanding more deeply its inseparability from international because the existence of international itself becomes possible only with availability of national. Would there be anything to say about international processes if various people who are different from each other did not exist? This is one side of unity. Its other side is in the fact that not only international does not exist without national but even national itself does not exist without international, appearing as its specific historic expression.

International processes are engendered by socioeconomic factors and are class conditioned. Therefore the main bearer of international in national is nation itself as an essentially social phenomenon. It may be said that international arises and is manifested in national basically through nation. Social factors, which, in their turn, condition the essence of nation have always appeared as basic factors of international. Therefore international and national are indivisible. The specific historic expression of this unity is the general internationalization of all spheres of public life of the USSR, the convergence and flourishing of socialist nations and so forth.

AUDITING COMMISSION REPORT TO USSR TRADE UNION CONGRESS

PM251033 Moscow TRUD in Russian 17 Mar 82 p 6

["Abbreviated" account of "Central Auditing Commission Report" delivered at 17th USSR Trade Union Congress in Moscow on 16 March by Ye.F. Gugina, chairman of the AUCCTU Central Auditing Commission]

[Text] Comrade delegates.

We have all been tremendously impressed by the vivid and inspiring speech by Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, which was full of boundless belief in the Soviet people's creative potential.

Comrade Leonid Ilich Brezhnev's speech and the CPSU Central Committee greetings message to the 17th USSR Trade Union Congress are a specific, militant program for the Soviet trade unions in the struggle to build communism in our country, fill with joy and pride the hearts of the multimillion-strong army of members of the country's most mass organization and inspire them to selfless labor in the name of the happiness and prosperity of our socialist motherland.

The AUCCTU report revealed Soviet trade unions' great organizational and educational work and determined the main avenues of their work in resolving the large-scale economic and social tasks set by the 26th CPSU Congress and outlined in Comrade Leonid Ilich Brezhnev's speech at our congress.

Guided by the decisions of the 25th and 26th party congresses and the 16th Trade Union Congress and in accordance with the USSR trade unions rules, the Central Auditing Commission has monitored the financial and economic activity of the AUCCTU and organizations under its jurisdiction and the examination of working people's letters and statements, and each year has examined the trade union budget and monitored the course of its execution.

In the period under review trade unions' budget increased 30 percent. The increase was mainly due to receipts from trade union membership fees. This is a consequence of the increase in the number of trade union members and the growth of wages, and also of the improved standard of organizational work by primary trade union organizations.

The growth in the income of the trade union budget helped the fulfillment of the 16th Trade Union Congress' decisions and created real potential for increasing the spending on cultural and consumer services for working people and members of their families. Some 85 percent of the total funds of the trade union budget, which amounted to R11 billion over the 5-year period, is spent on these purposes; of that sum, about R5 billion was spent on mass cultural work.

Considerable funds from the trade union budget are channeled into training and retraining the trade union cadres and aktiv. Since the 16th Trade Union Congress about 128 million people have received tuition on courses and at seminars, which is 23 million more than in the previous reporting period.

Trade unions show great concern for working people by giving them paid and free legal assistance and also developing the network of mutual aid funds in every possible way.

In the last few years the AUCCTU has taken a number of measures aimed at further strengthening trade unions' material and financial base. Primary trade union organizations' rights in spending funds on mass cultural work have been expanded, as have those of trade union central committees in deciding financial questions, and new standard staffs for trade union cultural enlightenment institutions and sports installations have been formulated. A resolution strengthening the financial status of agricultural trade union organizations has been adopted.

The trade union move theater network was further developed in the period under review, its material and technical base strengthened and the utilization of movies in working people's communist education expanded.

At the 26th CPSU Congress Comrade Leonid Ilich Brezhnev said: "...what is becoming the linchpin of economic policy is something that would seem to be simple and very prosaic--a thrifty attitude toward social property and the ability to make full and expedient use of everything we have." The trade unions must persistently implement this extremely important instruction from the party. The movement for economy and thrift must be developed everywhere and a resolute struggle must be waged against mismanagement and waste.

In the last 5 years major measures have been implemented to further develop state social insurance and pensions and improve working conditions and labor protection in production and medical services for workers, employees and kolkhoz members. In this period payments and benefits under the state social insurance system increased almost 34 percent and total R40 billion for 1982.

In the last 5 years pension payments to working pensioners increased 50 percent and totaled over R24 billion. Some R6.8 billion was spent on treatment and vacations for working people and children, which is R1.7 billion more than was spent in the previous 5 years. Some 127 million workers, employees, kolkhoz members and their children underwent treatment or spent vacations in sanatoriums, rest homes, preventive clinics, tourist bases and health camps free of charge or on concessionary terms, the costs being paid from state social insurance funds.

The Central Auditing Commission has regularly monitored the execution of the state social insurance budget. The material from the checks shows that there are still shortcomings in the planning and execution of the budget. Certain trade union committees have allowed insured persons to default and have failed to make full use of their right to recover for the budget funds paid out for temporary inability to work as a result of on-the-job injuries and occupational disease for which the administration is to blame. There have been violations in the payment of benefits to workers and employees and also in the payment of pensions to working pensioners.

An important section of trade unions' work in the sphere of implementing the party's social program is the carrying out of measures to expand sanatorium, resort, tourist and excursion services for the working people. In the years since the 16th Trade Union Congress, over R2 billion have been channeled into construction of new sanatorium complexes and tourist facilities and into modernizing and providing amenities at existing sanatoriums.

At the same time, there are still shortcomings in the organization of the treatment process, leisure, catering and cultural and consumer services in the work of certain territorial councils, sanatoriums and tourist institutions.

The Central Auditing Commission has paid great attention to the financial and economic activity of the AUCCTU main administration for capital construction. The audits and checks showed that serious shortcomings had taken place in the work of the main administration for capital construction and the capital construction administrations and departments of a number of trade union councils.

The financial and economic activity of trade union press organs has been constantly monitored by the Central Auditing Commission. In the last 5 years the one-time print run of newspapers and magazines has increased 20 percent. TRUD, Soviet trade unions' central press organ, today has a print run of 13.5 million copies. Profizdat, the AUCCTU's publishing house, publishes about 300 titles of books and pamphlets each year. In the period under review the profit from publishing activity increased 18 percent.

The party Central Committee attaches great importance to work with letters and to improving the organization of the reception of citizens. Since the 16th USSR Trade Union Congress more than 1.8 million letters from Soviet citizens have been examined by trade union organs, more than 200,000 of them in the AUCCTU apparatus.

The Central Auditing Commission has systematically checked work with working people's letters and statements in AUCCTU departments and administrations and institutions under AUCCTU jurisdiction. The checks show that working people's letters were usually given timely and careful consideration and received detailed ansers and explanations. The proposals and criticisms set out in the letters were systematically generalized and used in the preparation of decisions by state and trade union organs.

In March 1981 the CPSU Central Committee adopted a resolution "on measures to further improve work with working people's letters and proposals in the light of the 26th CPSU Congress decisions." The AUCCTU formulated and implemented a number of practical measures to fulfill the CPSU Central Committee resolution. This question was examined at the 13th AUCCTU plenum. The decisions that were taken instruct the AUCCTU apparatus and trade union organs to step up the attention they pay to this important matter and to eliminate the existing shortcomings. We must be guided by Comrade L.I. Brezhnev's instructions that "every party worker and every leader must regard a sensitive, attentive attitude toward citizens' letters, requests and complaints as his duty to the people and the party."

In the period under review the AUCCTU and trade union councils and committees have taken measures to improve control and auditing work, to step up the activity of auditing commissions and to increase their role in strengthening financial discipline. Many auditing commissions--and more than 2 million people have now been voted onto them--perform their duties conscientiously and with a sense of great responsibility. More attention must be paid to the work of auditing commissions. Trade union organs must improve their methodological leadership of auditing commissions, generalize and disseminate in timely fashion the experience of the best commissions, and give them practical help in performing their duties.

As a rule, the Central Auditing Commission has examined the results of audits and checks with the leaders of the audited organizations taking part in its sessions. Measures to eliminate the revealed shortcomings, to improve the standard of economic, financial and control and auditing work and to improve bookkeeping and accounting have been formulated in conjunction with the leaders. The execution of the commission's own decisions has been constantly monitored.

We must continue to improve the style, forms and methods of work of the Central Auditing Commission and to incr ease its effectiveness and efficiency.

Comrade delegates. Allow me to express the confidence that the multimillion-strong army of trade union members, inspired by the speech by Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, and by the CPSU Central Committee greetings message, will continue to improve their work by channeling working people's political and labor activeness, experience, knowledge and abilities into the successful implementation of the historic decisions of the 26th CPSU Congress and into a fitting greeting of the 60th anniversary of the formation of the USSR.

SOCIOLOGISTS FIND PROBLEMS IN WORKER DORMITORIES

Moscow SOVETSKAYA ROSSIYA in Russian 6 Apr 82 p 2

[Article by B. Pavlov, deputy sector head, Institute of Economics, UNTs [Urals Scientific Center], USSR Academy of Sciences, candidate of philosophical sciences, Sverdlovsk: "Boring Evenings"]

[Text] If one analyzes everything that is said and written about worker dormitories, the idea that one gets about this collective home for young people is linked with a single concept -- "Boring!"

But let's express a little doubt about this. Could it be that it is not a problem of boredom at all? There are local mixups, unresolved problems, and in general. . .

For many years the Institute of Economics, Urals Scientific Center, USSR Academy of Sciences, has been conducting sociological research on problems of worker dormitories. Questionnaires were filled out by tens of thousands of residents, educators, and activists, and several thousand dormitories were studied. The geography covered by the research is vast: the Urals, the Altay, the Ukraine. During those years the institute's data banks have gathered and summarized the opinions of thousands of people who were involved in one way or another with the dormitories of Cherepovets, Khar'kov, Orenburg, Chelyabinsk, Tyumen'. . . By relying on this research, let us take a look at the problem of recreation, the problem of boredom in young people's dormitories.

With what can one compare the life in a worker dormitory? How can one establish criteria? According to the logic of things, one should place on the second side of the scale the family. Thus, the young worker in a family and a young worker in a dormitory. Who is bored more, who is more active, who is happier?. . . Immediately the partial observations and conclusions of correspondents find confirmation in the statistics of large numbers.

Among the residents of dormitories, twice as many people as in families are not on friendly terms with books (they do not regularly read newspapers or magazines). The relative number of those who visit lectures is one-third here, as compared with those living in families. Only half the residents of dormitories watch television programs regularly (in families, the number of television viewers approaches 100 percent). Residents of dormitories visit evening dances half as frequently as those living with a family; and their rate of participation in sports, tourism, and creative and amateur occupations is one-third that of persons living at home. If one also analyzes other forms of recreational activities that are linked with culture, we are forced, when dealing with people living in worker dormitories, to apply the words "less frequently," "less," and "more weakly." Culture in the dormitory, as a rule, is "supplemented" by anticulture. The residents of worker dormitories visit wineshops more frequently. Worker dormitories are the special concern of the Komsomol instant-reaction detachments, the people's *druzhinas*, and the local policemen.

At first glance we face an incomprehensible situation. The residents of dormitories have approximately 20-30 percent more free time (they are not encumbered by urgent family concerns, and their everyday living conditions have been socialized to a greater extent). Secondly, the youth collective represent additional opportunities for organizing interesting things to do, they are an additional means for "infecting" one another with amateur occupations and interests. Thirdly, the residents in dormitories have a level of monetary income per month that is approximately 1½ times higher (in terms of an individual worker) than their peers living at home have.

Potential opportunities exist. But in actuality we see a reduction in the rate of activity of young people in the cultural sphere. Why is that?

When we speak of the state of recreation for young people in dormitories, we have in mind first of all the socially organized recreation. Summarizing the experience of the work at one or another of the better dormitories, we strive first of all to demonstrate the "many-flowered nature" of these forms. However, we frequently forget their effectiveness -- the qualitative and quantitative aspect.

In one of our studies we computed the average number of persons in the audience at various activities during the year. What do you think those studies showed? An average of 33 persons attends a lecture; 36 persons attend a cultural night at the movies; 31 persons go to a stage performance; and 19 persons participate in a walk in the woods or a tourist's walk. These activities encompass simultaneously a total of only 5 to 20 percent of the residents. But could it be that the residents take part in the activities several times, for example, each month, quarter, or year? We computed that indicator, computed the average duration of one activity, and compared all that with the overall free-time budget of the residents. It turned out that the socially organized part of that budget is no more than 3 percent. That is in the best dormitories that were represented at an oblast-level competitive review. But what about the other ones?

Recently in the dormitories of one of the rayons in Sverdlovsk, on the initiative of the party's rayon committee, we carried out an unannounced study. On one of the Saturdays, between 6:00 and 9:00 p.m., we observed how the recreational time of the residents was organized: what measures were planned and were being carried out that evening? What was the number of its participants? Who was conducting it? Were the Red Corner, the sports room, and the other areas intended for cultural and everyday purposes open? How many residents were in them? What were they doing? etc. No one in the dormitories had previously been told that we would be carrying out our study.

Out of 17 dormitories in the rayon that were checked on that evening (dormitories housing a total of approximately 5000 persons), a discoteque was in progress in only one Red Corner. In all the others we saw open Red Corners with from three to seven television viewers, open Red Corners with a turned-off television receiver and no one in them, and closed Red Corners.

We made computations: on that evening the dormitories in the rayon had 2500 young people present. The others had gone home for Sunday, or had gone out for a walk, to go to the movie, or on a date. . . Approximately 100 were in public recreational areas — that is approximately 4 percent of those present and two percent of all the residents.

Thus, in order today to increase the effectiveness of the public organization of recreation in worker dormitories, it is necessary first of all to answer two questions: "Why are only a few measures being carried out in dormitories?" and "Why are there only a few participants in the activities at the dormitories?" Obviously, the answers to these questions must be sought in the dialects of "supply and demand."

Who lives in today's worker dormitory? The age of the resident is approximately 25½ years (during the past five years the average resident in the worker dormitory has "aged" by 1½ to 2 years); with regard to education, he has approximately 10½ years of schooling (the figure includes the ½ because sociologists arbitrarily equate one year of training at an institution of higher learning with one year in school); they live [in the dormitory] an average of approximately two years, and the amount of men and women is approximately equal. But that is the average portrait of the dormitory resident. If one takes a more differentiated approach, the age in different groups of residents fluctuates from 18 to 40 years. Education: from 7 to 15 years. Approximately half the residents do not remain in the dormitories more than a year, and every fourth one has been registered for no less than 3 years. Now add onto that variegated nature of the groups those substantial differences that are typical of men and women.

The activities in the Red Corner [recreation and reading room] are usually planned for some kind of "average" resident. But he is not "average." He is different.

It is, of course, easier to make a diagnosis than to carry out "a course of treatment," because, it turns out, instead of one lecture on a single topic it is necessary to hold several lectures, and those lectures are on different topics. And in one instance that might be a lecture, and in another, it might be a debate. This kind of differentiation in the work will, obviously, require the search for additional organizational, ideological, artistic, and other reserves both within the dormitory and outside of it.

The second factor for increasing the activity rate of the socially organized forms of recreation in dormitories is the material base of culture. There exists the rather widespread opinion that the basic reason why dormitories are poorly equipped with cultural items lies in the difficulties involved in acquiring them. Without denying the importance of this factor, we nevertheless feel that there is a different reason.

Who in the dormitory needs the cultural items? Primarily the residents. Both the educators and the representatives of the public organizations have an interest in this. But who bears the material responsibility and who has all the worries of storing and using those articles? The administration. Additional articles mean additional worries.

For that reason one invariably sees on the doors of public rooms, despite the efforts of the public organizations, various kinds of locks, protecting the accountable material property intended for cultural use. Where is the way out? Apparently it is in the development of an effective system in which the administration, the public organizations, and the residents have a mutual self-interest in the development of culture.

The striving of the administration at the enterprises to push "over the threshold" of their subordinate dormitories the recreational activities of the young people is to a certain degree influenced by the fact that the games, dances, and informal communication among young people both in small groups and in large collectives are not taken into account when evaluating the effectiveness of educational work. As a rule, the educator who has organized a cultural trip to the movies deserves a higher evaluation than one who has authorized dances to be held in the recreation room or has set aside rooms where one can always play a little table tennis, pool, chess, or dominoes.

When speaking about the development of socially organized forms of conducting idle time in dormitories, we by no means are acting as proponents of some kind of total organization of free time. There must be an optimal correlation between the public and the individual. It is necessary to strive for that measure with which the free time is used with the greatest efficiency for developing the personality of each dormitory resident.

SHORTCOMINGS IN CRIME INVESTIGATION

Moscow SOTSIALISTICHESKAYA ZAKONNOST' in Russian No 3, Mar 82 pp 2-6

[Article: "Make More Effective Use of the Party's Instructions on Improving the Work of Investigating and Preventing Crimes"]

[Text] In December 1981, the question of the procurator organ's performance of the tasks flowing from the decisions of the 26th CPSU Congress and the November 1981 CPSU Central Committee Plenum and the instructions of Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the presidium of the USSR Supreme Soviet, on improving the work of preventing, exposing and investigating crimes and on further raising the effectiveness of investigative organ activity and procurator supervision over the observance of the law in an investigation and inquest, was discussed during an expanded session of the board of the USSR Procurator's office.

Responsible workers from CPSU Central Committee organs, the USSR Supreme Soviet Presidium and the USSR Council of Ministers; directors of legal safeguards organs; learned lawyers; and press representatives participated in the work of the board.

A. Rekunkov, USSR procurator general, presented the report.

The speaker pointed out that a CPSU Central Committee Plenum and the sixth session of the USSR Supreme Soviet had been held in November 1981. During them, the five-year plan for 1981- 1985 and the state plan and budget for 1982 had been discussed and adopted, and the instructions of the 26th CPSU Congress had been defined concretely. All Soviet people heartily welcomed L. I. Brezhnev's brilliant speech to the plenum which was permeated with the enormous concern of the CPSU Central Committee and Politburo for the further development of our country's economy and for the carrying out of the party's social policy. The need to defend state interests persistently and purposefully and to struggle decisively against localism and violations of Soviet laws and the norms of party ethics and communist morality was pointed out in the speech.

An important and critical role in the carrying out of the CPSU Central Committee's instructions and requirements belongs to the legal safeguard organs. It was emphasized during the 26th CPSU Congress that the Soviet people rightfully demand that their work be as effective as possible, that each crime be investigated in the required manner and that the guilty ones receive the punishment which they deserve.

In suppressing and preventing crime and any antisocial phenomena which interfere with our forward movement, the organs of the procurator's office, internal affairs and justice, and the courts have been called upon to strengthen public discipline and to contribute to the maintenance of a healthy moral climate as one of the foundations for the socialist way of life.

The investigative organs are an important link in the carrying out of the measures to combat crime and to strengthen state discipline and law and order. Thanks to the party's constant concern, the investigative organs have been considerably strengthened during recent years; and their technical equipment, the working and living conditions of the investigators and their training to improve their qualifications have been improved. All this contributes to their more active work in exposing and suppressing crime.

In rendering the skill and selfless work of many investigators and procurators their due, the procurator general pointed out that we must concentrate our attention on eliminating the shortcomings in the work of the investigative organs and in the procurator supervision over the observance of the law when investigating crimes -- shortcomings which decrease the effectiveness of the struggle against crime.

In a number of republics, krays, oblasts, cities, and rayons, a very important investigative task -- the assurance of the inevitability of accountability principle -- is still not being fully carried out.

The USSR procurator office directed the attention of the republic, kray and oblast procurators to the need for continuous and unremitting attention on the organization of the work to expose crime. Exposure is the number one task for the investigative organs and procurator supervision since the condition of the criminal nature and the prevention of crimes depend a great deal on it.

Some investigators have still not fully mastered work methods for unsolved crimes. For example, commissions of criminal experts have been appointed unjustifiably rarely for cases of theft in the Uzbek SSR. Procurators and investigators have displayed passivity in the work on suspended cases involving unsolved crimes in Chelyabinskaya Oblast, Krasnoyarskiy Kray and Donetskaya Oblast. Procurator Abdullayev of the Narimanovskiy Rayon in the city of Baku did not study a single case involving unsolved crimes and had paid absolutely no attention to this work. He was removed from his position.

During the all-union conference of leading procurator organ workers in April 1981, the need to concentrate the efforts of the investigative organs of the procurator offices of the republics, krays and oblasts on the practical organization of exposing crimes and to eliminate displays of a bureaucratic approach to this work was mentioned. Many procurators drew the correct conclusions from this and were able to achieve good results. For example, the investigative administration of the Urkainian SSR procurator's office was able to provide timely practical help to many investigators; a number of dangerous crimes were exposed with the direct participation of the administration's workers. The persistent work to expose crimes of past years is bearing fruit in the Belorussian SSR. Although the work of the procurator organs of these republics has not been deprived of deficiencies, there is the conviction that the measures, which are being adopted, will bring great benefit.

Unfortunately, things are not this way everywhere. The necessary importance is still not being attached to organizational work in several procurator offices in the republics, krays and oblasts. As a result, the city and rayon link is not receiving the necessary help.

Organizational derelictions in exposing crime are committed most frequently of all during the initial stage. Proceedings are instituted more than 10 days after the commission of a crime in every fourth case involving serious bodily harm in Volgogradskaya Oblast and in every third such case in Vitebskaya Oblast. This has a negative effect on the results of the investigation. All procurators must keep a strict watch on the timeliness with which criminal proceedings are instituted.

Special investigative operational groups, which help to reveal crimes successfully "while the tracks are still hot", are operating in many large cities. Experience convinces one of the prospects and effectiveness of this work form. Meanwhile, it happens that these groups are staffed with insufficiently trained people and their composition is frequently changed. As the speaker emphasized, this question deserves the continuous attention of procurator office directors.

Violations of the law concerning the procedure for accounting for and registering statements on crimes have a negative effect on exposing crimes. As a result, timely measures are not always undertaken based upon the statements of citizens and opportunities for the collection of evidence are lost to a considerable degree. This hampers the investigation.

The strict and absolute execution of the requirements in Article 29 of the law "On the USSR Procurator's Office" is a reliable guarantee of the observance of the law in this matter.

The quality of the investigation must remain a matter of continuous concern. Not a single person guilty of a crime should avoid responsibility and not a single citizen should be subjected to the unfounded institution of criminal proceedings. The observance of these requirements in general determines the professional skill of the investigators and the level of the work of the investigative organs.

Meanwhile, instances of the passing of unjustified rulings to halt cases are still not isolated ones, the courts send quite a few cases back for additional investigation, including ones to the procurator investigators; and unjustified delays in an investigation -- and often even procrastination -- are tolerated in many cases.

Deficiencies in the appointment and conduct of commissions of psychiatric, bookkeeping, commodity, and other experts are having a negative effect on the quality and periods of an investigation. The USSR procurator general pointed out that the main investigative administration is not displaying the necessary persistence in solving the questions connected with this. There is a lot of work here for the procurators of the union republics, krays and oblasts.

Violations of the judicial procedures for investigations are being committed during an investigation. Of course, there can be circumstances which require that some case or other be investigated by the procurator organs because of its public importance or for the sake of greater completeness and objectivity. However, the procurators and investigators are not always guided by those principles which have been established by law. There are instances where the investigators and procurators -- instead of engaging in an investigation of complicated unsolved crimes -- suspend work on them and prefer to work on cases involving easier and more obvious crimes. In the Latvian SSR, one-third of the crimes investigated by the procurator's office were subject to investigation by the internal affairs organs. At the same time, the investigators of the procurator's office are investigating only 10 percent of the embezzlements committed with the use of an official position. This practice is caused to a definite degree by blunders in the direction of an investigation and by the incorrect evaluation of the investigator's work -- based on the number of cases and not on the professional skill in exposing crimes.

A great deal of the investigator's efforts and time are spent on investigating unjustifiably instituted proceedings. Of course, it is often possible to determine the truth only by an investigation. However, as experience shows, a thoughtful approach by procurators and investigators to the institution of proceedings permits the number of cases, which end in a discontinuance, to be considerably lessened.

The most important requirement for each investigator and procurator is to conduct an investigation based on a very strict observance of socialist legality. It is possible to approach the evaluation of the situation regarding legality during the stages of the investigation only from the position of an absolute execution of this requirement. Some procurators think that there is no reason for any special concern since they have few such violations. This is an erroneous approach. When evaluating the status of legality, one cannot limit oneself only to qualitative indicators, average figures and percentages. Any violation of the law -- even an isolated instance -- is inadmissable. Every signal about this must be checked in a very careful way. You see, we are talking about observing the constitutional rights of citizens, and any display of leniency and irresponsibility here is intolerable.

The further improvement of investigative work depends a great deal on how the achievements of modern criminal science and the capabilities of expert establishments are used in practice. Success in work comes to those investigators who continuously widen their knowledge, who are well versed in the achievements and capabilities of criminal science, and who correctly organize coordination with workers in the expert establishment and with the specialists in various branches of knowledge. V. Ladeyshchikov (RSFSR procurator) and V. Tsurkan (Moldavian

SSR), investigators for especially important cases; V. Dontsov (Gor'kovskaya Oblast) and P. Kabanov (Kalininskaya Oblast), procurator criminologists; and many others are skilfully using the capabilities of science.

One must be persistent in raising the effectiveness of using scientific and technical resources even higher.

It is necessary to elevate this work everywhere to a new level and to see to it that each investigator masters professionally the entire arsenal of resources which modern science is giving to him.

Why are such serious deficienceies in investigative work being eliminated slowly? One of the reasons is that some leading workers have resigned themselves to derelictions of duty and to a debasement of the role of investigators in exposing crimes and that they are inadequately instilling a critical attitude and intolerance towards violations of the law.

For example, investigative work is at a low level in Checheno-Ingushskaya ASSR (the procurator is A. Rostov). Last year, 50 percent of the cases were suspended and discontinued there. Every third one of these decisions was rescinded as being unjustified. A case of embezzlement on a very large scale, which was committed by Bandayev, was illegally discontinued three times over the course of three years. The case was sent to court only after the intervention of the higher procurator. Bandayev was convicted. The procurator of the autonomous republic, his deputies and the board of the republic procurator's office must correct the situation without delay.

The toleration of shortcomings lowers the level of investigative work.

In order to radically improve the organization of investigative work and achieve a greater return, it is necessary to consistently and persistently eliminate the obstacles which interfere with it.

In some investigative organs, animated work with people is replaced by meetings, sessions and numerous instructions which only create the appearance of energetic activity. Elements of formalism and the absence of concreteness in the direction of an investigation appear at times in the work of the investigative administrations and sections of the procurator offices in Azerbaijan SSR, Dagestanskaya ASSR, Kirovskaya Oblast, and several others.

A very important direction in the organizational work of republic, kray and oblast procurators and investigative administrations and sections is the development and implementation of measures to reveal and eliminate the reasons and conditions which contribute to the commission of crimes.

The material of an investigation often serves as the basis for evaluating the crime's status and for developing organizational measures. This has fundamental importance for a procurator since the struggle against crime, the development of measures to prevent crimes and other offenses jointly with other organs, and the coordination of this work are the primary directions in the activity of a procurator's office in accordance with the law "On the USSR Procurator's Office".

The results of the preventive work still do not fully correspond to the extremely imposing -- if one is to judge from the numbers -- volume of this work.

In places, the necessary attention is still not being paid in the practical work of many procurators to the development of concrete measures to prevent the more widespread crimes. It is necessary to arrange matters so that the entire system of preventive work will be consistently directed toward the eradication of crimes and other offenses.

Recently, the practice of party committees examining questions concerning the strengthening of the law based on information from the procurators is becoming more and more widespread. This attaches the force of party directives to the decisions which are worked up, contributes to the involvement of the enormous capabilities of public control and work collectives in the struggle against anti-social phenomena, and permits more effective control to be exercised over the implementation of the planned measures and real changes for the better to be achieved. Procurators must expand this practice even further in order to fully use all the opportunities for improving the work of prevention.

The improving of the organizing role of procurator organs in preventing offenses and the insuring of a composite approach to this are determined to a great deal by the work level of the coordinating meetings and by the coordinating of the actions of all subunits in the republic, kray and oblast procurator organs. Their activity must be characterized by a common direction in the solution of the most important questions.

The effectiveness of many general supervision measures and the persuasiveness of the ideas and information of the procurators are intensified when material on investigated criminal cases is used in them. In its turn, material from general supervision practices must be used more actively to improve the quality of an investigation.

The organizational work to improve an investigation depends to a decisive degree on the level of work with the personnel. Almost all investigators now have a higher education. A total of 70 percent have worked in the procurator's office more than three years and more than half of them are communists. During the past year, every third investigator has been singled out for his successes in work, and 119 have been awarded decorations and medals. However, quite a bit still remains to be done in the work with personnel so that the procurator office workers will be equal to the requirements which are now being imposed on the law enforcement organs.

During the 26th party congress, Comrade L. I. Brezhnev emphasized the high responsibility of law enforcement organ workers in the strengthening of socialist legality and law and order. He said; "The professional knowledge of the workers in these organs must be combined with civil courage, integrity and justice. Only such people can worthily carry out the serious duties which have been imposed on them".

It is necessary to protect in every way possible the procurator's office from penetration by dishonest and morally unstable persons and to decisively get rid of those who conduct themselves unworthily and who abuse their official position. At the same time, it is important to continuously develop a sense of professional pride and high moral responsibility to the state and society in procurator office workers.

In a number of oblasts, the turnover of investigative personnel is high, and a significant number of them leave on their own personal request. One of the reasons for this condition is the insufficient concern of procurator office directors for the creation of normal working and living conditions for the investigators.

In order to control investigative organs on a level equal to modern requirements, it is first necessary to achieve a good organization of investigative work. It is important to attach more operativeness and militancy to all the activity of procurator organs, especially to the investigative organs, and to point them in the main directions which have been pointed out by the party's Central Committee.

Questions concerning the economy, the food program and the struggle to safeguard agricultural products are now at the center of the party's attention. As was pointed out during the 26th party congress, the foundation for solving all the other tasks, which are facing our country, is being laid in the area of the economy.

The necessity to suppress mismanagement and wastefulness effectively and decisively was once again emphasized during the November 1981 CPSU Central Committee Plenum. The procurator organs must significantly intensify their work to prevent and suppress embezzlement, bribery and profiteering; react sharply and without delay to indications that they have been committed; and improve the operativeness of the investigation and the level of procurator supervision over the observance of the law during the hearing of cases involving these crimes in the courts. The work of compensating one who has been caused material losses and of eliminating the reasons and conditions which contribute to the commission of embezzlement and other mercenary crimes must be performed more persistently and better.

The actions of those economic directors, who shut their eyes to embezzlement and abuses and who exercise their control functions carelessly, must be responded to.

In each case involving large-scale embezzlement and criminal actions which cause serious material loss to the state, it is necessary to carefully find out why the control and inspection organs did not reveal the abuses in a timely fashion.

New legal norms on the criminal responsibility for extortion and violations of trade regulations have recently been adopted in the union republics. Procurators everywhere must adopt all the measures which depend on them so that these laws will be applied actively and correctly and that they will indeed serve to halt abuses.

The USSR procurator general pointed out in conclusion that the role of the law and legality in solving the tasks of communist construction is continuously growing. Under these conditions, it is not enough to work strenuously. It is necessary to work with the maximum effectiveness and to direct every effort toward the achievement of real results in the strengthening of socialist legality and law and order.

'TRUD' ON USSR TRADE UNION ACTIVITIES

[Editorial Report] Moscow TRUD in Russian 16 March 1982 publishes on pages 1-4 an unattributed roundup of statistical information of Soviet trade unions under the rubric "From Congress to Congress." This begins as follows:

"At the present time the USSR trade unions unite over 130 million people in their ranks--17 million more than on the eve of the 16th USSR Trade Union Congress.

"Some 67 million people, that is every second trade union member, have permanent public assignments.

"Every year over 25 million people are involved in all forms of study. The main bulk of working people are busy in trade union aktiv schools.

"There are 141,700 standing production conferences in operation in the country. Over 6.2 million people, of whom 63.4 percent are workers, have been elected to them. In the last 5 years, over 7.3 million proposals have been adopted at standing production conference sessions and 82 percent of them have been introduced into production. And every year, through the introduction of standing production conference proposals, the national economy has profited by savings of about R800 million.

"From 1977 to 1980 the number of primary organizations of scientific-technical societies increased by 9,300 and of the all-union society of inventors and rationalizers by 16,300. The membership of these societies increased by 4.73 million and now total 21.6 million.

"During the 10th 5-year plan, a hypothetical R29.2 billion were saved in the national economy through utilizing over 20 million inventors and rationalizers' proposals, which was 150 percent more than in the 9th 5-year plan."

The information continues on page 2 as follows:

"On the initiative of the AUCCTU an all-union public review of working women's working, living and leisure conditions was held in 1977-1979. During the review, almost 2.5 million proposals were received, of which over 80 percent were introduced. As a result of their implementation, 1.3 million women were transferred from heavy physical work and out of production units with harmful working conditions, and 385,000 woemn workers were released from night shifts.

"As a result of work conducted by trade union and economic organs, the accident frequency indicator was reduced in 1977-1981 by 21.2 percent and cases of severe injury fell by 12.6 percent."

Details are also given on page 2 of improvements in health care, leisure and public catering. The remaining information on pages 3 and 4 deals with the increased emphasis on physical culture and sport and increased facilities for cultural and educational activities.

WESTERN WORKPLACE SOCIOLOGY SURVEYED, SCORED

[Editorial Report] Moscow NAUCHNYY KOMMUNIZM in Russian No 2, March-April 1982, carries on pp 97-105 a 7200-word article by V. A. Mirzoyan titled "The Problem of the Meaning of Work in Contemporary Bourgeois Sociology: Illusions and Reality." The article contains an extensive survey of recent Western research on the social psychology of the workplace. Mirzoyan claims that the problems bourgeois sociologists have uncovered have been solved under socialism.

BRIEFS

LITHUANIAN PARTY OFFICIAL ON TRADE UNIONS--Moscow PRAVDA in Russian 21 February 1982 publishes on page 2 a 1,800word article by N. Dybenko, secretary of the Lithuanian CP Central Committee, under the heading "The Workers Held Discussions; What the Report and Election Meetings in Trade Unions Show." Taking examples from Lithuanian experience, Dybenko outlines the role of the trade union report and election meetings and trade union activity in general. He notes that "in recent years party gorkoms and raykoms have considerably stepped up their attentiveness to trade union life" and that the party leadership "constantly examines questions of the trade unions' activity and party leadership of them." The article outlines the results of the report and election campaign and discusses the role of collective treaties, stating that "certain trade union committees do not take the trouble, in particular, to organize effective control, fail to display the due principled approach and do not listen every quarter, as is required, to leaders' reports on the course of fulfillment of collective contracts." It is stated that "the leadership of the republic's Ministry of Agriculture has not once in the last 5 years discussed such questions in its collegium, although it should do so at least once a year." Dybenko then discusses the role of socialist competition and concludes by noting that trade unions are "launching a still wider struggle for the successful fulfillment of the 26th CPSU Congress decisions and the 11th 5-year plan tasks. It is the duty of party organizations and all communists to constantly help them to achieve these noble goals." [Editorial Report] [PM021557]

PAPER ON ANONYMOUS CRITICISM--Moscow SOTSIALISTICHESKAYA INDUSTRIYA in Russian 5 March 1982 publishes on page 3 a 1,800-word "Review of Letters" by the newspaper's letters section under the heading "The Anonymous Letter-writer at a Crossroads of Opinions." The article reviews readers' letters on the subject of anonymous letters of criticism, quoting views both for and against the practice of writing anonymously but largely rejecting the views of those who defend the anonymous writer. Examples are given of the harm which can be done by anonymous criticism, "slandering" the innocent and causing unnecessary investigations. While asserting the importance of free criticism, the article says that "the vast majority of readers believe that slanderers who hide behind masks must be more actively exposed and dealt with, with all the severity of the law." In concludes: "Analysis of the numerous official replies to honest, open criticism which the editorial office receives (thousands every year) indicates that in the vast majority of cases party principles are adhered to firmly in investigating working people's complaints and warnings locally and in ministries and departments. However, it cannot be denied that some cases of the suppression of criticism still occur. But the fact that the newspapers write about them, expose those responsible for the suppression and seek their punishment indicates yet again that the party's course of developing criticism and self-criticism is being steadily and consistently implemented. Criticism is the weapon of the strong. And we must use it everywhere, skillfully and fearlessly." It is added that where a writer requests it, the newspaper will conceal his name. REGIONAL

NEW REGIONAL TASKS FOR MOLDAVIAN SCIENTISTS OUTLINED

Kishinev SOVETSKAYA MOLDAVIYA in Russian 1 Apr 82 p 3

[Text] Increased contribution by scientists to further development of scientific-technical progress and to solution of the most important national economic tasks of the 11th Five-Year Plan were the main questions examined at the session of the annual general meeting of the Moldavian SSR Academy of Sciences, which was held on 31 March in Kishinev. Work results of its subdivisions during the year since the 26th CPSU Congress have been summed up here.

A.A. Zhuchenko, president of the republic's academy of sciences and corresponding member of the USSR Academy of Sciences, said in opening the meeting that during the past year efforts of scientists have been directed at fulfilling the decisions of the 26th CPSU Congress and the 15th communist party congress of Moldavia. Basic attention has been devoted to raising the efficiency of fundamental research on the basis of subject topicality, integration and strengthening of the links between science and practice. A central place in the plans for the current five-year plan period is devoted to researching problems of contemporary social development, protection and rational use of natural resources and development of the agroindustrial complex, power engineering, land improvement and other sectors of the republic's national economy. Provisions have been made for accelerating the development of some new directions in the fields of biology, technology, earth science, nature management economics, agricultural power engineering and other fields of knowledge.

A.A. Zhuchenko described in detail the reorganization carried out in the republic's academy, aimed at raising the scientific work efficiency of its institutions. Characteristic features of the new structure in organization of science in the republic, he noted, is transition to the problem-directed principle in planning research and experimental design operations which ensure interdepartmental approach to solving the most important national economic problems, strengthening the academy's relations with VUZ's and sectorial-industrial and other subdivisions and science's increased influence on scientific-technical progress.

Participation of scientists in solving a complex of scientific problems envisaging creating scientific bases for the development of agriculture, protection and rational use of natural resources, creation of new materials, technical means and manufacturing methods and in working out questions of socioeconomic and cultural development of the republic was described in the report by D.V. Gitsu, chief scientific secretary of the Presidium of the Moldavian SSR Academy of Sciences and corresponding member. In describing activities of the main staff of Moldavian science in 1981, he noted that new theoretical results obtained in the fieldof mathematics, physics and chemistry, biological, agricultural and technical sciences, earth science and the research by social science scientists are used on increasingly broad scale in the national economic practice. The economic effectiveness from using nearly 100 scientific developments last year has increased 16 percent compared with the previous year and totaled R43.5 million. The extent of their introduction has increased. The research results of scientists have found application in all main sectors of industry and agriculture, in many ministries and departments, at major enterprises and in cities and rayons of the republic. More than one-half of the developments have been introduced in accordance with economic agreements.

The organizing and coordinating role of the Moldavian SSR Academy of Sciences has increased in the solution of republic-wide problems, including in the field of natural and social sciences. Its cooperation with ministries and departments in developing most important integrated programs has continued. Research and introduction of its results has been conducted on the basis of joint long-term programs with the republic ministries of Agriculture, the Fruit and Vegetable Industry, Health, Higher and Secondary Specialized Education, Motor Transport, the Food Industry and Land Reclamation and Water Resources, Moldglavenergo and Goskomselkhoztekhnika, Kotovskiy and Orgeyevskiy Rayons and Kishinev enterprises and organizations. The general academic plan of measures for rendering assistance to the national economy of the republic has been successfully realized.

A report by A.M. Andriyesh, first deputy chairman of the republic council for coordination of intersectorial scientific-technical problems and corresponding member of the Moldavian SSR Academy of Sciences, was devoted to the results in fulfilling intersectorial scientific-technical programs. During the past year, he noted, the council has completed developing programs for the most important problems of the agroindustrial complex and other sectors of the national economy. Such work programs have been confirmed by the government of the republic for 15 intersectorial scientific-technical problems. A considerable scientific potential--14 academic institutions and more than 100 collectives of VUZ's, sectorial scientific research institutes, NPO [scientific production association], enterprises and planning institutes and organizations--has been concentrated on their solution. A substantial contribution to solving them has been made by subdivisions of the academy. Equipment of the locally established center for automation of scientific research and metrology together with its operating system of collective use of scientific equipment, the SKTB [special technical design bureau] of the institute's experimental plant of applied physics, the experimental base of the department of biological and chemical sciences and other subdivisions are being used in implementing the programs.

With due regard for significance of the agroindustrial complex in the republic's economy a great share of scientific potential is directed toward solution of its problems and, first of all, toward protection and rational use of natural resources. Scientists' research is directed at developing measures for soil cultivation, struggle against soil erosion in row crop cultivation by the industrial method as well as in orchards and vineyards of the industrial type, development of slopes destroyed by ravines, rational use of landslide areas and reclamation and development of various kinds of landslide slopes and others. Great attention is being devoted to protecting and improving the use of water resources, developing methods of water purification and of low-waste and internal-drainage water utilization methods in industrial and agricultural production.

The main direction of research, connected with ensuring high efficiency of the agroindustrial complex, is in implementing a republic-wide scientific program aimed at creating an adaptable system of agricultural production under conditions of intensification and large scale concentration. Scientists are engaged in developing ecological bases for raising the adaptable potential of agricultural crops. Questions are being studied regarding their distribution with due consideration for soil and weather peculiarities of the republic's macro- and microzones, utilization of differentiated methods of plant cultivation and broad utilization of biologically active substances to control their growth and development. Economic and geographic research is becoming an important part in creating ecologically stable agroecological systems. Scientists have mapped the lands for the purpose of revealing the structure of soil covering for internal economic organization of agricultural territory. Means of aerocosmic information have been defined in compiling plans for land utilization by farms and the administrative region. A system of methods has been created for compiling microclimatic maps of frost and chill hazards, making it possible to rationally distribute orchards and vineyards.

Among other important problems the speaker listed the development of measures for preventing harmful consequences of stresses, increasing productivity of farm animals under conditions of their industrial upkeep, creating principally new methods of processing, storing and transporting agricultural production and research by social scientists aimed at improving organizational forms and economic interrelationships in the APK [agroindustrial complex].

Research conducted in the republic has created conditions for increasing the mineral and raw material potential and for expanding the sphere of utilization of nonmetallic minerals in the construction materials industry. Scientists have rendered substantial assistance to industrial enterprises in efficiently processing metals, reconditioning machine components and extending the periods of their fitness. New semiconductor materials and micro- and optoelectronic structures have been created for sensors, information recording systems and thermoelectric devices used in scientific research, industry and agriculture.

The speakers and participants in the debate devoted great attention to questions of improving coordination and integration of scientific research work, organization of its introduction and strengthening and better use of the science's model-production and experimental base. The necessity of further developing fundamental research, to ensure acceleration of scientific-technical progress, has been noted. The speakers also noted that increased efficiency of all work of scientific institutions will be their worthy contribution to preparations for the 60th anniversary of founding the USSR.

Reports were delivered at the meeting on the work of scientists who have been honored with prizes and awards of the Presidium of the Moldavian SSR Academy of Sciences. Newly elected administrators of scientific institutions of the republic's academy of sciences were confirmed.

Scientific reports were heard. S. S. Chibotaru, academician of the Moldavian SSR Academy of Sciences, devoted his address to the topic "Foreign Authors on Moldavian Culture and the Contemporary Ideological Struggle." The processes of self-organization in physical, chemical and biological systems have been analyzed by V.A. Kovarskiy, corresponding member of the republic's academy of sciences.

F.I. Furduy, candidate of biological sciences, described ways of increasing stress resistance and adaptable means of organisms.

P.P. Petrik, secretary of the Moldavian CP Central Committee, participated in the work of the annual general meeting of the republic's academy of sciences.

ESTONIAN EDUCATORS STRESS TEACHING OF NATIVE LANGUAGE

Tallinn MOLODEZH ESTONII in Russian 16 Mar 82 p 3

[Article by A. Zaytseva: "A Sense of Mission"]

[Text] --Tell me, what kind of pupils do you like?

> --Bold ones, who know how to defend their opinions, those who are not indifferent, who are excited about something--I do not suffer from "Dauphinism" myself when everybody is a "Dauphin."
>
> --Do you like your work?
>
> --Of course. Otherwise, what is everything for then?
>
> From an Interview with O. P. Barabaner

. . . If I were to be asked: Why is it that you picked someone like Ol'ga Petrovna Barabaner, a teacher who has worked in school for no more than a year and a half and who possesses neither seniority nor experience? I would reply: This is not an essay in praise. I want to show a young teacher in a young school faced with numerous problems. I want to show a person in the process of overcoming.

In essence, the situation is ordinary: To become established in your profession is always connected with difficulties. But here is a school which is four years old, and that means still without traditions--within the pupil and in the teacher collective. A school which has not yet become aware of the importance of the subject which Ol'ga Petrovna teaches--the Estonian language. Finally, children who have moved here from various areas and who have come from various schools.

She runs the senior classes. What did she begin with?

--Name an Estonian writer.

--Victor Kingisepp.

Do you laugh or do you cry?

We began with acquiring the textbooks--two years before this Estonian was not taught in the ninth grade, and textbooks were not bought. There is no syllabus, no methods aids, explain it on your fingers. And suspiciousness in the class:

--We always got fives in Estonian.

--And we never wrote papers.

--And what for, after all. . . .

You can teach pupils to give up easy fives and teach them to write papers, but to explain "what for, after all. . .," so that it reaches their consciousness. . . . If someone's mama comes and says:

--Why torture him; he is going to study at the Tallinn Polytechnical Institute, there are intelligent people there, and they will speak Russian with him.

How do you educate an intelligent person?

. . . If we were to disassemble in a purely conventional way the work which a teacher of the Estonian language has to do into its components, it would be the direct teaching of language, an introduction to the republic's culture, acquaintance with the national literature, and, finally, the cultivation of consciousness, the cultivation of the individual. This cultivation could have been called the super-task, but it is rather the basis, the foundation. With an awareness of "what for" the desire to study begins. This is the fundamental shift in consciousness which the teacher seeks to achieve. How? By creating interest? As Ol'ga Petrovna says--"Catch up, overtake, and interest." This is about the boy who ran away from his lesson, and his parents called upon the teacher to create an interest in him. . . .

--I do not have any backward pupils; I have children who work, and there are idlers. I give a grade for the fact that a person has learned something.

A girl who has the language may get a three in a quarter because she did not consider it necessary for herself to memorize poems and write papers. A two goes not to the one who does not know, but to the one who does not want to know. "You did not understand something--I will explain." But if he does not come for the "explanation"? In one quarter she gave 13 twos. An extradinorary event in the school. How did this happen, they say, we never had any problems with the Estonian language. But now there will be, the teacher replies. The notorious "fear of twos" and percentomania--a normal teacher does not fit in this system, and for this reason life is not sweet for him. One wonders why a five in Estonian which is known to be undeserved and which has become customary in certain schools--why is this not an extraordinary event? A five which undermines any basis of pedagogics, and turns any idea of criteria topsy-turvy in the eyes of children. . . .

Here is something interesting: With the general five point grade system, every teacher nevertheless has his own system, his own, if one may put it this way, price for a grade. And this is always felt clearly by the children. In Ol'ga Petrovna's system, there is an informal logic, in the way that her approach to any situation that the school puts before her is informal. At first glance, the decisions which she chooses might seem to be pedagogical sedition, but is this not because we have become too accustomed to formal decisions?

. . . The situation was like this: The children had become accustomed to working on their own things during the Estonian lessons. Physics, chemistry, and whatever else. How is one to fight against this?

--Whistle, holler, bang, stamp my feet, and get authority? It does not work with me. I see that a boy is copying physics. If I forbid him--he will still copy, he will do it on the sly. And he will not listen to my lesson anyway, he is not interested in that, he is afraid of the next lesson. All right, I say to him: I give you three minutes for your copying. After that, you will open your textbook and study with the class. Indescribable happiness: They have permitted copying. During the change of classes, I go up to him: Well, show me what you do not understand in physics, I will explain. I tell the physics teacher: Your pupil does not understand this type of problem. What is he doing, copying, he asks. I do not know, I answer. Then chemistry. A difficult topic--hydrolysis. They are working on chemistry, and that is the end of it. I understood that until we clear up hydrolysis, we will not move from the spot. All right, I say, let us get ready for the chemistry quiz. Only I am going to explain it to you in Estonian. They were overjoyed: Come on. However, they sit there and wag their ears, they do not understand. On the following day they brought dictionaries. The first thing that they learn in the ninth grade is to use dictionaries. And then all of the extraneous things fell away. And when there was a text on chemistry in the Estonian textbook, they started to go to the chemistry for help. I understood that my lesson had not worked out according to the curriculum, but how else do you find a common language with them? If they do not accept you, they do not accept your subject. You have to go through what interests them. A teacher has to be interesting.

This is about the question of how to interest children. Ol'ga Petrovna comes to all the evening events in the school. Not because she is obliged to. In order to associate with the children. There always are those who do not dance. She does not have her classbook with her; it is simply that all the people whom she teaches are her own people. And, of course, there are too few lessons for socializing. A fun and resourceful club was held with the neighboring school No. 9. Now in 8 "A" no one any longer asks why study Estonian. And they even want to organize with the eighth grade something like an oral magazine "What is New in Tallinn." And an Estonian language evening with school No. 31.

But none of this follows the curriculum either. But what about the curriculum, after all, from which you cannot get away? And where do you go to get away from boring textbooks, and how do you manage without methods aids?

Ol'ga Petrovna teaches language and gives brief reviews of the history of the Estonian literature. She is helped by a conversation book and notes from institute lectures. I was at a lesson devoted to the work of Yukhan Smuul. A poster was hung on the blackboard with a portrait of the writer, and there was a selection of newspaper materials devoted to his anniversary. The homework assignment, in addition to the usual one, was to read Smuul. There is no examination in Estonian; in the 10th grade she conducts a credit test by cards. The pupils make up the cards themselves, and in each one there is a conversational topic and grammar. There is also a system of credit for exercises--this is in all of the grades. Notebooks containing written work are checked at every lesson, and grades are put on a special sheet. If an exercise has not been done today, it will have to be done for the next lesson because at the end of the quarter everyone has to have grades for every item of work.

She is a strict teacher, Ol'ga Petrovna. Strict, above all, with herself, since she tries to correspond to the idea of a teacher which she has defined for herself.

--What do I regard as the main thing? Honesty in relationships with the people. If you have said something--do it. Trust. And also a teacher has to be strong, and never show his weakness, tiredness, or that he has been offended. You have to have a sense of humor. In combination, of course, with a sense of measure so as not to touch upon a sore spot. . . . What would I like to achieve? I would like with my lessons, my knowledge, and my thoughts to fill up that space which sometimes separates the children of Russian and Estonian schools.

Perhaps, this is called a sense of mission? A sense without which there can be no teacher.

Perhaps, it is a sense of mission that moves the teacher when in the face of innumerable problems he says:

--I intend to work for a long time right here in this school. I do not intend to jump around schools. If something is missing here--do it. Schools, of course, are different; in some places, of course, it is easier, but the children are the same everywhere, and different everywhere. The children are not guilty of anything, it is also difficult for them, children from different schools. And a different neighborhood or view from the window will not help me. . . .

For a year and a half Ol'ga Petrovna has been working in the fifth Tallinn secondary school. A year and a half--it is too soon to speak about results. No, we will not hear the rapid Estonian speech at the lessons. And the grades, as has already been said, have gotten worse on the whole, which disposes neither the children, nor the parents, nor the school administration toward the teacher. But here is what is strange: The children come to Ol'ga Petrovna's house when they feel like it. Not with all kinds of troubles and joys, but simply so, without any special reason, to sit, to have a chat, and to drink tea. And Ol'ga Petrovna who has a family and a nursing child, a 12-meter room, a mass of friends, a mass of unread books, and a shortage of free time, regards these constant visits as an inseparable part of her personal life. Or public life? Try to separate them. You cannot put this under any measure column or extra-curricular work. Should this be called giving, testimony to authority and trust? But friendship is friendship, as they say, and the results of work have to be measured more concretely. Now, if you could register that shift in the consciousness of a young person which changes his very perception of a subject.

I asked Ol'ga Petrovna to have a composition written in one of her classes on the topic of "A Lesson in the Estonian Language." The composition was written in two ninth grades. What can be said about them, such different ones? They are exceedingly sincere. They are critical and self-critical. There is no question that they are of great interest for the Ministry of Education of our republic, since they objectively reflect all of the shortcomings of the system of teaching the Estonian language and, moreover, contain very sensible suggestions. However, even this is not important for us now. These were, in their majority, compositions by people who were aware of the full importance of studying a subject which had been regarded by them as secondary. People who had become aware of the degree of their own ignorance and were sorry about it. I cannot cite them all, although all of them--without exception!--are interesting. I shall try to reduce them into one collective one which reflects the general picture:

"If you live in Estonia, it is simply shameful not to know the language, a person is obliged to study and know it. This thought does not give me any rest. After all, it is difficult and unpleasant when you do not understand what is being said to you. The Estonian language helps in socializing with friends. I did not want to study Estonian because I did not know what it was needed for. Now I understand, but, unfortunately, it is too late. Many believe this way: Why do I need this subject. I think that the reason for the ignorance of the language is just here. This is already the seventh year that I am studying Estonian, but I do not have a lot of knowledge. In the third and fourth grades I studied it conscientiously, but in the following ones I neglected it. This, maybe, is connected with the change in teachers. Frequently, if a lesson was supposed to take place according to the schedule, but for some reason it did not, this lost lesson was not made up. We went to lessons which were boring and monotonous like to forced labor. No one tried to get knowledge, only a grade was needed. To this day I cannot understand why people are sent to work at jobs where they are not competent. The teaching of Estonian has to be done seriously. Not much was demanded from us with it, and so we studied it in any old way. Strange as it may seem, there are not enough teachers of the Estonian language in the republic; they are not trained anywhere. And so, in our class alone 28 people will leave the school knowing that they do not know anything. And how many people is that in the entire republic? Many will leave school with the thought: "It is too bad that I did not study Estonian." The system of teaching the Estonian language which gives people reason for thinking of this lesson as secondary is a big obstacle for the solution of this problem. The reason for this is in the faultiness of the school curriculum--insufficient hours for teaching, an incorrect methodology, and also the narrowness of the textbook in which extremely little attention is given to Estonian literature. The dryness of the textbook is a big hinderance, especially in the junior grades where you have to work less with a textbook and give the pupils to show more independence, and inculcate a love of the Estonian language in them. I know only one thing: The more they ask of us and the more strictly they do it, the more useful it will be for us. Many of the kids probably will blame the teachers, but I think that we ourselves are at fault for everything. Everybody knows that in early childhood a foreign language is mastered easily, so would it not be good to solve the problem of studying the language beginning with kindergarten, or to teach it beginning with the second half of the first grade? I want very much to know Estonian perfectly. I am trying to work on this subject more seriously."

These lines are taken from the compositions of 18 pupils in 9 "A" and 9 "B". Maybe, you will say, the children are expressing impermissible ideas here? But we cannot prevent them from thinking. Especially, if the thoughts that are coming are already mature ones. It seems to me that Ol'ga Petrovna can even be proud of such pupils. Because she cultivated in her charges not only a respect for a subject, but a respect for another people and its language and culture. That is, those features which make up the great concept of an internationalism.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

AZERBAIJAN SSR

AMERICAN PROPAGANDA ESTABLISHMENT DEFINED, ATTACKED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 7 January 1982 p 2 carries a 1,800-word article by V. Bolshakov attacking VOA, Radio Liberty and Radio Free Europe for attempting to subvert the structure of the USSR. It is pointed out that "in 1980 the radio stations Voice of America and Radio Liberty increased broadcasts in the languages of the Caucasus and Central Asia, and in these broadcasts began to propagandize the 'experience' of the Iranian revolution resulting from Muslim clergy coming to the head of the government in the country. American propaganda, which in its broadcasts to Iran denigrates these clergy and the Iranian revolution itself by all means, often speaks in the role of Muhammad the Prophet in broadcasts to the USSR. When they call other nations of the USSR 'nonbelievers' they heap hostility on them, and they often call for a 'Holy War' [ghazavat] against the Soviet government which is not Islamic." Also, the Polish desk of Free Europe is accused of "inflaming nationalism."

PARTY AND ECONOMIC EDUCATION MEETINGS CONTINUE

[Editorial Report] Baku KOMMUNIST in Azerbaijani 20 January 1982 p 2 carries a 1,600-word reportage by L. Tahirov on a joint meeting of two schools of scientific communism at the N. Narimanov Oil and Gas Extraction Institute. The meeting concentrated on ideological questions. It was pointed out by geologist R. Dadashov, head of one of the scientific communism schools, that "the continuation of formalism in ideological work is still disturbing." Geydar Aliyev, first secretary of the CC AzCP and Candidate-member of the Politburo, said that "formalism is one of the most widely spread shortcomings, and the most difficult to root out in the activity of a number of party, soviet and administrative organs." On other party problems, Aliyev commented that "present-day difficulties are related to the complexity of the leadership of an economy which has made giant strides forward." Also, "despite the great work done in resolving the cadre problem, we still have flaws in this regard." On cadre leadership he said: "If today we are sometimes compelled to dismiss and severely punish a militia chief or a raykom secretary for dereliction of duty, it is because shortcomings still remain in the mentality of some segments of leadership personnel."

TOURISM CHIEFS FIRED, CENSURED BY PARTY

[Editorial Report] Baku KOMMUNIST in Azerbaijani 30 January 1982 p 4 carries a 1,400-word Azerinform dispatch on recent actions taken against the administration of the Azerbaijan Republic Tourism and Excursion Council due to "defective planning practices and the lack of goal-oriented and farsighted work on the basis of economic and financial activity." Therefore, results "remain significantly below the all-union per capita average." T.V. Zavyalova, chairman, was "freed from her duties." Deputy Chairmen A. Kh. Mirzabeyov and M.H. Mustafayev were "severely upbraided."

CENTENARY OF MUSTAFA SUBHI MARKED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 31 January 1982 p 4 carries a 900-word article by Professor M. Gazyyev, marking the 100th anniversary of the birth of Mustafa Subhi, one of the founders of the Turkish Communist Party. A brief biography is given.

MILITARY-PATRIOTIC EDUCATION STRESSED

[Editorial Report] Baku KOMMUNIST 9 January 1982 p 1 carries a 900-word lead editorial on military indoctrination in the Azerbaijan SSR. In describing the various means by which this form of education is conducted, it is noted that the "physical condition of youth entering the ranks of the army, their perfect knowledge of Russian and the nourishment of their military knowledge demand special attention."

FRIENDSHIP MAGAZINE TO PUBLISH IN ARABIC, LATIN SCRIPT

[Editorial Report] Baku KOMMUNIST in Azerbaijani 29 January 1982 p 4 carries a 200-word Azerinform dispatch noting that "a new number of the newspaper ODLAR YURDU, which is published for compatriots abroad by the Azerbaijan Society for Friendship and Cultural Relations with Foreign Countries, has been issued." The contents of the issue are described. "In the future ODLAR YURDU will not only be published in the modern script of the Azerbaijani language, but also in the Latin and Arabic script."

Baku ADABIYYAT VE INJASANAT in Azerbaijani 29 January 1982 p 2 carries an unsigned 500-word report on the contents of ODLAR YURDU, also mentioning that it will appear in the Arabic and Latin script. It is published twice a month.

BAKU JOURNALISM FACULTY TEACHES 'THE PRESS OF SOUTHERN AZERBAIJAN'

[Editorial Report] Baku KOMMUNIST in Azerbaijani 24 January 1982 p 3 carries a 950-word article by Tofig Rustamov, dean of the Journalism Faculty at the Azerbaijan State University imeni S.M. Kirov, describing new courses in their curriculum. "In 1981 by decree of the Azerbaijan SSR Ministry of Higher and Middle Specialized Education, departments of translation, television and radio journalism were created; through consideration of a new approach to scientific research, the press history department was changed to the department of press history and ideological work methods." With regard to the faculty as a whole, "all the teachers in the faculty are occasionally sent to the specialized faculty at Moscow State University and similar faculties, as well as to mass information and propaganda organs of our republic. Seventeen teachers are working in our faculty, of which 3 are professors and 11 are candidates of sciences or docents." In discussing additions to the curriculum it is noted that "students have shown interest in a specialized course, 'The Contemporary Press of Southern Azerbaijan,' which was introduced into the study plan this year."

NATIONALITIES OF AZERBAIJAN CLAIM MEDIA DISCRIMINATION

[Editorial Report] Baku KOMMUNIST in Azerbaijani 28 January 1982 pp 3,4 carries a 2,600-word Azerinform report on the 6th Congress of the Azerbaijan Journalists Union, at which "special attention is given to articles and broadcasts devoted to implementing the wise Lenin national policy of the party with Azerbaijan as an example, and devoted to aiding the friendship and reciprocity of the fraternal peoples of our Fatherland. S.A. Kerimova, chairman of the Administrative Committee of Nakhchyvan Journalists and editor of the newspaper SOVET NAKHCHYVANY-SOVETSKAYA NAKHICHEVAN; A. Kh. Arzumanyan, chairman of the GKAO journalists' organization and editor of SOVETAKAN KARABAKH-SOVETSKI KARABAKH; and N.I. Imangulieyev, editor of BAKY-BAKU and other speakers said on this subject that it was necessary to show the progress of all nations and peoples in a more balanced and brilliant manner."

LINGUIST ANALYZES FOREIGN WORDS

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 8 January 1982 carries a 900-word review by Samet Alizada of the book 'The Lexical Stylistics of the Azerbaijani Language' by T. Efendiyeva, which analyzes the strata of various foreign elements which have entered the language over its history. The reviewer notes that "foreign words are often called 'loans' or 'borrowings' in linguistics. Taking this into consideration in its entire scope, the author considers 'foreign' terms to be well accepted and demonstrates that we have generalized the majority of Arabic and Persian words in our language, whereas Russian and words 'of European origin' are words which can be characterized as terms, or technical vocabulary."

16TH CENTURY SUFI MANUSCRIPT STUDIED

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 8 January 1982 p 3 carries a 1,600-word article by Mohsun Naghyyev, chief scientific worker of the Manuscript Collection of the Azerbaijan SSR Academy of Sciences, on the discovery of an Azerbaijani translation from Persian of the early medieval Sufi work, the 'Pendnama.' The translation was done in the 16th century. "Works like these which possess a great mastery and esthetic perfection clearly demonstrate the formation of the translation tradition in Azerbaijan at this time and the high development of the translation art." The author of the original, "Ferideddin 'Attar was a well-known and prominent Sufi poet of the period 1120-1230." A facsimile with lexicon and annotations is to be published shortly.

IRANIAN MARXIST NOVELLA PUBLISHED IN AZERBAIJANI

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 29 January 1982 pp 3,4 carries a 2,900-word novella, "His Eyes," by Bozorg Alavi with a biographical note by Firuz Sadygzada. "The novel 'His Eyes,' fragments of which are presented to the readers of ADABIYYAT VA INJASANAT and which is considered one of the best examples of 20th century Persian prose, reflects the life and struggle of progressive Iranian intellectuals struggling against the Shahist order." Sadygzada also remarks on the close relationship which developed between Alavi and Pishavari (subsequently president of the Azerbaijan Democratic Republic, 1945-1946) when they were in prison together prior to World War II. Alavi now lives in the German Democratic Republic.

SOUTHERN AZERBAIJAN AND MIRZA IBRAGIMOV

[Editorial Report] Baku AZERBAIJAN in Azerbaijani No 10, October 1981 pp 66-88 carries a number of essays in honor of Mirza Ibragimov's 70th birthday. The essays concentrate primarily on the relationship of his life and works to the question of Southern Azerbaijan. The most interesting items are: Geydar Aliyev's speech pp 67-70; a biographical and artistic survey of Ibragimov's life by Ismayyl Shykhly, pp 72-77 in which it is noted: "As a result of the concern of the Soviet state and although he had been promoted as a writer and civil servant, Mirza Ibragimov always kept a longing for the South and a yearning to unite the divided Azerbaijan in his heart"; Jafar Khandan's 1946 article "The Subject of the South in the Work of Mirza Ibragimov," pp 77-82; a review of the publication and critical history of Ibragimov's novel about Southern Azerbaijan "The Coming Day" by Reshid Guliyev with additional comments by Samad Vurghun and Suleyman Rustam, pp 82-84; and Isa Huseynov's "What I Would Have Said in Tabriz," an account of what he would have said on this occasion if he had been able to address a meeting in Tabriz, pp 85-88.

EYEWITNESS ACCOUNT OF 1978-1979 TEHRAN DEMONSTRATIONS

[Editorial Report] Baku AZERBAIJAN in Azerbaijani No 11, November 1981 pp 154-164 carries a 6,500-word reportage by the Southern Azerbaijani author Rahim Dagig on the riots and public demonstrations in Tehran leading up to the Shah's departure from Iran. There is an introduction by Mirza Ibrahimov in which he says: "Along with preserving those characteristics and real scenes relevant to a documentary work, some space is given to an artistic conception. Sometimes he passes real events and personalities through the mirror of imagination, and tries to bring them to life through definite artistic colors." The test of the reportage and its style do not permit one to isolate the 'real' from the 'artistic.'

SOUTHERN AZERBAIJAN POETRY EMPHASIZED

[Editorial Report] Baku AZERBAIJAN in Azeri No 1, January 1982 carries on pp 189-191 a 1,400-word review of the poetry collection "Dawn Is Breaking" (Tehran, 1979) written by the Southern Azerbaijani poet of national liberation Habib Sahir. The review is written by Vafa Aliyev. "The poems collected in the book were written entirely in the time of tyranny, but the difficult atmosphere of the time did not give the poet a chance to print them." The poetry discusses the banning of the Azeri language under the Shah, the prisons and other forms of oppression. Included in the work is his poem "Northern Star," dedicated to Lenin and others dedicated to Suleyman Rustam and the Azerbaijani Marxist Samad Bahrangi. Baku ADABIYYAT VA INJASANAT in Azeri on 1 January carries on page 6 a 100-word article by Sabir Amirov who describes the content of the poetry of Memmedali Mahzun (also known under the name Memmedali Fakhraddin). He disappeared from sight in 1946. In the years up until 1981 he compiled a collection of his own poetry, "The Sickness of Separation," some poetry from which accompanies the article. Amirov describes this work as "a gift from the fatherland." On 8 January 1982 page 6 a 1,000-word review is carried of the poetry collection "Leaves of Battle" by the Southern Azerbaijani poet Sohrab Tahir, just published by the YAZYJY press of Baku in 1980. The review is by Imamverdi Abilov, who says: "In his southern poems his concept of the fatherland is not abstract; he describes and sings about it a sacred place which has taken the martyrs to freedom to its breast." A number of quotes from his poetry are given in the course of the review. On 15 January 1982 on page 8 a poem is published by the Southern Azerbaijani author M. Shimshek entitled "Do Not Forget America for an Instant," reprinted from DADA GORGUD (Tabriz) No 12 1981. The last refrain is "Do not forget America for an instant/May this savage beast be struck down and die." On 8 and 29 January 1982 pages 2 and 6 unsigned reports are published on the contents on the Tabriz literary journal DADA GORGUD, Nos 15 & 16, 1981. Brief descriptions of the contents are given.

CSO: 1830/347

CAMEL HUMPS POTENTIAL RESOURCE FOR SOVIET FOOD PROBLEMS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 1 January 1982 carries on page 5 a 2,000-word article by Khazhy Qorghanov on the camel as one potential resource for solving Soviet food problems. Four kinds of animals were traditionally herded by the Kazakhs, sheep, cattle, horses and camels, and they provided most of the material needs of the herdsmen and were thus celebrated in Kazakh oral literature. Camels were considered a sign of wealth and were therefore assigned a special place among the four. Recently, however, the number of camels has begun declining in the Soviet Union and in the KaSSR (there were only 121,000 there in 1981, less than in 1965) even thought camel numbers are on the rise worldwide (up to almost 17 million in 1979).

Qorghanov insists that this trend be reversed since many potentialities for increasing numbers of this valuable animal currently exist in Kazakhstan and the camel could make a major contribution towards solving Soviet food problems. Qorghanov calls for further development of specialized camel breeding, which produces 1,500 tons of meat, 705 tons of camel wool and 4,250 tons of kumiss on the average in the KaSSR each year, to increase quantities of camel products drastically. The article discusses each of these products in detail noting successes achieved in some enterprises.

ATOMIC POWER PROVIDES FRESH WATER IN PLANNED CITY OF SHEVCHENKO

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 5 January 1982 carries on page 2 a 1,900-word article by Bayzhanov, Z. Saqiev and S. Khaydarov, the first of five "Letters from the Mangyshlak Territorial-Production Complex," on the new, planned city of Shevchenko, oblast and regional development center. Shevchenko City is a new, bustling city, only some 20 years old, that has grown up in difficult environmental conditions besides the Caspian in an utterly dry, wind swept desert steppe region, in an area where local inhabitants once lived in primitive subterranean huts. In spite of such difficulties, however, the authors go on, prize winning architects, who have closely cooperated with builders in such things as extensive use of local building materials, have not just created a city, but a well planned, completely modern city, one, for example, in which buildings are used to break the force of powerful steppe winds and industrial areas are well sited on the outskirts of residential areas to prevent air pollution there.

The authors examine in detail one aspect of environmental problems encountered in building the new city, namely lack of fresh water resources since the area is without rivers, streams or any other large bodies of fresh water. After looking at a number of possible solutions, including transporting water across the Caspian and pipelines to distant rivers, planners decided on distillation of ocean water as an answer to the problem. Starting in late 1963 experimental distillation was begun on an industrial basis using crude oil as a fuel. Initially the distillation unit produced 5,000 cubic meters of fresh water a day and additional capacity allowed this output to be increased to 15,000 cubic meters a day. Atomic energy, however, has proven a far more efficient means of producing great quantities of fresh from ocean water.

In late 1972 a BN-350 fast neutron (breeder) reactor with a capacity of 350 megawatts began operating in Shevchenko, the first industrial nuclear reactor in the world. In July 1973 it began producing fresh and industrial water from ocean water as a by-product of energy production. Today 80-82,000 tons of distillate are produced a day or about 440-450 liters per city inhabitant, a level of water supply much higher than in many western cities. Industrial water produced by the reactor is used, among other things, for local irrigation to produce green areas in and around the city. Thus, for the first time, cheap distillation of ocean water using atomic power has become a reality, a great technological achievement and basis for the growth and prosperity of the new city of Shevchenko.

SHEVCHENKO BREEDER REACTOR BASIS OF REGIONAL DEVELOPMENT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 January 1982 carries on page 2 a 1,800-word article by S. Bayzhanov, Z. Saqiev and S. Khaydarov, the second of a series of five "Letters from the Mangyshlak Territorial-Production Complex," on the Shevchenko breeder reactor. The Shevchenko Atomic Electrical Station is world famous and is a fast neutron or breeder reactor that converts uranium-238 into plutonium-237, in addition to providing electrical power and drinking water.

With this introduction, the authors go on to discuss Soviet nuclear power in general, noting the enormous advantages of clean nuclear power over polluting chemical energy that is based on dwindling resources of fuels and the tremendous leaps made by nuclear power both in the world and in the Soviet Union in the approximately quarter century of its existence. They note as future goals of the Soviet nuclear power industry: 1) a controlled thermo-nuclear reaction, 2) thermo-nuclear electrical power stations, 3) nuclear magnetohydrodynamic generators, 4) new processes for obtaining energy from the fission of heavy elements and 5) new methods for the synthesis of lighter elements, and see the Shevchenko reactor as a major advance along the road to full realization of the nuclear potential.

Turning to the Shevchenko Station itself, the authors underscore its symbolic significance as an expression of a whole industry and its importance for an entire region that has developed rapidly in an economically and ecologically advantageous manner. They note the importance of nuclear power development in terms of the resolutions of the 26th Party Congress and record the fact that electrical power produced by Soviet nuclear plants will reach 220-225 million kilowatt hours by 1985 and that considerable effort is being made at Shevchenko and other local stations to increase generating capacities and refine production technology.

NEW TECHNOLOGY WIDELY USED IN BOZASHY OIL PRODUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 January 1982 carries on page 2 a 1,900-word article by S. Bayshanov, Z. Saqiev and S. Khaydarov, the third in a series of five "Letters from the Mangyshlak Territorial-Production Complex," on the Qalamqas and Qarazhambas oil fields of the Bozashy Peninsula. The article begins with a description of the bare, sparsely vegetated Caspian coast where major oil fields are now being developed and moves on to a detailed discussion of two major fields, at Qalamqas and Qarazhambas.

The Qalamqas field has been in production for about 3 years and produced 73,000 tons of oil during 1979, the first year of its existence, 1.26 million tons in 1980 and 2,245,000 tons in 1981 with still greater increases planned for the future. Work is done there on the basis of alternating work and rest shifts of 10-15 days each and some 2,000 workers now work at the field, with numbers expected to rise to 10,000 by year's end and 20,000 by 1990. In all 161 wells have been drilled and 98 are at present producing there.

At Qarazhambas production has reached 150 tons a day and a 2-3 fold increase is planned for the near future. At both fields considerably advanced technology is in use to enhance production. At Qalamqas drilling rigs are on rails to facilitate moving them from one site to the other and reagents are pumped into well heads to liquify the oil and separate out water. At Qarazhambas electric current is used for the same purpose. The article emphasizes the many special problems associated with oil production at both fields.

STRATEGY OF MANGYSHLAK DEVELOPMENT DETAILED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 8 January 1982 carries on page 2 a 2,100-word article by S. Bayzhanov, Z. Saqiev and S. Khaydarov, the fourth in a series of five "Letters from the Mangyshlak Territorial-Production Complex," on the extent and developmental strategy of the complex. The Mangyshlak peninsula has been made over as a consequence of intensive development taking place there and the area is dotted with 20th century marvels: the first industrial atomic power station in the world, a fast neutron, breeder reactor, an atomic distillation unit for sea water, a thermoelectrical center, the largest plastics factory in Eurasia, entirely automated, the first gas fixing plant in Kazakhstan, an automated petroleum industry, large compressor gas stations, petroleum gas and water lines, amazing cities and a full range of urban facilities of the most modern kind.

The authors describe these accomplishments in detail, particularly the gas fixing plant, which processes natural gases formerly vented and wasted, and the plastics factory that is a primary user of the gas fixing plant's products. They stress the careful interconnection and coordinated management of Mangyshlak factories and resources that is part of a carefully worked out overall development strategy involving such things as extensive use of automatic production management systems, data links, multi-channel radio and television communication, careful cooperation between planning and other organizations involved and the use of the most up to date technology including earth resource satellites. The authors note that local reserves of oil are now estimated at 350 million tons.

ELECTRICAL POWER SHORTAGE, PROBLEMS OF MANGYSHLAK DEVELOPMENT DETAILED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 January 1982 carries on page 2 a 2,200-word article by S. Bayzhanov, Z. Saqiev and S. Khaydarov, the last of five "Letters from the Mangyshlak Territorial-Production Complex," on the many problems in area development. The Mangyshlak Peninsula is a difficult area environmentally but is well located on the border of Europe and Asia and rich in a variety of resources including oil, natural gas, coal, iron, copper, manganese, phosphorite and sulphur. Although Czarist scientists suspected the rich mineral resources of the peninsula it has only been under the Soviet regime that there has been a solution to the problem of coordinated exploitation of the resources there.

After long years of exploration oil was struck at Zhetibay on 5 July 1961 and the Mangyshlak Peninsula has since become a major production center with tens of millions of tons of oil produced year by the early 1970's. The two-hundred millionth ton was produced in August 1981.

The 26th Party Congress has placed increased emphasis on coordinated production with yearly output at the fields to reach 18 million tons a year during the current five-year plan. Many problem areas, however, still remain, hindering full exploitation of peninsula resources. They include use of advanced thermal methods without a supporting laboratory base, considerably softening their impact upon petroleum production, problems with well piping, planning documents for production and survey work that are not up to required levels, plans that fail to take important planning areas into account (e.g., industrial water and electricity), construction work that fails to keep pace with development and lack of attention to oil field reserves as a whole with over concern for a particular horizon of production (oil bearing strata nearer the surface are those used, others, lying deeper, are ignored).

A particularly critical problem among them is lagging energy supply due to slow facilities construction with the result that the Mangyshlak Energy Combine will not be able to meet needs in the immediate future. Industries at Zhangaozen were brought to a halt 17 times last year due to electrical shortages and the problem exists at Shevchenko City as well. There is plenty of oil and gas, the authors, note, the problem is rather one of an industrial base to process it. The article ends with a plea for exploitation of still unexploited resources, such as abundant supplies of local building stone and mineral rich sledge from water distillation equipment.

EDITORIAL STRESSES IMPORTANCE OF ELECTRICITY CONSERVATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 14 January 1982 carries on page 1 a 1,100-word boldface editorial on the need to conserve as well as produce large amounts of electricity in Kazakhstan. Carrying out the decisions of the 26th Party Congress and the November 1981 Plenum of the CPSU CC require the development of energy resources up to the level of present demand along with other sectors of the people's economy. This is because adequate and uniform production of electrical energy is often a key factor in fulfillment and overfulfillment of five-year plan tasks. Thus the party and the government are showing concern for a continual increase in the capacity of electrical generating facilities and their proper technical equipment.

The editorial reviews the current state of KaSSR electrical power with emphasis on new facilities and new transmission systems, noting that transmission of generated power is as important as generation itself. The editorial ends with a plea for conservation, point up the enormous gains from even minimal savings for production processes and individual factories and stressing that conservation is a major foundation for raising material living standards.

ZHAYREM DEVELOPMENT A COMEDY OF ERRORS AND DEFICIENCIES

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 11, November 1981 carries on pages 49-53 a 2,600-word article by K. Uteulin on the many problems plaguing Zhayrem development, specifically the problems of water removal from the mines, inadequate repair and parts bases for mining equipment, labor shortage and an acute deficiency in housing and other facilities in the Zhayrem miners settlement. For centuries Zhayrem was the land of the antelope with only an occasional visit by man and no one had any conception of the riches lying beneath the soil. Serious geological exploration, in fact, began only in 1969 when, in search for iron, lead, zinc, barium, manganese and other mineral riches were discovered. In the years since then a major facility has developed and the area is now considered the largest nonferrous metals base in the republic.

Tremendous efforts have been and are being made to develop Zhayrem resources but many of these exertions could have been spared but for miscalculation, interagency confusion and direct mismanagement on the part of organizations and authorities responsible for developing Zhayrem. One major problem is ground water accumulation in the mines, a problem that will grow still worse as mines deepen. It seems that geologists totally neglected to take the problem into consideration when planning the mines and the error was repeated again when the mines were laid out. Thus as soon as digging began (the water table was just below the surface, instead of an estimated 15 meters deep) urgent measures had to be taken to remove rapidly accumulating mine waters (excavator operators are described as literally swimming in their cabs). As ad-hoc measures most have proven ineffective and have actually compounded the problem. Pumps were, for example, introduced that proved to be totally unable to withstand the corrosive mine waters (no one had bothered to test the waters or theorize their possible influence on metals) while waters that were pumped out were delivered to a rapidly growing bitter sea of poisonous water located too close to the mines with the result that as much as one-third of the many millions of cubic meters of mine waters removed have found their way back to the mines again through underground seepage. Although the scope of the problem has now finally been understood measures to provide ultimate solutions of the problem have been put off, seriously hampering development.

Also a problem at Zhayrem is an inadequate repairs base (particularly because of chronic parts shortages) and idle equipment (up to one-half of all dump trucks at any one time). But in both instances labor shortage (above all, skilled labor shortage) is the key since lack of experienced drivers, operators and others forces use of whoever is available with a resulting toll on equipment.

The reason for labor shortage itself, in turn, is not a shortage of Zhayrem applications, applications are, in fact, being turned down in every skill category, but acute shortage of housing even for workers already on the site. Uteulin discusses this problem in detail, noting a complete lack, initial planning to the contrary, of any order in the building of the Zhayrem workers settlement which is a jumble with poor housing by any standards and facilities totally inadequate to meet workers needs and is poorly situated in terms of a very harsh local environment. Instead of being the planned city originally intended Zhayrem is a mess on account of an official decision to produce ores as rapidly as possible without regard to the consequences of this decision for other areas of Zhayrem development. The author concludes, however, that despite the many problems advances are still being made and he praises the efforts of party cadres in bringing this about.

KAZAKH POLICE PAPER RESUMES PUBLICATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 January 1982 carries on page 4 a 200-word unsigned notice of the reappearance of the Kazakh police newspaper NA STRAZHE. In accordance with the statement of L.I. Brezhnev that "the responsibility of the Soviet police in strengthening socialist legality and the socialist legal system is very great" the KaSSR Ministry of the Interior has resumed publication of NA STRAZHE from 1 January 1982. The paper will publish various materials on heroism of police workers in guarding socialist legality and the socialist legal system and will assist in the struggle of the Ministry of the Interior, internal affairs administrations of executive committees of oblast soviets of people's deputies and of party and Komsomol organizations to strengthen socialist legality and actively propagandize Marxism-Leninism and the decisions of the party and government.

KAZAKHSTAN'S PROSPERITY CALLED VICTORY OF FRIENDSHIP OF SOVIET PEOPLES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 3 January 1982 carries on page 3 a 2,000-word article by M. Maghzumov entitled "Friendship of the Peoples, a Great Victory of Socialism" and published under the regular rubric "A Friendship With Deep Roots." The friendship of the peoples of the USSR is a social phenomenon that has developed freely, has its own history and occupies a special place in the spiritual life of the multi-ethnic Soviet people. Maghzumov shows that this same friendship is also the basis for the present prosperity of Kazakhstan and that Kazakhstan has become a great nation only through the selfless support of the Russian people. The article emphasizes the material benefits of Russian aid in particular and notes the current close exchange relationships between the KaSSR and the other Central Asian republics, on the one side, and the RSFSR, on the other, as witnessed by joint economic projects.

KAZAKH PHILOLOGISTS DEFEND NEW RUSSIAN-KAZAKH DICTIONARY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 January 1982 carries on page 4 a 2,200-word review by Professor F. Musabekova, head of the Kazakh Language Chair of the Abay imeni Kazakh Pedagogical Institute, Professor S. Isaev, head of the Kazakh Language Chair of the Qyzdar Pedagogical

Institute, and N. Ualiev, junior research worker at the Linguistics Institute of the KaSSR Academy of Sciences, of the recently completed two volume "Oryssha-Qazaqsha Sozdik" (Russian-Kazakh Dictionary), Qazaq Sovet Entstiklopediyasynyng Bas Redaktsiyasy, Alma-Ata, 1978, 1981. It is clear that the Russian language is of the utmost importance for the Kazakhs as for other fraternal nationalities of the USSR since this language is a great weapon for bringing about knowledge, understanding and mastery of the spiritual treasure of the Russian people and the cultural legacy of the peoples of the world and for acquainting the peoples of the world with superior examples of our national art and literature. The Russian language has also acquired progressive significance in terms of internationality and international relationships; thus the growing interest in Russian everywhere.

In connection with this interest the language institute of the KaSSR Academy of Sciences and the Chief Editorial Board of the Qazaq Soviet Encyclopaedia have published a new, two-volume Russian-Kazakh Dictionary. The review responds to the highly critical review of the work by Qasym Sharipov published in the 24 July issue of QAZAQ ADEBIETI. Sharipov complained of numerous errors, outdated and obsolete usage, artificially derived terminology and the inclusion of large numbers of native Kazakh words with Russian spellings among the dictionary's "Russian" entries.

Musabekova, Isaev and Ualiev, on the other hand, see many of these problems as virtues. The Kazakh words with Russian spellings, for example, the reviewers claim as examples of the many Turkic loan words in Russian, while the derived terminology, in their view, mostly represents actual current usage and, in any case, such "standard" terminology is useful in providing established translations for widely used expressions while "free" translations might confuse. The reviewers also note that some of the features of the dictionary criticized by Sharipov are, in fact, standard practice for Turkic bi-lingual dictionaries and that the dictionary must also be judged in terms of its audience, the users for which it was intended, and not in narrow lexicographical terms. Clearly, in their view, Sharipov is a nitpicker and while there are, they admit, problems, the dictionary is, in their view, highly useful and meets a major need.

COMMENTATOR DECRIES DISTORTION, RUSSIFICATION OF KAZAKH TOPONYMS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 8 January 1982 carries on page 12, under the regular rubric "Some Thoughts To Be Shared," a 2,000-word article by Myrzabek Duysenov on phonological and semantic distortion of Kazakh toponyms on account of long-term misunderstanding and Russification. Starting in the 17th century large numbers of European travelers and explorers gathered much useful information about Central Asia and Kazakhstan and the lives and cultures of their peoples. There were, however, many miswritings of local toponyms and other words in the writings of these travelers and explorers due to understanding, misconceptions and inability to represent local phonetic peculiarities in foreign scripts. One would logically expect these errors to be correct in modern times but this has largely not been the case.

Duysenov takes the view that place, city and other geographical names in Kazakhstan usually derive from a definite locality, family, people etc. and should be spelled in such a way so that such an association is clear to Kazakhs. He provides many examples of the kinds of problems involved and seems to deplore Russian use of old, outdated and wrong names and the many distortions arising from Russian orthographic conventions that render many Kazakh place names incomprehensible. Some Russian spellings, he says, are not even close, but, he adds, the Kazakhs once spoke of the Russian cities of Petrambor and Maskeu. The time has come, he concludes, to change this. Duysenbekov also chides misuse of terms of Arabic and Persian origin and other specialized Kazakh vocabulary by younger Kazakh writers.

RUSSIAN STUDIES OF KAZAKH FOLKLORE SIGN OF FRIENDSHIP

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 15 January 1982 carries on pages 6-7 a 2,400-word article by Bekmurat Uakhatov published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia" on the role of Russian scientists in the collection and investigation of Kazakh oral literature and folklore and entitled "Dawn of Friendship." The Voluntary Submission of Kazakhstan to Russia was an important event that had a beneficial impact upon the spiritual life of the Kazakh people. The submission had, moreover, in addition to its historical-social and political aspects major significance in terms also of the investigation and understanding of Kazakh literary, cultural and scientific creations.

One expression of this was the collection and study of Kazakh oral literature and folklore by Russian scientists, collection and study that began in the mid-18th century but reached its high point in the 19th with the studies of Radlov, Potanin and many others. The author discusses each of the major Russian investigators in detail and concludes that the 19th century marked the golden age of Kazakh folklore study and collection and that the role of Russian orientalists in this was an expression of great Russian-Kazakh friendship.

ALTYNSARIN, KAZAKH NATIONALIST PRECURSOR OF SOVIET EDUCATION

[Editorial Report] Alma-Ata RUSSKIY YAZYK V KAZAKHSKOY SHKOLE in Russian No 11, November 1981 carries on pages 37-42 a 1,500-word article by G. Khrapchenkov, vice-director of the Scientific Research Institute for Pedagogical Sciences imeni I. Altynsarin, on the 19th century Kazakh nationalist educator I. Altynsarin. The distinguished Kazakh educator I. Altynsarin had an important role in the creation of a school system in Kazakhstan. The author evaluates this role in terms of Altynsarin's educational philosophy, which exemplified the progressive tendencies of his time and emphasized the need for a "nationality" education that corresponds to the historical realities of a people's economic and cultural development and way of life, his stressing the use of both Russian and Kazakh in a new variety of secular school to be established for the broad Kazakh masses,the structure and organization of the new school advocated by Altynsarin, his lesson programs and his many contributions to Russian language instruction in terms of specially written textbooks, adapted to the specific needs of Kazakhs, and instructional methodology. The article seems to pose Altynsarin as a precursor of Soviet education.

RARE KULAN BEING TRANSFERRED FROM ENDANGERED ARAL HABITAT BY KAZAKHS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 January 1982 carries on page 4 a 200-word article by F. Arynbaeva on efforts now underway to remove rare kulan (equus hemionis kulan) from an endangered Aral habitat. Much has been done in the KaSSR to preserve and increase the numbers of the kulan, a rare species. As part of this effort eight kulan were brought to Barsakelmes Island in the Aral Sea where they adapted well to local conditions and now number more than 200. However, the Barsakelmes kulan are now endangered by environmental changes caused by the falling level of the Aral and, at the suggestion of the KaSSR Academy of Sciences, the republic government has now decided to move them to a new site, Myngbulaq, near the Caspian. The work of transferring the kulan has now begun and it is expected that the number of Myngbulaq will reach 30 by the end of the present year.

EDITORIAL ANNOUNCES NEW SOVIET, KAZAKH WATER PROTECTION LAWS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 January 1982 carries on page 1 a 700-word boldface editorial announcing new Soviet and KaSSR water protection laws. An all-union water law and, in accordance with it, a KaSSR water law, have just gone into force. These new laws will aid in revitalizing our struggle for water purity in the republic. The editorial evaluates republic successes and failures in this area, noting lack of supervision over how water protection measures are carried out, failure to construct or complete water protection facilities and equipment and failure to utilize appropriated funds fully among the failures. The editorial stresses the need to be concerned with small as well as large bodies of water.

CHANGING ATTITUDES TOWARDS ENVIRONMENT, DECLINE OF KAZAKH FORESTS DECRIED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 8 January 1982 carries on page 4, under the regular rubric "Man and Nature," a 1,100-word article by S. Abubakirov, member of the Youth Work Branch of the Central Committee of the Kazakh Society for the Protection of the Natural Environment, on changing attitudes towards the environment and an associated decline of Kazakh forests. The party and the government have sanctioned a number of measures and published laws aimed at improving protection of the environment in the Soviet Union. These efforts have been helpful but everything depends upon man and individual responsibility.

With this introduction in mind the author discusses traditional Kazakh attitudes towards the environment, showing how the Kazakhs of earlier times made great efforts to preserve forests and grasslands through many environmentally conscious measures.

He contrasts the traditional attitudes with present approaches that have, among other things, resulted in radical decreases in Kazakh forested area. With the forests have gone the animals and birds living in them. The old attitudes and careful concern for the environment of the past would be of great use, the author says, today. He ends by calling for not just reforestation but a major expansion of forests and a substantial effort to change values, particularly among the young. The article is followed by an editorial comment calling for readers responses to the issues raised by the article.

SOVIET DEPUTIES MUST SERVE CONSTITUENTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 22 January 1982 carries on page 1 a 1,100-word boldface editorial on the need for people's soviet deputies to serve their constituents. Many persons come to the offices of executive committees of soviets of people's deputies and present their petitions, requests and suggestions. This act shows the faith of the workers in their elected representatives and the people's interest in the social and economic development of the nation and concern for the state and for society. Workers petitions, requests and suggestions also help us understand society.

The editorial stresses the constitutional duty of soviet deputies to maintain a close connection with the masses and notices party efforts to enhance this function as part of an upgrading of the role of the soviets themselves. Examples are given of effective soviet deputies and of problems solved with their aid.

KAZAKH MINISTRY OF AGRICULTURE REPLIES TO MISUSE OF IRRIGATED LANDS CHARGE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 22 January 1982 carries on page 10 a 500-word letter by KaSSR Vice-Minister of Agriculture A.K. Kusainov written in reply to a 20 November 1981 QAZAQ ADEBIETI expose by hydrotechnician D. Saryqulov. Saryqulov's article was especially critical of misuse of irrigated fields.

Kusainov accepts Saryqulov's "appropriate and timely criticism" and announces that a special ministerial conference was held to deal with issues raised. He also recalls that a republic conference on the general problem was held in Alma-Ata last year. He expects that publication of conference proceedings will prove helpful. The Ministry of Agriculture itself, moreover, has initiated measures to improve exploitation of irrigated lands and increase fields. For example, fertilizer needs for major, valuable and high yield crops such as rice, corn, cotton and sugar beets are now being met. New irrigation machinery has been introduced with good results. But, he concludes, much irrigated land is not being used profitably, just as Saryqulov's article suggests, resulting in low yields. Measures to solve the problem will include improved supervision of irrigated land use.

NEW PHOSPHORITE MINES OPENED IN AKTYUBINSKAYA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1982 carries on page 1 an unattributed 100-word notice of progress being made in opening new phosphorite mines at Shilisay in Aktyubinskaya Oblast. Work is going forward rapidly at the Shilisay phosphorite mines, one of the major projects in Aktyubinskaya Oblast in the current five-year plan. Section one of the mines began production last year and a solidification chamber, a food refrigeration unit, a compressor station, a service rail line and headquarters buildings have been constructed at a total cost of 1.4 million rubles.

MAJOR NEW COAL RESERVES IN KARAGANDA BASIN

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 January 1982 carries on page 2 a 2,100-word article by E. Ebikenov and O. Aymaghanbetov on new coal reserves being developed with open pit methods at Borili in the Karaganda basin. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th Party Congress."

The Suyqbulaq River Valley near Pavlodar in Karagandinskaya Oblast has been known as Borili. It is a stretch of cheerless hills, yellow steppe and thickets of thorny reeds and caragana bushes near the river. Rich coal fields were discovered there in 1936 but World War II prevented their immediate exploitation. It was only in late 1979 that first efforts were made to mine Borili coal.

Production began on 14 April 1980. Some 2,046,000 tons were produced during that year, more than 4 million in 1981. Plans call for an annual production of 10 million tons in the future. Coal produced at Borili is delivered to Qushoqy for transshipment.

Ebikenov and Aymaghambetov stress the efficiency of open pit mining employed at Borili, the rapid pace of mine development and the emergence of a large mining complex about the pits. The pits themselves are 300 by 70 by 200 meters deep with the upper coal horizon located 25-26 meters below the surface.

Problems encountered in opening the mines included inefficient ore carrier use, organizational inadequacies and an all pervading dust. In spite of initial difficulties, however, production is now well ahead of planning and gathering momentum. Primary costs are well below the average for Karaganda coal production as a whole.

Plans for the future include a rail line from the pits to the railhead at Qushoqy to be completed in 1982 and a mining settlement for mine workers. Ebikenov and Aymaghambetov, however, distinguish some long-term problems as well that must be solved if Borili resources are to be exploited fully. Among them are a shortage of miners trained in open pit methods since the schools concentrate on traditional, underground mining technology, local environmental damage due to accumulations of mine refuge and failure to backfill pits, coal deliveries to Qushoqy that lag substantially behind production and shortages of surface, coal-moving equipment and rolling stock. Proven reserves at Borili are 600 million tons.

KAZAKH INDUSTRIAL GROUP PRODUCES CRAFTS GOODS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 29 January 1982 carries on pages 14-15 a 1,700-word interview with Gharifolla Zhalmukhanov, chief designer of the Crafts Industries Union under the KaSSR Ministry of Local Industry, on the union. Zhalmukhanov was interviewed by Nurdaulet Aqyshev, place and time not specified.

The Crafts Industries Union was created by the Ministry of Local Industry at the beginning of the last five-year plan. The interviewer asks Zhalmukhanov about the way in which the union came into existence. In his reply Zhalmukhanov stresses the gradual emergence of the new structure based upon existing industries. He uses the Tselinograd China Factory to illustrate the impact of the new organizational system upon union industries. This industry has been able to expand production assortment and use more traditional Kazakh design elements on its products. Success, however, was not so immediate elsewhere, Zhalmukhanov continues, and some union industries have had to be totally reequipped and restructured. He points to an increase in the number of different products produced by union industries, from 300-400 to 600-700 a year, as clear evidence of the success of the undertaking.

Asked about the products of union industries, Zhalmukhanov notes that its factories produce everything from kilem rugs to jewelry and that products are based upon Kazakh folk crafts. Many union products, moreover, are traditional items produced solely to meet Kazakh needs. Zhalmukhanov notes the many problems associated with producing traditional goods on an industrial basis. Raw materials such as leathers, felt, paints and lacquer are often poorly processed and substandard. Modern technology, moreover, often cannot be fully exploited in manufacturing the goods and factory craftsmanship is inferior to that of the traditional work being copied.

Zhalmukhanov is asked about what is being done in union industries to learn from traditional craftsmen. His reply emphasizes the existence of special factory offices charged with studying traditional Kazakh crafts and adapting their forms and techniques for industrial purposes. He notes cooperation with the KaSSR Central Museum in this area. Use of traditional craftsmen working at home is part of current planning.

The last question posed Zhalmukhanov by the interviewer is on problems facing the union in the future. Zhalmukhanov lists labor shortage, especially of designers and craftsmen, shortages of raw materials, most of which are supplied from other republics, and damage of goods in transit due to shortages of packing materials. Zhalmukhanov singles out poor deliveries from other republics, including the RSFSR, as a major source of difficulty for his union.

KAZAKH FORESTS, FOREST MANAGEMENT SYSTEM DESCRIBED

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 11, November 1981 carries on page 8-9 a 700-word article by Smaghul Makhmutov on Kazakh forests and the Kazakh forest management system. The article is published under the regular rubric "Cherish Nature."

Trees give meaning to the natural environment. The KaSSR is second in the Soviet Union to the RSFSR in forested area with 21.5 million hectares. Some 8.6 million hectares of this are exclusively forests. Forests are concentrated in Alma-Atinskaya, Taldy-Kurganskaya, Chimkentskaya, Dzhambulskaya and Vostochno-Kazakhstanskaya oblast while much of western and central Kazakhstan is essentially unforested.

Makhmutov lists the many uses of forests in terms of the environment and the republic's economy and describes Kazakh forest management. Under the current system, Kazakh forests are divided into three use categories. Category 1, 19.1 million hectares, is comprised of natural reserves, park and recreation areas, trees along roadways, near factories and in urban areas and is strictly controlled and protected. Tree cutting is allowed to take place only under specified circumstances. Category 2, .8 million hectares, is comprised of watershed and is also strictly controlled and protected. Limited cutting is, however, allowed on an annual basis. Category 3 is made up of industrial forests and includes 1.7 million hectares.

The purpose of the forest management system is to restore forests, prepare tree stocks, raise seedlings and expand forested area to achieve proper forest use. Makhmutov recalls that 1,114,000 hectares are hand planted in state forest reserves alone and that many trees have been planted by individual sovkhoz and kolkhoz as well to prevent soil erosion by wind and water. Some 293 tree farms currently operate in the KaSSR.

FEMALE WORKERS IMPORTANT IN A COMPLEX SOVIET INDUSTRY

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 11, November 1981 carries on pages 18-19 a 1,900-word article by N. Buryaqova and K. Nazkhanov on the growing importance of female workers in a mechanized, complex Soviet industry. The "Basic Directions for the Development of the People's Economy and Culture During the Years 1981-1985 and in the Period Until 1990" point out that proper exploitation of production potential and economy with labor resources will have a major impact upon fulfillment of 11th Five-Year Plan tasks. One area of particular concern in this regard is proper exploitation of women workers. This explains the special concern of the party and the regime for women workers.

Marx stated that one measure of social progress is the place of women in society. The Soviet Union leads the world in the percentage of its women participating in socially useful work. Some 92 percent of all Soviet women capable of work in material production, in services or are attending school. In all 51 percent of laborers and office workers are women and 47 percent of Kolkhoz members. In Kazakhstan, 49 percent of republic workers are women. This represents an enormous gain compared to prerevolutionary Kazakhstan.

Buryakova and Nazkhanov discuss one aspect of this revolution in detail, namely increased participation by female workers in certain industrial sectors due to qualitative changes in Soviet industry. That is to say, there is a direct correlation between the degree of mechanization and technological sophistication of a given industrial sector and the percentage of female workers in it.

Since women are better educated than male workers--59 percent of specialized cadres are women and the majority of students in higher educational and specialized institutions are female--this change has resulted in major gains in productivity in the affected industries. Since total gains in Soviet productivity have been low during the last decade women workers have thus made an inordiate contribution to the growth that has taken place.

These points are discussed in detail in the article with considerable statistical data to illustrate points made and a sector by sector analysis. Buryakov and Nazakhanov also review the social and other changes in Soviet and republic society that have made a broader female labor force and higher levels of female education and technical skills possible.

EDITORIAL ON THEORY AND PRACTICE IN HIGHER EDUCATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 January 1982 carries on page 1 an 800-word boldface editorial entitled "A New Era in Higher Education." The Soviet people are justifyably proud of the achievements of Soviet higher education and graduates of higher education institutions are making major contributions to the development of the Soviet economy and culture. For this reason, further growth of Soviet higher education will strongly influence future progress. Today there are 55 institutions of higher learning in the KaSSR and more than 25,000 young people studying in them in more than 190 disciplines.

The editorial stresses the need for a close connection between theory and practice in higher education and for a well-rounded education for today's students, the specialists of the future. Among problems mentioned are institutions not keeping abreast of scientific and technological progress and changing times, inadequate attention to student creativity and sociopolitical and management skills and poor selection of instructors. Such problems must be overcome in this new area of higher education

OPENING OF SIXTH CONGRESS OF KAZAKHSTAN JOURNALISTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 January 1982 carries on page 1 a 1,100-word boldface editorial noting the opening of the 6th Congress of the Kazakhstan Journalists Union. The 6th Congress of the Kazakhstan Journalists Union opened in Alma-Ata today, an event of the utmost importance for all concerned. The congress will sum up what has been accomplished in the last 5 years, criticize deficiencies and set future goals.

The editorial stresses the honored position of journalists and their important role in Soviet Society. It notes the improvement and increased sophistication of the Kazakh press, as witnessed by new papers and magazines, expansion of the format of existing publications and the revived "Oner" Press. The Leninist principles of journalism are restated as essential for Kazakh journalists.

COMMENTATOR STRESSES IMPORTANCE OF STUDENT SUMMER WORK SEMESTERS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 January 1982 carries on page 3 a 1,000-word article by T. Musaghaliev on the importance of student summer work semesters for the development of students themselves and for the Soviet economy. The article is published under the regular rubric "Today at the Institutions of Higher Education."

Only in the Soviet Union is labor valued as it should be and labor is the basis for all art and knowledge, joy and pleasure. Providing a labor education for the future builders of communism is one of the urgent tasks of the present day, a fact that has been pointed out by L.I. Brezhnev. Youth is the future and students are the most active component of youth.

Musaghaliev reviews one manifestation of this student activism, the special student brigades organized during the summer to allow students to participate actively in the Soviet economy and carry out mass enlightenment work. He discusses the type of brigades organized, work done, some institutions and individuals participating and successes achieved. Student construction brigades are singled out for special mention.

RUSSIAN COMPOSER-CRITIC PRAISED FOR CONTRIBUTION TO KAZAKH-SOVIET MUSIC

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 22 January 1982 carries on page 13 a 700-word article by Boris Yerzakovich on Soviet composer and academician B.V. Asaf'yev (1884-1949) entitled "A Friend of Kazakh Culture." The article is published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia."

The Soviet composer and academician B.V. Asaf'yev was known not only for his many noteworthy compositions but also for his scholarly contributions. Among them were articles and reviews concerned with Kazakh folk and professional music, the "Kazakh" operas of E. Bursilovskiy for example. In his articles Asaf'yev stressed the need for Kazakh music to absorb the traditions of European, Russian and Soviet classical music and the musical culture of the Soviet Union's peoples but underlined the importance of Kazakh folk music as the basis for a new professional music as well. In so doing Asaf'yev made a major contribution to the development of modern Kazakh music.

KAZAKH FOLKSINGER, BOLSHEVIK GHABBAS CELEBRATED

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 22 January 1982 carries on page 13 a 500-word article by Zh. Aytzhanov on the Kazakh traditional singer and early Bolshevik Ghabbas. The name of the singer Ghabbas is widely known in the Caryarqa region and he is ranked with the greatest of all the traditional Kazakh singers. He was also a Bolshevik and participated actively in the formation of a new society in Kazakhstan.

Aytzhanov reviews Ghabbas' work under the early Soviet regime recalling the 1920's as the highpoint of the poet's career. Ghabbas also cooperated with folklorest Zatayevich in collecting many famous Kazakh songs.

Zatayevich' collections were among the most important achievements in early folklore studies in post-revolutionary Kazakhstan. It was Ghabbas rapport with local singers that permitted much of Zatayevich' material to be collected.

HISTORICAL ASSOCIATIONS OF OSKEMEN MONUMENT MUST BE PRESERVED

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 11, November 1981 carries on page 25 a 500-word article by Qusayyn Zhamanbaev calling for the study and preservation of a local 19th century monument rich in historical associations. The article is published under the regular rubric "Preserve the Monuments."

Kazakhstan is rich in historical and cultural monuments of the past that embody the Kazakh past. One such monument is found at Akhmer Village near Oskemen City.

Zhamanbaev notes that when he was a young man there was a large, square, red-brick enclosure some 2 meters high near the village. Recently, however, he laments, the bricks have been stolen and cherry trees that were planted within the enclosure are all that remains. And they are dying from lack of care and have branches broken by the cherry-seeking children of the village.

The purpose of the enclosure was to protect a 2-meter high tombstone that still remains on the site. The stone is inscribed in Kazakh written in Arabic letters and is highly ornamented. Zhamanbaev stresses the great effort that went into fashioning such tombstones and their great beauty.

The stone covers the grave of one Mukhametqasen Auesbayuly, a descendent of a locally well-known Boribay. Auesbayuly was buried in 1899.

Zhamanbaev calls for the preservation and restoration of the tombstone, which is being damaged by the elements as the years pass, and for study of the local history associated with it. Such monuments, he says, are a great treasure for the Kazakhs.

READER CALLS FOR KAZAKH-RUSSIAN REVERSAL OF CONTROVERSIAL DICTIONARY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 22 January 1982 carries on page 13 a 300-word letter by reader Tortay Basibekov on the urgent need for a new Kazakh-Russian dictionary to meet the needs of the schools. Basibekov relates his own difficulties as a teacher due to the lack of such a dictionary and proposes reversing the recently completed two volume "Oryssha-Qazaqsha Sozdik" (Russian-Kazakh Dictionary) to produce a Kazakh-Russian dictionary.

RUSSIANS TOOK LEAD IN INVESTIGATING KAZAKH FOLK MUSIC

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 29 January 1982 carries on page 2 a 1,200-word article by Zaynur Qospaqov on the role of Russian scientists and explorers in the investigation of Kazakh folk music. The article is published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia."

Russian scientists, explorers, writers, military personnel and musicologists were closely involved in early study of Kazakh folk music. Qospaqov reviews their contributions with special reference to the work of A. Levshin, who became the model for later investigators, the musicologist A.F. Aykhgorin, S.G. Rybakov, Dm. L'vovich, A.V. Zatayevich and E.G. Erzakovich. The latter, directly inspired by the work of A.V. Zatayevich, represented the culmination of more than a century and a half of research with his careful recording of all aspects of Kazakh musical folklore including performance traditions. He was the first, for example, to study the individual styles of Kazakh folk musicians as well as the songs they performed. The ancient traditions of friendship between the Russian and Kazakh peoples thus lead to development of Kazakh musical culture and the investigation and spread of Kazakh music.

COMMENTATOR HERALDS MORAL, PSYCHOLOGICAL ASSIMILATION OF SOVIET NATIONALITIES

[Editorial Report] Alma-Ata QAZAQSTAN MEKTEBI in Kazakh No 11, November 1981 carries on pages 18-21 a 1,500-word article by Gh. Esimov on the progressive moral and psychological assimilation of Soviet nationalities. It is published under the regular rubric "Pedagogics and Psychology."

The nationalities question is one of the key social problems of refined socialism. There are now some 130 large and small nationalities in the Soviet Union. Two tendencies are exhibited by them. On the one hand, the nationalities themselves flourish and are achieving major cultural, artistic, scientific, literary and spiritual accomplishments. On the other, a mutual assimilation of the nationalities is taking place. This process involves an increase of common national characteristics in the life, spiritual world, culture, understanding, psychology, customs etc. of Soviet citizens.

A nationality is the totality of a people as expressed through a territorial, economic, political, linguistic, psychological and cultural unity. Each people is distinguished from another by its special characteristics. A national psychology and national moral values are among them.

Esimov gives examples of the type of differences meant by comparing the Kazakh and Russian kinship systems. He notes that these differences reflect differing economic and social bases of the two societies. When we speak of the psychological-moral assimilation of the peoples we mean the gradual disappearance of such differences, he says, and the emergence of universal Soviet internationalist qualities. He suggests that as economic interests become identical the Soviet peoples will acquire a common psychology and morality. In his discussion he provides many examples of "outdated" Kazakh customs now being replaced by modern Soviet customs. Traditional Kazakh marriage practices are singled out for particular criticism in this regard.

Esimov attacks bourgeois theoreticians who consider mutual assimilation of Soviet nationalities an impossibility due to an irreconcilability of psychologies between Russians, Soviet Moslem peoples and other nationalities. He points out that Marxism makes such assimilation possible since it sees psychological and moral characteristics as culturally-materially based.

Esimov notes the importance of the Russian language in the process of mutual assimilation and underscores bilateral borrowings of words and concepts between Russian and nationalities languages as an affirmation of the process of assimilation itself and an argument against the Western theory that Soviet linguistic assimilation is nothing more than assimilation to Russian. He sees two linguistic processes now going on. Formerly isolated components of large ethnic groupings are interacting as linguistic nationalities and assimilating to one another. Secondly, the emergence of national literary languages has led to linguistic assimilation with the Soviet Union as a whole.

Esimov decries claims of Panturkism, religious and linguistic unity of the Turkic peoples outweighing their Soviet connections. He concludes that mutual assimilation is a necessary manifestation of refined socialism and will be brought about by a common economic way of life.

KAZAKH OBLAST FRIENDSHIP SOCIETY MAINTAINS ACTIVE CONNECTIONS WITH MONGOLS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 29 January 1982 carries on page 4 an 800-word article by M. Yur'yeva, responsible secretary of the Dzhambulskaya Oblast branch of the Soviet-Mongol Friendship Society on active relations between Dzhambulskaya Oblast and Khobdo Aymak in Mongolia promoted by her society. Yur'yeva lists the usual exhibits, photo displays and lectures that are a regular part of friendship society work but also underscores an active exchange of delegations, more than 12 at the oblast-aymak level in the last 10 years, close relationships between various enterprises and institutions in Dzhambulskaya Oblast and Khobdo Aymak and the relatively large number of Mongol specialists being trained in the KaSSR oblast.

RAYON PARTY COMMITTEE PROMOTES GOOD LAND USE, CONSERVATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1982 carries on page 4 a 1,000-word article by K. Shaymerdenov, secretary of the Zhangaqorghan Rayon (Kzyl-Ordinskaya Oblast) Party Committee. The article is published under the regular rubric "Man and Nature" and details efforts on the part of the committee to promote good land use in Zhangaqorghan Rayon and protect the natural environment there.

The Syr-darya river valley is famous for its green pastures and dense forests. Zhangaqorghan Rayon, which administers the area, is comprised of 1,376,000 hectares of agricultural and pasture lands, some 129,000 hectares of forests and more than 1,000 hectares of lakes. The region is used for summer and winter pastures, rice growing, truck farming and other purposes.

Land resources in the Syr-darya valley are more than adequate for economic needs. The local problem is rather one of land conservation. As is well known, the party and the regime are devoting considerable attention to the problem and their lead is being followed by local authorities.

Shaymerdenov reviews the actions of rayon local authorities, beginning with his own party committee, in this area in detail. He notes the special campaigns to improve inhabited areas, large scale reforestation efforts and special emphasis on the development of aquaculture in local lakes as examples of what is being done. Among problem areas are a lack of concern with land use on the part of party, soviet and Komsomol organizations, insufficient involvement of the young in conservation and related efforts and a lack of care for trees planted in populated areas.

SECOND VOLUME OF KAZAKH RED BOOK PUBLISHED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1982 carries on page 4 a 900-word review by M. Baytenov, division chief of the Botanical Institute of the KaSSR Academy of Sciences, and senior research worker A. Orazova of the second, floral volume of the KaSSR "Red Book." Kazakhstan is a land rich in plants and animals, including many rare and unique species. Environmental changes, however, and the powerful influence of a rapidly developing industry and agriculture now threaten many of these species. USSR and KaSSR "Red Books" and endangered and rare species are useful tools in their preservation.

Volume 1 of the republic "Red Book," covering 87 faunal species, appeared in 1978 per a resolution of the KaSSR Council of Ministers. Volume 2, on flora, the joint work of botanists of the KaSSR Academy of Sciences Botanical Institute, the Central Botanical Garden and Kazakh higher education institutions, appeared late last year.

Volume 2 includes species contained in the USSR "Red Book," species growing only in Kazakhstan and not included in the USSR "Red Book" and species now declining in their Kazakh habitats. In all 306 species are listed. The review notices, in particular, useful information in the book on specific habitats and methods of floral preservation and record examples of specific problems (e.g. water reservoir construction, other large industrial and agricultural projects and overgrazing) threatening Kazakh flora.

MODEL FOREST PROJECT BEAUTIFIES SHUCH'YE

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 11, November 1981 carries on pages 8-9 a 500-word article by Khamze Qaratov on a model forest project near Shuch'ye City (Kokchetavinskaya Oblast). The article is published under the regular rubric "Cherish Nature."

The Burabay areas is blessed by nature and exceptionally beautiful with its lake and thick forests. The forests had their origin in a project begun in 1960 through the action of I.S. Spigalazov, a worker at the Kazakhstan Forestry Enterprise Research Institute, and then laboratory worker S.V. Malovik. The project covered an area of 44 hectares, which was ploughed to a depth of 20-22 centimeters and planted with nearly 2,000 trees over a period of several years. Many were brought in from other regions and even from abroad. Other plants were imported for the forest project as well. The park is now the glory of Shuch'ye City which becomes more beautiful with each passing year.

TURKMEN SSR

PARTY ROLE IN BASIC CONSTRUCTION STRESSED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 3 January 1982, page 1, carries a 1,100 word lead editorial emphasizing the significance of party organizations in helping the basic construction industry. It is noted that "because party-political work has not been placed on the correct road in construction, the way is open to negative situations like violation of work discipline. Also, we have been unable to bring an end to formalism in the organization of socialist competition. Party organizations have not fully controlled the work of administrations, and criticism and self-criticism have been conducted on a weak basis."

U.S. INTERNATIONAL BROADCASTS CALL FOR 'HOLY WAR'

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 5 January 1982, page 2, carries a 1,900-article by V. Bol'shakov attacking American international radio for stressing "bourgeois nationalism." It is also claimed that Radio Liberty has been calling for a "holy war" between the Muslims and non-Muslims of the USSR

ACADEMY OF SCIENCES ACHIEVEMENTS REVIEWED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 January 1982, page 3, carries an 800-word article by O. Ovezgeldiev, vice president of the Turkmen Academy of Sciences, on the 1981 achievements of the Academy. "Certain questions pertaining to the physics of heat waves emanating from the depths of the earth during earthquakes have been defined." Also, solar energy continues to be emphasized. To expedite research and production, "with the goal of automating experiments and more widely using electronic calculating machinery, last year new tools and instruments costing roughly 1 million rubles have been purchased."

6TH CONGRESS OF TURKMEN JOURNALISTS TO OPEN

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 January 1982- page 2, carries a 1,400-word article by A. Mammedov, chairman of the Board of the TSSR Journalists Union and director of Turkmeninform, on the imminent opening of the 6th Congress of Turkmen Journalists Union. Among shortcomings to be worked out are: "the work of the union board is not always appropriate for the demands of the time. The participation of the board with oblast organizations is rather weak. Journalist sections writing about literature and art, information and reportage sections are functioning in a weak manner."

Ashkhabad SOVET TURKMENISTANY in Turkmen 12 January 1982, page 2, carries a 1,700-word article by V. Antonenko and K. Gurbanov, on the congress proceedings, reiterating the above problems. Notable is that the Turkmen women's magazine SOVET TURKMENISTANYNYNG AYALLARY is commended for reaching "hundreds of women." The magazine lists its own circulation at around 130,000.

PILGRIMAGES TO MUSLIM SHRINES ATTACKED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 9 January 1982, page 4, carries a 2,200-word article by M. Annanepesov, doctor of historical sciences, in which the pilgrimage to the "holy places" of Turkmenistan are attacked. In one of them, near Gokdepe, "without receiving permission, a house was built which has been used as a mosque in the last 1 or 2 years. On days of Muslim pilgrimages, sacks containing money and sweets appear on the grave of a "holy" man; as for the contents of these sacks, these later go into the pockets of the psuedo-grave guardian who works this place. In 1958, the Religious Administration for the Muslims of Central Asia and Kazakhstan issued a special decree in which it was stated that those visiting the very numerous "holy" places were in sin from the point of view of the Muslim religion, and the functioning of ishans, sheykhs and grave guardians was forbidden in such places. In July 1973 this administration reminded clergy and believers of this decree.

But those going to these "holy" places, as a rule, do not know of this decree. Among them are many believers, even people who would not say that they are especially religious. In this context, workers on the ideological front, practicing atheists, medical practitioners must speak out courageously, convincingly and politely."

TURKMEN-UZBEK-KARAKALPAK RELATIONS STRESSED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 31 January 1982, page 2, carries a 1,400-word article by U. Shamuratov, secretary of the TCP Dashkhovus obkom, on the importance of internationalist education, the focal point of which is the mutual relationship between Turkmenistan, Karakalpakistan and Uzbekistan. He points out that "the socialist competition set up between workers of the Khorezm oblast of the Uzbek SSR and the Karakalpakistan ASSR contributes to the foundation of basic fraternal friendship of the Turkmen, Uzbek and Karakalpak peoples." One area where this has been beneficial is that "the Shabat, Sovyetyan, Gazavat, Gylynchnyyazbay and Gypchak-Bozsuv irrigation systems were built and reconstructed by workers of the three republics. With this, immense possibilities are opening up to expand and increase the scope and productive capacity of cotton, wool and vegetable cultivation on the lower Amu Darya."

AFGHANI CHILDREN VACATION IN TURKMEN SSR

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 9 January 1982, page 3, carries a poem by Orazmyrad Gurdov dedicated to the ties of mutual friendship which developed as a result of Afghani children vacationing near Ashkhabad in the summer of 1981. [Due to a printer's error, most of the poem has been obliterated by ink.]

BAKU-KRASNOVODSK FERRY SYSTEM DESCRIBED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 9 January 1982, page 1, carries a 600-word article by M. Mammedov, engineer of the Caspian Sea Shipping Administration, on the importance of the Baku-Krasnovodsk ferry route. Plying the route are the "Sovet Turkmenistany" railroad ferry, the tankers "Nebitdag" and "Turkmennebit," and the freighters "Kemine" and "Murgap." Last year the ferry "Sovet Turkmenistany" "transported 2,800 passengers and 6,000 light and heavy vehicles over the plan."

AMU DARYA FREIGHTER DESCRIBED

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 20 January 1982, page 1, carries a 1,000-word article by Vladimir Pu about the crew of the "Brest," a ship traveling the Amu Darya to the Afghan ports of Sherkhan and Khayraton. "The powerful ships headed for the Afghan ports of Sherkhan and Khayraton are loaded with various tools, construction materials and technical barges."

'FORMER BASMACHIS' SURRENDER IN SHIBERGAN

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 26 January 1982, page 3, carries a 150-word TASS dispatch relayed from BAKHTAR news agency of Afghanistan on the capture of "more than 20 former basmachis" who, on capture, submitted to the government and "announced their readiness to cooperate with the working people of Afghanistan." [Noted here because Shibergan is a predominantly Turkmen region; whether "basmachi" is to be taken as a "thief, brigand" or a remnant of Juneyud Khan's basmachi movement which had taken refuge in Afghanistan in the 1920's and early 1930's is not clear.]

KARAKUM CANAL BEING DEEPENED, WIDENED TO CASPIAN SEA

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 January 1982, page 2, carries a 400-word article by S. Nuryev, bulldozer foreman of the "Zapadgidrostroy" administration of the "Kopetdagvodstroy" trust, on the current status of the construction of the Caspian branch of the Karakum Canal. "Of the four parts of our administration one of them is engaged in extending the canal excavation from 850 kilometers to 1,096 kilometers, and widening and deepening it. They are also doing preliminary work to build a number of water stations." He notes that his administration is "implementing the great work in extending the canal to the Caspian."

KARAKUM CANAL FIFTH LINK SECTOR DESCRIBED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 3 January 1982, page 2, carries a 1,000-word article by A. Charyev, senior scientific worker at the Institute of Deserts of the TSSR Academy of Sciences, on the consequences of the fifth link of the Karakum Canal. Giving an extensive historical overview of the region through which it will run in southwestern Turkmenistan which borders both the Caspian Sea and Iran, he notes that the region is intrinsically fertile, but has suffered from lack of water for the last few centuries. "With the completed construction of the Karakum Canal, 33-34 new sovkhozes will be opened." He also enumerates the various subtropical products which these sovkhozes should be able to produce.

CSO: 1830/347

UZBEK SSR

SURKHANDARYA OBKOM CHIEF ON PURITY OF PARTY BANKS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 January 1982 carries on page 2 a 1,600-word article by Abdukhalik Karimov, first secretary of the Surkhandarya Obkom, entitled "Sacred Debt." The article focuses on the vanguard role of the party in achieving economic successes and the necessity of assuring that purity of party ranks is maintained through the process of recruiting new members. Karimov points out that Surkhandarya Oblast partkoms pay constant attention to the problem of party purity, and do not seek to recruit or retain communists who put personal over state interests, who pursue privileges, or who stain the name of communist. Karimov notes that during January-November 1981, a total of 1,234 new members were accepted into the party. Of these, 667 were workers, 233 were collective farmers, and 315 were economic specialists. Some 888 of the 1,234 had been tempered in the komsomol. Moreover, emphasis was placed on recruitment of women into the party ranks: 422 of the 1,234 new members were women. Karimov cites the CC CPSU Decree "On the work done by the Samarkand Oblast Committee of the Uzbekistan Communist Party to carry out the decisions of the 26th CPSU Congress that relate to increasing the vanguard role of communists and to developing their activism in social life," and stresses the relevance of its criticism of communists who do not skillfully organize work, publicize progressive experience, or show sufficient concern for their fellow men, and of partkoms who exhibit a "liberal" attitude toward communists who fail to behave properly. In the course of the article, Karimov cites a number of unacceptable actions, including graft, theft, eyewash, speculation, violation of womens' rights, slander, and the writing of anonymous letters about other communists.

KHOREZM OBKOM CHIEF PRESSES FOR MORE EFFECTIVE PARTY MEETINGS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 20 January 1982 carries on page 2 a 1,400-word article by Mad'yar Khudaybergenov, first secretary of the Khorezm Obkom, entitled "School for Tempering." The article focuses on the importance and most effective forms of party meetings in helping to assure the vanguard role of the party. Khudaybergenov cites the CC CPSU Decree "On the work done by the Samarkand Oblast Committee of the Uzbekistan Communist Party to carry out the decisions of the 26th CPSU Congress that relate to increasing the vanguard role of communists and to developing their activism in social life," and stresses the relevance of its provisions on the role of party meetings, the necessity to hold them consistently, to observe democratic principles, and to maintain observational control over the work of elected secretaries.

Khydaybergenov states that all 1,122 primary partorgs in Khorezm Oblast conduct work on the basis of a perspective plan, which means that issues are placed on an agenda so that communists will know and be able to prepare ahead of time for discussions at party meetings. Despite this perspective plan, some partorgs do not adequately prepare party meetings and do not devote sufficient attention to increasing the vanguard role of communists. Moreover, many partorgs are not effectively mobilizing communists for the struggle against violations of labor discipline and social order, alcoholism, theft of state property, and wastefulness. On the other hand, some partorgs have recently enjoyed more success in fighting speculation, bribery, favoritism and misuse of state property.

EDITORIAL CRITICIZES UZBEK PARTKOMS' WORK WITH RAYON NEWSPAPERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 January 1982 carries on page 1 a 900-word lead editorial entitled "The Rayon Newspaper." The editorial begins with the observation that the 152 rayon newspapers presently being published in Uzbekistan enter every home and convey party policies to agricultural workers.

Among the themes that the rayon press emphasizes are those dealing with the intensification of cotton cultivation, the specialization of agricultural production on the basis of agroindustrial integration, the friendship and fraternity of Soviet peoples, the "Hammer and Sickle" union of workers and farmers, and the superiority of the socialist way of life. However, SOVET OZBEKISTONI's editorial office has been picking up warning signals that a number of rayon newspapers do not adequately deal with the tasks cited in the CC CPSU Decrees "On the further improvement of ideological and political indoctrination work" and "On the work of the Kashkadarya Oblast Party Committee in the area of increasing the role of mass information and propaganda in mobilizing workers to carry out the decisions of the 26th CPSU Congress." A number of rayon newspapers do not print enough materials on the radical changes that are taking place in the daily life, production and consciousness of the people. Coverage of socialist competition, scientific and technological achievements, and progressive experience is frequently shallow, empty or simplistic. While an effort is being made to retrain rayon journalists through republic courses and oblast seminars, party committees must also accept the responsibility of orienting these journalists toward dealing with "the great problems and tasks of the future" and showing initiative.

UZBEK FOOD INDUSTRY DEPUTIES INTRIGUE AGAINST MINISTER

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 January 1982 carries on page 4 a 1,700-word article by Abdukarim Nabikhojayev [deputy chief editor of SOVET OZBEKISTONI] entitled "Operation 'X.'" The article is a "fictionalized" depiction of the actions of two deputy ministers of the UzSSR Ministry of the Food Industry: Abdupatakh Pulatov and Mamatkul Salamov. According to this account, Salamov had been sent by the Ministry to speed up construction of the Kasan Oil Extraction Plant so that it could start production on schedule. Pulatov was shortly thereafter assigned to assist in this task. The two deputies entered a conspiracy and composed an anonymous letter to send "over the head of the Minister" [Muninzhon Yuldashev] and bring about his downfall.

Pulatov gave the letter to a woman accomplice who typed it at the Yangiyul Oil Combine, in order to give the impression that it was sent by combine workers, and then dropped it in a street mailbox. The author of this article provides no clues as to the contents of this anonymous letter, but briefly sketches the backgrounds of the deputy ministers. Pulatov had been director of the Tashkent Oil Combine for 4 years, during which the Control and Revision Administration of the Ministry of the Food Industry had audited him four times and each time turned up major infractions and bookkeeping discrepancies. After the last audit, Pulatov was ordered to repay an illegal 664 ruble loan from the combine by the Ministry. From the minute he was appointed deputy minister [14 Aug 81] he had his eyes on the minister's chair. As for Salamov, he too coveted the minister's chair, and figured that it would be easy to get rid of Pulatov after the two of them brought about the minister's downfall. The author does not give the name of the third member of "Operation 'X,'" because this woman wrote a second letter to which she signed her name and in which she revealed the plot. When this letter reached the proper authorities, the two deputy ministers were removed from their positions. The author of the article asserts that the deputies were motivated by increasing criticism of their work at ministry meetings and by various party and government officials, which led to feelings of anger and victimization and to acts bordering on sabotage. Nabikhojayev concludes with the speculation that the two deputies may have been responsible for the general deterioration of the ministry's work over the last 2 years, during which SOVET OZBEKISTONI received more than 30 complaints and anonymous letters.

UZBEK SHEPHERDS CALL FOR INCREASING HERDS, DECREASING SLAUGHTER

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 9 January 1982 carries on page 1 a 1,100-word article by Norboy Ergashev, Hero of Socialist Labor and chief shepherd of "Ghozghon" Sovkhoz in Nurata Rayon of Samarkand Oblast, Choli Khojaqulov, delegate to the 26th CPSU Congress and chief shepherd of Sovkhoz imeni Lenin, and Fayzikhon Qonusov, deputy to the SS UzSSR and chief shepherd of "Qizilcha" Sovkhoz, entitled "Female Lambs Should Grow!" The article deals with sheep raising in Nurata Rayon, which, during 1981, delivered 3,255 tons of meat to the state, increased wool production by 25 percent, overfulfilled its milk plan, and brought 158,000 karakul pelts to preparation points. On the basis of the successful experience of preparation points. On the basis of the successful experience of several sovkhozes in the rayon, the shepherds urge that farms aim for creating two large herds from every existing herd.

UZBEK BIOLOGISTS PROMOTE 'ARTIFICIAL' PASTURES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 January 1982 carries on page 2 a 900-word article by Dr of Biology P. Zokirov and Candidate of Biology Q. Khojimatov entitled "Pastures With Abundant Grasses on the Barren Hills." The authors point out that the Uzbek SSR has close to 30 million ha of pasture land, including 24 million ha in the steppes, 2 million ha in the high mountains, and 4 million ha on the dry and barren hill slopes. The steppe and barren hill country can no longer support the enlarging herds, a situation whose seriousness is especially felt in the Fergana Valley, the Keles Steppe in Tashkent Oblast and neighboring Kazakhstan, and in the Nurata Foothills of Samarkand Oblast. Now, a group of scholars at the Botannical Institute of the Academy of Sciences of the UzSSR, led by Academician J. Saidov, have created a system for establishing feed pastures in the bogara land [where unirrigated spring crops are grown] of the barren hill country, which involves cultivating forage grasses that are resistant to aridity and cold. Some 200 natural grasses have been tested so far, and the system has been experimented with on 7,000 ha with good results. Initial costs for these "artificial" pastures are 50-55 rubles per hectare.

UZBEK WRITER PLEADS FOR NATIVE OVER EUROPEAN LIVESTOCK BREEDS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 8 January 1982 carries on page 2 a 900-word article by Nusrat Rahmatov entitled "On Horses and Breeds." Much of this article pleads the case for preservation of the karabair breed of horse that is native to the Turkestan region. Appealing to national pride, the author writes: "It should frighten us that the breeds which our ancestors bred for centuries might become extinct in 30-40 years." The author then turns to arguments based on the experiences of livestock breeders with European breeds of cattle, sheep and chickens, claiming that local breeds provide superior products and are fully acclimated to local conditions.

BUKHARA PUMPING STATION TO TEST SIBERIAN RIVER DIVERSION UNITS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 January 1982 carries on page 1 a 700-word article by correspondent H. Qodirov entitled "Born." The article contains the information that a pumping station has begun construction at Tudakul,just east of the city of Bukhara. When completed, it will be more powerful than the "Khamza-2" pumping station, which is considered the largest in Bukhara, and will be one of the most powerful in Uzbekistan. It will house five pumps presently being built at "Uralgidromash" Plant: "As a matter of fact, these units are the same as those designated for installation at the machine canals that will divert Siberian River waters to Central Asia and Kazakhstan--they will receive their first test at the Tudakul waterworks." The Tudakul pumping station is designed to lift 50 cubic meters water per second to a height of 70 meters and to make it possible to reclaim 180,000 hectares of land in the Urtachul, Malikchul and Shurkul steppe areas. Project allocations include 50 million ruble capital investment, 12,000 tons metal, and 100,000 tons reinforced concrete. A small city for workers and employees will be built at the site, where presently the 3d mobile mechanized column of the "Uzspetsvodmekhanizatsiya" administration is working three shifts in order to clear the foundation area of 3 million cubic meters of earth.

BUKHARA HYDROELECTRIC STATION LAUNCHED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 19 January 1982 carries on page 1 a very brief report from UzTAG entitled "Large Hydroelectric Station," which states: "A large hydroelectric station has started working in the Tudakul Depression in the Kyzylkum in Bukhara Oblast. With its help, plentiful water is being released into the fields. Now, more than 2 billion cubic meters have been collected in this natural basin. The water collected here is sufficient to irrigate 150,000 hectares of land in the Central Steppe and, generally, in the Bukhara Valley."

ARAL SEA ENVIRONMENTAL PROBLEMS DISCUSSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 January 1982 carries on page 2 a 1,200-word article by special correspondent Nomoz Sa"dullayev entitled "The Aral, Man, and the World." The correspondent touches on a variety of environmental problems that vex fishermen in the Aral Sea, basing his remarks on an interview with Bibijamal Asanova, a worker at the Muynak Fish Cannery. While it seems that fishermen enjoy good living conditions, they are perpetually short of fruit and vegetable produce because the saline land around the Aral will not support their cultivation. The correspondent points out that the Hungry Steppe land was desalinated, and that irrigation specialists from Uzbekistan are presently carrying out this task in the Kuban, the Nonchernozem, and even in foreign countries: "Why hasn't this been done here?" Another problem is that in recent years more than 10 million ha of smaller lakes have dried up around the Aral. Finally, the correspondent recalls reading that scientists propose a collector system for subsoil waters flowing away from reclaimed lands which could be channeled through these lands to irrigate them and then diverted into the Amudarya and Syrdarya Rivers, but he pessimistically wonders whether "this used water would help the Aral Sea on time?"

UZBEK ACADEMICIAN PROPOSES NEW CROP ROTATION TECHNOLOGY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 26 January 1982 carries on page 3 a 1,200-word article by N. Muhammadjonov, academician of the (UzSSR), Academy of Sciences, entitled "The Land Is Our Wealth." Muhammadjonov begins this article with a reproachful review of figures that indicate under-use of cultivatable land in Uzbekistan, and argues that present crop rotation methods are not scientifically based systems, do not make intensive use of irrigated lands, and cannot support the fight against cotton wilt. He then outlines a newly developed intensive technology for growing feed and cotton crops that is being advocated by the Experimental Plant Biology Institute of the (UzSSR) Academy of Sciences. This technology calls for rotating throughout the year cereals, legumes and other feed crops on rotation fields according to the scheme 3:6, 3:7, 3:8 [3 years feed crops and 6-8 years cotton crops] which can be applied in two basic variants depending on local requirements and soil. Under the first variant, fields are cleared of cotton plants, fertilized, plowed, and sown with rape [Brassicus Napus] or a mixture of rye and rape in January-February, harvested in April, sown with corn, which is harvested and cleared at end of August, when a mixture of alfalfa and rye is sown, with a first cutting of the rye in November-December. The rye can be cut again in April of the second year, and so on for eight or nine cuttings until summer of the third year. The alfalfa or rye is plowed under after its been cut two or three times in June or early July of the third year, and corn and soya beans or kidney beans are sown in alternate or mixed rows. When these are harvested, the field is prepared and perko is sown. After this is harvested in March-April, cotton is planted for the next 6-8 years according to whichever rotation scheme is used. After the 5th or 6th year, rotation with oats, rye, perko or the like is recommended. Under the second variant, a mixture of alfalfa and sorghum is planted in early spring of the first year, and is mown in early summer for silage. In autumn of the first year, throughout the second year, and until early summer of the third year, alfalfa and sorghum are planted again and again in rotation with oats and rye. Then the cotton crop is planted. The first variant is suitable for well-irrigated and cultivated fields, while the second variant is suitable for less well-cultivated or saline fields. This new technology will produce eight or nine crops of six kinds of cereals and legumes in 3 years. Introduction of this scheme will double feed grains and be effective against wilt. Muhammadjonov concludes this article with the reminder that the most important principle underlying the new technology is putting a halt to the harmful practice of successive plantings of the same crop on the same field.

UZBEKISTANIS WORKING IN VLADIMIR OBLAST

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 January 1982 carries on page 2 a 600-word article by correspondent J. Kholqosimov entitled "The Sound of Hearts in Unison." The article consists of three brief interviews conducted by telephone with figures in the Nonchernozem zone, including one with M. Polatov, manager of the "Uzvladimirvodstroy" Trust. Polatov expresses gratitude for the constant help provided by "the great Russian people" during Uzbekistan's difficult times, and states that organizations of the UzSSR State Committee for Construction of Water Resources situated in Samarkand, Andizhan, Fergana and Tashkent Oblasts have in return answered the call to reclaim lands in Vladimir Oblast of the Nonchernozem. Uzbekistanis are presently building the Sovkhoz imeni Arsikhovskiy, which will be a modern livestock complex, while the 11th Five-Year Plan calls for them to reclaim 13,000 ha of land and do 46 million rubles worth of contract work. Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1982 carries on page 2 a 1,400-word article by Professor A. Ortiqov entitled "Life-Giving Force." The article is devoted to the theme of friendship of peoples and includes among its examples remarks on Uzbekistanis who fulfill their internationalist obligations by working in the Nonchernozem zone. Ortyqov states that a detachment of 300 Uzbek land reclamators set off for work in Vladimir Oblast on 16 September 1982.

UZBEK ECONOMIST DISCUSSES URBAN, RURAL LABOR FORCES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 January 1982 carries on page 2 a 900-word article by economist P. Rohatov entitled "On the Path of Prosperity." Rohatov observes that as mechanization of agriculture spreads, the number of rural workers engaged in the social economy decreases. He states that a kolkhoz worker presently averages 150-200 work days a year, while the major part of the rural work force engages in private plots and domestic work. Moreover, as the rural labor force gets larger, the urban labor force falls increasingly short of requirements for manning new enterprises. The industrial growth experienced by Uzbekistan's cities after the war was accompanied by sufficient demographic growth to justify the expansion of major cities. Rohatov feels that current economic, sociological, demographic and administrative problems in urban areas force planners to consider limiting the growth of large cities while making a serious effort to fully utilize the labor force already in the cities. He cites as an example the fact that 6 to 10 percent of the population, the majority of which are women, in Tashkent City have not entered "useful social work," a situation that may be worse in cities such as Namangan, Andizhan, Bukhara and Samarkand. He calls on internal affairs organs and the State Committee for Labor and Social Problems to involve themselves with the task of drawing women into various urban labor sectors. For example, men presently form 70 to 75 percent of urban trade workers, 80 to 85 percent of food workers, and 60 percent of consumer service workers. Turning to the surplus rural labor force, Rohatov observes that the number of auxiliary enterprises in rural areas that engage rural labor and produce consumer goods are too few in number. He traces the cause of this to agricultural organs that do not participate in the solution of problems of constructing enterprises and workshops on farms and to the noninvolvement of consumer societies and trade organs in this work. Rohatov proposes that state and cooperative trade organizations compile a list of what goods could be produced on which farms at what costs and sale prices. Acknowledging that the establishment of such auxiliary enterprises on state and collective farms depends on the existence and skills of specialists on these farms, Rohatov concludes by calling on the UzSSR State Planning Committee, Ministry of Agriculture, and Ministry of Higher and Secondary Specialized Education to devote consideration to these problems and to provide methodological direction.

UZBEK CONSTRUCTION OFFICIAL URGES MORE PLAN APPRAISALS BY EXPERTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 January 1982 carries on page 2 a 1,000-word article by H. Nosirov, deputy chairman of the UzSSR State Committee for Construction Affairs, entitled "Construction Work Begins With Plan Drafting." Nosirov begins this article with the remark that the production potential of the Soviet Union is basically accelerated through introduction of the newest technical advances, and these must be incorporated into plans at the drafting stage. Ministries, agencies, and executive committees of local soviets must raise the productivity and skills of their departments of experts. During 1976-1980, the State Committees for Construction Affairs of the Central Asian, Kazakhstan and Transcaucasus republics reviewed 5,700 plan drafts submitted for expert appraisal. Of this total, 1,513 were submitted by the Uzbek SSR for 2.5 billion rubles worth of construction. Over the last 15 years, expert appraisers have been able to trim costs, materials and resource expenditures from these plans. At the same time, the board of experts of the State Committee has had to return for major revision 42 percent of the plan drafts submitted to it over the last 15 years. After citing examples of both inferior and superior plan drafts, Nosirov stresses that it is the technical and economic aspects of plans that must be improved. To accomplish this, he considers it necessary to expand the role of expert appraisals and increase assistance to them at the drafting stage of plans. At the same time, the skill level of experts must be raised. He concludes the article by singling out as an example of inferior work the engineering experts at the Main Administration for Capital Construction of the Tashkent Gorispolkom who "were they to try a hundred times, could not get one of their plans past appraisal."

FINISHED CONSTRUCTION GIVEN PRIORITY IN 1982 UZBEKISTAN PLAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 January 1982 carries on page 1 a 900-word lead editorial entitled "The Builder Is a Creator." The editorial notes that one of the features of the 11th Five-Year Plan is a decrease in growth of capital investment and an increase in putting fixed capital to work. The 1982 plan especially gives priority to completion of unfinished construction projects and utilization of existing material and labor resources, and calls for a 7 percent reduction of unfinished construction. The editorial specifies certain provisions of the 1982 plan for construction. Capital investment will rise 117 million rubles over 1981 to 5.5 billion rubles in 1982, 78 percent of which is designated for building production forces and reconstructing and reoutfitting existing enterprises. Development of the ferrous and nonferrous metallurgy industries will increase by 1.4 times, and of the gas industry by 1.5 times. The sum of 300 million rubles will go to increase production of consumer goods which is one-fifth of the total capital investment for industry. In the agricultural sector, 96,000 hectares of newly irrigated land will be made available, 80,000 ha of already irrigated land will be reclaimed, 60,000 ha of cultivatable land will be leveled, and 300,000 ha of pastureland will receive water supplies. The editorial warns that this plan cannot be fulfilled without an increase in productivity and greater economizing of all resources. In conclusion, the editorial states that a new economic management mechanism, whereby greater value will be placed on completion of construction projects than to volume of construction work, will be introduced beginning with 1982.

LARGE PHOSPHORUS DEPOSITS LOCATED IN KARAKALPAKISTAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 January 1982 carries on page 4 a 200-word report from UzTAG entitled "Phosphorous Deposits." The report states that scholars of the Karakalpak ASSR Filial of the Institute of Geology and Geophysics imeni Abdullayev of the Academy of Sciences UzSSR have determined that more than 20 phosphorus deposits exist on the territory of Karakalpakistan, including a strip of nearly 200 kilometers of phosphorite rocks in Kaplankir. According to their estimates, more than 100 million tons of phosphorus reserves exist in the KKASSR. With a supply of transport, power and sufficient labor forces, the necessary economic base for excavation of these deposits on an industrial scale would be created. This would make it possible to supply farmers of the KKASSR and Khorezm Oblast, as well as of contiguous areas of Turkmenistan, with phosphorus.

UZBEK GEOLOGIST IRKED AT LACK OF DEVELOPMENT OF MINERAL RESOURCES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 January 1982 carries on page 2 an 800-word article by I. Hamroboyev, director of the Institute of Geology and Geophysics imeni Abdullayev of the Academy of Sciences UzSSR, entitled "The Complete Program Is a Powerful Instrument." The author of this article claims that Uzbekistan is a region rich in both metallic and nonmetallic minerals which are not being exploited. As an example, he cites rich deposits of clay, and notes that nonetheless Uzbekistan imports various clay products, such as whitening powders, from Georgia and Azerbaydzhan, though even such imports do not meet demands. He then remarks that only after many years of effort by republic scholars and geologists did the USSR Ministry of the Construction Materials Industry decide to construct the Kuytash wollastonite mine. However, he points out that no word has been received about when actual construction of this mine, which was scheduled to start producing 5,000 tons of wollastonite annually, would begin. As another example of his thesis, Hamroboyev cites deposits of several billion tons of table salt that have been located and studied in areas bordering on Turkmenistan and Tadzhikistan even while the Uzbek SSR imports table salt from Solikamsk in the Urals and from Armenia and Kazakhstan. Hamroboyev states that the location, study and exploitation of minerals is a task that must be carried out on the basis of a complete program, and that the formulation of such a program has recently begun with the help of the Central Committee CPUz, Council of Ministers UzSSR, and Academy of Sciences UzSSR. He concludes the article by noting that the plan has reached the stage where a decision has been made authorizing the "Samarkandgeologiya" Union of the UzSSR Ministry of Geology to carry out the task of locating, studying and evaluating deposits of various precious metals during the 11th and 12th Five-Year Plans.

FIRST ISSUE OF NEW UZBEK WRITERS JOURNAL FEATURED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 22 January 1982 carries on page 5 a full-page spread featuring the first issue of the new Uzbek language journal for young writers named YOSHLIK [YOUTH] which appeared in January 1982. Contents of the first issue include excerpts from Brezhnev's "Memoirs," a humor and satire section, an interview with a prominent Uzbek educator, and the following three works: 1) a poem by Halima Khudoyberdiyeva dedicated to Uzbek youths who perished in the war; 2) a long story by Khayriddin Sultonov entitled "The Shores of Happiness" and set in the 15th century; and 3) a sketch of Sharof Ubaydullayev entitled "Aydin's Example."

UZBEK TRADE UNION COMMISSION CONCERNED WITH WOMEN'S HEALTH

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 January 1982 carries on page 2 a 200-word unsigned report under the "Trade Union Life" rubric entitled "concern for Mothers and Children." The report states that the Interagency Commission for Protection of Mothers and Children operating under the Republic Council of Uzbekistan Trade Unions coordinates activities in the areas of protection of working women and improvement of their working conditions and health care. The commission looks at problems like medical service, food, childrens' health care, organization of vacations, expansion of variety of goods, and improvement of trade service. It especially focuses on the work of sanitoriums and dispensaries where workers receive treatment without leaving the job. Presently, there are 91 such health facilities in Uzbekistan which treated more than 86,000 workers, including 30,000 women, during 1981.

UZBEK ACADEMY OF SCIENCES HOLDS ATHEISM SEMINAR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 January 1982 carries on page 1 a 100-word report from UzTAG entitled "Seminar for Atheism Lecturers." The report states that the Academy of Sciences of the Uzbek SSR has opened a seminar for lecturers on atheism devoted to further improving the forms and methods of atheistic propaganda. Academician E. Yu. Yusupov, president of the Academy of Sciences, gave the first lecture of the seminar entitled "Islam and the Modern Ideological and Political Struggle."

NEW UZBEK SSR ATLAS PREVIEWED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 January 1982 carries on page 2 a 500-word article by A. Hisomov, vice-president of the UzSSR Geographical Society, entitled "Atlas of the Uzbek SSR." The article announces that scholars and cartographers of the Geography Department of Tashkent State University, the Geography Section of the Academy of Sciences UzSSR, and the UzSSR Ministry of Education, have completed work on an atlas of the Uzbek SSR. The work will contain 37 maps, which have been drawn at a scale 2-4 times larger than usual, are extremely clear, easy to use, and informative, and incorporate data current as of 1979. The atlas will be composed of several sections. One section deals with physical nature, and includes a map on conservation of species. Another section deals with demography, and has maps containing city and nationality population figures. Another section deals with the economy, and includes maps of irrigation systems. There are also sections with educational and cultural institution maps, historical maps, a street map for Tashkent and tourist maps, and maps of basic construction works in Uzbekistan during the 11th Five-Year Plan.

MACHINE TRANSLATION LAB OPENED AT SAMARKAND UNIVERSITY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 January 1982 carries on page 2 a 700-word article by correspondent A. Dilmurodov entitled "The Machine Does the Translation." Dilmurodov reports that the Linguistic Engineering Laboratory under the Department of Foreign Languages at Samarkand State University was opened a year ago through the initiative of Candidate of Philology Hamdam Orziqulov. Having worked in the area of translation of foreign languages for many years, Orziqulov became intrigued with the potential of machine translation. Professor R.G. Piotrovskiy, director of the Linguistic Engineering Laboratory of Leningrad Pedinstitute, familiarized Orziqulov with the topic and provided him a great deal of information. Following correspondence with many computer centers, Orziqulov signed a 4-year 100,000 ruble contract with the computer production plant in Kazan. He then organized a group of Samarkand linguists who were assigned the task of creating a technical system and literature for translation from English into Russian. In a future phase, this group will prepare a dictionary for a microcomputer to be used in a tourist center to dispense information. The Samarkand linguists have also prepared the initial steps of a French-Russian vocabulary and dialog for a computer. The article notes that the Samarkand machine translation laboratory is the only one of its kind in Central Asia.

UZBEK ESSAY SERIES DEVOTED TO 60 YEARS OF USSR, NATIONALITY TOPICS

[Editorial Report] Under the rubric "60 USSR," SOVET OZBEKISTONI has begun to publish essays by prominent Uzbek scholars dealing with various aspects of the formation of the USSR, nationality policy, and the theme of friendship of peoples. Tashkent SOVET OZBEKISTONI in Uzbek 12 January 1982 carries on page 2 a 1,200-word essay by Docent and Candidate of Law K. Komilov entitled "The USSR: A Great Fraternal Family." Komilov begins this essay with the remark that a new historical entity came into existence under conditions of developed socialism, one based on mutual rapproachement of all classes and social groups, equality of nationalities and subnationalities, and fraternal cooperation. The sense of belonging to a fraternal family took root during the period of construction of the socialist society, and today is expressed in the fact that the Homeland of all nationalities is the USSR, the goal of all nationalities is the construction of communism, and the ideology of all nationalities is Marxism-Leninism. Komilov cites as an example of nationality participation in the management of the Soviet state, the fact that 60 nationalities are represented as deputies to the Supreme Soviet USSR. In the case of Uzbekistan, 48 nationalities are represented among the 101,979 deputies elected to local soviets, a figure that includes 37,274 workers and 33,260 farmers (of which, 4,902 are women). In the remainder of the essay, Komilov comments on the unprecedented changes that have taken place in Uzbekistan during the Soviet regime: "Today, Soviet Uzbekistan is an industrial-agrarian republic which has a powerful and modern industry...and a multibranched agriculture." Tashkent SOVET OZBEKISTONI 16 January 1982 carries on page 2 a 1,400-word essay by Professor A. Ortiqov entitled "Life-Giving Force." Ortiqov begins this essay with the observation that the nationality question has been completely resolved in the USSR. He proceeds to discuss cases that demonstrate the friendship of Soviet peoples, including Uzbekistanis helping to reclaim land in the Nonchernozem Zone, the rebuilding of Tashkent after the 1966 earthquake, the study of the Russian language, the Days of Uzbek Literature and Art held in Tajikistan in 1981, and the fulfillment of their internationalist obligations by thousands of Uzbek specialists working in Afghanistan, Algeria, Tunisia, Cuba, India, Ethiopia, Ghana, Angola, Syria, and the Yemen. He concludes: "Our beloved party has nurtured us like a mother, and cared for us like a father.' Tashkent SOVET OZBEKISTONI 21 January 1982 carries on page 2 a 2,000-word essay by A. A"zamkhojayev, corresponding member of the AS UzSSR, entitled "V.I. Lenin: Organizer of the USSR." This essay focuses on the leading role of Lenin in the formation of the USSR and the drafting of the first Constitution. The essay is informational in character. Tashkent SOVET OZBEKISTONI 13 January 1982 carries on page 4 a 1,300-word essay by Yakhyo Tokhtayev entitled "The Warmth of the Taiga." Tokhtayev devotes this essay to the formation and economic development of the Komi ASSR, and bases his description of the Komi country on his visit to the capital Siktivkar. Most of his remarks are focused on the lumber, coal, gas and other resources of the autonomous republic.

PROXIMITY OF UZBEK AND TAJIK LANGUAGES STRESSED BY UZBEK LINGUIST

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 29 January 1982 carries on page 5 a 1,700-word article by Sultonmurod Olimov entitled "Translation Possibilities and the Translator." This article appears in connection with an upcoming roundtable of the Uzbek and Tajik Writers Unions to be held in Samarkand to discuss translation problems. Olimov bases his remarks on a translation of a work of Navai, founder of Classical Uzbek literature, made by Muhiddin Aminzoda from Uzbek into Tajiki. Olimov observes that the task of translating classical Uzbek poetry into Tajiki differs in principle from that of translating Soviet Uzbek poetry, because classical Uzbek poetry is fundamentally closer to modern Tajik poetry due to their common use of the classical aruz-poetic meter. Comparison of translations of Navai into Russian, Tajiki, Azerbaijani and Kirgiz shows that Tajiki presents the greatest possibilities for translation. One can translate couplet by couplet instead of through free verse, because one can substitute word equivalents within the lines.

In fact, 69 out of every 100 words in Aminzoda's translation of Navai are the same. Such translations are not possible in a language like Russian, where one must employ a different principle of translation according to which the meaning of the Uzbek text is translated and then artistically recomposed in Russian. Olimov concludes the article with the advice that Russian translators of Uzbek works should be closely aided by Uzbeks.

UZBEKISTAN SHIPS COTTON TO POLAND

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 31 January 1982 carries on page 1 a very brief unsigned report under the "Good News" rubric that states: "Cotton processing enterprises in Kashkadarya Oblast have sent 600 tons of cotton fiber to the Polish People's Republic. An even greater volume of this raw material is being prepared for shipment to Cuba. This year [1981], cotton ginners of Kashkadarya Oblast have sent 5,000 tons more than last year of the valuable textile raw material to fraternal socialist countries."

AFGHAN MEETING ON FOUNDER OF UZBEK LITERATURE

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 22 January 1982 carries on page 7 a 200-word report by A. Abduazizov entitled "Devoted to the Great Poet." The report states that a seminar devoted to the study of Navai was held at Kabul University on 21 December 1981. Saidiy, rector of Kabul University, gave the opening talk on "the great humanist and singer of the friendship of peoples," followed by Dr Vohidiy, senior scientific worker in the Language and Literature Section of the Afghanistan Academy of Sciences, speaking on tasks facing Navai studies, and by Dr Siddiqiy, speaking on historical aspects of Navai's era. A letter from Babrak Karmal calling on scholars to carry out the new tasks connected with Navai studies was read to conference participants. The report also states that a collection of articles about Navai, samples of his writings, and newspaper and journal materials, has been printed in Dari and Pashtu languages, while a translation of Navai's treatise [on the beauties of the Turkic language] MUHAKAMATU'L-LUGATAYN is being prepared.

FILMING OF UZBEK DOCUMENTARY ON AFGHANISTAN REVOLUTION

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 8 January 1982 carries on page 6 a 1,000-word article by Hasan Qudratillayev entitled "Names in the Credits." The article makes the point that many people are involved in the shooting of a film, and illustrates the point by describing the hazards faced by cameramen during the filming of "Afghanistan: The Revolution Continues," directed by Malik Qayumov, and winner of the USSR State Prize in 1981. The author had been a member of a group of Soviet specialists working alongside Afghans on the "Sarde" project near Ghazna, when these cameramen first came to film the mowing of the wheat in September 1979. Having done so, they returned to Kabul and then reappeared 10 days later because Qayumov was not satisfied with the footage. Quadratillayev stresses that their work was carried out under precarious circumstances. Later on, the group of Soviet workers again met one of the cameramen, Turdi Nodirov, at their hotel in Kabul. Nodirov told them that Qayumov had just sent the film crew back to the same locality to shoot film of the peasant woman who is one of the central figures in the documentary. They had done so despite their promise to the woman not to return again. It seems that local counterrevolutionary elements had come to the woman after their previous filming and told her that if she let the infidels (kafir) take her picture again they would kill her. The crew were nonetheless permitted to film her "while the whole countryside was in insurrection" and were able to get excellent footage of the woman who, in the author's opinion, epitomizes the new person in Afghanistan and the basis of its hope for the future.

IRAN-IRAQ WAR KEY TO ISLAMIC REVOLUTION, SAYS UZBEK COMMENTATOR

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN'ATI in Uzbek 1 January 1982 carries on page 7 a 700-word commentary by F. Shohismoilov under the "Commentator's Pulpit" rubric entitled "Old Problems in the New Year." This commentary touches on recurrent international issues, such as peace, promoted by the Soviet Union, and aggression, promoted by militaristic and imperialistic circles of the United States, and conflicts in Afghanistan and Iran. The commentator states that the radical changes taking place in Afghanistan have all been initiated with appreciation for the historical customs and traditions of the Afghan people, which in turn increases their trust in the Afghanistan People's Democratic Party. Shohismoilov begins his comments on Iran with the statement "The Islamic revolution in Iran is continuing." However, he notes, since the regime of the detested Shah was toppled, presidential elections have been held three times, and fights are always breaking out in many provinces. The war with Iraq continues to aggravate the situation, and Shohismoilov feels that it is in the best interests of both peoples to put an end to it. He concludes that while Iran's leaders face many problems, "the future fate of the Iranian Islamic revolution depends on the successful solution to this problem."

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

TAJIK FIRST SECRETARY RASULOV DIES

Announcement of Death

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 6 Apr 82 p 1

[Official announcement and funeral arrangements for the death of Dzhabar Rasulov, First Secretary of the Tajik Communist Party]

[Text] From the CPSU Central Committee, the Presidium of the USSR Supreme Soviet and the USSR Council of Ministers

The CPSU Central Committee, the Presidium of the USSR Supreme Soviet and the USSR Council of Ministers with profound grief announce that on 4 April 1982, at an age of 68, Dzhabar Rasulov, member of the CPSU Central Committee, Deputy of the USSR Supreme Soviet, First Secretary of the Central Committee of the Tajik Communist Party and Hero of Socialist Labor, died suddenly.

CPSU Central Committee   Presidium of the USSR Supreme Soviet   USSR Council of Ministers

From the Central Committee of the Tajik Communist Party [TCP], the Presidium of the Tajik Supreme Soviet and the Tajik Council of Ministers

The TCP Central Committee, the Presidium of the Tajik Supreme Soviet and the Tajik Council of Ministers with profound grief inform the communists and workers of the republic that on 4 April 1982, Dzhabar Rasulov, outstanding organizer of party and soviet construction in Tajikistan, member of the CPSU Central Committee, Deputy of the USSR Supreme Soviet, First Secretary of the TCP Central Committee and Hero of Socialist Labor died suddenly.

Central Committee of the Tajik Communist Party   Presidium of the Tajik Supreme Soviet   Tajik Council of Ministers

On 4 April 1982, at the age of 68, the prominent party and state leader of Tajikistan, the member of the CPSU Central Committee, the Deputy of the USSR Supreme Soviet, the First Secretary of the TCP Central Committee, Hero of Socialist Labor Dzhabar Rasulov, died suddenly.

D. Rasulov was born on 10 July 1913 in the town of Leninabad in a worker family. He was a member of the CPSU since 1939. He started his labor activity in 1934 after completing the Central Asian Cotton Institute. He worked as an agronomist of an agricultural station and then administration chief and deputy people's commissar for agriculture of Tajikistan. In 1941-1945, D. Rasulov was the representative of the USSR People's Commissariat for Procurement in Tajikistan. In subsequent years, he worked as the people's commissar of agriculture and later the people's commissar for industrial crops of Tajikistan.

In 1946, D. Rasulov was appointed chairman of the Tajik Council of Ministers. From 1955 he worked as the USSR Deputy Minister of Agriculture, the Secretary of the TCP Central Committee and the extraordinary and plenipotentiary ambassador of the USSR to the Republic of Togo. From 1961 until the last days of his life, D. Rasulov held the post of First Secretary of the TCP Central Committee.

In all responsible areas of party and state activity, D. Rasulov showed dedication to the cause of communism, steadfastness in carrying out the party line and true internationalism. With his inherent industriousness, great sense of responsibility and profound knowledge of life, he was concerned with the fundamental questions of the economy and culture and made a major contribution to the development of cotton raising and other sectors of the Tajik economy. With his high ideological loyalty, humility and sensitive and attentive attitude toward people, he won profound respect and authority among the communists and all the workers of the republic.

At the 19th CPSU Congress, D. Rasulov was elected a member of the CPSU Central Auditing Commission and at the 22d and subsequent congresses, a member of the CPSU Central Committee. He was a deputy of the USSR Supreme Soviet and a deputy of the Tajik Supreme Soviet from the 2d through the 10th sittings.

For great contributions to the Communist Party and the Soviet state, Dzhabar Rasulov was awarded the high title of Hero of Socialist Labor. He had received nine Orders of Lenin, the orders of October Revolution, the Patriotic War Second Degree, three orders of the Red Banner and many medals.

The vivid memory of Dzhabar Rasulov, the loyal son of the Communist Party and the Soviet people, will always remain in our hearts.

Chernenko, V. V. Shcherbitskiy, G. A. Aliyev, P. N. Demichev, T. Ya. Kiselev, V. V. Kuznetsov, B. N. Ponomarev, Sh. R. Rashidov, M. S. Solomentsev, E. A. Shevardnadze, I. V. Kapitonov, V. I. Dolgikh, M. V. Zimyanin, K. V. Rusakov, M. P. Georgadze, M. G. Gapurov, T. Usubaliyev, M. Babayev, G. B. Bobosadykova, A. Dadabayev, I. F. Dedov, L. Karmyshev, R. Nabiyev, Ye. I. Perventsev, Yu. I. Polukarov, A. Khaydarov and M. Kholov.

On 4 April 1982, Dzhabar Rasulov, member of the CPSU Central Committee, First Secretary of the TCP Central Committee, Deputy of the USSR Supreme Soviet and Tajik Supreme Soviet, Hero of Socialist Labor, died suddenly. So ended the life of a man to whose name is linked the founding and development of the republic in the fraternal family of Soviet peoples, the flourishing of its economy, science and culture. Dzhabar Rasulov was born on 10 July 1913 in a worker family. He started his labor activity in 1934 as a cotton agronomist after completing the Central Asian Cotton

Institute. His unusual abilities and professional training quickly moved him among the leading workers. In the prewar years he moved from a regular specialist to the position of Tajik Deputy People's Commissar for Agriculture.

In 1941-1945, D. Rasulov worked as the representative of the USSR People's Commissariat of Procurement for Tajikistan. Later he directed the republic people's commissariats of agriculture and industrial crops. In taking a direct part in the socialist transformation of agriculture and other sectors of the economy, he made great efforts for the industrial development of kolkhoz and sovkhoz production, particularly for cotton raising.

For many years D. Rasulov directed the republic government and from 1955 through 1958 was the USSR deputy minister of agriculture. He was later elected the secretary of the TCP Central Committee and for a certain time was the Soviet ambassador to the Republic of Togo.

Starting in 1961, D. Rasulov continuously worked as the first secretary of the TCP Central Committee. It was precisely in the high position of leader of the republic party organization that his outstanding qualities as the organizer and indoctrinator of the masses were fully apparent.

All his ebullient life was closely tied to the Leninist party in whose ranks he served since 1939. In all areas of party and state construction, D. Rasulov showed initiative and creativity, purposefulness and tenacity in carrying out the plans for the republic's economic and social development. Linked to his name are the development of the Vakhsha Valley, the virgin lands of Dal'verin, the building of large irrigation systems and livestock complexes as well as the creation of the Southern Tadzhik Territorial-Production Complex [TPK] and its heart the Nurek GES.

Being a consistent internationalist, D. Rasulov did a great deal to strengthen the friendship among the peoples of our nation and for broadening the economic and cultural ties of Tajikistan and the other republics, krays and oblasts of the nation. He was constantly in the thick of the masses and knew their life and needs well. The well being of the people and the solving of major social problems were his constant concern.

At the 19th CPSU Congress, D. Rasulov was elected a member of the CPSU Central Auditing Commission and at the 22d, 23d, 24th, 25th and 26th CPSU congresses was elected a member of the CPSU Central Committee. D. Rasulov was a deputy of the USSR Supreme Soviet, 2d-10th sittings and a deputy to the Tajik Supreme Soviet for a number of sittings.

By his indefatigable and fruitful activities in the responsible party post, by his unstinting labor and remarkable human qualities, D. Rasulov won profound respect and authority among the communists and all workers. The motherland highly regarded his accomplishments for the party, state and our people. He was awarded the title of Hero of Socialist Labor and had received nine orders of Lenin, the Order of the October Revolution, three orders of the Red Banner, the Order of the Patriotic War Second Degree and five medals.

The vivid image of Dzhabar Rasulov, loyal son of the Communist Party and Soviet People, will always remain in our hearts.

From the Central Committee of the TCP, the Presidium of the Tajik Supreme Soviet and Tajik Council of Ministers

The TCP Central Committee, the Presidium of the Tajik Supreme Soviet and the Tajik Council of Ministers have decreed:

For organizing the funeral of Hero of Socialist Labor, Dzhabar Rasulov, member of the CPSU Central Committee, Deputy of the USSR Supreme Soviet and First Secretary of the TCP Central Committee, to establish a governmental commission consisting of M. Kh. Kholov (chairman), R. N. Nabiyev, Yu. I. Polukarov, M. B. Babayev, G. B. Bobosadykova, A. D. Dadabayev, I. F. Dedov, L. K. Karmyshev, Ye. I. Perventsev, A. Kh. Khaydarov, V. Ye. Novichkov, Sh. M. Sultanov, Yu. A. Shakarimov, I. Kurbanov and V. M. Arkhipov.

From the Governmental Commission on Organizing the Funeral of Hero of Socialist Labor Dzhabar Rasulov, Member of the CPSU Central Committee, Deputy of the USSR Supreme Soviet and First Secretary of the TCP Central Committee

The coffin with the body of Dzhabar Rasulov will be on view in the Great Hall of the TCP Central Committee.

For those wishing to bid farewell to the deceased, the hall will be open on 6 April from 1000 to 1900 hours and on 7 April from 1000 to 1300 hours.

The funeral will be held on 7 April at 1500 hours in the Park imeni Ayni.

Medical Statement on the Death of Dzhabar Rasulov

Dzhabar Rasulov for an extended time suffered from ischemic heart disease, atherosclerosis of the aorta and coronary vessels, atherosclerotic cardiosclerosis and diabetes.

On 3 April 1982, a myocardial infarction developed, acutely complicated by cardiogenic shock.

Death occurred from the growing cardiovascular insufficiency.

Funeral Eulogies

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 8 Apr 82 pp 1, 2

[Funeral of Dzhabar Rasulov]

[Text] The workers of Tajikistan on 7 April escorted Dzhabar Rasulov on his last journey. Rasulov was an outstanding organizer of party and soviet construction in the republic, a member of the CPSU Central Committee, deputy of the USSR Supreme Soviet, first secretary of the TCP Central Committee and Hero of Socialist Labor.

For the second day the mourning procession has continued as the workers, bowing their heads, pass in front of the coffin of Dzhabar Rasulov set up on a base among wreaths and flowers in the Great Hall of the TCP Central Committee. Homage was paid to the memory of the remarkable son of the party and people by the workers of Dushanbe, representatives of the worker collectives of all the oblasts and rayons of Tajikistan and representatives from the fraternal republics of the nation.

At 1300 hours, entry into the hall was stopped. Remaining around the casket were members of the governmental commission to organize the funeral, relatives and close friends and co-workers of Dzhabar Rasulov. There were the last minutes of farewell.

To the sounds of a funeral dirge, the casket with the body of Dzhabar Rasulov was carried out of the hall and placed on a gun carriage. The funeral cortege accompanied by an honor guard headed to the Park imeni S. Ayni. The funeral procession moved down the main boulevard of the capital. The Tajik state flags with mourning ribbons flew at half-mast on the public buildings.

Numerous wreaths were carried in front. On crimson cushions were the orders and medals, the high decorations of the motherland which had been given in commemoration of Dzhabar Rasulov's activities.

On his last journey he was accompanied by members of the TCP Central Committee, members of the Presidium of the Tajik Supreme Soviet, deputies of the USSR Supreme Soviet and Tajik Supreme Soviet, ministers, leaders of social organizations and representatives from the labor collectives of the capital and all the cities and settlements of the republic.

Along the entire route of the funeral procession stood many thousands of Dushanbe residents in respectful silence.

In the Park imeni S. Ayni, the casket was put on a base.

Taking the rostrum were the members and candidate members of the Bureau of the TCP Central Committee, M. B. Babayev, G. B. Bobosadykova, A. D. Dadabayev, I. F. Dedov, L. K. Karmyshev, R. N. Nabiyev, Ye. I. Perventsev, Yu. I. Polukarov, A. Kh. Khaydarov, M. Kh. Kholov, V. Ye. Novichkov, Sh. M. Sultanov and Yu. A. Shakarimov.

Along with them were delegations from the fraternal Central Asian republics, the deputy section chief of the CPSU Central Committee N. S. Perun, the sector chief of the CPSU Central Committee V. I. Smirnov and other officials who had come to the funeral.

The funeral meeting was opened by M. Kh. Kholov, chairman of the Presidium of the Tajik Supreme Soviet.

Speech by M. Kh. Kholov

Dear Comrades! With profound grief, the communists, all the workers of the republic and our people have accompanied on his last journey the member of the CPSU Central Committee, the first secretary of the TCP Central Committee, the deputy of the USSR Supreme Soviet, Hero of Socialist Labor Dzhabar Rasulovich Rasulov.

It is difficult to accept the idea that the heart no longer beats of this ardent Leninist communist who devoted his entire life, strength, knowledge and experience, his organizational talent to the cause of building communism.

We have lost a person of great soul, ardent heart, clear mind and profound belief in the rightness of our common cause.

Thus was he known in Tajikistan and beyond it. Workers from the CPSU Central Committee and delegations from the fraternal republics have come to escort Dzhabar Rasulov on his last journey and we are profoundly grateful for this.

Dzhabar Rasulov always protected as the apple of his eye a profound loyalty to the great ideas of Lenin, to the ideas of internationalism, friendship among the Soviet peoples and our great fraternity.

Dzhabar Rasulovich Rasulov emerged from the very thick of the working people. He was born on 10 July 1913 in the town of Leninabad in a worker family. After completing the Central Asian Cotton Institute he commenced his great labor biography as a regular agronomist and after a short time had moved up to the position of a people's commissar of Tajikistan. During the years of the Great Patriotic War, Dzhabar Rasulovich Rasulov worked as the representative of the USSR People's Commissariat of Procurement for Tajikistan and did a great deal for victory over the enemy.

All his subsequent activities were constantly linked with the enormous creative work of developing the republic economy, science and culture. During the difficult postwar years, he headed the republic government and was USSR deputy minister of agriculture.

In 1958, Dzhabar Rasulovich was promoted to leading party work. Later he was the extraordinary and plenipotentiary ambassador to the Republic of Togo.

From April 1961, Dzhabar Rasulovich headed the Tajik republic party organization. In this high position his remarkable organizational abilities and talent as the leader and indoctrinator of the masses were most vividly and fully apparent.

At the 19th Party Congress, Dzhabar Rasulovich Rasulov was elected a member of the CPSU Central Auditing Commission. At the 22d and subsequent CPSU congresses he was elected a member of the CPSU Central Committee.

The republic workers repeatedly and with complete unanimity elected Dzhabar Rasulovich Rasulov as a member of the highest national and republic state bodies, the USSR Supreme Soviet and the Tajik Supreme Soviet.

In all areas of party and state construction, Dzhabar Rasulovich Rasulov showed initiative and creativity, purposefulness and tenacity in carrying out the policy of our party and the Soviet state as well as important and responsible tasks of economic and cultural construction.

By his indefatigable creative activities and remarkable human qualities Dzhabar Rasulovich won profound respect and authority among the communists and all the workers of the republic.

The motherland highly regarded the accomplishments of Dzhabar Rasulovich to the party and state and to our people. He was awarded the title of Hero of Socialist Labor and received nine Orders of Lenin as well as many other orders and medals.

We, his comrades in our joint work and immediate associates, valued and loved Dzhabar Rasulovich as an active, knowledgeable and indefatigable worker, a charming and exceptionally humble man and an always exacting and principled leader. He was a model of high party loyalty, professionalism and unstinting service of our great multinational motherland.

Dzhabar Rasulovich was closely linked to the workers, kolkhoz members, scientists, the literary and artistic workers, the youth and all strata of the population. He knew their lives and needs well. You could not even find a small corner of our republic where he had not been. He was known by everyone, from the school child to the war and labor veteran. And there is no sphere of economic and cultural construction where his talent, mind, kindness and humaneness were not apparent.

Dear Dzhabar Rasulovich, your bright image will always remain in our hearts.

Upon the authorization of the TCP Central Committee, the Presidium of the Tajik Supreme Soviet and the Tajik Council of Ministers I open the meeting devoted to the memory of the member of the CPSU Central Committee, the deputy of the USSR Supreme Soviet, the first secretary of the TCP Central Committee and Hero of Socialist Labor, Dzhabar Rasulovich Rasulov.

Speech by Yu. I. Polukarov, Second Secretary of the TCP Central Committee

Dear Comrades! Friends! A deep and unprecedented grief has befallen the country. Dzhabar Rasulovich Rasulov has left us. He was a loyal son of the party and the people, a person of a broad mind, many talents and limitless charm.

All his ebullient life was connected to the Leninist party and he was completely dedicated to its ideals and cause to which he totally devoted his inexhaustible energy and all his strength.

In holding the position of first secretary of the TCP Central Committee, Dzhabar Rasulovich was consistent and unswerving in carrying out the party line and in implementing its plans. He greatly valued the trust of the party and the people and justified this with all his life.

In all his actions we constantly felt a strict party approach and the wholehearted service of state interests. He never ceased instilling a Leninist style of work in the republic and was the very first to follow this.

In possessing outstanding organizing abilities and an unquenchible thirst for activity and being in a constant, creative search, Dzhabar Rasulovich showed a scope and boldness of thinking, innovation and uncompromisingness in the struggle against shortcomings. He fortunately combined an ability to realistically assess the situation of each day and to have a feeling for the future.

We, his comrades and associates, find it hard to believe that we will no longer be next to a person who possessed such profound wisdom and enormous experience, who could always analyze the most difficult situation and find the solely correct solution. As no one else, he knew the daily life of the republic and its party organization. As no one else, he possessed the capacity to isolate the main point and was always where this main point was being solved.

In holding a high position and in being a prominent party and state figure, he at the same time was always simple and accessible, sensitive and responsive. For all of us he remains an example of limitless humility, the greatest principledness and sense of responsibility and the ability to subordinate himself to common interests.

Everyone who worked with Dzhabar Rasulovich, everyone who knew him or met him will always keep in their heart a vivid image of this remarkable person. His name will remain forever in the history of the republic Communist Party.

The communists and all the workers of the republic bow deeply to the bright memory of Dzhabar Rasulovich Rasulov.

We express feelings of profoundest sympathy for his mother, relatives and close friends and wish them courage in this sad and sorrowful day.

Dzhabar Rasulovich Rasulov will always be with us in our deeds and concerns and he will remain among his comrades in work and among everyone who learned from him and happened to meet him. He is in our struggle for the great cause of Lenin and for the triumph of communism.

Speech by R. N. Nabiyev, Chairman of the Tajik Council of Ministers

Dear Comrades! Saying farewell is always difficult. But it is particularly so when one says farewell to a close friend and comrade, a remarkable person from whom we all learned party principledness and state wisdom, firmness and purposefulness.

Today we are escorting on his last trip a prominent party and state leader of the republic, a member of the CPSU Central Committee, a deputy of the USSR Supreme Soviet, the first secretary of the TCP Central Committee and Hero of Socialist Labor, our dear unforgotten Dzhabar Rasulovich Rasulov.

We have lost a loyal son of the Communist Party, an outstanding leader, organizer and indoctrinator of the broad masses of the people and a person of enormous energy, inexhaustible will and optimism.

Dzhabar Rasulovich dedicated his entire life to the flourishing of Soviet Tajikistan and to the strengthening of the friendship and fraternity of the Soviet peoples.

During these minutes it is difficult to express the sense of irrecoverable loss which has befallen us, the grief and sorrow which fill our hearts. The biography of Dzhabar Rasulovich Rasulov is the living history of the republic. His was a great and glorious life. An agronomist, a people's commissar, a diplomat, a state figure and for more than 20 years the first secretary of the TCP Central Committee. He was always on the forward edge of the struggle to carry out the plans of the Leninist party.

For the workers of the republic Council of Ministers which for many years was headed by Dzhabar Rasulovich, his state approach to solving economic and social problems, his industry, his Leninist style in work were a high model and example for imitation.

In all the posts where the Communist Party happened to send him, he showed wholehearted dedication to the cause of communism, tenacity in achieving the goal and great exactingness on himself and comrades in work. Here he always remained a man of boundless humility, kindness and generosity of soul. These qualities won for him profound respect and authority among the communists, the workers of the republic and everyone who knew and worked with him.

The self-sacrificing labor of Dzhabar Rasulov was properly regarded by the motherland. He was awarded the high title of Hero of the Socialist Labor and received numerous orders and medals of the USSR.

But the best monument to him will be our flowering fields and industrial enterprises, powerful hydroelectric plants and new cities to the creation of which he invested all the ardor of his passionate Bolshevik heart.

The untimely death of Dzhabar Rasulovich is a heavy blow for each of us. Today this pain is shared with us by all the Tajik people and by all the workers of the republic who for him were one great and ardently loved family.

Comrades, dear friends! During the difficult moments of farewell our hearts are filled with sadness. But not only sadness will remain in them. In them will always remain the dear image of Dzhabar Rasulovich Rasulov and in them will always remain a vivid memory of him and his accomplishments.

And now, bidding him farewell, we say:

Farewell dear friend and teacher! Farewell dear Dzhabar Rasulovich!

Speech by M. G. Gapurov, First Secretary of the Central Committee of the Turkmen Communist Party

Dear Comrades! With profound grief the communists and all the workers of Soviet Turkmenistan received the news of the untimely death of the prominent political and state leader of Soviet Tajikistan, the member of the CPSU Central Committee, the deputy of the USSR Supreme Soviet, Hero of Socialist Labor and first secretary of the TCP Central Committee, Dzhabar Rasulovich Rasulov.

It is hard to believe that the ardent heart of this Leninist communist has ceased to beat. He was a person of great soul who totally devoted all his strength and organizational talent to the flourishing of the Tajik economy and culture.

Dzhabar Rasulovich traveled a great and glorious distance from a regular kolkhoz agronomist to the first secretary of the TCP Central Committee. In all jobs which were assigned to him he worked with his inherent energy, he showed profound knowledge of his job, initiative, party principledness and high responsibility, and was a humble, industrious and exceptionally cordial man. The remarkable advances of Soviet Tajikistan in economic and cultural development are linked to his name and to his ebullient and indefatigable organizational activities.

The party and Soviet government highly regarded the accomplishments of Dzhabar Rasulovich Rasulov. He had been given the high title of Hero of Socialist Labor and had received numerous orders and medals of the USSR as well as diplomas from the Presidium of the Tajik Supreme Soviet.

The workers of Turkmenistan also had high regard and deep respect for Dzhabar Rasulovich. The close ties of friendship and cooperation between our fraternal republics were brightened by the cordial kindness of the Leninist internationalist, our unforgettable Dzhabar Rasulovich Rasulov.

We have lost a person of unbending will, high party principledness and tempering, excaptional capacity for work, demanding on himself and subordinates, sensitive and totally loyal to the cause of the great Lenin.

In bidding farewell today to Dzhabar Rasulovich, our dear comrade, friend and brother, we are clearly aware that the best memory of him will be our self-sacrificing labor to carry out the historic decisions of the 26th CPSU Congress and the great cause of building communism to which he devoted all his vivid life.

Farewell, our dear Dzhabar Rasulovich. The memory of you, a loyal son of our party and people, your bright image and deeds will always remain in our hearts.

Speech of M. Khamidov, Automatic Lathe Operator at the Dushanbe Tadzhiktekstil'mash [Tajik Textile Machinery] Plant imeni Dzerzhinskiy

Dear Comrades! Today every person in our republic is heart-sick. We do not want to believe that our dear and close Dzhabar Rasulovich Rasulov is no longer with us. It would be hard to find a person who had not met the first secretary of the TCP Central Committee on the job or personally or who had not turned to him for advice or aid.

He was particularly close to us, the workers, because the life and activities of Dzhabar Rasulovich were inseparably linked with the work of the republic plants and factories, associations and construction sites.

He was constantly among us, the working people. He could frequently be seen in the production shops of the enterprises and at construction sites. He visited our plant many times. We will never forget his advice or his warm cordial talks. It was always simple and easy to talk with him. We, the workers, felt that this remarkable person and expert in important party and state affairs was interested in our opinion on various questions and that our interests were close and comprehensible to him.

Dzhabar Rasulovich was repeatedly elected by the workers of our city to the USSR Supreme Soviet and the Tajik Supreme Soviet. He devoted a great deal of energy and attention to the flourishing of the Tajik capital and to improving the life of the people of Dushanbe. The memory of him among the working people will be eternal and grateful.

I repeatedly met Dzhabar Rasulovich. Particularly memorable for me were the trips as part of a Tajik delegation to the ceremony in Minsk devoted to the 60th anniversary to the formation of Belorussia and also to Moscow to the 26th CPSU Congress. His cordiality, simplicity, responsiveness and humanity will long remain in our memory. These qualities of his, combined with personal charm, a great knowledge of people and humility, won him the love and respect and great authority.

In possessing the inate talent of a leader, Dzhabar Rasulovich devoted all the ardor of his soul, all the passion of an ardent fighter for the cause of Lenin and all his life to building communism and to serving the people and our socialist motherland.

Our dear Dzhabar Rasulovich! In bowing our heads deeply to your memory, during this sorrowful hour we assure you that we will always remain the loyal continuers of the great Leninist cause to which you dedicated all your forces and we will steadily and consistently carry out the plans outlined by the party.

Speech by N. D. Khudayberdyyev, Chairman of the Uzbek Council of Ministers

Dear Comrades! Friends! Everyone who lives and works in Uzbekistan was profoundly pained by the sad news of the untimely death of the prominent party and state figure, the member of the CPSU Central Committee, deputy of the USSR Supreme Soviet, first secretary of the TCP Central Committee and Hero of Socialist Labor, Dzhabar Rasulovich Rasulov. During this sad hour of farewell, the workers of our republic bow their heads deeply to the bright memory of our unforgettable friend and brother.

The Central Committee of the Uzbek Communist Party, the Presidium of the Uzbek Supreme Soviet and Uzbek Council of Ministers and personally the candidate member of the Politburo of the CPSU Central Committee and first secretary of the Central Committee of the Uzbek Communist Party, Comrade Sh. R. Rashidov, instructed us to express profound, sincere sympathy for the TCP Central Committee, to the Presidium of the Supreme Soviet and Council of Ministers, to the communists, to all workers of Tajikistan, to the mother, relatives and close friends on the occasion of the untimely end of dear Dzhabar Rasulovich.

The entire life and labor biography of Dzhabar Rasulovich is a vivid example of unstinting service of Lenin's party, the Soviet people and the great cause of building communism.

The outstanding accomplishments of the Tajik workers are inseparably linked to the name of Dzhabar Rasulovich. Particularly important successes have been achieved over the last more than 20 years when he headed the republic party organization. Under the leadership of the TCP Central Committee and Dzhabar Rasulovich Rasulov personally, the republic has produced a remarkable galaxy of party, soviet and economic cadres as well as prominent scientists and cultural leaders.

The diverse activities of Dzhabar Rasulovich were highly regarded by the party and state.

Dzhabar Rasulovich was well known, profoundly respected and loved in Uzbekistan as well. Being a passionate internationalist, he valued the friendship of the Soviet peoples headed by our elder brother, the great Russian people. He made a major contribution to strengthening and developing economic and cultural ties between the Tajik and Uzbek peoples. Inestimable was his personal contribution to the traditional socialist competition between the cotton-growing republics.

Dear Friends! Just recently, Dzhabar Rasulovich was in our republic and along with us shared the enormous joy of the ceremony on the occasion of presenting Uzbekistan with the Order of Lenin. Together with us, he warmly and with his entire heart rejoiced over the successes of the republic. This was a joy of our true close friend, our dependable associate and brother. Such a person will never be forgotten.

The bright memory of Dzhabar Rasulovich as a Bolshevik communist, an ardent fighter for the cause of the Leninist party and Soviet people and as a great patriot of our great socialist motherland will always remain in our hearts. Farewell, our faithful friend and good comrade!

Speech by M. S. Asimov, President of the Tajik Academy of Sciences

Dear Comrades, Friends! An ardent, tireless heart has ceased beating. Our dear, deeply respected Dzhabar Rasulovich Rasulov is no more. It is difficult to put in words all the deepness of our grief, the bitterness of the heavy loss and the pain in our hearts.

A loyal son of the Communist Party and the Soviet people has departed from life. A citizen of the Soviet nation has departed from life, a person totally dedicated to the ideals of Lenin's party and for the sake of which he worked for almost a half century, working unstintingly, wholeheartedly, knowing neither fatigue, rest or quiet.

Dzhabar Rasulovich carried the banner of a communist high. He was a communist in his every breath and in his every drop of fast-flowing blood!

At present, along with the workers and kolkhoz members, and along with all the republic workers, the teachers and physicians, the scientists, poets, writers, the cultural and artistic figures and all the working intelligentsia of Tajikistan bow their heads to his bright memory.

Dzhabar Rasulovich showed exceptional concern for the development of science and culture, for increasing the ranks of the intelligentsia, for its ideological tempering and for raising its role in communist construction. In being constantly in touch with the representatives of the intelligentsia, he sensitively attended to their needs and showed Leninist concern.

For us he was an elder comrade, a wise and considerate mentor and taught us to measure our lives according to Lenin. His wholehearted dedication to the cause of the party and the people, his irreconcilability for any deviations from the standards of communist morality, his high internationalism, party principledness and exceptional humility serve as an example for all of us and particularly for our youth.

We have lost a remarkable communist whose chest bore the brunt of all winds and whose heart was open to all concerns, one of those whose memory lives in the popular saying handed down from generation to generation:

He remains living and eternal.
He who is of good repute,
Forever noble thoughts will bear his name.
Farewell dear Dzhabar Rasulovich!

Speech by T. Kh. Koshoyev, Chairman of the Presidium of the Kirghiz Supreme Soviet

Dear Comrades! With a feeling of profound pain the communists and workers of Soviet Kirghizia reacted to the sad news of the premature death of the prominent party leader, the member of the CPSU Central Committee, the deputy of the USSR Supreme Soviet, Hero of Socialist Labor and first secretary of the TCP Central Committee, Dzhabar Rasulovich Rasulov. The heart of an ardent communist has ceased to beat. All his life was totally devoted to the triumph of communism and to serving the people. It is hard to believe that Dzhabar Rasulovich is no longer among us.

Allow me on behalf of the Central Committee of the Kirghiz Communist Party, the Presidium of the Kirghiz Supreme Soviet and Kirghiz Council of Ministers, to express profound sympathy to the family and close friends, to the associates of Dzhabar Rasulovich, to the communists and to all workers of fraternal Tajikistan. Along with you, dear friends, we share this great grief. It is particularly difficult and painful now to say farewell to a comrade and friend, a person of great charm, cordiality and kindness.

All the life and labor of Dzhabar Rasulovich Rasulov was a vivid example of wholehearted serving the party of Lenin, the Soviet people and the great cause of communism.

The name of Dzhabar Rasulovich is inseparably linked to the great accomplishments of the Tajik people over the last more than 20 years when he headed the Tajik party organization. Inexhaustible energy, warmth of heart and responsiveness, high principledness and intolerance of shortcomings were character traits of Dzhabar Rasulovich.

The communists and workers of Soviet Kirghizia knew and loved Dzhabar Rasulovich Rasulov well. Our meetings with him will never fade in our memory. He made a strong effort to make the fruits of our joint labor and mutual socialist competition ever-stronger and to carry out the party's plans evermore successfully.

And today, during this sad hour of saying farewell to Dzhabar Rasulovich Rasulov, with particular clarity we see all that he has done for the cause of communist construction, for strengthening the friendship of our peoples and for the triumph of socialist internationalism.

The communists and workers of Soviet Kirghizia will always keep in their memory and in their hearts the remarkable image of Dzhabar Rasulovich Rasulov, a glorious son of the Leninist party and Soviet people.

Farewell, our dear friend and comrade.

Speech by Sh. M. Sultanov, First Secretary of the Tajik Komsomol Central Committee

Comrades! It is difficult to find the words which could express all the deepness and weight of the grief which has befallen us and to get across the burning pain of irrecoverable loss. No more is Dzhabar Rasulovich Rasulov, the loyal and constant friend of the youth. He always generously shared with us the warmth of his kind, active heart, he fired us with his energy and inexhaustible optimism, and he closely and carefully followed our every step, he rejoiced in our successes and helped with wise and kind advice.

For each of us the life of Dzhabar Rasulovich was a vivid example of wholehearted serving the people and the home party. From this excellent man the youth have always learned and will learn enormous industriousness, exceptional humility and crystal moral purity.

Until his last minute, Dzhabar Rasulovich was among the youth. Our dear and respected teacher has left us during the solemn and memorable days of the republic Komsomol forum. The ardent speech by Dzhabar Rasulovich at the Komsomol Congress will always remain in our memory, it struck deeply into the souls and hearts of the youth and ignited in them an ardent flame of inspiration and a noble desire to dedicate all their energy, strength and knowledge to the party's cause.

As a great friend and careful mentor of the youth, Dzhabar Rasulovich always believed in the youth and linked the future of our socialist fatherland and its victorious march to communism with them.

Sleep quietly, our dear and beloved teacher. The youth of Tajikistan solemnly vow to you that we will justify these hopes! [Dzhabar Rasulovich devoted a great deal of attention to strengthening our nation's defense capability. This was mentioned by the first deputy commander of the Red Banner Central Asian Military District, Lt Gen V. M. Arkhipov.]

Speech by [Lt Gen] V. M. Arkhipov, First Deputy Commander of the Red Banner Central Asian Military District

Dear Comrades! Today we are all living through a grievous loss. The member of the CPSU Central Committee, the deputy of the USSR Supreme Soviet, the first secretary of the TCP Central Committee, the profoundly respected Dzhabar Rasulovich Rasulov has untimely left us.

All the creative life of Dzhabar Rasulov, his indefatigable labor activities were inseparably linked to our own Communist Party which he had joined in 1939. In holding for many years high state and party positions such as people's commissar of agriculture, chairman of the republic Council of Ministers and the first secretary of the TCP Central Committee, Dzhabar Rasulovich Rasulov devoted all his knowledge, talent, his exceptional organizational abilities to the cause of the development and flourishing of the republic's economy, science and culture. In all the positions where he was sent by the Communist Party, Dzhabar Rasulovich set an example of unstinting, wholehearted service of the motherland, the party and his people.

The exceptional industriousness, party principledness, combined with cordial warmth and a daily concern for people, won him the ardent love and respect of the communists and workers.

The life and activities of Dzhabar Rasulovich were diverse and ebullient. Being for many years a member of the Military Council of the Red Banner Central Asian Military District, he made an enormous contribution to strengthening the defense might of the nation and to raising the combat readiness and high combat capability of the troops on its southeastern frontiers. Dzhabar Rasulovich showed constant concern and attention for training and indoctrinating the personnel as well as improving their combat skills and the life and routine of the district's troops.

For unstinting labor and for great services to the party and state, Dzhabar Rasulovich Rasulov was awarded the title of Hero of Socialist Labor and received nine Orders of Lenin and many other orders and medals.

The Military Council, the Political Directorate and all the personnel of the Red Banner Central Asian Military District share with you, dear comrades, all the bitterness of loss and express to the Central Committee of the Communist Party, to the Presidium of the Supreme Soviet and to the Council of Ministers as well as to all the workers of Tajikistan, the relatives and close friends of Dzhabar Rasulovich their sincere condolences and sympathy.

The bright memory of Dzhabar Rasulovich Rasulov, a true internationalist and an ardent patriot of the socialist motherland, will always remain in our hearts.

Speech by M. Makhmadaliyev, Hero of Socialist Labor and Chairman of the Board of the Kolkhoz imeni Lenin in Voseyskiy Rayon

Comrades, Friends! Today is a sad day for all of us. We are escorting on his last journey the loyal son of the party and people, our unforgettable mentor, Dzhabar Rasulovich Rasulov. Untimely death has taken from the ranks of the party and people a true communist, a person of great soul and generous heart.

Dzhabar Rasulovich moved up from a regular agronomist to an outstanding party and state figure. Regardless of his enormous busyness, he was always among the people. He was well known and sincerely loved by all the cotton and grain raisers, the orchard tenders and livestock raisers, by all the workers of the republic. He devoted exceptionally great attention to the development of agriculture and all the republic's economic sectors.

Due to his wise advice, we have achieved great successes. In particular, all the accomplishments of our kolkhoz are linked to the name of Dzhabar Rasulovich. I personally knew Dzhabar Rasulovich for 40 years and spoke with him during official and private meetings. He was a true communist and a man of great soul and exceptional humility.

His total dedication to the cause of the Communist Party and people have been and will be an example for all of us. I, like all my fellow farmers and like all the workers of Tajikistan, grieve on the occasion of this irrecoverable loss.

Dzhabar Rasulovich was a particle of his home land which he loved so much and always wanted to see happy. All his titanic activities and all his life were directed to realizing this dream. With enormous sadness and pain in our hearts we say farewell to you, dear Dzhabar Rasulovich.

[End of eulogies]

The funeral meeting was ended.

Relatives and close friends said farewell to Dzhabar Rasulovich. Accompanied by a funeral dirge, the coffin with the body of the deceased was lowered into the grave. The salvoes of a farewell salute resounded. The anthems of the USSR and Tajikistan were played. Over the grave an obelisk was placed on which was inscribed: "Dzhabar Rasulov, 10 August 1913--4 April 1982."

In paying a final salute to the outstanding party and state leader of Soviet Tajikistan, the troop subunits marched past.

The communists and workers of Tajikistan will always keep in their hearts the vivid image of Dzhabar Rasulov, a loyal son of the Leninist Communist Party.

UKRAINE PREMIER SPEAKS AT ACADEMY OF SCIENCES MEETING

Kiev PRAVDA UKRAINY in Russian 3 Apr 82 pp 1-2

[Speech of comrade A.P. Lyashko]

[Text] In the realization of the social and economic tasks of the 11th Five-Year-Plan, an important role is assigned to science. Soviet scientists are expanding the front of basic and applied research, and they are trying to accelerate the introduction of scientific developments into practice.

The collective of many thousands of the Ukrainian Academy of Sciences supports with deeds the resolution to increase the effective result of the scientific search, to enlarge its contribution to the development of the national economy of the country. The results of the activity of the Academy of Sciences of the republic during the first year of the five-year-plan and the tasks for 1982 were assessed at the General Assembly of the UkSSR Academy of Sciences, which was held 1-2 April in Kiev.

Outstanding scientists, the directors of scientific research institutes and VUZ's, the representatives of party, soviet, and public organizations met in the assembly hall of the Kiev Gorispolkom.

The presidium of the meeting includes the comrades V. V. Sherbitskiy, A. F. Vatchenko, G. I. Vashchenko, A. P. Lyashko, V. A. Sologub, A. A. Titarenko, Yu. N. El'chenko, A. S. Kapto, Ya. P. Pogrebnyak, the deputies of the chairman of the UkSSR Council of Ministers, the members of the presidium of the UkSSR Academy of Sciences, and the directors of a number of ministries and departments.

The president of the UkSSR Academy of Sciences, Academician B. Ye. Paton, presented a report.

A. P. Lyashko, member of the Politbureau of the Central Committee of the Communist Party of the Ukraine and chairman of the UkSSR Council of Ministers, spoke at the meeting.

Speech of Comrade A. P. Lyashko

Dear Comrades! A little more than a year has passed since the time of the completion of the work of the 26th CPSU Congress, which marked the entry of our country into a new important stage of communist construction. Having advanced large-scale socio-economic tasks, the congress of the party, and then the November (1981) Plenum of the CPSU Central Committee, clearly determined concrete paths and means for the successful advancement of our society to the projected boundaries. In their arsenal a most important role has been assigned to science as an ingenuous productive force in the country of mature socialism. Its development constitutes the foundation of foundations of scientific-technical progress.

"The party of communists," L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the Presidium of the USSR Supreme Soviet, said at the 26th CPSU Congress, proceeds from the fact that the building of the new society without science is simply unthinkable."

Life has convincingly confirmed that the ideas and goals advanced by the congress exert a profound and growing influence on all aspects of the life of our society, on all peaceful development. Having perceived the domestic and foreign policy elaborated by the 26th CPSU Congress as their own vital cause, the Soviet people have through selfless labor secured the further advancement of our country in all the directions projected by the congress.

During the past year the Soviet Ukraine has taken a new step along the path of socio-economic progress. The national income of the republic, from which we draw resources both for the increase of the prosperity of the people and for the development of production, increased by 2.6 billion rubles and reached 80 billion rubles. The program of social development and the increase in the prosperity of the people is being realized consistently. Real incomes per capita of the population have increased. Payments and benefits from public consumption funds have increased by 1 billion rubles for the year. At total of 337,000 well-built apartments have been constructed. In a word, no matter what aspect of social life we take, be it the sphere of production or the sphere of consumption of material and spiritual goods, everywhere the characteristics of a dynamic forward movement are visible.

These results embody in a weighty manner the achievements of advanced scientific thought, labor and knowledge of the scientists of the republic, of the generally-acknowledged staff of science--the UkSSR Academy of Sciences. In the report of the president of the academy, B. Ye. Paton, a broad analysis is presented of the work that has been carried out in the most important scientific directions and the tasks of further scientific investigation have been designated.

Taking into account what has been said, I would like to note that in the recent past the role and responsibility of the UkSSR Academy of Sciences in the securing of scientific-technical progress and the reequipment of production have increased. In 1981 the economic effect from the use of scientific developments of academy institutes in the national economy was twice as high as during the first year of the 10th Five-Year-Plan.

It must be said, however, that during the past year some sectors of the national economy of the republic met with certain difficulties, as a result of which they did not fully fulfill the plan in terms of individual indicators.

During the remaining four years we are faced with the solution of complex tasks. They are reflected in the decisions of the November (1981) Plenum of the Central Committee of the Communist Party of the Ukraine and in the five-year-plan for the economic and social development of the UkSSR. V. V. Sherbitskiy, member of the Politbureau of the CPSU Central Committee and first secretary of the Central Committee of the Communist Party of the Ukraine, talked about this in detail at the

Plenum of the Central Committee of the Communist Party of the Ukraine, which took place on 24 March of this year.

The main and the most profound essence of the national economic problems consist in securing the transfer of the economy onto the rails of intensive growth, to make it truly economical. They can and must be solved successfully with the active participation of all scientific forces.

Accentuating the attention to this, L. I. Brezhnev said at the 26th CPSU Congress: "The country has an extreme need for the concentration of the efforts of "big science", along with the elaboration of theoretical problems, to a greater extent on the solution of key national economic problems, on discoveries capable of introducing truly revolutionary changes in production."

Among such main questions of our economic operation, it was noted in the speech, one must above all single out the necessity of every conceivable economy in the expenditures for final products, the most important item of the efficiency of production.

An increasingly large part of accumulations is being directed towards the development of the fuel-energy and raw material bases. Characteristic peculiarities of obtaining fuel and raw material at the present time are the increasingly complex conditions of the exploitation of deposits in connection with the transition to greater depths and the impoverishment of the ore mass in regard to the content of the basic product. All of this gives rise to new problems and above all raises the question about the more exact foresight of the phenomena which the geologists and operating staff will encounter at these depths. The solution of the problems of securing the efficient exploitation of fuel and mining deposits at great depths must become the subject of the special attention of scientists--geologists, geophysicists, and geomechanics.

It is also important to propose new, more economical methods for the enrichment of the ores and coal being extracted. The scheme being used for the enrichment of iron ores and bituminous coal has not undergone any serious changes for many decades. Meanwhile, in processing increasingly great use is made of coal with a high ash content and ores with a lower iron content. Hence the sharp increase in expenditures for the enrichment and cost of the concentrate. The scientists of the Academy of Sciences, in collaboration with the scientists of the VUZ's and industrial scientific research institutes are called upon to conduct more actively the elaboration of new technologies of extraction and enrichment of useful minerals, and the efficient use of low-quality types of power carriers and raw material.

There must be an increase in scientific research dealing with nuclear energetics which in subsequent years will be the only source of growth in the production of electric power in the UkSSR. Already by the end of the current five-year-plan, the relative weight of electric power produced at nuclear power stations will increase to 28 percent in the republic, as compared to 6 percent in 1980.

Of primary significance is also the intensification of the search and practical utilization of new sources of energy for the full satisfaction of the rapidly growing requirements of the national economy of the country. It must be said that the solution of many of these questions is envisaged through the republic scientific -technical program "Energokompleks"

An important key problem, A. P. Lyashko emphasized, is the securing of the requirements of the national economy for construction materials of high quality. A great deal of work is being carried out in this direction, about which B. Ye. Paton spoke today. During the recent past alone, a number of material- and fuel-saving technologies, original methods for strengthening the components of machines and entire designs have been developed in the institutes of electric welding, materials science, physics of metals, superstrong materials, problems of casting and others. The successes here are unquestionable.

And nevertheless let us examine how the material balance and the total expenditures turn out for maintaining in working condition the already existing large producer goods and to what extent the materials being created and the methods of their processing meet contemporary requirements. The operation of a number of new installations and machines testifies to the fact that the intensification of production processes is accompanied by an increase in expenditures for the more frequent replacement of components and units, labor expenditures for repair, moreover sometimes in dimensions which exceed the growth of production due to intensification --which leads to a rise in its production cost. Precisely in this sphere, our economy is in acute need of science in order to become more economical.

All of this must attract the attention of scientists, designers, and technologists to the realization of a broad and purposeful program of research and experimentation work for the improvement of the quality of construction material, the increase of the ability to resist wear and tear, reliability and durability of machines and equipment, which will secure significant savings in material expenditures national labor.

Questions of the acceleration of the turnover of material resources also relate to the problem of the rational use of materials. This requires thorough study by scientists and economists and the development of corresponding recommendations in regard to the questions of perfecting inter-industry ratios, specialization and cooperatively-organized relations.

One of the central problems of the current five-year-plan, as is well known, is the food problem. High growth rates in agricultural production constitute the basis of its solution. For the successful fulfillment of the tasks that have been set here, it is necessary to unite the efforts of scientists in the creation of new, highly-productive varieties of crops and strains of livestock, in the development of efficient technologies of production, preservation and processing of produce.

The speech noted the fruitful work of the scientists of the academy in regard to the creation and organization of the use of pre-mixed feeds, the technologies of the production of fruit powders, and the preservation of the sugar beet through the application of aqueous solutions of carbon ammoniates as a preservative, and others.

Also important is the further active continuation of the investigation of the theoretical foundations of the selection and formation of crops, as well as the search for new methods of raising the quality and the reduction of losses of agricultural produce. The development of chemical and especially biological means of protecting plants from pests and diseases must be increased. They are extremely necessary in connection with the broad transition to industrial technologies of cultivating agricultural crops.

The Central Committee of the Communist Party of the Ukraine and the government of the republic attach great significance to the realization of special purpose programs "Agrokompleks" and "Sakhar". The Academy of Sciences is called upon to increase its contribution to their realization.

Along with this, problems of preserving nature and the rational use and preservation of natural resources must occupy an important place in the plans of the academy institutes. You know, almost 2 billion rubles are projected to be used for measures to protect the environment, according to the 11th Five-Year-Plan.

The social scientists of the UkSSR Academy of Sciences are working in important scientific directions. The Marxist-Leninist doctrine, research on philosophy, political economy and scientific communism serve as the theoretical basis of the decisions being taken on questions of socio-economic development.

Significant work has been accomplished in regard to the creative study of the real processes in the developed socialist society, the past and present of our country and the republic. This work became particularly active during the period of preparation for the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics and the 1500th anniversary of the foundation of Kiev. Scientists in archaeology note that twice as much knowledge about the history of the city has been accumulated in the past 15 years than during the preceding 150 years. A number of fundamental works have been created which investigate the common historical roots of the Russian, Ukrainian, and Belorussian nations, the friendship and fraternity of all nations and nationalities of the USSR, the leading role of the CPSU, the advantages and possibilities of mature socialism, the Soviet way of life, and others.

The questions of the further perfection of the management of the national economy require the special attention of the economists, jurists, philosophers and psychologists and representatives of other humanistic sciences. This is a complex problem. And we expect well-grounded proposals from the social scientists.

During the past few years, A. P. Lyashko emphasized, the relations between science and production have become stronger, its effectiveness has increased, and the time required for the introduction of scientific developments in the national economy has been reduced.

During the years 1980-1981 alone, the Central Committee of the Communist Party of the Ukraine and the government of the republic, on the initiative of the Academy of Sciences, accepted more than a dozen decrees regarding scientific research development and the organization of its industrial use. A new impulse in this direction was provided by the republic review of the introduction of the achievements of science in production that is being held.

At the same time, not all research organizations are operating with high effective results. The technical and technological solutions proposed by them do not always correspond to the level of contemporary requirements. The unjustified dissipation of scientific forces and material resources is continuing. The Council for the Study of the Productive Forces of the Ukrainian Soviet Socialist Republic of the UkSSR Academy of Sciences must work with greater efficiency in the matter of researching the problems of the distribution of industry, the complex and rational use of natural resources, and the perfection of the structure of the economy of regions.

The introduction of scientific discoveries and inventions in the national economy is the most difficult area even today. The most important place in this mechanism must be occupied by the testing and experimental base of the scientific research. It is known that the labor efficiency of scientists is 3-4 times higher in those institutes which have such a base. The administration of the academy is devoting a great deal of attention to this question, and positive experience has already been gathered here.

In October of last year, the government of the UkSSR adopted the decree "On the State and Developmental Measures of the Experimental Production Base of the Scientific Institutions of the Republic". And we hope that it will help to overcome the bottlenecks in this responsible link of the research process.

Our party highly values the work of scientists and manifests constant concern for the improvement of the conditions of creativity and the everyday life of scientists. In recent years the CPSU Central Committee has twice adopted decrees on the experience of the work of the Academy of Sciences of our republic, and this is testimony of the important achievements of the large detachment of workers of the academy in the acceleration of scientific-technical progress.

In conclusion, A. P. Lyashko, in the name of the Central Committee of the Communist Party of the Ukraine and the government of the republic, expressed the strong conviction that the scientists of the Academy of Sciences, the industrial institutes and the VUZ's, in the practical realization of the historic decisions of the 26th Congress of the Leninist party, will further improve the scientific process and increase their contribution to the solution of the tasks of communist construction.

THEORETICAL CONFERENCE MARKS LENIN ANNIVERSARY

Conference Opens

PM301315 Moscow IZVESTIYA in Russian 22 Apr 82 morning edition p 3

[TASS reports: "Loyalty to Leninism"]

[Text] Philosophical interpretation of the processes of political and cultural development is of great significance for the fulfillment of tasks of communist building and for the successful ideological struggle against imperialism, which is not ceasing for a single day its bitter attacks on the socialist countries in an attempt to weaken their unity.

This was stated by the participants in the international theoretical conference "Philosophy, Politics, Culture," which opened in Moscow 21 April. It is devoted to the 112th anniversary of V.I. Lenin's birth. Scientists from Bulgaria, Hungary, the SRV, the GDR, Mongolia, Poland, the USSR and the CSSR are participating in the conference's work.

Questions of the further creative development of Marxism-Leninism and of stepping up the struggle against anticommunism. Bourgeois ideology and falsifiers of developed socialism are being discussed at plenary sessions and in sections. The conference participants are devoting great attention to enhancing the role of social scientists in the struggle for peace, to ease international tension and to prevent thermo-nuclear catastrophe.

The conference has been organized by "ideological struggle in the modern world"--the problem commission of multilateral cooperation among the socialist countries, academies of sciences--the philosophy and law department of the USSR Academy of Sciences, the Philosophy Institute, the Foreign Ideological Trends and the Soviet Association of Political (State) Sciences.

Conference Ends

PM301317 Moscow PRAVDA in Russian 24 Apr 82 p 3

[TASS report: "To Live and Struggle Lenin-Style"]

[Text] Expressing the working people's interests and the fundamental requirements of our time, Marxism-Leninism enables you to orient yourself correctly in the complex modern world. It is a guiding star for people of good will in all corners of the globe.

This was stated by the participants in the international theoretical conference "Philosophy, Politics, Culture" devoted to the 112th anniversary of V.I. Lenin's birth. It concluded its work in Moscow 23 April.

The CPSU and the socialist states' communist parties, it was stated at the conference, creatively develop the great Leninist teaching. The 26th CPSU Congress and the congresses of the communists of other fraternal parties have made a significant contribution to the treasure house of Marxism-Leninism. The socialist community follows a Leninist course and consistently pursues a policy of peace and detente, security and cooperation among peoples.

The conference participants evaluated highly the new Soviet peace initiatives advanced by comrade L.I. Brezhnev at the 17th Congress of USSR trade unions and at the festivities in Tashkent.

An open letter was adopted from the socialist countries' philosophers to the world's social scientists. It voices concern at the state of modern international relations and contains an appeal for every effort to be made to save mankind from nuclear destruction.

'IZVESTIYA' EXAMINES CONSUMER SERVICE TASKS

PM101049 Moscow IZVESTIYA in Russian 4 May 82 morning edition p 2

[Unattributed article under the "Themes of the Day" rubric: "The Good Mood Service"]

[Text] A session of Belgorodskaya oblast's Menyaylovskiy rural Soviet has examined the question of consumer services in the villages and hamlets under its jurisdiction. The discussion was preceded by lengthy preparation. Deputies together with Soviet experts and the aktiv studied the work of three comprehensive reception centers which serve the rural Soviet's inhabitants and probed in depth the problems on which the expansion of services and the improvement of service quality depend. Not surprisingly the talk at the session was businesslike and interested. Here, for example, is what N. Dobroshenko, RSFSR Supreme Soviet and rural Soviet deputy and chairman of the Olminskiy kolkhoz, said in his speech:

On the eve of the session, our group of deputies made a thorough analysis of the plan for the construction in the economy of primary projects. It was decided to include the consumer service center [don byta] among those projects. The building of it could not be postponed--people's needs are growing and consumer sphere workers must create the appropriate conditions so as to satisfy them.

The profound attention of deputies and local Soviets to the services sphere, which is rightly called the good mood service, is legitimate. In a multitude of deeds and tasks Soviets pay paramount attention to matters connected with people's everyday needs and requirements, without which specific concern for specific people is inconceivable. Does it need to be said that developing and improving the services sphere are indeed a manifestation of such concern?

The sector's enterprises are broadening socialist competition for improving work quality and standard of service, fulfilling the target for the second year of the 5-year plan ahead of schedule and are giving worthy greeting to the 60th anniversary of the USSR's formation.

Leonid Ilich Brezhnev's words from the 26th party congress rostrum--"the store, the canteen, the laundry, the dry cleaners-- this is where people go everyday. What can they buy there? How are they greeted? How do people talk to them? How much time do they spend on the various types of household chores? To a great extent people judge our work according to how these questions are resolved. They judge it strictly, demandingly. And this must be borne in mind, comrades"--were an instruction to everyone directly or indirectly related to this service, for the entire multimillion army of service sphere workers.

Just three 5-year plans ago consumer services became an independent national economic sector. But much has been done in this comparatively short time. Its workers carry out 15 million orders for 900 types of service everyday. It now has at its disposal the latest equipment, automated flowlines, diagnostic instruments and program-controlled machinery. A broad program of measures has been implemented for the further concentration and specialization of production and the improvement of the quality control structure. The pace of the retooling of the sector is attested by the fact that up to 700,000 units of specialized equipment are introduced into production annually at RSFSR service sphere enterprises alone. Consumer services in the non-chernozem zone and the Siberia and Far East region are developing at preferential rates.

The services sphere is indeed vitally important. It is no mere chance that many voters' instructions, on which the current convocation of Soviet deputies have done a lot of work, were concerned with questions connected with developing consumer services. During the run-up to the local Soviet elections talk repeatedly turned to the need to build a bath-house in a settlement or to set up a rolled metal workshop on a city street, open a store in a new residential district or organize the selling of semi-manufactures at a large dining hall. And such questions should immediately be regarded as a priority and resolved without delay using available potential and putting reserves into operation.

Consumer services are most closely connected with the economy and have noticeable effect on people's labor productivity. The lack of the necessary repair workshops for metal goods or radio sets, or of dry cleaners and other consumer service enterprises and badly compiled work schedules which force people to stand in line for hours--all of which people still often encounter now and which is, in particular, a product of low quality service and a lack of respect for customers--has a noticeable effect on labor indicators and deprives people of the opportunity of making the greatest use of their free time.

The service sphere is multifaceted. It embraces the work of trade, public catering, consumer and municipal services. But its workers deal directly with people everywhere--whether they have come to the canteen for lunch or whether they are at the shoe repairer or a photographic studio. Direct contacts of this kind impose a special responsibility on every enterprise and every worker in this sphere. It is his direct duty to be equal to the demands of the time, responding to these high demands both in terms of the level of professional training and of overall standards.

It was the increasing level of people's requirements that at one time brought into being the comprehensive reception centers which have been set up in many villages. They made possible a considerable improvement in rural inhabitants' consumer services. In the RSFSR alone 98 percent of farms now have permanent consumer service facilities. But it must be said that even to this day many are not capable of working at full capacity or of organizing matters at the present day level, because the conditions under which they have to work often leave much to be desired. It is often the case that such centers are located in ramshackle, badly suited and cramped premises. In most oblasts and rayons specific targets have been laid down for reequipping or building new reception center premises. Local Soviets must monitor the fulfillment of such targets and achieve the unconditional implementation of outlined plans. Unremitting attention paid by local organs of power to the activity of the service sphere is an important condition of its success.

WEEKLY INTERVIEWS BELORUSSIA'S KISELEV

PM101247 Moscow LITERATURNAYA GAZETA in Russian 28 Apr 82 p 2

["Topical interview" with T. Ya. Kiselev, candidate member of the CPSU Central Committee Politburo and first secretary of the Belorussian CP Central Committee, by correspondent Anatoliy Kozlovich: "The Master Makes the House..."--date and place of interview not specified]

[Text] [Question] From the platform of the 26th party congress Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, said: "...The pivot of economic policy is something which appears simple and commonplace--a thrifty attitude to public property and the ability to make full, purposeful use of all we have." And the congress unanimously approved this conclusion. If the party sets such a task, it must believe that not all cadres have yet understood the tremendous significance of simple, commonplace work to run the economy economically, that they are not fully prepared for this. In your observation, Tikhon Yakovlevich, how, where and why is this lack of preparation manifested, and where is it leading?

[Answer] Leonid Ilich Brezhnev's thesis on a thrifty attitude toward public property has been taken up by our party and the working people of the Soviet land. They have understood it, accepted it, applied it to life and begun to implement it in practical matters. Leonid Ilich's idea met with such a warm response because, like excellent, first-grade grain, it fell into good ground.

What features does the people's wisdom most value in a person? Simple, seemingly everyday features--industriousness, thrift, sympathy, a sense of duty, devotion to the communist ideal. If a person has this, the rest will follow. These features have helped Soviet people to withstand all their trials and are the best confirmation of an individual's ideological and moral maturity.

In the difficult years of the civil war the party called for the strictest economies in everything. This meant economizing in order to survive and gain strength. And the party and people coped successfully with this task, despite the incredible difficulties and the gloomy predictions and calculations of enemies of every hue.

And no sooner had the country gained strength, no sooner was there bread on the table, as the saying goes, when the fascists arrived. There were 4 years of bloody fighting. The historic victory was secured at a high price. Human losses were tremendous. Once again there was ruin, difficulties and forced economies wherever possible.

The Soviet person's unshakable conviction in the correctness of his cause, his labor heroism, sense of duty and conscious thrift, collaboration and cooperation between all the USSR's nations and ethnic groups--these things make up the firm foundations on which all that has today been achieved is based and on which our future social wealth will grow.

It was on these same foundations that Soviet Belorussia rose from the ashes and ruins, supported by the great Russian people and all the fraternal republics, to its present great heights in the development of the national economy, science and culture. I will cite some concrete figures. In an unprecedentedly short space of time, by 1950, the prewar level of industrial output was surpassed. Over the next three decades the republic's global social product increased nearly tenfold. In 1981 Belorussia's national income was more than twice what it was in 1970, which is not so very long ago. For the attainment of high results in the all-union socialist competition and successful fulfillment of the USSR state plan for economic and social development in 1981 in industry, the Belorussian SSR was pronounced the victor and awarded the challenge red banner of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee.

We need this excursion into the country's history and brief information about the republic today in order to understand more profoundly the essence of Leonid Ilich Brezhnev's instructions on the need for economy and thrift at the present stage of our society's development. This principle, which crystallizes the people's experience, is decisive in the present-day concept of reasonable, zealous economic management.

[Question] And it is addressed to each of us....

[Answer] Precisely. Let us look around us and reflect.

It still happens that when a person has bread on his table he hardly notices it. Not infrequently he even throws it away. Bread on the garbage heap--unthinkable. A fact, nonetheless. On our stairway landings we have bins for collecting food waste. About 160,000 tons of this waste is collected in a year in Minsk alone. It is taken to pig raising units. The fact that we collect it is certainly a good thing, but it is a bad thing that bread is being thrown away. Can this really be in the spirit of the people's traditions?

In his book "Memoirs" Leonid Ilich wrote: "...It was no accident that in our family there was an extremely respectful attitude to bread. My mother's cheerful saying, which we heard at table every day, has remained with me all my life: 'Well, lads, you have eaten, and now scoop up every crumb.' It was not because of poverty or meanness that these sayings grew up among the people. They inculcated in children a thrifty attitude, even, I would say, a devout attitude toward bread.

"I believe that without this attitude to our daily bread, you cannot raise a worthy person who is moral in the fullest sense of the word. Canteens, cafes and baker's stores have now started hanging up beautifully designed signs calling on people to save bread. That is useful, of course, but it is a pity that such appeals have become necessary. Thrift must be inculcated from an early age, first and foremost by the parents, within the family."

These words contain a good, clear moral, but why does not everyone heed it? In other words, why are there people who throw away bread? One answer is that people have begun to live better. Concern for people is our party's main aim. But prosperity has increased, and some people reason: Now we can overindulge, now we can squander.

Formerly the crumbs were carefully collected from the table, but now whole hunks of bread may be thrown away. Old clothes, for instance, are also thrown in the trash can. Some people are embarrassed to take them to the second-hand shop or simply to recycling dumps, and in some places there is no opportunity to do this. There are other examples. If guests come to your home, you switch on the light, show off your furnishings. You sit in one room, but the lights are on everywhere. You are ashamed to switch them off; people might think you scrimp and save. And at work? All the available lighting is switched on, and it stays on even during the lunch break. Someone walks through a shop and sees a bolt on the floor, which his neighbor at the next lathe has just made. It probably fell off the trolley when it was being taken to the store. Does he pick it up? Not always. Some people will pick it up and throw it in the trash can. Just think--a bolt. You go out into the factory yard. There, in the backyard, packaging material may be scattered, things are rusting, scrap metal is strewn about, and sometimes stock metal too.... Some people look at all this calmly. They are used to a situation where new boxes are brought to replace damaged or rotten ones, while articles spoiled by erosion are replaced by new ones.

All these are, so to speak, superficial facts. But they indicate that some people are not particularly attentive toward "trivia," are indifferent, unconcerned, I would even say devil-may-care. As if they had forgotten the simple truth: The greater the wealth, the bigger the crumbs.

[Question] So some truths are worth repeating?

[Answer] Take our daily bread again. In 1940 Belorussia produced 2.7 million tons of grain, while in the last 5-year plan the annual average was 6.2 million tons. Naturally, the higher the gross yield, the more was invested in the fields, the more combines threshed the grain, the more trucks and freightcars transported it, the more elevators stored it, the greater was the probability of losses and the more substantial every grain that was saved. In other words, now that there is more bread, we must safeguard and save it still more carefully.

This principle applies fully to all sectors. The output of machines increases and the number of components produced for them increases correspondingly. Metal consumption increases--that means that every surplus shaving is instantly transformed into a huge pile of wasted public property. It has been calculated that 15 years ago a 1-percent saving in our republic was equivalent to 12,000 tons of standard fuel, while now it is equivalent to 26,000 tons; for rolled metal products the figures are 14,000 and 25,000 tons respectively, and for cement--18,000 and 44,000 tons.

The relationship is obvious: The bigger the scale of production, the more significant the benefits from savings and thrift and the greater the cost of instances of thriftlessness. And not only in economic terms, but in moral terms. Everyone must be clearly aware of this relationship, must really feel it. And it is gratifying that all the working people have responded with heart and soul to the 26th congress appeal: "The economy must be economical."

When the people's wisdom, the economy and politics merge, a positive result is assured. A concrete program of measures for achieving what the party plans is defined in the well-known CPSU Central Committee and USSR Council of Ministers resolution "on stepping up work in saving and ensuring rational utilization of raw material, fuel, energy and other material resources" adopted last July, in the decisions of the CPSU Central Committee November (1981) plenum and in Comrade Brezhnev's mobilizing, inspiring speech at the plenum. The task is clear and a program exists. Now we must work.

[Question] The press keeps reporting how certain enterprises have saved such and such an amount of metal, cement, textiles....Substantial figures are mentioned--as if some rich sack has been opened. Of course, the public wealth is augmented as a result of savings. But sometimes people ask: How can savings be made if tough norms and strict techniques exist? On what basis must savings be assessed?

[Answer] On the basis, above all, of their tremendous economic importance. If you have saved something, you have augmented the country's wealth. For instance, in the last 5-year plan Belorrusia saved 2.5 billion kilowatt-hours of electricity, more than 1 million tons of standard fuel, and also a considerable quantity of metal, sawn lumber and cement. The masses' creative initiative is yielding real results. But while rejoicing in this, we must always ask ourselves whether everything has been done. How has each result been achieved? The facts about savings must also be studied. Why? I will give a few examples.

At the Minsk bearings plant they systematically save rolled metal while at the same time increasing the volume of output. There is less metal, but more output. What miracle are they working there, what are they making the "surplus" bearings from? From the initiative of engineers, designers and lathe operators. They have introduced and smoothed out new techniques, cutting rolled metal expenditure norms to a minimum and saving 2,330 tons last year.

Another incidental fact. When I was at that plant, the workers asked: Why can you not always buy linen in the stores? Yet they themselves pack the bearings in it, for which they are allocated 313,000 meters a year. Is it not possible, I asked in my turn, to replace natural fabrics with some other, less limited material? They are now considering that question. I am confident that they will think of a way of saving linen for more appropriate uses.

Many facts indicate that it is possible to make savings successfully in big matters and small. Switching off the light by your machine when you go for your break is a good thing. It is the simplest economy. Simple not in quantitative terms (a large number of lights switched off results in a considerable saving), but in psychological and moral terms. But it is a pity that we have to remind people of the need for what may be called an elementary saving.

It is another matter to save the metal for an extra bearing, for instance. That cannot be done without creativity. You have to rack your brains. You need high qualifications, skill, the will and awareness of the aim. Such a saving as those made at the Minsk bearings plant can be considered profound and creative--different terms could be used, but I hope the meaning is clear.

Then there are empty savings. Here is an example. Last year the leadership of the Skhlov furniture factory submitted a report on considerable electricity savings. The source of this success was checked. It turned out that the enterprise had been set excessively high energy expenditure norms, and the factory had "saved" on them.

Unfortunately the Skhlov furniture factory is not the only one. Similar things happen at certain other enterprises. The task is to expose and prevent such "savings," as well as errors in setting norms for labor and in technologists' calculations. All kinds of miscalculations distort the nature and purpose of savings. They distort them in moral terms, not only economical terms; they distort the criteria for assessing a worker and run counter to our principles of zealous economic management.

[Question] Are these important moral and psychological nuances taken into account in organizing the movement for savings and thrift and in summing up the results of work in labor collectives?

[Answer] We are striving to do this as much as possible. The movement for savings is organized in three main salients in the republic.

First. The Belorussian CP Central Committee demands that party, trade union and komsomol organizations and economic leaders at all levels maintain unremitting control of the observance of production and technological discipline. Discipline exists where people value time and save it. Working time is one of the main indicators of savings. Alas, people often forget the material value of time. Figures are necessary to remind them. Here they are: In the republic's industry in the last 5-year plan losses of working time amounted to an annual average of 0.5 percent of time worked. At first glance, a tiny amount. But look how it is assessed--at almost half a billion rubles. Industry could have yielded that much more output over the 5-year plan period.

It is very important to analyze carefully who specifically wastes working time, and why. When we know the reasons, we will find a way of eliminating them.

Work is being done in the republic to fulfill the CPSU Central Committee, USSR Council of Ministers and AUCCTU resolution "on further strengthening labor discipline and reducing cadre turnover in the national economy." For instance, in the Volkovysktsementnoshifer Production Association they know how to value working time and have reduced losses to almost nothing--to 0.05 percent. Cadre turnover here amounts to 4.6 percent.

As a result of the movement for savings and thrift we are increasing our material resources and at the same time resolving a very important task--we are educating man, teaching him responsibility not only for himself, but for our common cause, and bringing his thinking up to the level of a statewide perspective.

Second. Considerable reserves for savings lie in work to improve cadres' skills. When the working people's skills, experience and professional competence are increased, then labor productivity increases, and at the same time the economy climbs to a higher level.

Professional skill works miracles, as we saw at the Minsk bearings plant and as we will see at the Minsk tractor plant, which produced nearly 90,000 tractors last year, 475 of them above plan.

Minsk's V.I. Lenin Tractor Plant Association has more than once been victorious in the all-union socialist competition. Its collective's contribution to the nationwide moneybox is the Belarus tractor, whose engine life has increased from 6,000 to 8,000 hours. The machine looks the same, but is much more economical. Where have the extra 2,000 hours come from? From the skillful application of the latest achievements of the scientific and technical revolution and from the high skills of all who made the tractor. Practically every engineer, technicians and worker at the plant is studying. In connection with the transition to team forms of labor organization and payment a new form of training has been introduced there--team leaders' classes, at which 700 people have already added to their knowledge.

It is a most important task for us to strive to ensure that at all enterprises every worker, technicians, engineer and designer sits down to study. If we organize training everywhere and reorient cadres towards savings, then fewer heavy, metal-intensive machines will leave the factory gates, the electricity meters will spin more slowly and less coal and oil will be burned in the furnaces.... You have to know how to make savings. That means you must be taught how to make savings.

Here I would like to say this. Cadres' professional training will become more meaningful and worthwhile if it is skillfully combined with economic training, in which more than a million leaders, specialists, workers and kolkhoz members are involved in our republic. If a worker knows the party's economic policy thoroughly, that means he is more accurately aware of his own place in the economic production chain and better aware of his responsibility for the task entrusted to him.

And the third avenue in the movement for savings and thrift is thorough analysis of norms, plan targets and state all-union standards. I have already touched on this question. It is a matter of making accurate calculations which help to bring reserves into play and eventually to assess the worker correctly and objectively. This latter point is, you will agree, of some importance. Nothing so inspires a person as a fair assessment of his labor. But a fair assessment needs a criterion. Defining an accurate criterion helps ensure the scientifically substantiated setting of norms for labor.

Work to revise norms is constantly in progress in our republic. For instance, last year 13.5 percent of existing output norms were revised in industry, which is equivalent to a 1.5 percent increase in labor productivity. A substantial saving. We will continue this work in the future.

[Question] Does that mean making norms tougher?

[Answer] It would be more accurate to say bringing the standard of norms up to today's standard of worker skills, up to the increased potential of modern equipment. Incidentally, norms are increasingly frequently revised on the workers' own initiative. Early this year communist Viktor Uvarovich Makarov, an electric welder at the Minsk truck plant, proposed an 18 percent increase in the norm. Other workers supported him. This will produce substantial savings. And there are many such examples.

The worker himself improves the production program and seeks ways of increasing his own labor contribution to the common cause, safeguarding and augmenting the people's property. So why do we often talk only of production reserves, if there are personal reserves too? Probably because we do not always see the problems and prospects of the economy in terms of its links with the specific worker or leader.

But, I repeat, wanting to make savings is not enough, you have to know how. And to this end every worker must develop in himself a sense of being the master [chuvstvo khozyaina], must really care about the people's property.

[Question] A master cannot take a step without finding something to do. If a master walks through the yard, he finds a ruble; if he walks back again, he finds another. Do these folk proverbs express your idea, Tikhon Yakovlevich?

[Answer] "Man walks as the master of his vast motherland," says the popular song we all know so well. Let us look in the encyclopedic dictionary to see what the word "master" [khozyain] means.... Here we are.... Khozraschet [autonomous financing] is in, but not khozyain. The compilers of the dictionary obviously thought there was no need to give a definition of khozyain, that it was perfectly clear. But that concept--khozyain--is sometimes used inappositively. For instance, I once heard an enterprise director being described as the khozyain. Flattering, perhaps, but incorrect in principle. State property is the common wealth of the entire Soviet people, as is recorded in the USSR constitution. The director leads the plant and manages the production process on the instructions of the state, which is a state of the whole people.

We read in one of Lenin's works: "...appoint leaders of the people's labor to responsible posts...." That is the crux of the matter: The director must lead the people's labor, as a result of which the country's wealth is created. The people create the wealth with their own hands, they own it, they are the masters [khozyain]. And it is true that such a master cannot take a step without finding something to do, as the proverb says. Incidentally, in what publication is that recorded?

[Question] In Dal [reference to 19th century Russian lexicographer]. And he gives a definition of khozyain: The owner of something. Dal's dictionary also contains this saying: The master [khozyain] makes the house.

[Answer] That is a more accurate reflection of the sense of our conversation. The sense of being the master is an impetus generating constant creativity for the sake of the prosperity and improvement of your own socialist house. It is thanks to precisely this sense that millions of our people become rationalizers, inventors, production frontrunners and originators of labor initiative and innovations. We have become so used to this that we regard it as self-explanatory. For instance, the rationalizers' movement.

The rationalizers' searching thought processes advance production and save the state huge sums. We usually cite the sums saved by the introduction of their proposals to characterize the rationalizers' movement. In Belorussia alone last year that sum totaled R283 million. This figure clearly demonstrates the economic significance of rationalization. At the same time the movement is of tremendous social, moral and psychological significance. That must always be borne in mind. We should talk more about the benefit which rationalization brings to the worker himself. It stimulates his thought, develops initiative and makes life more interesting.

[Question] And if one thinks about it, Tikhon Yakovlevich, what kind of man is this rationalizer in the nationwide movement for increasing efficiency and work quality?

[Answer] Are you asking what it is that distinguishes a rationalizer? I believe that he is distinguished by a tireless creative searching, a desire to look to the future and prepare for it today. And the sense of a master consists of this.

The example set by a rationalizer is so strong psychologically that it creates around itself an active gravitational field. Otherwise the ranks of creators would not be replenished steadily, continuously. Some 10 years ago, the Belorussian Society of Rationalizers and Inventors numbered 197,000 people, now it is 489,000.

[Question] A rationalizer, it could be said, is always critical....

[Answer] And always creative. He fights to establish what is new and progressive. This is why the significance of the rationalizers' movement is so great in the struggle to accelerate scientific and technical progress and organize production and its administration at the level of present-day requirements.

Every rationalizer, inventor and initiator of a labor pledge at his work station is effectively implementing party policy, embodying it in concrete actions and concrete production and moral relations within the labor collective. The greater the number of national creators and skilled craftsmen, the more real and productive is the working people's participation in administering the country's affairs.

Rationalizers and inventors are the golden treasury of the socialist national economy, of our society. Is it not the noble task of our propaganda and of our literature, as well, to propagandize their experience and selflessness more actively and portray their character traits?

[Question] And how does the economization program fit into the program of the struggle for quality?

[Answer] Quality is the basis of economizing. Without caring for product quality or work quality talk of economizing can become words divorced from deeds. You cannot achieve top quality by ignoring the achievements of the scientific and technical revolution. The scientific and technical revolution is the powerhouse of the economy.

There are quite a few examples which show the mutual influence and conditionality of scientific and technical progress and the movement for saving and work quality and its results. Experts of the Minsk Gorizont Production Association have developed a new color television. It is substantially better than its predecessors. It is half the weight and consumes less than half the electricity. Mass production of this television, which begins this year, will make it possible to ensure a considerable saving.

It is a rule that a high-quality item is always economical. The higher the quality, the more substantial the economy. Nearly 25 percent of all products produced in the republic have the seal of quality. We consider this to be not enough. It is planned to increase the proportion of top quality products to at least 30 percent by the end of the current 5-year plan and even higher later on. A responsible mission here has been entrusted to the designers--after all, it is they who put the best features into a product.

The Gomel combine builders were set the task of creating a highly productive silage combine harvester equal to the best foreign counterparts. Such a machine--the KSK.100--has been built. The machine operators praise it.

I had occasion to visit the testing of the Gomel combine and to see the interest with which the Gomselmash comrades and rural machine operators worked on designing it. Their work was well organized, they helped one another and subsequently became richer together by a skill directed toward economizing.

[Question] Tikhon Yakovlevich, you said that "the Gomel combine builders were set a task"....Subsequently testers, rural machine operators and other services and departments were included in the resolution of the task. Consequently, considerable credit for the overall success belongs to the organizers who managed to pool the efforts of many people and enterprises?

[Answer] I would continue like this: It is precisely skillful organization on which success is based. The national economic organism is now so complex and its components are so closely interconnected and interdependent that success is impossible without precise organization. There are still instances when one enterprise which has not fulfilled its contractual obligations causes losses not only to itself but to others too. This is sometimes caused by the pursuit of narrow departmental advantage to the detriment of overall state benefit. Once again the question of leaders arises in our conversation.

The people's labor is not departmental but always bears in mind the common good, the social objective. And if a leader answerable for a specific area of production and bearing personal responsibility for it feels that he is a leader of the people's labor he never pursues narrow departmental advantage and does not begin to view his specific area of production or department in isolation from overall interests.

The people are selfless. Individuals still suffer from individual self-interest. You meet them among leaders and rank and file workers. They occasionally economize at the expense of others, too. And their advantage often turns to the detriment of the state. The disease, unfortunately, has still not been completely eliminated. Its complete and final eradication is our society's goal. Let us recall Vladimir Ilich Lenin's words:

"Communism begins where /ordinary workers/, not minding hard work, show selfless concern for increasing labor productivity and for protecting /each pod of grain, coal, iron/ [passages between slantlines printed in italics] and other products which are not for the workers themselves or to those 'near' to them but for those 'far away,' that is, for all of society as a whole..."

These are lines from "The Great Initiative" (Velikiy Pochin).

In line with a fine tradition, during April millions of Soviet people take part in a Leninist communist subbotnik. On this occasion many collectives worked on 17 April on economized energy resources, setting examples of highly productive labor.

[Question] Could you say which measures implemented in the republic are making it possible to "merge" more efficiently the movement for saving "from below" and saving "from above"?

[Answer] The guarantee of success lies primarily in planning. The Belorussian SSR 5-year plan envisages increasing national income by 23.3 percent, considerably outstripping the growth in capital investments. In the 10th 5-year plan, this ratio was 28 percent to 30 percent. Thus, the new plan is geared toward making fuller use of the republic's production, scientific and technical potential and all resources and toward accelerating the commissioning and reducing the assimilation time of new capacities. The plan also envisages preferential growth in national income in comparison with the growth of GNP. In other words, it is a question of the speediest transition to an intensive path of economic development.

How can this plan requirement be ensured? There is one way--by reducing the material intensiveness of production, making comprehensive savings and use of raw materials, fuel and electricity, applying the achievements of scientific and technical progress more fully and introducing resource-saving techniques more actively. It goes without saying that it is impossible to do without accurate accounting here or a thrifty attitude to output when transporting and storing it.

Daily concern for thrift is everyone's affair, wherever he works, in the city or the country, and at whatever job. Thrift enriches people both materially and spiritually. However, an attitude of thrift toward the state housing stock, land or nature, for example, has still not become the universal norm. No, you must remember: No breakage, no damage. Children are always watching adults and taking their examples from them. Our children must acquire good habits in the future. And this depends on us all now. Implacability toward any instances of mismanagement and wastefulness must be the norm of work, family and everyday conduct.

[Question] We have often used the word "economy" today since this is the theme of our talk. But this term is used in the West, too, and calls for economy are heard there, too....

[Answer] They are heard there, too, that is true. The capitalist states also call on the working people to economize, but how and for what? To ensure monopoly superprofits and for the sake of the arms race. Their style of economizing means cutting spending on education and the population's medical service and sickness and old age pension provision, in other words, a planned general offensive against working people's basic rights.

Socialist-style economizing, as we have already noted, has quite opposite aims and means of attaining them. In Minsk in March there was a republic scientific and practical conference which discussed questions of further improving working people's patriotic and internationalist education in the light of the ideas and conclusions set out in Leonid Ilich Brezhnev's book "Reminiscences." Among the many speakers at the conference was hero of socialist labor Mikhail Trofimovich Klimov, a team leader at the Orsha Order of Lenin flax combine. "Someone abroad once asked me: Why do you complicate life for yourselves by adopting increased pledges?" He explained. "How can you answer that? Our wish to give the motherland more output of higher quality and our desire to improve the economic machanism are in full accord with the interests of the whole collective and each worker. Last year the enterprise's profits totaled over R22 million. And this means that we have considerable contributions for the collective's social and cultural needs."

The people's good is the aim of economizing. Comprehensive economizing helps us to constantly increase spending on satisfying Soviet people's social needs even more fully: Free education, the medical service, pension provision for all working people, the payment of various benefits and grants, state subsidies for housing, food and so forth. "The more mature our society becomes," Leonid Ilich Brezhnev said at the 17th USSR Trade Unions Congress, "the greater the attention we can and must pay to working people's everyday needs--housing, food, the services sphere, health care and education--to everything that determines people's prosperity and good spirits."

In our society everything begins and ends with people. Because the Soviet man builds his communist home for himself, his children and grandchildren. Our big and bright home is the Soviet Union. Soon there will be a joyous festival in that home--its 60th anniversary. Like all Soviet people, Belorussia's working people will greet the great jubilee with new successes in socialist competition for the implementation of the 26th CPSU Congress' historic outlines.

U.S. CRUISE MISSILES 'FUNDAMENTALLY NEW, DESTABILIZING' WEAPONS SYSTEM

Moscow LITERATURNAYA GAZETA in Russian 21 Apr 82 p 14

[Article by S. Daniyarov under rubric "American Military Threat": "From the Matador to the Tomahawk: The Power of One Cruise Missile Is Ten Times That of the Bomb That Was Dropped on Hiroshima"]

[Text] A decade that "bristled with weapons" -- that is how the American TIME magazine called the 1980's. The year 1981 will apparently take a special place in that decade. The Republican administration adopted a new program for the strengthening and expansion of the American nuclear "triad." During the summer the first Trident submarine was launched, and literally a few months later the U.S. Air Force began to deploy cruise missiles.

Called upon to reinforce all three components of the American strategic "triad," they will be produced in three versions: for launching from bombers; from submarines and surface vessels; and in a ground-based version. At the present time, an air-based missile is in the stage of production and deployment. Two other versions have entered the final phase of development. Practically speaking, they are indistinguishable from each other. They have one and the same engine, an identical guidance system, and the same type of warhead. The differences are purely of an external nature. The sea-based and ground-based missiles are known by the name Tomahawk. In essence, the weapon is a small (the largest version -- the sea-based missile -- is approximately 6 meters in length and 50 centimeters in diameter), unmanned, rocket-type flying projectile that carries a type W-80 nuclear warhead with a capacity of 200 kilotons. Installed on the missile is a small-sized highly economical turbofan engine of a new type, which was developed by the Williams Research Company.

Deterrent Weapon

In and of itself, the idea of this kind of weapon is not new. The unmanned Mace and Matador cruise missile have already been part of the arsenal. However, the cruise missile of the 1980's owes its birth to achievements simultaneously in several fields of science and technology -- such as microelectronics, materials science, and aviation engine-building. The radius of action of the new missile can be as much as 2000 nautical miles (approximately 3500 kilometers). It can fly at very low altitudes and has an accuracy that exceeds by a factor of 10 the accuracy of the existing generation of American ICBM's. The onboard electronic computer enables the missile, when flying at low altitudes, to avoid collisions with obstacles lying in its path to the target. In addition, special materials hinder its detection by radar. In the words of one of the "fathers" of the cruise missile, Admiral W. Locke, the signal from the missile on a radar screen will be practically indistinguishable from the interference created, for example, by a bird.

At first, people used to speak about their relatively low cost. The Pentagon put the price of a single cruise missile within the confines of $500,000 to $1 million. But more realistic estimates also exist. The military commentator for the NEW YORK TIMES, D. Middleton, feels that, with a consideration of all the expenditures, the cruise missiles will cost $40 million. That is the estimate for the maximum number of cruise missiles -- approximately 11,000. Although the current program of the Reagan administration envisages the production of approximately 4000 cruise missiles in all three versions, it still will be an undertaking that is anything but cheap.

The main point, however, is that the United States has created a fundamentally new weapons system that can exert a destabilizing influence upon the strategic balance in the world. The nuclear arms limitation and the prospects for further understandings in that area will prove to be questioned. While not yet physically realized in metal, the cruise missiles have given birth to one of the most complicated problems in the course of the SALT-II negotiations. The treaty that was signed in Vienna, and the protocol to it, contained reliable methods of accounting for and monitoring air-based missiles and created the prerequisites for banning in the future the two other modifications. The only regret is that the present administration has repeatedly expressed its negative attitude toward this important step in the area of limiting the arms race.

As long ago as 1977, former U. S. Secretary of the Air Force John McLucas said, "By becoming involved in the production of cruise missiles, we are unable to predict what this will lead to. The president's decision (to accelerate the development of cruise missiles) takes us from the world of the known weapons systems, where all its major units can be measured and computed, into a world of armaments that do not lend themselves to monitoring." Thus, the cruise missiles open up a new channel in the arms race, the closing of which channel will be increasingly complicated in the future. Despite that fact, American strategists are engaged today basically in a search for different versions for using cruise missiles. For them the cruise missile has become a "weapon in search of an application," as it was called by retired Admiral J. Laroque.

It has been propagandized as a means of continuing the service life of American strategic bombers and as an effective replacement for them; as an invulnerable strategic reserve for the navy and as a means of expanding the functions of the fleet. Cruise missiles have been highly touted as the response to the "Soviet threat," as an "ace in the hole" in negotiations with the USSR, and even as a means of creating a more "stable atmosphere" in the world. But the whole truth was stated outright by former U.S. Secretary of Defense M. Laird. As he saw it, "the development of the cruise missile is necessary if we are to guarantee the further buildup of American might in the future. . ."

"Contractor No 1"

At the present time much is being said in the United States about the "inertia" that is supposed to be inherent in the progress of development of nuclear arms, about the "natural nature" of the creation of new generations of weapons, and about the "pressure of military technology." These judgments, like the high-sounding words about "strategic stability" are not worth a plugged nickel. The greed for profit, the new ranks for generals, the increase of the prestige for the military caste in American society -- those are the motivations that activate those who hide behind concern for "national security."

In the late 1960's one of the basic contractors of the Pentagon, the McDonnell-Douglas Corporation, developed a fundamentally new system of guiding unmanned apparatuses, and called it the Turk. The possibility of substantially increasing the accuracy of firing found a warm reception in military circles. The first to seize on the idea of creating cruise missiles with an improved guidance system were the representatives of the navy. The admirals saw the capability of tripping up their chief competitor in the fight for a greater share in the military budget -- the air force. One of the chief propagandists of this system was Admiral H. Rickover. The fact of the matter is that in the late 1960's the navy bureau that he headed -- the bureau responsible for the development of nuclear power units -- had developed a new type of atomic engine for submarines. While pushing the cruise missiles ahead, Rickover did not forget to mention also the need to create also a new type of submarine. Several corporations immediately undertook the development of a cruise missile for the navy. Those corporations included General Dynamics, which subsequently became the chief contractor for that program, and, in general, in a list published by the influential FORBES magazine, it is called military "contractor No 1."

For the Air Force, one of the propagandized merits of the cruise missiles -- their low cost -- turned out to be a major shortcoming, inasmuch as the acceptance of the new missiles as standard equipment instead of the B-1 bomber would have meant a loss to the Air Force of a very substantial piece of their "budgetary pie." But, having made the decision to stop the B-1 program, Carter hurried to assuage the generals with the $24.8 billion, which were mentioned as a "gain" from the cancellation of the B-1 program, but which would remain in the Pentagon's budget. A large part of that "gain" went into the acceleration of the cruise missile program and, in the form of profits, was supposed to find its way into the pockets of the General Dynamics and Boeing companies -- the chief competitors in the fight for the right to produce the cruise missile for the Air Force.

The Boeing company is also one of the ten leading contractors for the U. S. Defense Department. Close ties between them have existed since World War II. It was a B-29 bomber that had been manufactured at Boeing plants that dropped the atom bombs on Hiroshima and Nagasaki. After the war the Boeing company began to produce intercontinental ballistic missiles. That company's interest in air-based cruise missiles was also heated up by the fact that, in accordance with the plan of the Carter administration, that missile was supposed to be carried on the B-52 bombers that were being produced also by the Boeing plants. Thus the company hoped to receive additional profits from programs for modernizing and improving the obsolete B-52 bombers and to bypass the Rockwell International firm, which was the new contractor for the new B-1 bomber.

"Thanks to Senator Jackson"

Thus, two giants in the military-industrial complex engaged in the struggle for the production orders for the air-based cruise missiles. The one that got the upper hand was Boeing, which received a separate Air Force contract that was the biggest one since the Vietnam War -- $4 billion. Boeing's success apparently is to the credit of Senator H. Jackson. In the Senate he represents the state of Washington, where the headquarters and the plants of the Boeing company are situated. It is to him that the company owes the large-scale military production orders that fell to its lot during the postwar years.

Boeing's victory is so considerable that TIME magazine printed on one of its covers a photograph of the smiling president of the company, T. Wilson. At the New York stock exchange, there was noted a bullish dealing in the victor's shares. Boeing's competitor, the General Dynamics company, was also not offended by the Pentagon: it received an order to produce two other versions of the cruise missile -- the sea-based and ground-based versions.

For a long time the ground-based version was viewed as a secondary sector in the cruise missile program. But in 1979, at a session of the NATO Council in Brussels, under pressure from Washington, a decision was made to deploy on the territory of Western Europe 464 Tomahawk ground-based cruise missiles and 108 Pershing-2 medium-range ballistic missiles.

The nuclear means of the theater of military actions (as the American strategists call Europe) occupy a special place in the plans of the American military. The high accuracy of the medium-range means, according to the "hawks" in the Pentagon, will make it possible to use them for nuclear strikes, which are called "surgical." However, what kind of "surgery" can we be discussing if the power of the nuclear warhead in an American cruise missile is 10 times that of the bomb that destroyed Hiroshima?

The shifting of the strategic emphasis in the direction of medium-range nuclear means is linked with an increase in the search for a way out of the "nuclear blind alley" that the United States found itself under conditions of the strategic parity that has formed between the USSR and the United States.

Cruise missiles, in addition to Pershing-2 missiles as a means of delivering nuclear weapons to the European theater of military actions can, according to the concepts of American strategists, substantially change the strategic balance that has developed both on the USSR-U.S. level, and on the NATO-Warsaw Pact level. The threat of a nuclear conflict, in the opinion of the "hawks," hangs over Europe.

What does that mean?

Here are figures that Academician L. A. Il'in presented to the participants in a congress of physicians in Cambridge. Let us assume that one thousand nuclear bombs, each with a power of one megaton, have been dropped on Europe. Five hundred have exploded on the ground, and 500 in the air over the major cities. What will happen to the 671 million men, women, and children living between the Atlantic and the Ural Mountains?

There would be 167.7 million killed and 146 million wounded. . .

On the path of the carrying out of these sinister plans in Western Europe, a powerful wave of an antiwar movement has been building up. Its participants are demanding that the U.S. government reject the deployment of cruise missiles and other medium-range missiles.

As for the Soviet Union, it, in conformity with the Peace Program for the 1980's which was adopted at the 26th CPSU Congress, is in favor of a broader series of measures to limit the arms race and to achieve disarmament. In L. I. Brezhnev's speech at the 17th Congress of Trade Unions, concrete proposals were suggested for reducing the arms in Europe. Erecting reliable roadblocks on the path of saturating the world with cruise missiles and other types of mass-destruction weapons is a goal that conforms to the interests of all nations.

GRISHIN ADDRESSES MOSCOW KOMSOMOL CONFERENCE

PM100701 Moscow MOSKOVSKAYA PRAVDA in Russian 14 Apr 82 p 2

[Apparent text of speech by V.V. Grishin, first secretary of Moscow CPSU Gorkom, delivered at 13 April 25th conference of the Moscow City Komsomol Organization]

[Text] Comrades.

Allow me, on behalf of the Moscow Gorkom, to cordially greet the delegates to the 25th conference of the Moscow City Komsomol Organization and to wish you and, through you, the komsomol members and all young Muscovites new achievements in labor, studies and social work.

This conference is summing up the komsomol organization's activity over the past 2 years and is an important event in the capital's sociopolitical life. This was well said in the report of the Moscow Komsomol City Committee, whose work during the period under review merits positive appraisal. The conference is being held at a time of nationwide struggle to fulfill the 26th CPSU Congress decisions and the socioeconomic program of the 11th 5-year plan and a time of widespread preparations for a portentous event in the life of our motherland--the 60th anniversary of the USSR's formation.

The time that has elapsed since the 26th party congress has convincingly demonstrated the lasting significance of its historic decisions and shown most definitely that the course elaborated by the congress is a true, Leninist course and that the congress propositions and conclusions are a reliable, scientifically substantiated guide to action.

All the economic, ideological, theoretical and political work of our party and its central committee is characterized by an innovatory approach, wisdom and farsightedness in pursuing domestic and foreign policy and in implementing the economic strategy for the 80's, whose ultimate goal is to enhance the Soviet people's well-being.

The party congress guidelines enjoyed creative development at the CPSU Central Committee November (1981) plenum. Comrade L.I. Brezhnev's program speech at the plenum defined specific ways to realize the national economic tasks for 1982 and the 5-year plan as a whole and to further improve work efficiency and quality in all links of social production.

The recommendations and conclusions contained in Comrade L.I. Brezhnev's speeches at the USSR 17th Trade Union Congress, at the presentation of the Order of Lenin to the Uzbek SSR and at the meeting with that republic's leaders are of great significance for party, trade union and komsomol organizations in implementing the party's socioeconomic policy.

Responding to party decisions with practical deeds, Moscow's labor collectives under the leadership of party organizations are concentrating their efforts on the unconditional fulfillment of state plans and socialist pledges adopted and on achieving high end results at every workplace.

The results of the first year of the 5-year plan attest that Muscovites have laid a good foundation for fruitful work in subsequent years. The city's industrial enterprises produced above-plan output worth hundreds of millions of rubles, including cultural, domestic and household goods worth $130 million. The entire increase in the production volume was secured through higher labor productivity. More than 40 percent of the products subject to certification were awarded the state seal of quality. Production of a considerable number of new highly productive machines, machine tools, instruments and consumer goods was started up. Moscow enterprises are being modernized and retooled on a wide scale.

Construction organizations commissioned new production capacities and many apartment blocks, schools and cultural and domestic projects, collectives of scientific establishments and transport, municipal services, trade, public catering and consumer services enterprises coped with the set tasks. Sectors of the city's economy are working stably this year, too. The plan for the first quarter was fulfilled in all the main indicators.

For their great successes achieved in the all-union socialist competition last year the city of Moscow, the Baumanskiy and Perovskiy rayons and more than 100 enterprises and organizations were awarded CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee challenge red banners. Some 4 rayons and 25 labor collectives were declared winners of the socialist competition for the RSFSR.

These successes are the result of the Muscovites' selfless labor and of the great organizational and political work of party, Soviet, economic, trade union and komsomol organizations.

A weighty contribution to the common achievements was made by komsomol members and young people, who today make up more than 30 percent of the capital's working class, as well as a significant proportion of working people in all sectors of physical production, science and culture and the services sphere. Many of them set examples of a conscientious attitude work and are leading production workers and innovators and socialist competition winners.

Allow me to express to you and to all young Muscovites cordial gratitude for your shock work in fulfilling the 5-year plan targets and to wish you new labor successes.

Comrades. Complex and responsible tasks face the city party organization, the komsomol and all Moscow's working people this year. They are associated, above all, with ensuring the fulfillment and overfulfillment of the strenuous plan targets and high socialist pledges adopted by Muscovites.

In industry the entire increase in the output volume is to be secured through higher labor productivity, there is to be a considerable increase in the production of articles in the top quality category, and work is to be intensified on the specialization of Moscow enterprises in the production of output of the highest technical standard. It is necessary to enhance the efficiency of capital construction, improve the use of all forms of transport and implement measures to further strengthen the ties of science with production.

Measures are to be implemented to make rational use of existing labor, material and energy resources, to seek out and commission all internal economic reserves and to step up the struggle against mismanagement and waste.

The plans provide for the expansion of consumer goods production, an improvement in the qualtiy of housing construction and the further development of the trade, public catering and consumer and medical services networks. The achievement of these aims will make it possible to considerably improve Muscovites' working and living conditions and leisure and will serve the cause of realizing the party's social program.

The successful fulfillment of the plans and socialist pledges requires intensified political and organizational work. It must help to ensure that every working person in the capital, in whatever sector he works--and this applies directly to young people--is aware that the success of the 5-year plan depends, in the final analysis, on his daily productive labor.

As Comrade L.I. Brezhnev emphasized at the 17th Trade Union Congress, particularly great signfiicance now attaches to "creative initiatives and innovations aimed at improving labor productivity, making rational use of the latest achievements of science and technology, saving resources and improving quality." It is the chief task of komsomol members and young people to take an active part in resolving these problems and in building communism.

The competition with the motto "60 shock labor weeks to the 60th anniversary of the USSR's formation" is widespread in the city's collectives, and preparations for a Lenin communist subbotnik are being completed. Many enterprises and leading production workers have adopted pledges to complete the annual plan targets by the 65th anniversary of great October and the targets for the first 2.5 years of the 5-year plan by 30 December 1982.

We must try to ensure that young production workers are in the vanguard of this competition, that any useful youth initiative is supported in all the city's komsomol organizations and that every youth collective works without laggards.

It should be pointed out that a certain section of youth has a careless attitude to labor and allows spoilage in work and overconsumption of raw materials, fuel and supplies. There are still many violations of labor discipline among young people, and cadre turnover is high. Komsomol organizations must step up young people's struggle for high labor efficiency and economies at every workplace.

It is necessary to set up more komsomol and youth teams and give them all possible assistance in achieving high results in their work. It is necessary to promote the broad transfer of these teams to financially autonomous forms of labor organization and incentives which, by decision of the party, are to be the chief forms in the 11th 5-year plan. Out of more than 12,000 komsomol and youth collectives only approximately 3,500 are yet working according to the financial autonomy method. As you see, there are large reserves here. They must be brought more actively into the struggle to improve work efficiency and quality.

In conjunction with party and trade union organizations and economic leaders more care must be shown for the vocational and general educational growth of young people, for satisfying their needs and requirements and for creating conditions for highly productive labor, studies and sensible leisure, that is, it is necessary really to ensure that young cadres are tied to production.

The report of the city's Komsomol Committee and the delegates' speeches spoke in detail about the work of komsomol organizations in fulfilling Comrade L.I. Brezhnev's instructions connected with more actively involving young people in resolving very important national economic tasks.

The party has always supported the noble desire of youth for what is new and unknown, the desire to be where things are harder and where the fate of our plans is decided. Patronate of the country's major new construction projects has become such a task for the komsomol.

The city's komsomol members now exercise patronage over 62 very important construction projects. On komsomol passes thousands of the capital's young men and women are participating in opening up and developing the West Siberian territorial production complex and oil and gas deposits, constructing the Baykal-Amur main railroad and erecting very important projects in the city. Student construction detachments alone have assimilated capital investments worth more than R450 million in 5 years. It is necessary to further develop and improve this important form of involving young people in affairs of state importance and to improve the labor and moral tempering of youth. Our glorious youth, our glorious komsomol must be everywhere in the difficult sectors of our great construction.

Comrades.

The komsomol organizations must increase the responsibility of every komsomol member for fulfilling his basic obligation to society and try to ensure that young people are deeply aware of the high patriotic meaning of their work and its connection with strengthening the motherland's might. It is necessary to develop socialist competition among young workers and employees and the movement for a communist attitude to work and to fulfill well the motto "shock labor, knowledge, initiative and creativity by young people for the 11th 5-year plan." The duty of every young worker and production worker is to make his own contribution to fulfilling the targets of 1982 and of the 5-year plan as a whole.

Moscow young people must take an active part in carrying out technical progress, in resolving the tasks of modernizing enterprises, mechanizing and automating production and introducing industrial robots and manipulators to replace people's manual labor, constantly increase labor efficiency, and set new production records.

It is necessary to ensure more concrete and energetic participation by komsomol organizations and all young people in improving the state of affairs in transportation, on which the efficient working of the city's economy as a whole depends to a large extent.

Young people working in construction require special care and attention from the city komsomol organization. Many of them are not Muscovites, and it is difficult for them to settle down in the capital's bustling rhythm. In the last 6 years alone over 280,000 new workers--mainly young people--have come into the Moscow gorispolkom construction organizations. Only 16 percent of the newcomers have undergone training in vocational and technical schools, the remainder having acquired professional skills at their workplaces. Some 31,000 young construction workers do not have secondary education, many of them do not study anywhere and they are not provided with the conditions for acquiring general educational and professional knowledge. The everyday life and leisure of young people in workers' hostels and sometimes at their places of work is inadequately organized.

We must not become reconciled to all this. The duty of the komsomol organizations is to persistently improve the training of young construction workers, to improve their education and training, to transmit to them the rich experience of older workers and the glorious traditions of the capital's working class and to show more concern for improving their working, living and leisure conditions.

Young people in scientific research and planning and design organizations take an active part in implementing the party's course toward accelerating scientific and technical progress and intensifying production. Every seventh city komsomol member works in this sphere. This is a great force.

The komsomol organizations must involve young people more actively in resolving major scientific problems and practical issues connected with modernizing and technically refitting enterprises, implementing creative cooperation contracts between production and scientific collectives and further developing rationalizers' and inventors' work. Young people must play a leading role in carrying out the technical revolution.

In Moscow's conditions komsomol patronage of the consumer services sphere is of special significance. Though in the past 4 years over 15,000 people have been sent to trade, public catering and consumer service enterprises on komsomol travel warrants, there are still many unexploited reserves here. Questions of creating komsomol-youth collectives are being resolved too slowly and cooperation between komsomol trade organizations and enterprises producing consumer goods are not developing strongly enough.

Much remains to be done to improve work with creative youth. It is necessary to seek more effective forms of fostering in young artistic workers an active life stance, political culture, a conscious approach to the topical problems of today and a high degree of responsibility for the ideological and artistic standard of works created. The komsomol must show more concern to ensure the participation of creative youth in the aesthetic education of Muscovites, propaganda of the Soviet way of life and the development of ties between creative organizations and labor collectives.

In all sectors of communist creation and education, innovativeness, initiative and a striving to be of great benefit to the country and the people must be displayed. Only thus can the high responsibility be cultivated which the party demands of the young generation. The party believes in the inexhaustible strength and the creative intellect of young people and pins great hopes on them in the task of successfully continuing the great cause of communist building.

Comrades. The communist education of Soviet youth has always been and remains the chief goal of all the komsomol's work.

At the Third Komsomol Congress, V.I. Lenin placed before young people the task of "studying communism." The propositions of this behest of Lenin as they relate to the conditions of building communism and of scientific-technical and social progress have been creatively developed in party congress decisions, CPSU Central Committee documents and Comrade L.I. Brezhnev's works and speeches.

To study communism today means being an active participant in communist building, working selflessly for the common good and striving constantly to master general educational and professional knowledge and the achievements of scientific and technical progress.

This means studying Marxist-Leninist theory profoundly and creatively and fostering in oneself firm ideological conviction, class-consciousness, loyalty to the revolutionary traditions of the Communist Party and the working class and intransigence toward alien ideologies and the enemies of communism.

This also means taking an active part in public life, mastering the skills of managing production and public affairs and always defending the interests of society, the people and the state. It means maintaining the norms of communist morals and ethics by personal example and constantly enriching one's spiritual level.

To study communism today means educating oneself in the spirit of Soviet patriotism, promoting the strengthening of our motherland's might, cherishing the moral and political unity of our society above all else. Strengthening the people's friendship and being intransigent toward any manifestations of nationalism. It means always being ready to devote all one's strength and one's life if necessary, to the cause of defending the socialist motherland, to the happiness of its people and to the cause of communism.

The komsomol organizations must educate young people in the spirit of proletarian internationalism, fraternal friendship among the USSR peoples, and friendship with the socialist countries' peoples and with all fighters for the cause of peace and freedom, in the spirit of the international class solidarity of working people.

The capital's communists are firmly convinced that the komsomol members and all young Muscovites, true to the behests of great Lenin, will worthily continue the glorious revolutionary, combat and labor traditions of the older generations and continue the glorious Leninist cause.

Our youth are our replacement, our future. It is they who are the heirs to the achievements and gains of Soviet society, to the wealth of its spiritual culture. Young people have broad opportunities to receive education, acquire a profession and carry out their life vocation.

The school years are an important stage in the formation of a young person's personality. Concern for the schools and for improving the work of the pioneer organizations is the responsible task of the komsomol. However, not all komsomol organizations work in close contact with teaching collectives to train literate and well-educated people. Unity between training and education and a correct professional orientation of children and adolescents are not always ensured. Some school eavers have a disrespectful attitude to work.

Educational work to temper the young generation must be structured in such a way that each future citizen of the land of Soviets consciously forms in himself from childhood an internal need to work conscientiously in a communist way and learns to value and respect the working man.

The system of vocational and technical education occupies a special place in training cadres for the economy. Suffice it to say that over 40,000 young production workers pur out of the city's 198 schools every year into the ranks of the working class.

At the same time there are still considerable difficulties in staffing schools, results and professional training of students are poor, and there are still many violations of public order.

All questions of the life of the vocational and technical schools--admissions of young people, improvement of the teaching process, the organization of practice, the use of graduates in production--must be resolved with the participation of the school and base enterprise komsomol organizations. We must ensure that the construction of new and the modernization of existing establishments are shock komsomol construction sites, take care that only the best-trained komsomol members are sent to be masters of production training and, together with the teaching collectives, increase the standard of general educational and vocational training of students in the system of vocational and technical education.

It is necessary to improve the work of the komsomol in the city's vuzes and technical colleges, where hundreds of thousands of people are studying. Firm ideological conviction, professional skill, the ability to organize the work of the collective, high culture and broad erudition--these are the qualities which must distinguish the modern specialist.

The party attaches great significance to the conscious participation of young people in sociopolitical life and believes in their strength and potential. It considers it the very important job of the whole party and the whole people to carry out the task set by Lenin of the communist education of youth, "the education of a generation capable of finally realizing communism." It is the duty of komsomol members to justify the party's high trust and to foster themselves as true communists and fighters for mankind's bright future.

Comrades. For more than 10 years the city party organization and Moscow's working people, including komsomol members and youth, have been working to implement the task of tremendous political and practical significance set by Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee, task of turning the capital into a model communist city.

A great deal has been done in the period that has elapsed. Approximately 140 of the city's enterprises and organizations have now been awarded the title of "model." In addition to great successes in production activity and in improving people's working and living conditions and leisure, these collectives are characterized by high efficiency in political education work.

An organic part of this work is the education of Muscovites, and young people above all, in the spirit of the moral principles of a resident of a model communist city. The komsomol raykoms and komsomol organizations which have confined themselves to a short-term campaign to propagandize moral principles and which poorly influence the processes of fostering high moral qualities in young Muscovites and underestimate the strength of public opinion and the personal example of komsomol activites were rightly criticized today.

As you know, cases of drunkenness, hooliganism, theft, foul language and a consumerist attitude to society have not yet been eradicated among young people and even komsomol members. Many criminally punishable offenses are still committed by young people.

It is necessary to struggle resolutely against these phenomena, strengthen the education of youth and adolescents on the basis of moral principles not only in labor collectives but also at places of residence, and more frequently analyze and discuss these questions at the komsomol gorkom and raykoms and at komsomol meetings.

In the work of komsomol organizations on the moral education of youth constant use must be made of Leonid Ilich Brezhnev's books "Malaya Zemlya," "Rebirth," "Virgin Lands" and "reminiscences." On turning to these works young people grasp with their mind and heart the lessons of struggle and creation and learn to be real political fighters for the party's cause and patriots of the socialist homeland.

Special attention must be devoted to the patriotic and international education of youth. This was emphasized with new force in the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation."

We are satisfied that young Muscovites are characterized by high labor and social activeness, ideological maturity and a firm life stance. Unfortunately, there is still a section of youth which, although insignificant, displays civic passiveness, indi,ference and political unconcern. Its being educated and well-informed sometimes goes hand in hand with political naivete.

Our class enemies are seeking to exert a corrupting influence on the Soviet people's awareness. Here they gamble, above all, on youth, and particularly on that section which has not received real political training.

Under the conditions of the intensifying ideological struggle in the international arena it is necessary to enhance political vigilance, increase attention to carrying out counterpropaganda and teach youth to evaluate facts and phenomena from the positions of the working class, the leading force in our society. The struggle against bourgeois ideology must be more offensive, concrete and uncompromising.

Imperialism, primarily American imperialism, is fanning the arms race and preparing for war. It is the lofty duty of komsomol organizations still more purposefully to carry out the military-patriotic education of youth and prepare it for service in the ranks of the armed forces and to foster courage, willpower and readiness for great achievements in young people. It is necessary to familiarize youth more widely with the Soviet Army's heroic traditions, the present-day military life of Soviet servicemen, combat hardware and weapons and to organize mass military-patriotic measures. In conjunction with the dosaaf and sports organizations it is necessary to create all the conditions for young people to master military knowledge, for sporting exercise, for passing "ready for labor and defense" norms and for the comprehensive preparation of every young person to defend the motherland. The motherland's defense is youth's sacred duty.

Comrades. The komsomol is our party's militant assistant and reliable reserve. Its strength lies in the party's leadership.

The city party organization entrusts the komsomol with responsible matters, supports young people's useful initiatives and shows concern for strengthening the party nucleus among komsomol cadres. More than 46,000 young communists are now working in the city's komsomol organizations. They head approximately 60 percent of primary komsomol organizations, and many have been elected onto komsomol committees and bureaus. It is pleasing to note that Muscovite komsomol members make up three-fourths of the new reinforcement for the city party organization.

The holding of this conference completes the report and election campaign in the city's komsomol organization. The meetings and conferences which have been held have shown the high standard of the komsomol organizations' work and helped to improve the qualitiative composition of the elected aktiv. During the reports and elections many businesslike proposals and critical remarks have been voiced aimed at eliminating existing shortcomings.

The komsomol gorkom and raykoms must analyze the results of the reports and elections in depth, organize the implementation of the proposals which have come in, and constantly inform the komsomol organizations of progress in their fulfillment. It is important to engage more specifically in the training and education of komsomol cadres, to help them in mastering the skills of organizational and political work, and to enhance their responsibility for their specific assignments.

The activity of the komsomol primary organizations must be persistently improved and their role enhanced in educating young people and resolving all the important tasks facing the collective. The main thing is to render them more specific aid, to seek to ensure that all projected measures and pledges are carried through and produce tangible results.

It is necessary persistently to enhance the importance of komsomol meetings in the life of the primary organizations, to submit the most topical problems of interest to young people for their discussion, and to ensure that every meeting is a real school for komsomol members' education. In their practical activity the komsomol committees and bureaus must reach every komsomol member and develop his initiative and activeness in production and social affairs.

Komsomol members, like communists, have just one privilege--always to be in the front line, where things are hard, where you are most needed for the common cause. And it is a great joy to be in the front ranks of the fighters for communism. But it is not given free. It is won by persistent labor, study and education. Allow me, comrades, to wish you great successes in this struggle.

Comrades. The party's constant concern for and attention to young people have resulted in great achievements in their education in a communist spirit. We have good young people, they are worthily continuing the Soviet people's revolutionary, combat and labor traditions. Young Muscovites are making a great contribution to the fulfillment of the 11th 5-year plan and 1982 targets and socialist pledges and to the successful implementation of national economic plans in industry, transport, construction, municipal services, scientific institutions and the consumer services sphere.

All this attests that the Moscow komsomol is daily confirming its loyalty to Lenin's behests and the Communist Party cause.

Allow me to express confidence that the capital's komsomol members and young people will augment their contribution to the struggle to fulfill the historic 26th CPSU Congress decisions and the 5-year plan targets and to ensure the triumph of the great communist ideals.

ZAGLADIN: REAL SOCIALISM STILL THE TOUCHSTONE

PM201147 Moscow PRAVDA in Russian 6 Apr 82 p 3

[Book review by V. Markov: "In the Struggle for the Future"]

[Text] We are living in a tempestuous and fascinating time. Before our eyes a radical turnabout in human life--from its prehistory, as K. Marx put it, to its history proper--is taking place. In the 20th century mankind's past, represented by the capitalist system with its sophisticated exploitation of the working masses and imperialist coercion of scores of peoples, and its future--the socialism which was born in the flames of proletarian revolution--have come face to face. As V.V. Zagladin rightly points out in his book (note), (V.V. Zagladin: "Socialist Society's Historic Mission" [Istoricheskaya Missiya Sotsialisticheskogo Obshchestva]. Moscow, Political Literature Publishing House, 1981, 158 pp.), questions bearing on the nature of socialism and its place in human history are therefore central to the current ideological and political struggle.

The author demonstrates that carrying out socialist transformations and further improving the new society are all modern ways of performing the working class epoch-making mission and are a specific element of that mission. The attitude of representatives of any political force or ideological trend to real socialism and to the difficult and innovatory work of consolidating and developing the new society is therefore the touchstone of their true class position.

The book compares the gains of real socialism with what the capitalist system has achieved in the context of a broad spectrum of fundamental problems relating to social development and poses that most devastating of questions for bourgeois ideologists and other "critics" of real socialism chiming in with the antisocialist propaganda chorus: What does socialism, in contrast to capitalism, actually do for the broadest working masses and the working man?

This is the root of the historical argument between socialism and capitalism. By abolishing private ownership's domination of the instruments and means of production, socialism frees labor from every and any form of exploitation, paves the way for the establishment of universal social justice and takes the crucial step from the nominal equality of bourgeois democracy to actual socialist equality.

Marhsalling a mass of different facts and polemizing with bourgeois and revisionist "critics" of socialism, the author presents solid arguments showing the tremendous promise held out by socialism for solving supremely important socioeconomic, political and cultural problems and for safeguarding the working masses' vital interests.

This is also demonstrated by the themes explored in the chapters explaining socialist society's historic mission. Taking the liberation of labor as his starting point, the author shows the humanity of socialism's aims and the nobility of the means of achieving those aims. The new order has given the working man confidence in the future and the opportunity to steadily improve the quality of his life through honest labor, and opened the way to education and culture and to all-round individual development. The truth about real socialism and its advantages and about this new human lifestyle is a supremely important weapon in the fight against bourgeois and revisionist lies and slander and a powerful means of educating and rallying all revolutionary and progressive forces in the capitalist countries.

We all know just how important the problems of democracy and the exercise of human rights have become in the ideological struggle of today. Socialism's gains in this sphere are summed up in Lenin's formula: "The same masses who, even in the most democratic bourgeois republics, are equal in law but by thousands of tricks and dodges are barred from taking part in political life and from exercising democratic rights and freedoms are now beginning to make a regular, essential and decisive contribution to the democratic running of the state." (Complete Works, Vol 37, p 500) The reality of advanced socialism and the practical experience of the Soviet state of the whole people shows that the CPSU has been steering the development of our society's political system along a reliable Leninist course, increasing the masses' social activieness and involving increasingly broad strata of the working people in management.

In this, the year which marks the 60th anniversary of the USSR's formation it is also fitting to remember that it was socialism which for the first time in history resolved one of the most complex questions of global significance--the nationalities question. The CPSU Central Committee resolution devoted to the jubilee points out: "No other state in history could have done so much in such a short time for the comprehensive development of nations and nationalities as the USSR--the socialist fatherland of all our peoples."

The historic mission of socialism, which is opening up more and more opportunities for the progress of society and the individual and showing the peoples of the nonsocialist world the right road--a road made smoother by a wealth of practical experience--to a better future, is demonstrated no less clearly and forcefully by its direct influence on contemporary world development--as, for example, in the solution of the socioeconomic, scientific, technical and ecological problems currently facing mankind. These problems are also analyzed in another of the author's books--"Current Global Problems: Scientific and Social Aspects"--which he cowrote with I.T. Frolov (Moscow, International Relations Publishing House, 1981).

The book under review convincingly demonstrates that the consistent and unswerving campaign waged by the Soviet Union and the fraternal socialist community countries for lasting peace and to prevent military catastrophe is inextricably linked with its support for all contemporary revolutionary and progressive movements. The greater the strength and the closer the unity of the anti-imperialist front, the stronger the cause of a just and democratic world peace and the firmer the peoples' security. The peace program for the 80's proclaimed by the 26th CPSU Congress and the constructive new Soviet initiatives put forward by Comrade L.I. Brezhnev at the 17th USSR Trade Union Congress and Intashkent provide a good basis for a switch in international affairs from confrontation to peaceful cooperation and for creating conditions more favorable to the campaign for the peoples' freedom.

At a time when imperialism's most aggressive circles are trying to reverse the course of history, threatening the very existence of human society, it is socialism which is the firmest guarantee that mankind's future will not be cut short and, moreover, that it will be a bright one. But this has to be fought for. The book "Socialist Society's Historic Mission" outlines the main areas of that fight and explains the enormous importance of the decisions of the 26th Congress of Lenin's party to its success. Victory is guaranteed by the cohesion of all present-day revolutionary forces in the task of fulfilling the working class' epoch-making mission and in the fight to consolidate world socialism's positions, further develop socialist transformations, and achieve peace and social progress.

SUPSOV PRESIDIUM DISCUSSES ELECTIONS

PM111457 Moscow PRAVDA in Russian 5 May 82 p 2

[TASS report: "USSR Supreme Soviet Presidium Session"]

[Excerpts] A regular session of the USSR Supreme Soviet Presidium was held in the Kremlin on 4 May under the chairmanship of V.V. Kuznetsov, candidate member of the CPSU Central Committee Politburo and first deputy chairman of the USSR Supreme Soviet Presidium.

Addressing the session, V.V. Kuznetsov stressed that elections will be held in the year of our multinational state's portentous jubilee, the 60th anniversary of the USSR's formation. The Soviet republics reflect the population's multinational composition and it is thus important that all nations should be duly represented in state organs taking strict account of each person's professional and ideological-moral qualities. It is necessary to make maximum use of the labor enthusiasm generated by the election preparations to fulfill the 11th 5-year plan targets and to make skillful use of tried and tested forms and methods of organizational work to further increase working people's creative activity.

A USSR Supreme Soviet Presidium resolution advises union republic Supreme Soviet presidiums to pay attention to establishing all the necessary conditions for the active work of electoral commissions taking account of the particular features of the present election campaign connected with the simultaneous holding of elections to local Soviets and people's courts. Local Soviets must ensure the strict accounting, generalization and implementation of electors' instructions approved by preelection meetings and the prompt examination of citizens' proposals and comments expressed at working people's meetings on the reports of ispolkoms, local Soviet and people's judges.

Local Soviet ispolkoms, organs of justice and other law enforcement organs are charged with adopting measures to further intensify work on the clarification among the population of measures aimed at implementing the 26th CPSU Congress decisions in the sphere of economic and social development, improving socialist democracy and comprehensively strengthening law and order.

Participating in the discussion of the questions on the agenda were V.V. Grishin, member of the CPSU Central Committee Politburo; T.Ya. Kiselev, candidate member of the CPSU Central Committee Politburo; M.A. Yasnov, A.F. Vatchenko, I.Ye. Polyakov, I.B. Usmankhodzhayev, S.N. Imashev, P.G. Gilashvili, K.A. Khalilov, A.S. Barkauskas, I.P. Kalin and M. Kholov, deputy chairmen of the USSR Supreme Soviet Presidium; V.I. Konotop and M.Z. Shakirov, members of the USSR Supreme Soviet Presidium; A.M. Shkolnikov, chairman of the USSR People's Control Committee; A.M. Rekunkov, USSR prosecutor general; S.I. Gostev, chief of the CPSU Central Committee planning and finance organs section; and leading workers of the USSR and RSFSR councils of ministers and a number of ministries and departments.

PONOMAREV BOOK ON CONSTITUTION REVIEWED

PM300935 Moscow PRAVDA in Russian 24 Apr 82 p 2

[Article by Prof O. Kutafin, Dr of juridical sciences, under the rubric "Among Books": "Constitution of Developed Socialism"]

[Text] The new USSR constitution has now been alive, functioning and working for more than 4 years, demonstrating its great creative force. Study of the constitution, assimilation of its principles and knowledge of its provisions are an essential constituent part of fostering high political culture in every citizen and an important factor in the successful and consistent implementation of the USSR fundamental law.

Everyone--workers in party and state organs, economic leaders, members of public organizations and labor collectives, and every USSR citizen--must know the constitution. Therefore propaganda and explanation of the constitution's provisions are of great significance.

A book published at the Political Literature Publishing House--the first political and legal commentary on the country's fundamental law in Soviet juridical science--is a distinctive "guide" to the articles of the 1977 USSR constitution. It is entitled "The USSR Constitution: A Political and Legal Commentary" (Onstitusiya SSR: Politiko-Pravovoy Kommentariy), under the general editorship of, and with an introduction by, B.N. Ponomarev (Political Literature Publishing House, Moscow, 1982, 398 pages). It not only illumines in detail the legal and juridical aspect of each of the constitution's provisions but also reveals their political and ideological significance.

Relying on the firm foundation of Marxist-Leninist teaching on the state and on comrade L.I. Brezhnev's instructions, the book's authors give a multifaceted description of the essence and significance of the 1977 USSR constitution as a true manifesto of developed socialism.

The USSR fundamental law is the most important long-term state legal document ensuring the further development of socialist democracy and opening up wide scope for its improvement. The new Soviet constitution graphically confirms that the society of developed socialism has become a society of constantly developing democracy.

One of the most important features of the Soviet constitution as the constitution of a new type of state is the fact that it devotes great attention to the legal consolidation of the foundations of the socialist social and state system. The authors of the commentary convincingly show that the new fundamental law not only preserves this feature of all Soviet constitutions but also considerably expands the framework of the constitutional regulation of the life of the socialist society.

The concept of developed socialism elaborated through the efforts of the CPSU and the fraternal parties became a reliable theoretical and methodological basis for improving the constitutional norms of the socialist state of the whole people.

The book reveals the principled importance of the provisions on the political system of society, which were introduced into the USSR constitution for the first time. It shows the special role which our state of the whole people plays in this system and analyzes the dialectic of its ties with other links of the political system. It is precisely the close and constantly growing connection between society and the state, reflected in the fundamental law, that creates conditions for the gradual evolution of socialist statehood into social communist self-government.

The political and legal commentary on the constitution contains a detailed description of the CPSU's leading and directing role and clearly reflects the party's actual place in the Soviet society and state and the further enhancement of its role in the leadership of communist building.

The book thoroughly analyzes the articles in the second section of the USSR constitution, which governs relations between the state and the individual. Under the conditions of the developed socialist society their interests by and large coincide. And this is why relations between the state and the individual under socialism are harmonious in nature and reflect the spirit of comradeship and collectivism.

The commentary graphically shows that the building of developed socialism in our country determined the considerable improvement in the provisions of the country's fundamental law on the rights, freedoms and duties of Soviet citizens. The 1977 USSR constitution convincingly showed that the concepts of man's freedom, democracy and social justice are filled with real substance only under the conditions of socialism.

Mature socialism demonstrates the indissoluble connection between the development and deepening of socialist democracy and the flowering and rapprochement of all the country's nations and nationalities. The USSR constitution serves to further strengthen the alliance principles of the multinational state, organically combines socialist federalism with democratic centralism and contributes to the further strengthening of the friendship of the country's nations and nationalities and to their steady rapprochement. The 1977 USSR fundamental law, the book points out, confirmed the Leninist principles of the national state system enshrined in previous Soviet constitutions. At the same time the current USSR constitution also reflected the considerable strengthening of the union republics' unity and strengthened guarantees of their sovereign rights.

The fundamental idea in all the Soviet constitutions is Lenin's thesis on the Soviets as the political basis of our state. Revealing the substance of the provisions of the USSR fundamental law devoted to the representative Soviet organs, the book's authors show that it developed further the democratic principles of the Soviets' formation and activity and provided for the strengthening of their role in resolving the most important questions in the life of the country. The preparations for the upcoming local Soviet elections provide further confirmation of the effectiveness of our constitutional principles.

Supplementing and concretizing our knowledge of Soviet statehood and its historical development, the political and legal commentary is an important step in the further popularization of the new Soviet constitution, the ideas of socialist legality and the fundamental, principled advantages of socialism. This book will be greeted with interest by readers.

PARTY CC ON INITIATIVE OF KHARKOVSKAYA OBLAST COLLECTIVES

PM111405 Moscow PRAVDA in Russian 4 May 82 p 1

[Unattributed report: "At the CPSU Central Committee"]

[Text] The CPSU Central Committee has adopted a resolution "on the initiative of the collectives of construction, installation and design organizations and the enterprises of Kharkovskaya oblast tractor and agricultural machine-building industry in mounting socialist competition in 1982 in honor of the 60th anniversary of the USSR's formation for the ahead-of-schedule fulfillment of capital construction plans and targets for the commissioning and startup of capacities and for the handover of housing and cultural and consumer installation."

The resolution approves the initiatives of the collectives of the construction and installation organizations of the Ukrainian Ministry of Industrial Construction's Kharkovpromostroy and Kharkovzhilstroy combines, and the S. Ordzhonikidze Kharkovskiy Tractor Plant Production Association, the Serp I Molot Kharkovskiy Motor-Building Production Association, the Kharkovskiy tractor engines plant, the Kupyanskiy foundry named for the 60th anniversary of the great October socialist revolution, the Chuguyevskiy fuel apparatus plant named for the 26th CPSU Congress, the Dergachevskiy turbocompressors plant and the State Institute for the Designing of Tractor Plants and Agricultural Machine-Building Plants under the Ministry of Tractor and Agricultural Machine Building--which collectives have adopted socialist pledges for the ahead-of-schedule fulfillment of capital construction plans and the targets for the commissioning and stratup of production capacities and the handover of housing and cultural and consumer installations.

This will enable the creation of design capacities for the production of the high-powered T-150K tractors at the Kharkovskiy tractor plant and the oblast enterprises cooperating with it to be completed in 1982.

It is recommended that union republic Communist Party central committees and party kraykoms, obkoms, gorkoms and raykoms mount broad organizational and political work to disseminate the initiative of the collectives of Kharkovskaya oblast construction organizations and tractor and agricultural machine-building enterprises and to involve all participants in the construction and reconstruction of agricultural machine-building enterprises in the socialist competition.

The editorial boards of central and local papers are instructed to publicize regularly the progress of the fulfillment of pledges to accelerate the construction and reconstruction of agricultural machine-building enterprises adopted by the working people of Kharkovskaya oblast and other krays and oblast of the country, and the experience of the leading production collectives and innovators in developing the socialist competition in honor of the 60th anniversary of the formation of the USSR.

REPORT ON LENINGRADSKIY OBKOM PLENUM

PM131453 Moscow PRAVDA in Russian 28 May 82 p 2

[Report by PRAVDA correspondents V. Gerasimov, G. Petrov, V. Senin: "Working Effectively, Creatively"]

[Text] Leningrad--Working intensively and purposefully to fulfill the decisions of the 26th CPSU Congress, Leningrad communists are striving to ensure the unity of organizational, economic and political education activity. Efforts are being focused on creating in collectives a favorable atmosphere in which each worker can work creatively and to maximum effect. It was from a stance of maintaining such an atmosphere everywhere and of guaranteeing the necessary conditions for productive work and the unconditional fulfillment of pledges that the participants in a Leningradskiy CPSU Obkom plenum discussed party organizations' tasks in improving collectives' labor and sociopolitical activeness in implementing the 26th CPSU Congress decisions and L.I. Brezhnev's instructions. G.V. Romanov, member of the CPSU Central Committee Politburo and first secretary of the Leningradskiy Party Obkom, delivered a report at the plenum.

"Together with all Soviet people, Leningraders warmly approve the propositions and conclusions of the speeches of Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, at the 17th trade union congress and the celebrations in Uzbekistan," the keynote speaker said. "The program aims of confidently boosting the people's prosperity and intensifying the Soviet state's economic potential have been adopted by Leningraders as their unswerving guide and make it incumbent on us to pursue even more actively the party's course toward production intensification and the improvement of work efficiency and quality in every way."

The report and speeches noted that the joint efforts of party, trade union and Komsomol organizations in developing collectives' creative activeness and in working people's communist education have become more effective. A large arsenal of means and methods of asserting an active life stance in urban and rural workers is being skillfully employed. This is evidenced in particular by the fact that 2.7 million Leningraders are taking part in competition to fulfill the targets of the 11th 5-year plan ahead of schedule and to save resources in every way.

The desire to make a larger contribution to resolving the most important tasks in accelerating economic and social progress is the source of many valuable initiatives. The initiatives of the optical mechanics, "Svetlana" and "Pozitron" associations on raising technical standards and quality and reducing the time taken to develop and master equipment, and the initiative of the "elektrosila" workers, who decided that every new article they produced should bear the seal quality and that the entire increase in output in the current 5-year period should be secured without any increase in rolled metal consumption, are becoming increasingly widespread. The appeal of the collectives of the A.A. Zhdanov Shipbuilding Plant and the I.I. Polzunov Central Boiler and Turbine Institute Science and Production Association to ensure the planned increase in the volume of production and scientific research while at the same time reducing the number of workers has also been widely supported. Cooperation is developing between enterprises and organizations taking part in constructing the most important national economic installations, and the experience of cooperation among the sailors, railroad workers, motor transport workers and river workers of the Leningrad transportation terminal is being enriched. And recently the foremost workers--delegates to the 26th CPSU Congress--appealed to Leningraders to achieve higher indicators than previously envisaged in honor of the 60th anniversary of the formation of the USSR and to ensure the ahead-of-schedule fulfillment of personal 5-year plans. The patriotic initiative was supported by 750,000 workers and over 15,000 collectives in industry, agriculture and transportation.

Recently the party Obkom bureau approved the initiative of a large group of enterprises and construction organizations. By concentrating forces and resources on the most important startup projects and more rapidly supplying design estimates, industrial equipment and materials, they pledged to ensure the ahead-of-schedule commissioning and startup of major capacities.

The speakers noted that the pledges in the jubilee year are high and crucial. There are about 500 models of new article to be developed and manufactured, the "60-Letiye SSSR," the first of a class of oceangoing roll-on, roll-off freighters, must be completed ahead of schedule, and 25 powerful rock excavators, large electric machines and other equipment must be supplied to miners. The Oblast's Sovkhozes will sell the state 190,000 quintals of potatoes and vegetables, 20,000 quintals of meat and about 30 million eggs over and above the target, and no less than 95 percent of arable and livestock products must be graded as first-class.

The active life stance and political maturity of collectives and of every worker are expressed in such actions and plans since conscientious and creative work is the main yardstick of merit and honor in our society.

The scientific standard of propaganda has improved. Integrated political days and "open letter days" have become standard practice. Sociological research has become an important instrument for studying public opinion. All this enables party organizations to gain better knowledge of people's moods and aspirations and to improve their work in communist education.

At the same time, the plenum said, by no means everything has been done yet. Not only must experience be generalized but shortcomings and omissions must be interpreted critically too. It is infeasible to resolve large-scale complex tasks without making use of progressive ideas in the sphere of equipment and technology and of production and labor organization, without breaking with customary conceptions and without displaying a creative attitude to work and that means without struggling against old ways which hinder progress. It is extremely necessary, in industry, to consolidate the trend toward the faster growth of labor productivity by comparison with the growth in the volume of production; in agriculture, to create a reliable fodder base; and in construction, to commission 130 important projects this year alone and to increase the contribution made to implementing all-union, sector and territorial comprehensive scientific and technical programs.

The practice of many collectives is evidence precisely of such an approach to the matter. The "Kiorovskiy Zavod", for instance, has created a specialized section with 20 machining centers, which has increased labor productivity fivefold and has released a large number of machine tool operators and toolmakers. The "Prodmash" Association, at the suggestion of communist A. Maslennikov, has begun to use powder metallurgy articles. As a result, the need for machine tool operators has diminished and over 20 tons of rolled metal are saved annually. Unfortunately, the plenum noted, such a genuinely thrifty attitude to urgent problems is still not dominant everywhere.

Great attention was paid at the plenum to further improving the quality of goods. And this is understandable. Probably nothing so reflects a Peron's attitude to work as the quality of the product he is involved in producing.

Communists have increased the attention paid to saving metal, fuel and electricity. Foremost experience must be used without delay, the keynote speaker and other speakers said, especially as the city and oblast collectives still include some that work uneconomically and allow great losses.

The prime obligation of party committees must be concern for reducing output prime cost and increasing production profitability. This task equally faces the agroindustrial complex. All elements of the food production process must continue to be improved and the material and technical base of agricultural, procurement and processing enterprises must continue to be strengthened.

In resolving economic and social tasks a great deal depends on the leaders. They must display initiative, fulfill their functions efficiently, not wait for special instructions, still less delegate to others what they themselves are supposed to do. The plenum participants sharply criticized the practice of amending plans and parasitical attitudes.

Progressive forms of collective work must be further disseminated and improved, more attention must be paid to the qualitative aspect when organizing teams, and the role of the foreman as direct organizer of production and educator must be increased. The speakers ordered an intensification of the struggle against negative phenomena.

A subject of special concern for communists is the education of the rising generation. In his youth a person must learn to work conscientiously, to acquire a taste for knowledge and to be able to distinguish truth from falsehood and genuine values from bogus values, the plenum said.

The plenum assured the CPSU Central Committee, its politburo and comrade L.I. Brezhnev that the Leningrad communists and workers of the city and oblast, purposefully increasing the labor and sociopolitical activeness of collectives and every worker, will increase their contribution to the implementation of the 26th CPSU Congress decisions and will mark the 60th anniversary of the USSR with new achievements.

PROSECUTOR'S OFFICE AIDES HOLD MOSCOW CONFERENCE

PM230845 Moscow PRAVDA in Russian 16 Apr 82 p 3

[TASS report: "Exchange of Experience"]

[Text] The participants in an all-union conference of best investigators of prosecutor's office organs, which ended in Moscow 15 April, generalized work experience.

O.V. Soroka, USSR deputy general prosecutor, delivered a report on the tasks of further improving the work of the investigative apparatus in the light of the 26th CPSU Congress decisions and comrade L.I. Brezhnev's instructions.

The conference participants outlined measures to improve work organization and to ensure closer cooperation between prosecutor's office investigators and internal affairs organs and the public.

Special attention was devoted to questions of intensifying the struggle against embezzlement, bribery, mismanagement, overstating of performance data and other violations of state discipline. The eradication of antisocial phenomena such as drunkenness and hooliganism was also discussed.

Participating in the work of the conference were L.N. Smirnov, chairman of the USSR Supreme Court; A.M. Rekunkov, USSR general prosecutor; G.K. Tsinev, first deputy chairman of the USSR KGB; A.Ya. Sukharev, USSR first deputy minister of justice; and V.I. Gladyshev, deputy chief of a CPSU Central Committee section.

ENTERPRISES' NEED FOR MORE INVOLVED LEADERSHIP

PM061525 Moscow PRAVDA in Russian 26 Apr 82 p 1

[Editorial: "Forming Ideological Conviction"]

[Excerpts] The formation of the new man is not only a very important goal but also an essential condition of success in communist building.

In past years much has been done to fulfill the tasks which have been set. Party organizations are asserting the comprehensive approach increasingly actively in their ideological activity and seeking with increasing persistence to combine ideological-theoretical, political-educational, organization and economic work. Combined political days and sociological studies on topical problems of concern to people have become part of the practice of the party committees of Moscow, Leningrad, the Ukraine, Kazakhstan, Belorussia, Georgia and other republics, krays and oblasts. The restructuring effected in accordance with the 26th party congress instructions and the CPSU Central Committee resolution on the further improvement of party study has had a beneficial effect on the atmosphere, quality and efficacy of studies in the political enlightenment system. There have been many good changes in mass political work at people's places of residence and in the activity of the information and propaganda media and many culture and art institutions and creative unions.

Success on this path attends above all those who do not rest on their laurels but boldly seek and try out new forms and methods most in accordance with people's interests and requirements, who set themselves specific tasks. For instance, by what ways and means has the Dnepropetrovsk Party Organization succeeded in recent years in reducing by over 25 percent working losses caused by absenteeism? First of all, with the aid of the sociological services, they made a careful study of the reasons for violations of labor discipline. Then they compiled a program of action which included a broad package of measures--from the improvement of transport, trade and consumer services and medical services for the population to the enhancement of the role of workers' meetings and comrades' courts and the intensification of ideological and moral education and the propaganda of legal and ethical knowledge. And, finally, the projected measures were implemented by the joint efforts of the party, trade union and komsomol organizations, economic leaders and ideological aktiv.

We have before us a convincing example of the fusion of ideological, educational and organizational work, of the unity of word and deed. Unfortunately, this unity is not always attained. There are still many party committees and primary party organizations which continue to prefer to emphasize not the quality but the number and "resonance" of the measures carried out. Here their actual goal, the attainment of specific end results, is frequently lost from sight. For instance, in the leadership of socialist competition the main point is its actual progress, the living process of labor rivalry, its moral sense, and the revelation of everything new generated by people's daily creativity, energy and acumen. However, it is precisely this which sometimes goes unheeded, while all efforts are spent on the compilation and "showcasing" of pledges.

In work with people it is necessary to eliminate more resolutely elements of formalism, arrogance, and a "paperwork" style of leadership. In the Tselinograd Antierosian Equipment Association many workers do not know the names of the party committee secretary, chief engineer or deputy director and do not remember when the director himself last met the collective. This fact was cited at a recent Kazakhstan CP Central Committee plenum. Formalism and indifference are intolerable in ideological education work. They lower the effectiveness of work among the masses, generate passiveness and in some cases can create the ground for the penetration of alien views and sentiments.

Constantly being in the midst of people and not in the midst of papers, living by the same concerns as working people--this call of the party's directly concerns every communist, komsomol member and fighter on the ideological front. Our paramount task should be the creation everywhere, in production and daily life, of an atmosphere and sociopsychological and moral climate in which the Soviet person's best qualities and character traits are revealed most fully.

BOOKS ON REVOLUTIONARY PROCESS REVIEWED

PM031533 Moscow PRAVDA in Russian 22 Apr 82 p 4

[Book review by V. Korionov: "Invincible Process"]

[Text] The assertion of socialism as a world system has caused profound changes in the life of mankind. "There is no country or group of countries, no ideological or political trends," comrade L.I. Brezhnev said at the 26th CPSU Congress, "which has not experienced the influence of socialism to some degree. That is the reality of the late 20th century."

Revolutionary changes have become the main content of our time. The path of the development of the revolutionary process and socialist transformation is varied, complex and hard. How this process proceeds, its gist, its successes, difficulties and prospects, the present-day strategy and tactics of the communist parties of various countries--the revelation of these and other topical issues is one of the prime tasks for Soviet socialists. A new work on whose publication scientific workers of the CPSU Central Committee Academy of Social Sciences have embarked--"Problems of the World Revolutionary Process"--promises to make a definite contribution to this work.*

The first edition of this publication has been produced. It opens with an article by academician B.N. Ponomarev revealing the international significance of the 26th CPSU Congress which defined the prospect of Soviet society's development and the party's international activity at the present stage.

The profound correctness of the course of the CPSU, which is consistently guided by Marxist-Leninist teaching in its activity, is particularly evident in the atmosphere of the aggravation of the class struggle within the capitalist countries and in the international arena as a whole. The world today cannot be understood, explained or transformed without Leninism. It is no accident that the ideologists of anticommunism are trying by any means to wrest the communist movement from Leninism.

---

*Problemy Mirovogo Revolyutsionnogo Protsessa. Moscow, Mysl Publishing House 1981.

The authors of the anthology show how the communist parties, guided by Marxism-Leninism, are resolving the most complex tasks set before the working class and working masses of our era. During this struggle the theory of scientific socialism, which absorbs the increasingly diverse experience of the peoples' struggle for social and national liberation, is developing with historical practice. The cause of socialism is becoming the cause not only of the communists but also of the broadest circles of patriots and revolutionaries.

Using the example of various regions and countries the authors draw a picture of the developing world revolutionary process. The anthology sheds light also on some questions of the struggle of ideas in the world today. A special section is devoted to the analysis of a number of books on questions of the class and ideological struggle written by Soviet authors.

Yu. A. Krasin's new work is devoted to the same topic.* It examines the experience of the development of the world revolutionary process in a period when it is scaling qualitatively new heights. The author traces the features of the manifestation of the natural laws and trends of the revolutionary process in the seventies and analyzes questions which are animatedly discussed in the communist movement, the questions of democracy, the state and revolution, class and political alliances, the international and national elements in the revolutionary process and other questions. The book also investigates recent anticommunist theories and shows their total unsoundness.

The above-mentioned books confirm that Marxist-Leninist theory arms us with a genuine understanding of the natural laws of the world's revolutionary transformation.

'PRAVDA' WARNS AGAINST 'ANTI-MARXIST' VIEWS ON CULTURE

PM200959 Moscow PRAVDA in Russian 5 Apr 82 p 1

[Editorial: "The Culture of the Land of the Soviets"]

[Excerpts] Mankind has witnessed how more than 100 nations and ethnic groups in the USSR, rallied under the banner of Great October, have enriched the treasurehouse of socialist and world culture with their artistic and scientific discoveries. Yet before the revolution more than one-third of them had no written language and vegetated in obscurity. The new social system not only opened up the road to knowledge for the working people and gave them broad access to cultural assets, it also made them the direct creators of culture. The Russian language, voluntarily adopted by Soviet citizens as the language of international intercourse, has become an important factor in the fraternal unification of the USSR's peoples and their cultural exchanges and access to the spiritual wealth of world civilization.

Comrade L.I. Brezhnev's report to the 26th CPSU Congress and other party documents define strategic directions in the sphere of cultural building. The party steadily follows a course of achieving correspondence between the country's socioeconomic development and the level of its spiritual culture, strengthening ties between literature and art and the people's life and increasing the social and ideological effectiveness and the social role of culture in general.

Soviet culture, which develops along the lines of communist party mindedness and a popular approach [narodnost], is a powerful factor for forming internationalist convictions in our country's citizens and educating them in the spirit of deep respect for all nations and ethnic groups and implacability toward vestiges of bourgeois nationalism and chauvinism. The very acute ideological struggle of the modern world demands political vigilance and a reliable Marxist-Leninist armor from the masters of culture.

Continuity with progressive artistic traditions and reliance on the spiritual experience of past generations of the working people are the law of cultural building in our socialist society. Soviet people follow with interest not only the course of development original [samobytnyy] cultures in the fraternal republics, but also the new, valuable elements contributed to mankind's spiritual treasurehouse by other countries and peoples of the world. This responsiveness to all that is positive in the sphere of the achievements of the human spirit in no way removes the need to be guided by social class criteria in assessing the legacy of past eras and modern cultural phenomena. As ever Lenin's teaching on the two cultures, on the confrontation in the class society between the elements of leading democratic culture and bourgeois, reactionary culture retains all its force and significance for us. Intentional or unintentional deviation from the principles of this teaching is the road to serious ideological errors and the loss of correct orientation in the struggle of ideas in the international arena. Among the scientific and artistic intelligentsia any attempts to establish anti-Marxist ideas about a "single cultural stream" and to gloss over the opposition and struggle between progressive and reactionary trends in the history of the establishment and development of a particular people's culture or in contemporary world culture must be resolutely rebuffed.

Collectivism, which is the basis of the Soviet way of life, is manifested in many forms on the cultural front too. Creative unions, engendered by the need for workers in literature and art to pool their efforts both in resolving professional problems and in ensuring more effective participation in communist creation, are a school of civic spirit for the artistic intelligentsia. They make a great contribution to the organization of cultural exchange with the socialist community countries, the establishment of creative contacts with progressive artists throughout the world and the struggle for peace and social progress on our planet and against imperialism's ideological sabotage.

The increased scale and complexity of the tasks of cultural building make it incumbent on party committees to improve the standard of leadership of this most important sphere, display constant concern for the ideological tempering of creative cadres and make fuller use of the spiritual wealth accumulated by society to mold the personality to the new person and mobilize the masses' energy to successfully fulfill plans for the 11th 5-year plan.

Soviet culture is the culture of the people, for the people. That is its strength and the guarantee that it will go on flourishing.

BETTER SANCTIONS AGAINST ABSENTEEISM URGED

PM270921 Moscow PRAVDA in Russian 21 Apr 82 p 3

[PRAVDA correspondent V. Sapov articles "Who Will Stop the Absentee"]

[Text] Barnaul--"Dear Editorial Board: Let me tell you of a case which I find impossible to understand. We took V. Labunin into our team from a neighboring sector. A rolling stone if ever there was one. The shop administration, tired of bothering with him, suggested that our collective exert an influence on Labunin. We have experience of this sort of thing. We agreed and, to put it bluntly, regretted it.

"The newcomer gave us trouble. He went absent not for 1 day, nor 2, but for a whole 3 months. In accordance with the law, V. Labunin ought to have been dismissed under Article 33 of the code of laws on labor. But we were given to understand that it was not possible to do this: Apparently you can't back out once you've begun. For instance, we wanted to assign the offender to carry shavings. But when it learned of this the administration said, You have no right, he's a skilled fitter. Must we mollycoddle absentees like this?"

This was the letter which the PRAVDA editorial board received from hero of socialist labor V. Lantsov, fitter team leader at the Altay Motor Building Association. At first we could not believe it: surely things were not really like this? Alas, they were. What is more, this was not an isolated case in the association where the letter writer works. Yu. Kapustin, A. Medvedev, V. Karkavin and several other workers did not appear at their machines for 2-3 months. Last year 1,840 man-days were lost at the enterprise because of absenteeism. The material loss from this is the same as if a sector of 40 men did not work for 2 months. I am not even mentioning the hidden losses of work time which are simply not recorded here.

So how does the administration assess such facts? I put this question to plant director V. Miloserdov, and he said:

"We have to put up with absentees. There are not enough workers, especially in summer. But nonetheless we fulfill the plan."

The plan can be fulfilled in various ways, including at any price. This is precisely what happened in the instrument production unit, for example, where uneven output and panic working are a normal phenomenon. And the reasons are the same: absenteeism and low labor discipline.

It cannot be said that there has been no struggle at all against this evil. Attempts are made to win the negligent workers round at all levels of management and at meetings, they are criticized in "flash" notices on notice-boards, by "Komsomol searchlight" members and in various people's control bulletins and pamphlets. Volunteers detain alcohol lovers at their workplaces and at the gate. But there is a great deal of superficiality in all this.

Even when it comes to the point of punishing the guilty, there is a defensive reflex at work in the administration: It does not want to appear worse than others in this repsect. And so, you see, someone goes absent and he is rebuked for form's sake and let off.

This is what happened with worker S. Bogatov from the No 1 shop. The men had a meeting to pass judgement on the guilty party but the upshot was that they virtually pinned a medal on the offender's chest: "Considering S. Bogatov's conscientious attitude to work, we ask the administration to leave him in the collective pending a first warning."

But this was not his first misdemeanor. And there are people in the shop who have up to a dozen warnings and yet feel free.

The measures used against the guilty are more than lax. For some reason the comrades' court is avoided. Only 3 out of 133 absentees were discussed at its sessions during the year. And the foreman themselves give the absentees an easy time and even protect them: I'll keep quiet, but on Saturday be so kind as to come to work, they say. Thus, in January and February 15 people went absent in the shop. And on the timeboard there was a full entry until the shop trade union committee interfered.

But the shop leader I. Levin remained displeased with its actions. He even refused to give the correspondent the names of the foremen who connive with the absentee: "I examined them myself."

The communist V. Lantsov, who sounded the alarm, must be given his due. He is a principled man with initiative. His team is well known throughout the area. It works under the motto: "The collective is responsible for the state of labor discipline." V. Lantsov's team is one of the oldest in the association. Its members, of course, have changed but the approach to people remains the same: The best worker is a disciplined worker.

Lantsov has been landed with rolling stones before, but the atmosphere in the team has always helped to reeducate them. Apparently progress has even been noted with V. Labunin. When he got into trouble, he admitted his guilt and realized that that was the end of "freebooting" for him. For in this collective the principle is: If you offend you are responsible. The slightest lateness or premature departure from work is regarded as an extraordinary happening. And if this were the case everywhere there would be far fewer violators of discipline.

Is there a chance of achieving this at the enterprise? Undoubtedly. The team form of labor organization, which actively influences rather lazy people and individualists, convinces one of this.

Now as never before, the role of labor collectives and of all public administrative institutions is increasing. But they need support. For what happened originally with this same V. Labunin? The team did not know how to punish him. Postpone his leave until the winter? But Labunin had had quite a good "holiday" already. And you will not disconcert him by depriving him of his "13th wage" [yearly bonus equivalent to extra month's pay] since while he was absent he was making his own private deals. You cannot assign him to unskilled labor either. It would be possible to put him lower down the waiting line for an apartment, but Labunin does not need a new home. And this is where his comrades were staggered: You cannot find measures to influence the offender.

It would seem that the state committee for labor and social problems and trade union organs must think out measures to tighten up the struggle against discipline offenders. It is difficult, for instance, to understand why absenteeism is counted toward length of service. The question of the expediency of issuing character references for discharges must also be studied. If a negligent person is given the appropriate written assessment when he is dismissed or transferred to other work, he will possibly rethink his behavior in this new job. Character references would doubtless help to create a more demanding atmosphere in labor collectives. And this means that work results will be better.

SIXTH EDITION OF CPSU HISTORY REVIEWED

PM261023 Moscow PRAVDA in Russian 2 Apr 82 p 2

[Unattributed review: "Following the Path of Struggle and Victories; On the Publication of the Sixth Edition of the 'History of the CPSU'"]

[Text] Fate assigned Soviet communists an enviable role--to be at the sources of the socialist transformation of life. The path to the pinnacles of social progress blazed by Lenin's party is a path of heroic struggle, hard trials and worldwide-historic victories for the working class, socialism and communism. That is why interest in our party's historical experience is so great. That is why we leaf through the glorious pages of its annals with such excitement.

A knowledge of the history of the CPSU not only elucidates the past, thus helping us to understand the present better, and enabling us to look into the future at the same time, it also serves as an active means of mobilizing Soviet people to the fulfillment of the tasks of communist building. It is also hard to overestimate the role of our party's history in the Soviet people's communist education.

The link between different eras, the continuity of the CPSU's Leninist course are particularly apparent just now. The 26th CPSU Congress which opened the annals of the very important historical events of the nineteen-eighties was an important epoch-making milestone in the life of the party, the entire Soviet people and the world communist and workers' movement. The congress documents and materials and above all the CPSU Central Committee report delivered by comrade L.I. Brezhnev, are a model of the creative, innovatory approach to key problems of the development of Soviet society and to the processes taking place in the world and of the consideration given to our party's very rich historical experience.

The party's life and activity, including its diverse, fruitful political, ideological and organizational work on the basis of the decisions of the CPSU Central Committee October (1964) plenum and the 23d-26th party congresses for the benefit of the Soviet people and for the sake of building a communist society have been comprehensively elucidated in the textbook "The History of the CPSU" published in its sixth, supplemented edition.*

The textbook uses new party documents and takes into account observations made during its discussion. The book is supplemented by a chapter on the 26th CPSU Congress and an account of the main provisions of the new USSR constitution.

The book's pivotal, leading theme is the all-around exposition and revelation of the ideas and activity of V.I. Lenin, and an account of how the party is fulfilling his immortal behests. The CPSU's historical path is the embodiment of the organic unity of revolutionary theory and practice. And by its entire content and specific historical facts the book confirms this proposition.

The textbook reveals the specific nature and distinguishing features of each of the major stages on the path of Lenin's party in accordance with which its tasks, strategy and tactics and organizational forms of activity have altered. But at all stages of its development--in the struggle for the victory of the bourgeois-democratic and then socialist revolution and during the building of a new society--the party has elaborated and steered a political course based on Marxist-Leninist teaching and according with the interests of the working class and working peasantry, of all the country's nations and ethnic groups, and the interests of the motherland and the cause of international socialism.

Generalizing the lessons of the history of Bolshevism, V.I. Lenin noted that in terms of the wealth of revolutionary experience and forms, nuances and methods of struggle it has no equal in the world (see complete collected works Vol 41, p 8). The communist party had already accumulated a large amount of varied experience of struggle in the pre-October period. Under the unbelievably hard conditions of the underground and in ideological battles against opportunists of all stripes, the Bolsheviks theoretically elaborated very complex ideological, political and organizational questions and resolved in practice the tasks connected with them. This was the most important condition for ensuring the leading role of the Russian proletariat and its leading detachment in three revolutions. The experience of creating a party of a new type and its struggle for the hegemony of the proletariat and for the establishment of the alliance of the working class and peasantry and for the enlistment of the oppressed nations to the side of the revolution--all this became a most valuable asset of the world revolutionary movement.

The textbook analyzes the aggregation of problems connected with the struggle of Lenin's party for the establishment of the power of the working class in the country and traces the main avenues of the party's multifaceted activity.

---

*Istoriya Kommunisticheskoy Partii Sovetskogo Soyuza. Sixth supplemented edition. Authors' collective comprising: B.N. Ponomarev (leader), M.S. Volin, V.S. Zaytsev, I.I. Mints, A.D. Pedosov, V.I. Popov, A.I. Sobolev, K.I. Suvorov, B.S. Telpukhovskiy. Moscow, Political Literature Publishing House 1982, 784 pages.

The party's experience in the post-October period was even richer and more diverse. The party blazed a trail through virgin territory. It had to elaborate and did elaborate in theory the most complex questions of the transition from capitalism to socialism and the development and improvement of socialist society. The result of the party's titanic work was real socialism and at the same time the practically tested science of building a new society.

The formation of the USSR was a very great service rendered by Lenin's party, multinational in composition and profoundly internationalist in its ideology and politics, organizational structure and the principles of its activity. By its tireless defense of the fundamental interests of the working class and the broadest masses, its devotion to the ideals of communism, by its very great attention to the interests and feelings of all peoples, and by its implacability toward any manifestations of bourgeois nationalism, chauvinism and national nihilism, the party won the lofty right to be the leader of the working people of all the country's nations and ethnic groups.

By its consistent theoretical, political and organizational work the party nurtured in them the firm determination for union and mobilized their will and forces to attain the common goal--building socialism and communism. The CPSU invested its tireless labor, the communists' talent and spiritual ardor, and the party cadres' knowledge and organizational art in the social and national liberation of the country's peoples and the boosting of their economy and culture.

Describing the first steps in socialist building, the years of industrialization, the socialist transformation of agriculture and the cultural revolution, and the feat of the party and people in the great patriotic war and the years of postwar renewal and in speaking of the grandeur of the working people's deeds, the book reveals the sources of the Soviet people's heroic accomplishments and recreates the spirit of the era. Of course, not everything has been ideal on this path. Socialism in the USSR was built under incredibly complex conditions. And the party treated and still treats with Leninist principledness and constructiveness the difficulties and shortcomings which were, naturally, inevitable on the trailblazers' path. Life has confirmed the correctness of the party's political course and shown its ability to generalize the masses' experience and reveal the errors committed and rectify them.

The textbook's new edition has covered extensively the concept of developed socialism which has supplemented our party's political arsenal in recent years. On the basis of the documents of the 24th, 25th and 26th CPSU Congresses, the material connected with the 50th anniversary of the formation of the USSR and the 60th anniversary of the Great October Socialist Revolution and the provisions of the new USSR constitution, the book gives a detailed description of the most important features and traits of the mature socialist society.

Developed socialism is a step, a stage, in the maturity of the new society when the restructuring of the sum total of social relations is completed on the basis of collectivist principles inherent in socialism. Its most important distinguishing features are full scope for the operation of the laws of socialism and for the emergence of its advantages in all spheres of public life, the organic integrity and dynamism of the social system, its political stability and indestructible internal unity.

On the basis fo the concept of developed socialism the CPSU has specified and given specific form to the paths and deadlines for implementing our program goals and has defined its strategy and tactics for a long historical period.

The textbook breaks down the establishment of mature socialism into periods and reveals the most important stages of the formation of the concept of a developed socialist society.

The textbook's sixth, supplemented, edition, while retaining the book's former overall size, includes two new chapters. The first describes the CPSU's activity under the conditions of developed socialist society in 1971-1980 and the successes of the socialist community countries. The same chapter reveals the party's struggle to enhance production efficiency and improve the economic mechanism and covers in detail the problems of the party's further consolidation and the improvement of the standard of its organizational and ideological political work.

The book's material convincingly attests to the growth of the CPSU's leading and guiding role in Soviet society, the intensification of its influence on all aspects of the country's life, and the consolidation of the unity of the party and people. A large place in the textbook is taken up by questions of the CPSU's international activity and the elucidation of its struggle for the pursuit of a policy of peace and progress and for the cohesion of the international communist movement.

The concluding, 20th, chapter of the textbook is devoted to an important new frontier on the path toward communism--the 26th CPSU Congress. It was a congress of communist creation and peace, the book stresses. It was a graphic demonstration of the party's monolithic cohesiveness and its loyalty to Marxism-Leninism, proletarian internationalism and the great ideals of communism. Comrade L.I. Brezhnev's report at the congress, a thorough, all-encompassing report imbued with new ideas and conclusions, contains a Marxist-Leninist analysis of the topical problems of the present day and makes an important contribution to revolutionary theory.

The textbook covers in detail the CPSU's socioeconomic strategy and reveals the content of the basic guidelines for the economic and social development of the USSR for 1981-1985 and the period through 1990, which were approved by the congress. The task of further improving the people's well-being is put first in the party's policy, the book notes.

Under the conditions of mature socialism the interconnection between economic progress and society's sociopolitical and spiritual development can be felt increasingly closely. The book analyzes and generalizes the processes taking place in the social-class structure of Soviet society and examines the congress's propositions and conclusions connected with the party's activity at the stage of developed socialism, its building, and organizational, ideological and political educational work.

The Soviet communists' forum, the book shows, has armed the party and people with a clear and mobilizing program of creation and peace. The congress has countered imperialism's inflammatory, provocative course with a positive, constructive stand for the consolidation of peace, the intensification of detente, and the curbing of the arms race and has pointed the real way toward the solution of the entire complex of the most acute, "explosive" problems of world politics. The new peace initiatives advanced by the CPSU confirm that socialism and peace are indivisible.

The historical path of our party, the path of struggle and victories, is a graphic confirmation of the general natural laws of revolution and socialist and communist creation. Only on the basis of the experience of Lenin's party and the fraternal Marxist-Leninst parties of the socialist community countries is it possible to judge today what real socialism is.

The profound study and theoretical consideration of the CPSU's great historical experience are an essential condition and firm basis for forming communist conviction. That is its tremendous social and educational significance. The textbook "The History of the CPSU" now in its sixth edition is, as practice shows, a good basis for the propaganda of the historical experience of Lenin's party and an important aid in Soviet people's ideological education.

'NATIONLESS' SOCIETY SEEN AS LONG-TERM AIM

PM201045 Moscow SOTSIALISTICHESKAYA INDUSTRIYA in Russian 2 Apr 82 p 3

[Article by R. Salikov, candidate of philosophical sciences, under the rubric "Talk on a Topical Theme": "Developed Socialism and Nations"]

[Excerpt] Moscow--The indissoluble alliance of all the country's classes, social groups and peoples is strengthened in the joint solution of common economic and sociopolitical problems. The unity of the Marxist-Leninist world outlook and of fundamental interests and aims and the overall equalization of living conditions unite them in a new social and international community--the Soviet people. This is one of the most important features of a mature socialist society.

And what is the fate of the nation then? Are nations and ethnic groups not changed by the formation of a new international community? Do national characteristics, national culture and language not disappear? No, nothing is changed and nothing disappears. The international community simply emphasizes those unified stable features which are inherent in all nations and in every nation.

It must be borne in mind that the development of national relations is an extraordinarily complex process. And in a society of mature socialism, national differences are preserved and will be upheld very much longer. On the other hand, the optimum conditions are created for the comprehensive flowering of nations--conditions under which national differences are enriched by the international element and are interwoven. The rapprochement of socialist nations is thereby accelerated.

This process is objective. But our party opposes both attempts to accelerate it artificially and any striving to hold it back. The party's nationalities policy is directed toward the comprehensive development of all nations and of each nation individually.

The consolidation of ethnic groups into a nation is one example. Russia before the Great October Revolution numbered a little over 10 nations. During socialist building, over 40 more nations emerged as a result of the national consolidation of the ethnic groups of the North Caucasus and Transcaucasia, Central Asia, the Far East and the north. In our country now there are over 100 nations and ethnic groups. Some 53 of them have their own state system--from autonomous okrugs right up to union republics.

And it cannot be said that this process has finished; national consolidation continues. Not in the flames of wars between nations but under conditions of peace, mutual assistance and fraternal consent. The united peoples do not shut themselves away in "national compartments" and do not pride themselves on their "exclusiveness" but unite on principles of socialist internationalism in a unified monolith. "Life demonstrates that the USSR is a dynamic and effective form of the state unification of Soviet nations and ethnic groups designed to cover the whole historical period of the gradual development of the socialist state system into communist social self-administration," the CPSU Central Committee resolution on the USSR's 60th anniversary says.

The complete merging of the nations will only occur under communism's conditions. But this will not be the result of the dissolution of some nations within others. The nationless society of the future will absorb everything valuable and progressive that has been developed by socialist nations during their historical development, flowering and gradual rapprochement.

The contemporary stage of the rapprochement of the nations and ethnic groups is not simply an exchange of material and spiritual values. Qualitatively new features emerge and are consolidated in their economic life, social structure and in contact between nations. New socialist models of national culture, everyday life and traditions are born by which the peoples enrich one another.

One cannot forget V.I. Lenin's prophetic words on this: "The socialist movement cannot triumph within the fatherland's old framework. It creates new, higher forms of human community life where the legitimate demands and progressive aspirations of the working people's masses of /all/ [word printed in boldface] ethnic groups will be satisfied for the first time in international unity when the present national divisions are destroyed."

Our union, a society of mature socialism, creates these "new higher forms of human community life" in practice every day. This is the higher meaning of the Leninist nationalities policy consistently and purposefully implemented by our party during communist building.

KOMSOMOL FIRST SECRETARY SPEECH TO CONGRESS

Tallinn MOLODEZH' ESTONII in Russian 19 Mar 82 pp 2, 3

[Report by D. P. Visnapuu, candidate member of the Bureau of the CC of the Communist Party of Estonia, first secretary of the CC of the Komsomol of Estonia: "Report on the Work of the Central Committee of the Komsomol of Estonia and the Tasks of the Komsomol Organization in the Light of the Decisions of the 26th CPSU Congress". For a related report see translations from SOVETSKAYA ESTONIYA of 19 and 20 April published in JPRS report 080751]

[Excerpts] We listened with enormous attention and enthusiasm to the speech of the First Secretary of the Central Committee of the Communist Party of Estonia Comrade K. Vayno and to the greetings of the Central Committee of the Communist Party of Estonia to our congress. We express our most heartfelt gratitude to the communist party and to the communists of our republic for their high trust, constant solicitude, and support and we swear to continue to be worthy of this trust, and to give all of our strength, ability, and youthful energy to the fulfillment of the tasks which have been set for us.

The four years which separate us from the previous congress of the republic's Komsomol organization are marked by events of outstanding importance. This was a time of great affairs and vivid victories in the life of our state, party, and Komsomol. The 26th CPSU Congress which armed the party and the Soviet people with a clear fighting program of action for the forthcoming period was one of the greatest events of our day which had an enormous influence on the entire course of world development.

The celebration of the 40th anniversary of the restoration of Soviet power in Estonia and the award to the republic of the Order of the October Revolution were important events in the life of our republic. Our Komsomol members, young men and young women, marked in a worthy manner the 60th anniversary of the CP of Estonia, the 60th anniversary of the All-Union Komsomol, and the 60th anniversary of the Komsomol of Estonia. The award to the republic's Komsomol of the Order of the Red Banner of Labor gave a special brilliance to our holiday. This is a high evaluation of the activities of all of the generations of our Komsomol members.

Today we are summarizing the results of the work of the CC of the Komsomol of Estonia and of the entire Komsomol organization of the republic during the past four years, and we are discussing the key issues in the life of the Komsomol. Our

Komsomol forum is a responsible stage in the course of the preparations for the 19th Congress of the All-Union Komsomol which will begin in two months.

A profound knowledge of the party's policies and of the theory of Marxism-Leninism is the basis of the social activeness of the youth and of its high political consciousness.

Guiding itself by the demands of the party, and studying the rich experience of party organizations, during the period between its congresses the CC of the Komsomol of Estonia made a careful analysis at its plenums and bureau meetings of the work of our primary Komsomol organizations, mapped out concrete measures to improve ideological work, and directed the efforts of the Komsomol toward a more effective solution of the problems of the formation of a Marxist-Leninist worldview in young men and women, a communist attitude toward labor, and an improvement of moral education.

The formation of a Marxist-Leninist worldview begins at an early age. The school plays an exceptionally important role here. This was emphasized at the Fifth Plenum of the CC of the Communist Party of Estonia which heard a discussion of "On the Work of the CC of the Komsomol of Estonia in the Communist Education of the Republic's Youth in the Light of the Demands of the 26th CPSU Congress." Definite forms of the consolidation in practice of the theoretical principles of a scientific worldview have developed in our Komsomol organizations and have already become traditional. Quite a bit has been done here. However, sharp attention was given at the plenum to shortcomings in our work in the education of the student youth. The principle of overallness is not always ensured. Sometimes petty bourgeois and consumerist feelings among the individual representatives of the student youth do not receive a proper rebuff. Not all of the possibilities are used for educating the younger generation in the spirit of internationalism and patriotism.

We are disturbed by the passivity and impotence of a number of Komsomol committees and Komsomol workers in the solution of these problems. The Fifth Plenum of the CC of the Communist Party of Estonia demanded from Komsomol organizations a careful analysis of the state of patronage over schools, and a more active and aggressive participation in the formation among the student youth of a Marxist-Leninist worldview and of a firm class position. The plenum's decree shows us the concrete direction of work for the future.

The basic struggle on the ideological front is being waged for the youth. Our enemy is wagering on its lack of experience in life. He does not scorn any means and is unstinting of his time in order to undermine the faith of our youth in the value of the socialist way of life, and to sow in its consciousness the seeds of a petty bourgeois and nationalistic manner of thought.

In our daily work with the youth, we must always take this circumstance into account, and make use of all of the forms of Komsomol work and the means of ideological and moral influence. After the 18th Congress of the Komsomol of Estonia, the number of young men and women who were adding to their knowledge in the system of Komsomol political studies doubled. Through this academic year more than 60,000 working young people are studying here. In addition, 24,000 people are adding to their knowledge in the system of party studies and in the schools of communist labor. During the reporting period, the vast majority of our young men and women mastered the syllabus "The Constitution of Developed Socialism." The materials of the 26th CPSU Congress were studied with great interest at classes.

The review "For Every Young Worker--A Secondary Education" has continued. Study conditions have improved, the success rate of students in the evening and correspondence schools has stabilized, and the number who are weeded out has decreased. However, we do not have the right to regard this work as satisfactory, since for a number of recent years the staffing plans for the evening and correspondence schools has not been fulfilled.

In connection with the exacerbation of the ideological struggle, the CC of the All-Union Komsomol has recommended that the system of Komsomol political studies give more attention to a deeper study of Marxism-Leninism. In organizing the political studies the chief attention has to be concentrated on the content, quality, and effectiveness of the lessons. This means, as Comrade L. I. Brezhnev stated at the 26th CPSU Congress, " . . . to achieve in fact a unity of the ideological theoretical, political educational, and organizational and economic work of the party."

Propagandists have the task of saying the decisive word here. There are quite a few people in the Komsomol political studies system who work creatively and with passion. Purposeful work with Komsomol propagandist cadres is being performed in Pylvaskiy, Vil'yandiskiy, and Yygevaskiy Rayons. However, the proportion of propagandists with a higher education is small in the Komsomol organizations of the city of Pyarnu and Tartu and in Paydeskiy Rayon.

Lecturers are irreplacable helpers of the youth. Every year around 12,000 lectures for a half million listeners are held in youth auditoriums. During the reporting period, two streams were graduated from the republic school of the young lecturer.

However, the level of lecture work does not satisfy us. Our lecturers do not always deliver quality talks to the youth on the topics of the ideological struggle, the economy, and national relations.

The struggle against bourgeois ideology has to have an aggressive character. It is the duty of Komsomol organizations to unmask the inventions and slander of bourgeois propaganda and to increase the political vigilance of the youth. This is making large demands upon our cadres and aktiv and presupposes that they are constantly informed and work on themselves.

We have to devote more attention to atheistic education. Last year was the 25th anniversary of the tradition of holding Summer Youth Days. However, the Komsomol gorkoms and raykoms sometimes limit all atheistic work solely to the summer days.

A system of the patriotic and international education of the youth has taken shape in our Komsomol organization. Such large actions as the "My Homeland is the USSR" expedition and the All-Union field trip by Komsomol members and young people to the sites of the revolutionary, combat, and labor glory of the Soviet people make an invaluable contribution to the education of true patriots and internationalists. Every year more than 140,000 young men and women from our republic, including more than 90,000 Komsomol members, participate in the field trips. We place a high value upon the enormous contribution which is made to the patriotic education of the youth by our party, war, and labor veterans. Today also they are on the front line of educational work.

A valuable impulse to patriotic education in our republic was given by the opening in Tallinn last year of the All-Union Memory Watch and the organization in connection with this of the Komsomol-Pioneer Post No 1 at the memorial to the Soldier Liberators of Tallinn at Tynismyagi. The honorific right of standing at this post has as of today been granted to almost 2,000 students of the city of Tallinn.

The Leninist Communist League of Youth of Estonia unites in its ranks the representatives of 70 different nationalities. In mastering knowledge, and working in multinational Komsomol organizations, our republic's youth constantly feels what invaluable wealth the friendship of peoples is. The clubs of the friendship of peoples at the republic's schools and houses and palaces of pioneers can be called the most widespread form of international education. There are now 276 of them in our republic. It has become traditional to have festivals of the friendship of peoples, circles of pioneer friendship of detachment and druzhiny of the same name, meetings and Saturdays of solidarity, correspondence with people of your own age, and trips to friends from other fraternal republics in the country. During the reporting period, the basis was laid for annual meetings of internationalists.

At the same time, the Komsomol committees have to, for the sake of international education, make better and more purposeful use of sports, tourism, amateur artistic activities, student construction detachments, and pupils' druzhiny, and participate more actively in developing relations between the cities and rayons of our great homeland which have been made kindred cities and rayons.

During the reporting period, through the mediation of the Committee of Youth Organizations of the ESSR and the "Sputnik" Bureau of International Youth Tourism dozens of foreign youth delegations and thousands of tourists became acquainted with the life of the Komsomol of Soviet Estonia, and the economic and cultural achievements of the republic. Every year young men and women from our republic travel to other states as members of Soviet youth delegations and tourist groups.

Fraternal cooperation is developing successfully with the organizations of the youth leagues of the countries of the socialist commonwealth--above all, with the Shverinskiy district organization of the Union of Free German Youth and with the youth of the Sol'nokskiy committee of the Communist Youth League of Hungary. It has become traditional to have exchanges of official delegations, tourist groups, friendship trains, and druzhiny detachments, and a mutual participation in seminars and professional mastery competitions.

During the period between the congresses challenge banners of the CC of the Komsomol of Estonia and of the Shverinskiy district committee of the Union of Free German Youth "For Successes in the Development of Friendly Relations Between the Youth of the GDR and the Estonian SSR" were established.

The youth press and television and radio youth broadcasts play an important role in the formation of a Marxist-Leninist worldview in young men and women. Today we can note with satisfaction that they have been able to find the possibility for direct association with youth collectives and for carrying out joint measures with them. This kind of practice has to be continued.

We expect a more profound treatment of youth problems and of their labor activities from the republic's Komsomol press. The floor has to be given more frequently to young workers and kolkhoz workers. Young journalists have to be more consistent in opposing bottlenecks and manifestations of formalism in Komsomol work and have to be more persistent in intervening in the solution of the most diverse problems.

The party demand regarding the necessity for an overall approach to educational work manifests itself above all in the Lenin test which at the present time is being conducted under the motto of "The Decisions of the 26th CPSU Congress Into Reality." This form of work has been in use with us for 12 years now. The CC of the Komsomol of Estonia constantly keeps the issues of the Leninist test in the orbit of its attention. For successes in the labor watch devoted to the 110th anniversary of V. I. Lenin's birth, 24 Komsomol organizations of our republic were awarded memorial pennants of the CC of the All-Union Komsomol.

The Estonian Republic Council of Trade Unions has supported our proposal on eliminating parallelism in the individual overall plans of the participants in the Lenin test and their socialist commitments. It is now necessary to work out a single individual overall plan--a socialist commitment.

Throughout all time the people has always honored the worker. Only in conscientious labor, and in the steady, stubborn, and effective fulfillment of daily obligations is it possible to genuinely find life's goals, only this helps the youth to find its place in society. Our youth is meeting the Komsomol congress above all with successes in labor.

The republic's youth met the 26th Congress of the Communist Party of the Soviet Union in an atmosphere of great labor enthusiasm. On the threshhold of the 60th anniversary of the Komsomol of Estonia 26,000 young men and women and 300 Komsomol youth collectives reported the advance fulfillment of their five-year plan assignments. During the reporting period, the republic's Komsomol committees performed a substantial amount of work to develop socialist competition. In 1980, a republic practical scientific conference which had been organized by the CC of the Komsomol of Estonia was held and at it there was a detailed consideration of the questions of the effectiveness of labor rivalry, and the corresponding recommendations were developed.

Good experience in organizing competition among the rural youth has been built up, for example, in Rakvereskiy, Vil'yandiskiy, Tartuskiy, and Kingiseppskiy Rayons. Socialist competition is successfully taking place in many Komsomol organizations of large industrial enterprises. Among them are the Tallinn Plants imeni M. I. Kalinin and Kh. Pegel'man, the "Dvigatel'," the Tartu Control Apparatus Plant, and others.

At the same time, we cannot ignore the shortcomings in this important matter. In certain Komsomol organizations labor competition among the youth is carried out in a formal manner. More attention should be devoted to pulling up laggards.

The Komsomol is proud of its traditions of shock work. The facilities of the Olympic Sailing Regatta in Tallinn which were declared to be an All-Union Komsomol shock construction project were the chief construction site of Estonia's Komsomol during the reporting period. The rayon and city Komsomol committees should make use in the future of the experience in organizational work which was gained here.

However, many Komsomol committees and Komsomol leaders have not known how to direct the creative energy and strength of the youth into the necessary channel. For example, the work of the 17,000-member Tartu City Komsomol Organization at its shock project gave rise to criticism at the reports and elections conference. One could wish for a better situation in the reconstruction of the "Krengol'mskaya Manufaktura"--a republic Komsomol shock project. Last year the republic's Komsomol sent only 86 people there, and those were basically from Narva.

During the reporting period more than 1,000 volunteers received Komsomol travel authorization to the country's most important construction projects. Since the end of 1980 a patronage agreement has tied us to the Komsomol organization of Tyumenskaya Oblast. It is necessary for the Komsomol gorkoms and raykoms to join in its fulfillment more actively.

The decisions of the 18th Congress of the Komsomol of Estonia emphasized the necessity for a substantial increase in the number of Komsomol youth teams. During the reporting period their number increased by one-fourth. They include around 14 percent of all of the working youth. The creation of youth collectives is given an especially large amount of attention in the systems of the Ministry of Trade, Ministry of Domestic Services, and the Estonian Republic Union of Consumers' Societies. The number of teams in the sphere of trade and domestic services increased during the reporting period by 2.5 times.

At the same time, many Komsomol committees and economic leaders have not yet become aware of the importance of this form of production activity and educational work. The Komsomol committees of Tartuskiy Rayon--one of the republic's leading agricultural rayons--have still not been able to create a single youth brigade in such a highly important sector as animal husbandry.

Speaking at the 17th Congress of USSR Trade Unions, Comrade L. I. Brezhnev emphasized the importance of the wide introduction of new forms of team organization and labor stimulation. The method of team contracting has become very widespread in the republic's Komsomol youth collectives. The CC of the Komsomoi of Estonia has approved the work experience of the Narva "Baltiyets" Plant. Today almost one-third of our Komsomol youth collectives work in accordance with this method.

The traditional professional mastery competitions which are carried out jointly with the trade union organizations and the ministries are of substantial help in improving professional skills. In 1981 they had the participation of 25,000 young men and women competing in 82 specialties.

Our youth mentors are performing a large amount of work in the education of the youth. During the reporting period their number increased by almost one-third. Among them are such remarkable workers as the Heroes of Socialist Labor, the spinner at the "Krengol'mskaya Manufaktura" Combine Svetlana Petrova, the milkmaid at the "Vil'yandi" Support Point Demonstration Sovkhoz Leyda Peyps, and the construction worker Vladimir Mynzu.

The CC of the Komsomol of Estonia, together with the Estonian republic Council of Trade Unions, has to give thought to how to increase the role of the republic Council of Mentors in the leadership of this patriotic movement.

The struggle for economizing and making efficient use of material resources is closely connected with the cultivation of love and of a proprietary feeling.

The party has mapped out a vast program for improving the well-being of the people for the 11th Five-Year Plan and for all of the 1980's. The CC CPSU regards the basis task here to be an improvement of food supplies for the population.

The food program, Comrade L. I. Brezhnev said last year at the November Plenum of the CC CPSU, both economically and politically is the central problem of the entire five-year plan. During the planning of the work of the republic Komsomol organization during the reporting period especial attention was given to the development of agriculture. Our duties are not limited to sending the youth to the farms. Both the raykoms and the farm Komsomol committees have to devote more attention to the daily life of the young worker.

The All-Union review of the technical creativity of the rural youth gave a new impetus to the training of mechanization specialist cadres. The Komsomol organizations of Khar'yuskiy and Paydeskiy Rayons did good work here. At the same time, certain Komsomol committees of Khaapsaluskiy and Valgaskiy Rayons conducted their review for the most part on paper. The Komsomol committees have to take a more active part in developing the movement "You Live in the Village--Know the Equipment!"

At the report and election meetings in the Komsomol organizations and at the city and rayon Komsomol conferences a great deal of criticism was made of the CC of the Komsomol of Estonia with regard to the organization of labor competition among the rural youth. Sometimes more than 20 different kinds of permanent and temporary competitions, reviews, raids, operations, and movements are conducted among the rural youth. In our view, it is necessary to create a single overall system of socialist competition which embraces all of the spheres of agricultural work, and which would be easily controllable, flexible, well-grounded, with a flexible mechanism for summing up results, and understandable to all young rural workers. The path leading to the steering wheel of a combine or to a machine tool, to a scientific research institute, or to an artist's studio begins on the school bench. Pupils make up around one-half of the republic Komsomol organization. During the period between congresses, much attention was given to patronage over the schools and to the questions of the communist education of pupils. An important place here was occupied by preparing pupils for labor and for life. However, it was noted at the 18th Congress of the Communist Party of Estonia that almost one-half of the secondary school graduates who come into the economy do not have a specialty.

In accordance with the decision of the 18th Congress of the All-Union Komsomol on strengthening patronage relations between the school and production, pedagogical detachments have been created in our republic. There are now 339 such detachments in operation which contain more than 3,000 workers from the most diverse vocations. As is shown by the practice of Kalininskiy Rayon in the city of Tallinn, the city of Pyarna, and Vil'yandiskiy and certain other rayons, with skillful direction the detachments become reliable helpers of the pedagogical collectives of the schools, and an important factor determining the effectiveness of labor education and vocational orientation.

We do not have the right to forget for an instant that the most important thing for the pupil is studies. Associations, circles and clubs based on interests, and specialty schools are an important form of awakening an interest in knowledge among pupils. In carrying out the decisions of the 18th Congress of the Komsomol of Estonia, during the reporting period a Scientific Pupils' Society was created. Its founders were the CC of the Komsomol of Estonia, the Ministry of Education ESSR, the "Znaniye" Society ESSR, and the Estonian Republic Council of Scientific and Technical Societies. There are now 23 sections of this scientific society in operation.

However, there has to be an improvement of the interdepartmental coordination of the work of the society, financial questions are being solved with difficulty, and the number of schools participating in the society's activities has to be increased.

The teacher's personality and his teaching expertise play an especial role in the process of education. The Komsomol teacher organizations have to help in the formation of the young teacher. Every fifth or sixth teacher in the republic is our league comrade. The young Komsomol member teacher is an example and the soul of the Komsomol life of his class and his school.

The training of young worker cadres in the system of vocational and technical education is regarded as one of the chief directions for accelerating scientific and technological progress and increasing the efficiency of social production. Unfortunately, in many families and general educational schools there has arisen a widespread tendency which is worthy of censure of recommending to the vocational and technical schools those young people who are experiencing difficulties with their studies, or have behavior problems. We have to substantially increase the responsibility of Komsomol workers and activists for their recommendations of young people to vocational and technical schools.

One of the most important tasks of the Leninist Komsomol, D. Visnapuu noted, is the leadership of the pioneer organization, of our young Leninists. The senior pioneer leaders have the task of playing an important role here. Many of them give all of their energy to this matter. However, every year in our republic one-third of the senior pioneer leaders are still replaced, and many schools still begin the school year without them. This is our incompleted work with respect to hundreds of energetic young brothers and sisters. It has to be eliminated and demanded that the city and the rayon Komsomol committees, together with the public education agencies, seriously engage in the training of a reserve of cadres of senior pioneer leaders.

Today's student or pupil in a secondary specialized educational institution is tomorrow's specialist, labor collective organizer and educator, and reserve for Komsomol worker cadres. During the reporting period, the success rate in the republic vuzes and tekhnikums increased. But, at the same time, the proportion of students whose knowledge in all subjects can be recognized as good is still unable to satisfy us.

We are rightly proud of the scientific achievements of our students. The medals and diplomas from All-Union competitions convincingly testify to the value of the work done, and most of our students are engaged in scientific work. During the reporting period, there was an appreciable activization of the creative work of the pupils of the secondary specialized educational institutions. Thus, the instructional studios which were created by the design bureaus of the pupils of the Tallinn construction engineering tekhnikum have received All-Union recognition. The economic significance of the research work which has been performed by pupils has increased.

Public political practice occupies an important place in the acquisition of the skills of organizational and educational work which will be needed by the future specialists in the future. However, stagnation can be felt in this important form of work. Together with the Ministry of Higher and Secondary Specialized Education ESSR, the student youth section of the CC of the Komsomol of Estonia has to breathe new life into this necessary work.

It is difficult to overestimate the contribution of the student youth to the development of the economy. A special place here is assigned to the Estonian pupils' druzhina and to the student construction druzhina which have quite a few labor victories to their credit. At the same time, the reporter noted, ideological political work requires further improvement here.

The councils of young scientists and specialists became more active during the reporting period. Thus, an overall youth creative collective--the "Khiyumaa-82"--has been created at the Institute of Economics of the Academy of Sciences ESSR. It is being led by the institute's Komsomol organization secretary, a winner of a Komsomol of Estonia prize, the Candidate in Economic Sciences Pear Tang. Nine members of this collective have set themselves the goal of studying the prospects for the economic and social development of Khiyumaaskiy Rayon. This work is going successfully.

An analysis and elimination of the reasons which hinder an increase in the scientific qualifications of young scientists, and a more efficient use of their creative energy has to remain at the center of the attention of the Komsomol committees of scientific institutions.

One of the basic goals of our educational work, the reporter emphasized, is to ensure the observance by every young person of the principles of communist morality. Unfortunately, sometimes the questions of the moral education of young men and women remain in the background. Sociological studies show that for the vast majority of young men and women family and friends enjoy the greatest moral authority. The task of the Komsomol organizations is to actively assist in the establishment of a healthy atmosphere in young families, and demand from Komsomol members a more serious attitude toward the upbringing of children.

The organization of the free time of the younger generation also occupies an important place in the work of the Komsomol. It has to be seen to it that young people learn to use their leisure purposefully and rationally, so that it does not become an empty passing of time. This demands enterprisingness, great efforts, and the overcoming of mental inertia.

A decrease in law violations among the youth is directly dependent upon the solution of this problem. In recent years we have achieved definite success in the legal education of the youth. The cooperation between Komsomol organizations and the agencies of internal affairs has improved. At the same time, it has to be established that the work of the CC of the Komsomol of Estonia and of the Komsomol gorkoms and raykoms to prevent legal violations by youth and to create an atmosphere of censure for any misdeed has still been insufficiently consistent.

Life demands from literature and art, D. Visnapuu said, an ever more active participation in the solution of social and public political problems.

During the period between the congresses, a number of young creative figures have come forward among us--movie directors, theater directors, and artists who have their own creative signature, a sharp social sense, and whose work has given rise to a broad interest. Nevertheless, there are shortcomings in the work of the creative youth. The CC of the Komsomol of Estonia and the Komsomol gorkoms and raykoms have to be more active in giving it a clear social command.

The Komsomol regards the development of physical culture and sports as a task of state importance. In the last four years alone, around 160,000 young men and women passed the "Ready for Labor and for the Defense of the USSR" (GTO) norms. This is a large number. But can we say that every one of us regularly engages in physical culture and sports? The fulfillment of the GTO norms is not an end in itself. Our task is the formation in young men and women of a daily need for sports activities.

At the present time there are 164,000 young men and women in the ranks of the Leninist Communist League of Youth of Estonia, which is 10,000 more than on the eve of the 18th Congress of the Komsomol of Estonia.

The educational level of the members of the All-Union Komsomol has risen. More than 60 percent of the Komsomol members have a higher or an incomplete higher or secondary education. The number of working young men and women who do not have a secondary education has decreased by almost 15 percent.

The chief forces of the Komsomol of Estonia are concentrated in the economy--more than half of its members work here.

During the reporting period, the Komsomol strata grew among the youth in industry, trade, the public catering system, municipal services, the service sphere, and agriculture.

Unfortunately, some Komsomol committees give insufficient attention to Komsomol influence on the decisive sectors of the economy. The number of Komsomol members working in construction and transportation has been growing slowly.

The task of our Komsomol organizations is to ensure with concrete deeds the vanguard role of the Komsomol in the most important branches of the economy, to create Komsomol youth collectives there, to increase the Komsomol stratum, and to strengthen its influence on the youth.

The numerical growth of our organization is vivid testimony to the growth of the Komsomol's authority, and to the growth of the consciousness of the youth and of its ideological maturity. The Komsomol committees have to devote more attention to this matter. It is necessary to carefully analyze the situation in every slowly growing organization and to provide it with the necessary help.

The practice of creating at the gorkoms and raykoms commissions for the preliminary examination of the questions connected with the admission to the Komsomol of the student youth has justified itself.

Statistics show that quite a few Komsomol members change their residences or place of work within the republic during the course of a year. In doing so, some of the young people lose their connection with the Komsomol organization. Therefore, on account of moving from one organization to another last year some of the Komsomol members did not get on the Komsomol register in time. There were especially substantial losses in Tallinnskiy, Kokhtla-Yarveskiy, and Pyarnuskiy city and Valgaskiy, Yygevaskiy, and Rakvereskiy Rayon organizations.

The review of the work of our Komsomol organizations on carrying out the decisions of the 25th and 26th Party Congresses helped to activate Komsomol work.

At the same time, stricter demands should be made upon laggards, and more concrete measures to eliminate shortcomings should be mapped out and introduced.

The 26th CPSU Congress set a task for us: to create a vital creative atmosphere in every Komsomol organization. This task can only be carried out if all of the elements of the Komsomol--the groups and the shop primary organizations--will in fact seek to increase the vanguard role of Komsomol members in labor, studies, and publicly useful work.

An active life position, civic maturity, and vocational expertise are formed in young people in the primary Komsomol organizations which are an essential component part of the labor collective.

An important place here is assigned to the practice of the distribution of Komsomol commissions. It should be added that they are distributed equally, in a well-thought-out manner, and with regard to the abilities and interests of the young people.

The Komsomol gorkoms and raykoms play a large role in increasing the efficiency of the primary organizations, and in improving organizational political work. They have the direct responsibility for the fate of every primary Komsomol organization, and for increasing its efficiency. However, not all of the gorkoms and raykoms have been able to organize their work in accordance with the demands of the present day. Frequently the direct work of the primary Komsomol organizations remains outside of their field of vision.

At the 18th Congress of the Komsomol of Estonia the Valgaskiy Raykom was criticized for a large number of reasons. Four years have passed. A large number of plans have been approved in the raykom, and quite a few decisions have been made. Despite this, in a number of primary organizations especial changes for the better cannot be seen. Thus, in the rayon there has been a decrease in the Komsomol stratum among young animal husbandry and mechanization specialists, and the number of Komsomol youth collectives has decreased. Listless work is being done by the rayon headquarters of the "Komsomol Searchlight" and by the operational Komsomol detachment. The basic reason for these omissions is an inability to work with the primary Komsomol organizations.

In recent years much attention has been devoted to the holding of Komsomol meetings. However, here also there still are shortcomings. Sometimes the schedules for holding meetings were not observed in the organizations. Rarely were there discussions at them of work with the non-league youth, of the activities of the Komsomol groups, of the legal education of the youth and of the work of the "Komsomol Searchlight." The Komsomol meetings were rarely visited by gorkom and raykom secretaries, apparatus workers, and gorkom and raykom members.

At the 18th Congress of the Communist Party of Estonia there was criticism of those Komsomol committees which sometimes copy far from the best in the work style in certain institutions, and spend time on all kinds of conferences and meetings and on the drawing up of certificates and reports. There has to be a decisive struggle against this. The CC of the Komsomol of Estonia has reduced the amount of information it requests, at the same time increasing the demands upon its quality. Komsomol workers have begun to visit the organizations more frequently and to give them effective help.

In recent years many Komsomol committees have begun to introduce long-term overall planning for their work. It has to be noted, however, that certain Komsomol committees do not take sufficient account here of the interests of the different youth groups, do not study positive experience, and do not give practical aid to primary organizations. Performance verification continues to be a bottleneck in the work of many Komsomol organizations, and frequently it has an episodic character. Sometimes the kinds of decisions are made which are difficult to carry out and verify.

An improvement of the entire work of the Komsomol depends, in the first place, upon the political maturity of the Komsomol cadres and aktiv, upon their practical sense, organizational abilities, and creative initiative.

Thanks to the constant concern and attention of the Communist Party of Estonia, the republic's Komsomol organization possesses experienced cadres and an aktiv of good organizers and youth leaders. Members and candidate members of the CPSU now head every third Komsomol group and organization and 60 percent of the primary Komsomol organizations. To follow Lenin's principles of work with cadres means to be concerned not only about the political growth of cadres, but also to make new demands, dictated by life, upon every Komsomol worker. All of the gorkom and raykom secretaries have a higher or an incomplete higher education.

However, we are not pleased by the fact that among the secretaries of certain rural Komsomol raykoms there are no agricultural specialists. Nor are the demands of the time being met by the qualifications and educational level of the Komsomol committee secretaries of the vocational and technical schools and secondary specialized educational institutions.

Practice shows that cadre problems are solved in those places where the Komsomol committees show constant concern for a cadre reserve and teach the future youth leaders. In the republic as a whole, all of the necessary conditions have been created for this. Seminars, Komsomol aktiv schools, and studies in the Vilnius zonal Komsomol school give Komsomol workers the opportunity for substantially raising the level of their training.

Permit me on behalf of the congress, D. Visnapuu said in conclusion, to assure the CC of the Communist Party of Estonia and the CC of the All-Union Komsomol that the Komsomol members and the entire youth of our republic will give all of their energy and enthusiasm to carrying out the historic decisions of the 26th CPSU Congress and to the construction of a communist society, and will provide a worthy reception for the 19th Congress of the All-Union Komsomol.

2959

VAYNO SPEECH TO KOMSOMOL CONGRESS

Tallinn MOLODEZH' ESTONII in Russian 19 Mar 82 pp 1, 3

[Speech by K. G. Vayno, member of the CC CPSU and first secretary of the CC of the Communist Party of Estonia at the 19th Congress of the Komsomol of Estonia: "For the Five-Year Plan--The Shock Labor, Knowledge, and Creativity of the Young". For a related report see translations from SOVETSKAYA ESTONIYA of 19 and 20 April published in JPRS report 080751]

[Text] Dear comrades!

It gives me great pleasure to fulfill a commission from the Central Committee of the Communist Party of Estonia and to express on behalf of all of the communists of the republic ardent and sincere congratulations to you and in your person all Komsomol members, young men and young women, on a great event--the opening of the 19th Congress of the Komsomol of Estonia--and to wish you success in your work.

The congress of the republic's Komsomol is an exciting holiday for everybody: both for the youth, and for the older generation. For since the first days of its revolutionary struggle the party has based itself on the youth, and attention to the youth has always been one of the cornerstone principles of its work. "We are the party of the future," V. I. Lenin said, "and the future belongs to the youth. We are a party of innovators, and the young are always willing to follow innovators."

The Leninist Komsomol has always been and continues to be a faithful helper of the party, and its reliable reserve. To always be where it is difficult, where the success of our common cause is being decided, at the most complex and important work sectors--this is the fighting tradition of the Komsomol of Estonia. The award of the Order of the Red Banner of Labor to the republic's Komsomol is a recognition of its services and its contribution to the construction of communism.

We are convinced that the Komsomol will continue to give all of its enthusiasm and all of its strength for the good of the people and of the party. We know that in any matter the Komsomol can be boldly relied upon!

The congress of our republic's Komsomol is not only a holiday, and not only a report about labor accomplishments and frontiers which have been taken. It is above all a highly practical and demanding conversation about the affairs of the youth and about the problems which exist among young people. This is all the more important since in front of us there is a responsible period: The 19th Congress of the Union Komsomol is approaching--an important landmark in the life of the country's Komsomol.

This year is the year of the 60th anniversary of the formation of the Union of Soviet Socialist Republics. "It is a great holiday for our dear homeland," Comrade Leonid Il'ich Brezhnev said in his speech at the 17th Congress of USSR Trade Unions, "a holiday of the friendship of peoples. It is a triumph of the Leninist nationalities policy. And, at the same time, it is a good occasion for summing up the results, and defining and refining the tasks for the future." It is precisely from this point of view that the delegates to the congress will have to work out a concrete program of activity for the Komsomol organizations of the republic during the year of the glorious anniversary of the Country of Soviets.

The republic's party and Komsomol organizations are now accomplishing the very important tasks which were set by the 26th Party Congress. The basic demand of the day is an intensification of production on the basis of scientific and technological progress, and an increase in efficiency and improvement of the quality of work. We have to wage a persistent struggle to increase the production of industrial output and of consumer goods, to make more efficient use of fixed capital, and labor and material resources, to increase labor productivity, and to be careful and proprietary in the way we save and use raw materials, materials, electric energy and fuel.

Last year created a rather good foundation for the fulfillment of our plans. But in order to successfully fulfill the five-year plan, even higher indicators have been put in the plan for this year. Its fulfillment will require a substantial strain on our strength.

Much here depends upon the Komsomol. Upon how skillfully and energetically the Komsomol will help young people to master economics and put advanced experience, team contracting, and multi-machine tool operation into practice. We know splendid models of the shock work of many of our young comrades. Thousands of the republic's young men and women fulfilled and overfulfilled the assignments of the 10th Five-Year Plan and of the first year of the 11th Five-Year Plan ahead of schedule.

We are talking today about shock work not as a temporary success. Every achievement and record is good if on the next day it becomes a norm for the many. The advanced worker today is the one who does not have a single lagging worker next to him. To lead people is without question a difficult task, but the creative searches of the shock workers of the five-year plan produce an enormous economic effect. And it would be difficult here to overestimate the power of the personal example. Let us recall how the youth of the country was stirred by Igor' Skrinik and his appeal to work for oneself and for those who did not return from the battles of the Great Patriotic War. Today in the republic there has been a wide development of the patriotic movement of the youth--"For the 11th Five-Year Plan--the Shock Labor, Knowledge, Initiative, and Creativity of the Young!"

Komsomol initiative is a barometer which accurately characterizes the atmosphere of the organization, the atmosphere of its creative search and efficiency. It is not enough to proclaim a slogan, to cast an appeal from the rostrum of a Komsomol meeting or conference--it has to be reinforced by concrete deeds and by the demonstration of a personal example. If a person proclaims lofty goals, but himself does very little to achieve them, we say that that person is a phrase-monger. If at the beginning of a year a Komsomol member has voted for increased collective commitments, but at the end of the year he throws up his hands--it did not turn out, he says, circumstances got in the way--that person is also a phrase-monger. Real initiative declares itself with weighty results and high achievements.

Patronage over objects of capital construction and over All-Union shock construction projects is a very important work sector for the Komsomol. This is why the initiative of the republic's Komsomol to adopt patronage over the reconstruction of the "Krengol'mskaya Manufaktura" Combine deserves every approval and support.

You know that last year was a difficult one in our republic in agriculture because of weather conditions. It brought quite a bit of disappointment. But that makes it all the more important to strengthen all of our organizational work in order to more rapidly deal with the consequences of that bad year.

The new harvest is already maturing during these spring days. It will depend upon how we have prepared ourselves for the spring sowing, and upon whether we have known how to perform punctual high quality repairs on equipment and train cadres of mechanization specialists in the village. And here we are also counting upon the Komsomol, upon your young energy and initiative. We are disturbed that there are not enough mechanization specialists on the farms.

For this reason, the Central Committee of the Communist Party of Estonia has supported the initiative of the Tallinn Polytechnical Institute to train some students as mechanization specialists for work in the village during the busy time. It would be very good if this experience is taken up on a wide scale by the Komsomol organizations of the other Vuzes and tekhnikums of the republic. The training of young mechanization specialists and the successful organization of help from the city to the village--this is also a kind of examination for the Komsomol committees, a test of their practicality, of their ability to define their participation in the accomplishment of a national task.

The 26th Party Congress declared animal husbandry to be a shock front in the village. There is good reason why there can be heard in these words an echo of the war years when the entire country rose up to fight shoulder to shoulder for a common cause and for a common struggle. Today, it is precisely here, in animal husbandry that the front line runs, it is here that problems which are important for the entire country are being resolved.

We are confident that the republic's Komsomol will make its contribution to the solution of these problems also. The livestock sections and the animal husbandry teams are in need of young reinforcements. Every year more and more modern animal husbandry complexes are built in the village, and highly qualified cadres are needed for work on them. The feed shop, breeding--all of this requires its experts. Here also Komsomol organizations could say their word.

Comrades! The questions of the ideological political and educational work of the Komsomol organizations will undoubtedly occupy a large place at the congress. Our Komsomol is actively engaged in production and in labor education. And this is good. But we cannot be indifferent to what books are read by the youth, what films it prefers, and what music it is enthusiastic about. A worker's honor, and attachment to one's native plant or kolkhoz can be spoken about at Komsomol meetings and also at recreational evenings and in discotheques; that is, things should not be torn into separate spheres: Here, people say, is production, but here is leisure, and there is nothing in common between them. The process of education is unbroken. And if a young worker is permeated by the idea that he is the heir of the labor traditions of his plant or factory, then, of course, nothing will pull him over to another place.

There are problems and there are shortcomings in our life--no one hides them, and we speak about them frankly and openly. But any problem, including a profoundly economic one, in the final analysis, is connected with people. For this reason, the deeper, the more vital, and the more human the educational work of Komsomol organizations is, the more effectively will they be able to influence the formation in young people of an active life position and of lofty moral qualities.

Soviet youth must, as V. I. Lenin taught, persistently master the knowledge of all of the riches which have been developed by mankind. And, first of all, the Marxist-Leninist teachings. These teachings are an inexhaustible ideological source which give us confidence in our strength, courage and optimism, and faith in our victory.

To learn communism, and to learn how to build communism--this behest of Lenin's has today become the meaning of the life of thousands of Komsomol members. But our entire life, and the scope and complexity of the tasks which have been put forward by the party are urgently dictating the necessity for raising the organizational and ideological educational work of Komsomol organizations to a new and higher level. This, let us say it frankly, is not an easy and not a simple matter. It includes many components. It is absolutely obvious that the line taken by the 26th Party Congress regarding the necessity for the reorganization of many sectors and spheres of ideological work has a direct relationship to the education of the youth.

Another thing is also obvious. This reorganization is still going slowly. It is very important that our youth not only master political knowledge, but also know how to apply it in practice. It is just this quality, as experience shows, that sometimes is lacking in certain young men and women. It is just here that their philosophical maturity shows up. For it sometimes happens that the theoretical knowledge which is obtained in educational institutions and at seminars in the system of Komsomol political studies remain as something unto themselves, while life flows on in its own way.

Today, as never before, it is important to see to it that every young man or young woman has a deep understanding of the full extent of the sharpness of the ideological conflict in the contemporary world. As you know, our ideological opponents place their bets, above all, on the youth, striving to get into their nets those still inexperienced young people who have a weakness for the easy, so-called, "beautiful" life. This is why it is so important to teach our youth a class approach to social phenomena and to cultivate ideological maturity in it.

There is in our day the kind of concept known as the ideological front. To wage a merciless war against manifestations of views and mores which are alien to us also means to be on the front lines. On this front we cannot forego a single one of our ideas, and not a single one of our people. The work of our Komsomol organizations has to be directed toward this, toward having the chief object of all Komsomol work being the young person, his interests, views, convictions, and deeds. And it also must be considered here that in this uncompromising ideological struggle our enemies do not scorn anything, including the incitement of nationalistic and petty bourgeois, philistine feelings.

Our young people are distinguished by a profound ideological conviction, patriotism, and loyalty to the party's cause. But we also have negative facts. There are very few such people, and they do not define the appearance of our youth. But they exist. And their education has to be engaged in seriously and thoroughly.

This means that educational work is not always conducted persistently and purposefully among the youth. Why hide the fact that the level of the measures which are conducted and the yield from them is not yet always high. We, for example, are alarmed by the level of the performance of certain youth discotheques. They, like all other measures, have to serve the goals of the ideological and moral education of the youth and of the organization of beneficial rest. And, of course, the Komsomol has to have the first word here.

We speak a great deal and well of our construction druzhiny, student and school ones, and we ennumerate their successes and achievements. Of course, these successes are real. The young people from the senior grades do a considerable amount of useful work during the summer on the farms. Student construction workers take an active part in the construction of important and necessary economic objects. All of this is good and useful. But we would like to see educational and ideological political work in the druzhiny and among the pupils and students also well organized. Meanwhile, however, there are shortcomings here.

We know how great the role is today of young specialists in accelerating scientific and technological progress in the life of our entire society. It is they, the graduates of our vuzes and tekhnikums, who will have to say their word in the organization of production and management, establish profoundly moral relations, and bring people high culture. It is precisely for this reason that the Komsomol should give its most careful attention to the education of students, to their ideological and political training. The Central Committee of the Communist Party of Estonia properly appreciates the great affairs with which the life of the vuz Komsomol organizations are full. But, at the same time, it would be incorrect not to mention that in the work with students we have omissions. Many students do not participate in the circles of the scientific student society, and in certain vuzes their public political practice is not sufficiently well organized. Is this not a field of activity for the Komsomol organization of vuzes from the point of view of cultivating public activeness in students, of their political maturity?

The vuz and school Komsomol organizations are, in essence, the first stages of a person's political biography. It is here that young people, young men and young women, go through a school of social and civic maturity. This was especially emphasized at the last Plenum of the CC of the Communist Party of Estonia which discussed the work of the CC of the republic's Komsomol in the communist education of the student youth in the light of the demands of the 26th CPSU Congress.

We have to strengthen the close interconnection between labor, ideological, and moral education in the work with every category of the youth. This is the key to success, and the basis of the authority of every Komsomol organization. The more difficult the tasks with which the party charges the Komsomol, the more skillful and perfect must the work of the Komsomol aktiv be. Here a great deal depends upon how our Komsomol cadres and activists have been trained, and the extent to which they are capable of giving an example to their comrades and drawing them after themselves.

Even greater attention has to be devoted to the selection of cadres, and to expanding the Komsomol aktiv. It is very important to notice capable and talented young people in time, to promote them, support them, teach them to work with the youth, and help them to uncover their abilities.

We sometimes forget the truth that ready-made organizers do not come to Komsomol work. People who wish to work, who thirst for knowledge, but who do not have organizational experience. And the Komsomol committee, if it is really a good committee, gives them what they want.

Young people are characterized by a desire to respond to every useful initiative, and to every new matter. However, it frequently happens that taking up something with ardor, adopting new commitments, Komsomol members, without bringing one job to a conclusion, take up another, and then a third. And there are no final results. This sometimes happens on account of poor organizational work, an inability to correctly place one's forces. We have to increase both the efficiency and the practicality of Komsomol organizations, their organizational and educational role. Less general phrases and declarations, and more concrete work; the ability to bring a job which has been begun to a conclusion--this has to be the guide in one's daily work.

In all of its useful initiatives the Komsomol can count upon the most active support and help of the republic's party organization. The strength of our Komsomol, and a guarantee of the high efficiency of its organizations is in our party leadership.

The communist party is constantly replenishing its ranks with Komsomol members. Today every second communist in the republic was a Komsomol member in the past. During the last five years alone, more than 12 thousand people entered the party through the Komsomol.

Thousands of communists today could repeat the words of our well-known poet and writer Yukhan Smuul who said this about the Komsomol membership card: "It has become a particle of me forever."

The glorious history of our Komsomol is a part of the biography of our republic, and today's Komsomol members, young men and young women, will continue it, and write bright new pages into the chronicle of the remarkable affairs of our republic Komsomol.

We are firmly convinced that the republic's Komsomol will continue to be an active helper and reserve of the party and, under the leadership of party organizations, will continue to be in the vanguard of the struggle for the realization of the historic decisions of the 26th Party Congress. I wish you great success on this path, comrades!

Then Comrade K. G. Vayno made public the greetings of the Central Committee of the Communist Party of Estonia to the 19th Congress of the Leninist Communist Youth League of Estonia.

(Comrade K. G. Vayno's speech was attentively listened to by the assemblage and repeatedly interrupted by enthusiastic applause).

CONFERENCE ON AGROINDUSTRIAL COMPLEXES CONVENES IN TBILISI

Tbilisi ZARYA VOSTOKA in Russian 9 Apr 82 p 2

[Information Item: "The Rayon Management Echelon: Ways to Improve It"]

[Text] Until recently, in the sphere of farming alone, the rayon management echelon contained the representatives of a minimum of four ministries and departments. This led to parallelism, the disuniting of efforts and resources, and to other negative phenomena which hindered an increase in the intensification of agricultural production. How is today's agriculture to be managed in the rayon, and which organizational structure best corresponds to the demands which are being made today upon this branch of the economy? These and other problems of improving the system of the management of agriculture and the other branches of the agroindustrial complex are at the center of the attention of a coordination conference which is taking place in Tbilisi.

Its participants--leading scientists from the country's large scientific research institutes who are working on the problems of the economics and organization of agriculture and agricultural specialists--are developing a draft of a general plan for the management of agriculture in the system of the agroindustrial complex. In the reports and addresses which have already been heard, it has been noted that contemporary agricultural production is a highly complex mechanism, and it cannot be looked upon in isolation from any other processes of an economic and social character in the village. Meanwhile, in the overall managerial chain the rayon link of management in which the basic production task is in fact accomplished has proven to be weakened and uncoupled.

To overcome this uncoupling is a very important task which has been put forward by the party and government.

A careful examination was made of an experiment which was conducted in Abashskiy Rayon of our republic where for the first time in the country a rayon agricultural production association was created. At first, it consisted only of three subdivisions: the rayon agricultural administration of the republic's Ministry of Agriculture, the rayon "Gruzgoskomsel'khoztekhnika" association, and the rayon administration of the Ministry of Land Reclamation and Water Resources. And in the very first year the association succeeded in directing the work of the three basic partners toward the accomplishment of the chief task--a maximum increase in the production of agricultural output.

Whereas during the first years of the experiment the association's results were evaluated only by the level of agricultural output production, during the subsequent years there was an evaluation also on the basis of the solution of problems of a social order, construction, and the introduction of scientific achievements into production.

The experience of Abashskiy Rayon has become widespread. At the present time production associations have been created in all of the rayons of the republic. They contain not only kolkhozes and sovkhozes, and the rayon subdivisions of sel'khoztekhnika and of land reclamation and water resources, but also processing industry enterprises, construction and trade organizations, and so forth.

The experience which has been gained in Georgia and in the other union republics in improving the management of the agroindustrial complex, the conference participants emphasized, should be absorbed by the general plan of agricultural management in the system of the agroindustrial complex.

A further improvement of the management of agriculture and of the other branches of the agroindustrial complex, it was emphasized at the conference, will promote the accomplishment of the tasks set by the 26th CPSU Congress, and, above all, the accomplishment of the food program.

During the first day of the conference's work, addresses were delivered at it by the Director of the Georgian Scientific Research Institute of the Economics and Organization of Agriculture Professor P. Zhgenti, the Deputy Director of the All-Union Scientific Research Institute of the Economics of Agriculture Doctor of Economic Sciences V. Mashenkov, the Chief of the Main Administration for Inter-farm Cooperation and Agroindustrial Integration of the USSR Ministry of Agriculture Candidate in Economic Sciences V. Prosin, the Chairman of the Interdepartmental Coordination Council of the Agroindustrial Complex of the GSSR and Deputy Chairman of the GSSR Council of Ministers O. Vardzelashvili, the Department Director at the All-Union Scientific Research Institute of the Economics of Agriculture Professor I. Ushachev, and others.

The work of the conference was participated in by the Secretary of the CC CP of Georgia D. Patiashvili, the First Deputy Chairman of the GSSR Council of Ministers N. Chitanava, and the responsible worker of the CC CPSU N. Grishakov.

The conference is continuing its work.

MOSCOW TELEVISION STUDIES VOCATIONAL ORIENTATION

[Editorial report] Moscow Domestic Television Service in Russian at 0658 GMT on 13 May carries the scheduled 30-minute "Lenin's University of Millions" program which is devoted to problems of vocational orientation.

Establishing, through a number of interviews, the fact that many workers are dissatisfied with their jobs or are already working in a job other than the one for which they were trained, the program looks at factors which determine vocational orientation. An example of how attitudes to a given job differ is shown in interviews with a little girl and a woman working in that job.

Addressing the TV audience, V.A. Polyakov, deputy director of the Scientific Research Institute of Labor Education and Vocational Orientation of the USSR Academy of Pedagogical Sciences, notes that the problem of vocational orientation is "primarily linked with the formation of labor requirements and habits in a person and the inculcation of industriousness." He notes that the wrong choice of a vocation may be the result of a lack of understanding of what various jobs entail. He suggests that application of the Marxist-Leninist principle of combining studies with productive labor offers a solution and says that "the creation of material values" by schoolchildren "is of great educative significance, has a certain economic significance and, most of all, gives the pupils an opportunity to try their ability at one vocation or another."

The film goes on to show the work of the Chervonoarmeyskiy rayon interschool training and production combine for labor education and vocational orientation of pupils in Lvov, which gives pupils a hands-on look at various vocations.

The negative role of parents in career selection of pupils is noted and a special laboratory of professional consultation in Leningrad is shown where pupils and parents receive career guidance. V.V. Pavlov, chief of a sector of the USSR State Committee for Labor and Social Problems, discusses material incentive in various jobs and notes that measures are being undertaken to correct various distortions which have appeared in the wages structure and to make wages more responsive to educational levels and efficiency of work. He says the measures will make the system more flexible and these factors must be taken into consideration in work aimed at vocational orientation.

The film takes a look at the Rostov Vocational Orientation Center, where aptitude as well as choice of vocation are discussed.

The needs of society and the country in general are viewed and pupils of a class which became a housing construction brigade are introduced.

Joining the program, Prof I.V. Bestuzhev-Lada, doctor of historic science, notes that there is one essential shortcoming in all the work being done on this problem, namely that the research is uncoordinated, not united around a specific problem and is being carried out by dozens of diverse institutions and organizations. He suggests that the next 5-year plan envisage a complex approach to this problem and that people be made aware of "what the situation is like now, where people are engaged and in what positions and how many people will be needed in the coming years and in the more distant future." He says that a system of practical production work is needed and adds that good experience in the vocational orientation sphere has been accumulated in Leningrad, Lvov and Rostov [but] they need to be united into a system and their results popularized.

Bestuzhev-Lada criticizes the practice of practical familiarization with jobs through excursions to enterprises and goes on to note poor labor organization. Two people often do the job of one because only the manager is responsible to higher authority, so workers labor in accordance with their ability and interests.

He notes that the Leninist principle of democratic centralism, state planning discipline and one-man management must be adhered to; "however, as soon as the plan is ready, the collective must decide how to fulfill it, since it has the capacity to understand how to do it. The manager of the collective has his own function. He must organize the fulfillment of the plan and be accountable for it, for his work, before higher authority and, of course, before his collective." He notes that experience has shown that this leads to sharp changes in labor conditions. "After all," he asks, "how many workers do we have, the so-called time-workers, who are being paid wages for serving time?" He concludes by calling for improvements in labor organization and incentives.

BRIEFS

'TRUD' CONFORMS TO NEWSPRINT CONSTRAINTS--Occasionally we see a notice in TRUD saying that the next issue of the paper will appear not tomorrow, but the day after. Why is that? (A. Kankrov, Zheleznodorozhnyy, Moskovskaya Oblast). The question why TRUD occasionally fails to appear on other days of the week apart from Monday intrigues many readers. There are 300 issues of TRUD per annum. The publishing house is allotted the paper for that number of issues. In cases where it is necessary to cover very important events at home or abroad and the paper exceeds its schedule or appears in an enlarged form (6-8 pages instead of 4) we have to miss days to avoid exceeding the planned paper consumption volume. [Text] [Unattributed reply to reader's letter: "The Missing Issue"; first graf is reader's letter] [PM111319 Moscow TRUD in Russian 17 Apr 82 p 4]

CPSU SOCIAL SCIENCE COURSE--The second batch of students has graduated from the CPSU Central Committee Academy of Social Sciences Correspondence Department. Among the graduates are party kraykom and obkom secretaries, executives of the CPSU Central Committee apparatus and central ideological institutions, ministers, oblispolkom chairmen and deputy chairmen and other responsible party, Soviet and komsomol workers. For 3 years the students have been studying part-time topical questions of Marxist-Leninist theory and practice of communist building and the CPSU's domestic and foreign policy and ideological activity. Particular attention was devoted to studying the 26th CPSU Congress decisions, CPSU Central Committee plenum materials and the provisions and conclusions contained in Comrade L.I. Brezhnev's works and speeches and other documents of the CPSU and the Soviet state. V.I. Dolgikh, secretary of the CPSU Central Committee, delivered a concluding address to the graduates. [Text] [PM051445 Moscow PRAVDA in Russian 29 Apr 82 p 2]

CHELYABINSKIY OBKOM PERFORMANCE, TASKS--Chelyabinsk, 3 May--The discussion at a Chelyabinskiy obkom plenum of the question of the obkom bureau's organizational and political work was substantive and in many ways instructive. The report by obkom First Secretary M. Voropayev and the speeches by the plenum participants analyzed in depth the bureau's activity since the 26th CPSU Congress and the oblast party conference. A range of problems associated with implementing the targeted comprehensive programs for the national economic development of the south urals was examined. In addition, to noting the successes achieved, the plenum drew attention to serious shortcomings in the use of fixed production capital and the existing potential for technical progress and social development. The plenum directed the oblast's party organizations to further improve the leadership of all production sectors, to achieve the highest efficiency in economic work and to improve the working people's ideological and political education. [Text] [PM070851 Moscow PRAVDA in Russian 4 May 82 p 2]

NATIONALITIES POLICY DISCUSSED--A Lenin jubilee scientific session was held at the CPSU Central Committee Social Sciences Academy 20 April. Scientists discussed theoretical questions of the party's nationalities policy in the light of the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation." The reports and speeches emphasized the great vital strength of Lenin's teaching on the nationalities question and its creative development and consistent implementation in the CPSU's activity. [Text] [PM300841 Moscow IZVESTIYA in Russian 22 Apr 82 morning edition p 3]

LAST RESPECTS TO ZARODOV--Moscow has paid its last respects to Konstantin Ivanovich Zarodov, candidate member of the CPSU Central Committee and chief editor of the journal PROBLEMY MIRA I SOTSIALIZMA. The hall where the casket containing the body of the deceased was installed was decked in mourning. The awards conferred on K.I. Zarodov for his services to the motherland were displayed on scarlet velvet. The honor guard included M.V. Zimyanin, secretary of the CPSU Central Committee; P.F. Alekseyev, K.M. Bogolyubov, V.V. Zagladin, L.M. Zamyatin and N.A. Petrovichev, members of the CPSU Central Committee; A.S. Chernyayev, candidate member of the CPSU Central Committee; CPSU Central Committee executives; the leaders of a number of ministries and departments; and representatives of the public. A funeral meeting was held at Novodivichye Cemetery, where K.I. Zarodov was buried. [Text] [PM281211 Moscow PRAVDA in Russian 23 Apr 82 p 6]

USUBALIYEV ADDRESSES 21ST KIRGHIZ KOMSOMOL CONGRESS

Frunze SOVETSKAYA KIRGIZIYA in Russian 27 Mar 82 pp 1-2

[Report on Speech of Comrade T. U. Usubaliyev, first secretary of the Central Committee of the Communist Party of Kirghiziya, at the 21st Congress of the republic Komsomol]

[Excerpts] On behalf of the General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade Leonid Il'ich Brezhnev, Comrade T. U. Usubaliyev warmly greeted the delegates to the 21st Congress of the republic Komsomol and, through them, all youth of Soviet Kirghiziya and expressed best wishes for the successful work of the Congress and the remarkable achievements in labor and training for the good of our great socialist homeland, so that Kirghiz youth will increase even more their contribution to communist construction and the implementation of the decisions of the 26th CPSU Congress.

Allow me on your behalf, said Comrade T. U. Usubaliyev, and on behalf of all the boys and girls in the republic to express profound gratitude to that wise and concerned mentor of youth, Leonid Il'ich who is loved by us all, for his paternal attention and wish him good health and further productive work in the name of happiness of the Soviet people, for the good of the world and for social progress of all mankind.

Comrades! It is profoundly symbolic that the 21st Congress of the Komsomol of Kirghiziya is taking place during the days of nationwide preparation for the glorious anniversary of our multinational homeland. "One of the most important results of the 60-year path of the USSR and one of the main sources of our power," noted Comrade L. I. Brezhnev at the festive meeting in Tashkent, "is the solid, inviolable friendship of all peoples of our country."

For the workers of Soviet Kirghiziya as for those of the entire country, the Eleventh Five-Year Plan is a five-year plan of immense deeds and accomplishments. Among the multitude of large-scale tasks carried out by the republic is further assimilation of the Naryn River with its rich hydro-energy resources which are estimated to amount to a total of 30 billion kilowatt hours. After the Kurpsayskaya GES--it is to reach its full production capacity this year--it will be necessary to equip the Tash-Kumyrskaya, Shamaldy-Sayskaya and the Kambaratinskaya hydroelectric stations with an overall capacity of 2,650,000 kilowatts.

The work for comprehensive assimilation of the invaluable natural wealth of Issyk-Kul'skaya Oblast and the regions of the Chuyskaya Valley will also continue for many years.

The creation of a territorial production complex will make it possible to bring into national economic circulation hundreds of thousands of hectares of empty, less productive land, to accelerate the assimilation of the rich mineral-raw material and hydroelectric power resources in the interests of all the Soviet people, and also to stabilize the level of Lake Issyk-Kul'. This is an extremely large and costly program that is being carried out in the interests of the entire country. Many union and republic scientific institutions, ministries, departments, enterprises and organizations are beginning to carry it out. The implementation of this large multifaceted program will transform our republic even more and considerably increase its contribution to the further consolidation of the economic and defense might of the USSR.

Extremely important work will also have to be done to accelerate the development of the branches of industry that produce consumer goods. It is a matter of honor for each worker of the republic to carry out the large tasks that have been earmarked by the decree of the CPSU Central Committee, "On the Work of Party Organizations of Kirghiziya for Expanding the Production and Improving the Quality of Consumer Goods and Developing the Sphere of Services."

Comrades! The Komsomol has always been an active assistant of the party in implementing the agrarian policy. And now when the party is engaged most seriously in questions of improving the supply of food products to the population, the activity of rural Komsomol organizations should be even more appreciable. Comrade L. I. Brezhnev said in Tashkent that the country is now "working out and refining a comprehensive food program which will join together into one the production, storage and processing of agricultural products. Of course the program itself, even if it is a very good one, will not solve the problem. It is necessary to considerably increase the volumes of agricultural production in all regions of the country."

One must create in the labor collectives the kind of moral and psychological atmosphere whereby everyone is obliged to consider it his duty to work as productively as possible and with the greatest return; the kind of atmosphere wherein the position of idlers, absentees, slipshod workers and thieves of public property will become absolutely intolerable.

Comrades! In all of these matters Komsomol is obliged to utilize more actively all forms, means and methods of organizational and ideological-educational work. The youth press should play a leading role here. Unfortunately, young collectives of journalists do not devote enough attention to the republic's many construction projects which have been declared Komsomol or such important branches as animal husbandry and the sphere of trade and consumer services. Rural correspondent posts have not been created in all of these sections and ties have not been created with activists of the press, television and radio.

It becomes especially important to step up the education of youth what with the tasks of communist construction becoming more complicated and the international situation becoming more critical. The dangerous aggressive course of American imperialism and the U. S. NATO allies as well as the Chinese hegemonists are accompanied by the inflaming of anti-Soviet and anti-communist hysteria and deliberate distortion of the domestic and foreign policy of the Communist Party and the Soviet state. Imperialist propaganda is attempting to discredit the real socialism, to defame its achievements, in order to erode the class awareness of all workers, especially youth.

Our glorious Soviet youth are selflessly devoted to the ideals of communism and we are proud of the high level of their political awareness and labor activity. But we cannot ignore the negative aspects which still exist among a certain part of the young people.

There are quite a few cases where many boys and girls, after unsuccessfully attempting to enter VUZ's or upon completion of school, do not get a job for a long time, remain outside the collective and lead an idle life. And among them, unfortunately, are many Komsomol members. Some of the youth, especially in large cities, do not desire to work in the sphere of material production. And this at a time when many branches of industry, agriculture and construction are experiencing a critical need for personnel in mass occupations.

Those who love the easy life still do not encounter attitudes towards themselves whereby any of their attempts to give the state less and take more or, more precisely, steal from it, is immediately rebuffed by society. Do these cases always become the object of strict condemnation among Komsomol members? Sometimes the guilty ones are not even discussed anywhere.

We have no social base for the manifestation of nationalism, but remnants and residuals of it can manifest themselves if we weaken international education at all. And we must counteract any attempts of imperialist and Maoist propaganda with the increasing role of the ideology of proletarian internationalism and friendship of peoples.

The decree of the CPSU Central Committee concerning the 60th anniversary of the founding of the USSR says: "We have a right to be proud of the fact that in general the workers of all nations of the country, the peoples of former national regions who were previously doomed to eternal backwardness have confidently stepped into the socialist future, bypassing capitalism, and reached the heights of social progress. In the joint struggle for a new and just world, there has arisen a great brotherhood of people of labor, the sense of a single family, and an inviolable Leninist friendship of people has arisen--an inexhaustible source of the creativity of the masses." In the Leninist friendship of peoples of the USSR lies our confidence in our powers, the optimism of our people proceeding along the path earmarked by Lenin's party.

The fact that the ideological struggle is becoming more acute makes it necessary to step up the atheistic propaganda. Our class opponents are now utilizing the Islamic factor especially actively in order to set the Soviet people against one another and plant seeds of mistrust. The Muslim clergy, churchgoers and sect members have in all ways accomodated themselves to the spirit of our time; they are trying to influence the world view and change it in their own favor.

Unfortunately, not all Komsomol committees properly evaluate manifestations of religious remnants. It seems that the proper conclusion should be drawn from this criticism.

Additionally, we have many unutilized reserves for further improving the organization of publicly useful labor of school youth. During the time of the summer labor quarter the Komsomol committees should be concerned not only about the volumes of work, but primarily about its educational effect. It is important that the labor of the senior classmen be collective labor and that they become familiar with the fundamentals of modern production.

Special attention should be devoted to orienting youth toward such honorable occupations that are needed by the republic's national economy as construction worker, agricultural machine operator and animal husbandry worker. The schoolchildren should be well aware of which enterprises and businesses exist in the vicinity and rayon and which of them need labor force, what their working conditions are, which occupations are needed and where one can learn them. Here is a broad field of activity for Komsomol organizations of base enterprises, and the leaders of this work should be Komsomol youth collectives.

The problem of assigning graduates of vocational and technical schools is being handled poorly in other branches of the national economy as well. This takes place because no attention is paid to them in the labor collectives and the proper production and housing-living conditions are lacking.

I should like to draw the attention of rural Komsomol organizations to the need for expanding the training of shepherds and workers in other animal husbandry occupations through the system of vocational and technical education.

Komsomol organizations should exercise special control over questions of labor placement of working youth and eliminate negative phenomena in this matter.

The VUZ Komsomol has found such a successful form of working with student youth as student detachments. During five years about 120,000 people have gone through the school of ideological-political, labor and moral tempering in student detachments. People from VUZ's and tekhnikums have performed more than 350 million rubles' worth of work in construction and other branches of the national economy. The sphere of the detachments' activities has expanded.

These are pluses for the moral education of students. But, unfortunately, there are also minuses. Pointing out the serious shortcomings in the training and utilization of specialists, Comrade Leonid Il'ich Brezhnev in his speech in Tashkent emphasized that the higher school is still "producing many more specialists in a number of profiles than the national economy needs and is failing to produce enough of others." Leonid Il'ich also pointed out "omissions in the personnel policy and the incorrect utilization of young specialists." These shortcomings are typical of our republic as well.

There are still frequent cases where the personal interests of graduates of VUZ's and tekhnikums prevail over their feeling of duty, the vocational and civil responsibility of the Soviet specialist. Having received a higher or secondary special education, some of them look for any opportunity to avoid going to work in their specialty, leave industry or school classes within the first months, or leave ill people without skilled medical assistance. Such actions deserve the strongest censure and the punishment for them should be severe.

Working in the Komsomol the communist is called upon to transfer to those who are just entering life the best traditions of the party and the people. Party organizations should assist the youth leaders in this matter. The majority of party committees have deeply studied and take into account the moods, demands and specific features of various categories of youth and strive to help their leaders to make their work flexible and varied in terms of forms and methods as well as effective in terms of results.

But there are also cases where, having recommended a communist for work in the Komsomol the party organizations forget about him, and are not interested in how things are going or how they can assist him. Of course such "forgetfulness" does not help the cause.

The Komsomol is an important source, from which the party has gleaned and is gleaning fresh forces. The absolute majority of those accepted into the party are members of the VLKSM. During the past six years alone more than 23,000 Komsomol members have augmented the party ranks in the republic.

Here we see a clear manifestation of the succession of generations and party traditions. Young people enter the party in order to continue the cause of the communists of the older generation.

Comrades! In the very near future there will be the 19th Congress of the Komsomol which Comrade L. I. Brezhnev called a large political event of the year. The preparation for this forum should be a mighty stimulus for increasing the creative activity of youth, and we are confident that the republic Komsomol can meet the high requirements of the party.

UKRAINIAN CENTRAL COMMITTEE MEETS WITH OBKOM, OBLISPOLKOM OFFICIALS

Kiev PRAVDA UKRAINY in Russian 28 Mar 82 p 1

[Information Item: "Strengthen the Organizational and Political Work to Carry Out the Decisions of the 26th CPSU Congress"]

[Text] A conference has been held in the CC of the Communist Party of the Ukraine with the first secretaries of the party obkoms and the chairmen of the ispolkoms of the oblast Soviets of People's Deputies. An examination was made of the tasks of further strengthening organizational and ideological educational work to carry out the decisions of the 26th CPSU Congress and realize the aims set forth in the speech by the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions.

The member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of the Ukraine Comrade V. V. Shcherbitskiy delivered an address at the conference on these matters.

It was emphasized that the most important thing today is to activate the reserves and possibilities which exist at every enterprise and on every kolkhoz and sovkhoz, and to take every measure to fulfill the economic plans and socialist commitments adopted by the republic's workers for 1982--the second year of the five-year plan, the year of the 60th anniversary of the USSR. All of our forces have to be used in order to create a real foundation for the accomplishment of the social and economic program of the 11th Five-Year Plan and, above all, for the accomplishment of our key and central task--to make the economy genuinely economical and to bring about a serious improvement in production efficiency and in the quality of all work.

The discussion concerned above all a thrifty and zealous use of productive capital, especially newly commissioned capacities, and also of material and raw material, fuel and energy, and labor resources, an absolute fulfillment of the established assignments for economizing them, a rise in the technical level and quality of output, an improvement of the structure and work of the managerial apparatus and a decrease in its size, a strengthening of state, production, and labor discipline at all sectors and in all elements, and an increase in the responsibility of workers for their work.

With regard to leading workers who, as was emphasized at the conference, have not drawn the necessary conclusions from the demands of the 26th CPSU Congress and the November (1981) Plenum of the CC CPSU, do not show initiative and persistence in fulfilling state assignments, produce obsolete equipment and low quality consumer goods, make unsatisfactory use of production and financial allocations, and engage in deceptions--the appropriate measures must be taken, right up to releasing them from their positions. A more resolute struggle has to be waged against cases of mismanagement, irresponsibility, reporting distortions, and unsubstantiated corrections of plans. Rigid control has to be established over the expenditure of resources for various kinds of mass measures--conferences, symposiums, reviews, and so forth,--the innumberable checks which frequently divert many people have to be more clearly coordinated, and their effectiveness increased. All of the cracks through which the people's property is squandered or badly spent have to be closed up everywhere.

We have to see to it that the approach of all party committees to the leadership of the economy is more qualified and deeper. The party obkoms, gorkoms, and raykoms are obliged to make a detailed and knowledgable analysis of the economic side of the work of enterprises, construction projects, and farms, giving especial attention to such very important indicators as a rise in labor productivity, a decrease in the cost of output, an increase in profits, and also the organization of norm setting for and the payment of labor. Control has to be strengthened over the work of the balance commissions, and their role has to be increased as an effective lever of influence on the economies of enterprises, farms, and branches. It is also important to improve the work of the economic services at enterprises and construction projects, and to give greater attention to the training and use of cadres of economists, planners, norm setters, bookkeepers, and accountants.

In organizing the practical realization of the aims stated by Comrade L. I. Brezhnev in his speech at the 17th Congress of USSR Trade Unions, it is necessary to concentrate the efforts of party, government, economic, trade union, and Komsomol agencies on the accomplishment of the urgent tasks which are connected with increasing food resources, improving the storage of output, and strengthening the struggle against losses. It is necessary to introduce the new forms of the team organization and stimulation of labor more persistently and extensively, to curtail manual labor, improve the organization of socialist competition, more actively disseminate advanced experience, and develop in every way the movement of rationalizers and inventors. It is important to make skillful use of the possibilities which exist in the localities for a consistent solution of all of the problems concerning an improvement of the working and living conditions and of the rest of people, to give great effectiveness to all of the forms of people's and workers' control, especially in the spheres directly connected with the daily needs of people, and to increase the role of the workers' meetings and permanent production conferences and of collective agreements.

It is necessary to proceed from the fact, Comrade V. V. Shcherbitskiy said, that a profound economic analysis, the concentration of the efforts of party organizations on the fundamental, long-term questions of the development of the economy, demanding control over the work of cadres, and the punctual strengthening of weak sectors with specialists and capable organizers--that these are the most important party levers for influencing the economy which has been and continues to be the chief policy for us.

Recently much has been done in the republic to improve work with the secretaries of the primary party organizations and with the workers of trade union and Komsomol agencies. The accomplishment of the tasks before us demands a further improvement of the style and methods of their work, and of the selection, placement, and education of cadres, a comprehensive consideration of the practical and ideological-moral qualities of workers who are being promoted, and a strengthening of performance control and verification. Work has to be organized in such a way that the workers of party, government, trade union, and Komsomol agencies are in the midst of the masses every day.

It was emphasized at the conference that party organizations have to make more active use of the preparations for the 60th anniversary of the formation of the USSR for the purpose of strengthening the ideological and political and patriotic and international education of the workers and their class tempering. It is necessary to organize an extensive explanation of the principled propositions put forward by Comrade L. I. Brezhnev at his speech at the 17th Congress of USSR Trade Unions and at the gala meeting in Tashkent devoted to the presentation to the Uzbek USSR of the Order of Lenin regarding the economic, social, national, and cadre policies of the CPSU, and also its new and exceptionally important foreign policy initiatives and proposals aimed at restraining the arms race, allieviating international tensions, and establishing the principles of good neighborliness, mutually advantageous cooperation, and mutual trust in the relations between states.

A speech at the conference by the member of the Politburo and Second Secretary of the CC of the Communist Party of the Ukraine I. Z. Sokolov was devoted to the strentghening of organizational work to carry out the decisions of the CC CPSU and CC of the Communist Party of the Ukraine on strengthening the struggle against drunkenness, violations of public order, and thefts.

The candidate member of the Politburo of the CC of the Communist Party of the Ukraine and First Deputy Chairman of the UkSSR Council of Ministers Yu. A. Kolomiyets considered the urgent tasks connected with the organized completion of the wintering of livestock, the fulfillment of the established assignments for the production and procurement of animal husbandry output, and the preparations for the spring field work.

In order to accomplish this year's responsible and difficult tasks it is important, it was noted at the conference, to correctly place our forces and not scatter them, to concentrate attention on the root and key issues, to act with maximum concreteness and practicality at every sector, and to seek persistently to reach the goals which have been set and a high final result.

The conference was participated in by the members and candidate members of the Politburo of the CC of the Communist Party of the Ukraine Comrades A. F. Vatchenko, G. I. Vashchenko, I. A. Gerasimov, B. V. Kachura, A. P. Lyashko, I. A. Mozgovoy, V. A. Sologub, A. A. Titarenko, V. V. Fedorchuk, Yu. N. Yel'chenko, A. S. Kapto, Ye. V. Kachalovskiy, and Ya. P. Pogrebnyak, by the deputy chairmen of the Presidium of the UkSSR Supreme Soviet and the UkSSR Council of Ministers, and by section chiefs of the CC of the Communist Party of the Ukraine.

UKRAINIAN TRADE UNION COUNCIL CRITICIZED

Kiev PRAVDA UKRAINY in Russian 11 Apr 82 p 3

[Article: "To Be the Party's Support Among the Masses"]

[Text] In order to reorganize more successfully the work as applicable to the present-day requirements, the trade-union agencies must consistently and persistently confirm at all levels the Leninist work style, must unceasingly learn from the party the art of organizing the job at hand and the art of working with people. That idea was emphasized by the participants on a meeting that was held in the evening of 10 April in Kiev -- a republic-level meeting of the trade-union activists at which there was a discussion of the results of the work of the 17th Congress of the USSR Trade Unions, the tasks evolving from its decisions, and the speech of General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

The speaker -- member of the Politburo of the Central Committee of the Communist Party of the Ukraine, Chairman of the Ukrainian Trade-Union Council, V. A. Sologub -- and those who made statements unanimously noted that the brilliant, deeply meaningful speech of Comrade L. I. Brezhnev, and the message of greeting by the CPSU Central Committee to the 17th Congress of the USSR Trade Unions, were a new manifestation of the tremendous attention being devoted by our party to the activities of the trade unions, and the concern for increasing their role and importance in the life of the country and in the political system of Soviet society. The Communist Party invariably views the trade unions as an influential social force, as its reliable support among the masses, as a powerful means for the development of democracy. The decisions of the 17th Congress of the USSR Trade Unions, the participants stated, are imbued with concern for the further expansion of the participation of the trade unions in the country's economic and social-political life, in increasing the effectiveness of their organizing and educational work.

The participants in the meeting of the republic's trade-union activists emphasized that today it is important to reinforce the congress's decisions by concrete measures that are aimed at the successful fulfillment of the planned assignments for 1982 and for the Eleventh Five-Year Plan as a whole. That is promoted by the socialist competition for the worthy meeting of the sixtieth anniversary of the formation of the USSR. Approximately 40,000 collectives and 500,000 workers in the republic have pledged to fulfill the assignments for the first two years of the five-year plan by the sixty-fifth anniversary of the Great October; and more than 4500 collectives and approximately 100,000 advanced workers and innovators of production have pledged to complete the assignments for the first 2½ years, and many for the first 3 years of the five-year plan, by the sixtieth anniversary of the formation of the USSR. The appeal by the delegates of the 17th Congress of Trade Unions to the workers of the entire country found broad support in the Ukraine. That appeal called for the extention, during the jubilee year, of the socialist competition for the attainment of higher labor productivity at every work site. Those who spoke called upon the workers and kolkhoz members, engineer-technical workers and employees, and students and schoolchildren in the republic to take active part on 17 April in a Communist *subbotnik* [volunteer work day] devoted to the 112th anniversary of the birth of V. I. Lenin.

At the present time, speakers at the meeting said, it is important to concentrate our efforts in extending to all the labor collectives the valuable initiatives and experience of the advanced enterprises and organizations, kolkhozes and sovkhozes. The chief attention should be devoted to the search for unused reserves, the introduction of the achievements of scientific-technical progress. There was a well-principled discussion of the participation by the trade unions in the resolution of social questions, in improving the organization, norm-setting, and payment of labor, and the improvement of the medical, trade, and everyday services provided to the workers.

The participants in the activist meeting, from positions of high demandingness in the light of the tasks posed in the speech by Comrade L. I. Brezhnev at the 17th Congress of the USSR Trade Unions and in the statement made by Comrade V.V. Shcherbitskiy at the 13th Congress of the Trade Unions of the Ukraine, directed critical comments to the Ukrainian Council of Trade Unions, and a number of councils and committees of the trade unions, ministries and departments, and trade-union organizations. Special attention was devoted to increasing the effectiveness of the efforts of the trade-union committee which are aimed at eliminating the existing shortcomings. It was emphasized that the trade-union workers must be located more deeply in the thick of people and must rely more solidly upon the activists, upon the initiatory, energetic, ordinary members of the trade union. The concern for the development of the economy must be inseparably linked with concern for improving the working and everyday conditions of every working man, the protection of his rights, and with the raising of the standard of living and cultural level.

The speakers at the meeting of the activists included Candidate Member of the Politburo, Secretary of the Central Committee of the Communist Party of the Ukraine, Ya. P. Pogrebnyak. He commented that the republic's trade unions have been making a definite contribution to the development of the economy, and have been doing a lot of work to mobilize the workers for the fulfillment of the tasks of economic and cultural construction and to achieve the communist education of people. At the same time the role of the trade unions in carrying out the party's economic policy, and the tasks of the Eleventh Five-Year Plan, can and must be considerably higher. Then Ya. P. Pogrebnyak analyzed the results of the work performed by industry, agriculture, and the construction and transportation organizations of the republic in 1981 and the first quarter of the current year.

In this regard the trade-union agencies must concentrate their efforts in the key areas of increasing the effectiveness of industrial and agricultural production. It was pointed out that it is necessary to engage more efficiently in reducing the expenditure of manual and heavy physical labor, to fight to reduce the equipment outages and losses of work time, and to take all steps to reinforce labor discipline. In every labor collective it is necessary to intensify the economy measures, to make the maximum use of reserves, and to wage a persistent struggle against production losses.

A considerable amount of attention was devoted to the tasks of the trade-union agencies in improving the medical, trade, and everyday services provided to the public.

An important place in the statement was occupied by questions of improving the style and methods of work of the trade-union agencies and organizations. The work style of the councils and committees, and of every trade-union organizations, must become genuinely creative, and must conform more fully to the increased demands, and every trade-union worker and activist must double or triple his efforts with regard to the fulfillment of the party's intentions.

The participants of the meeting of activists set down specific steps for fulfilling the decisions of the 17th Congress of the USSR Trade Unions, and the tasks posed in the speech by Comrade L. I. Brezhnev.

In the resolution that was adopted, the participants of the meetings expressed their unanimous approval of the domestic and foreign policy of the Communist Party and assured the CPSU Central Commitee, and General Secretary of the CPSU Central Committee, Chairman of the USSR Supreme Soviet, Comrade L. I. Brezhnev, that the trade-union organizations in our republic, under the party's leadership, will extend even more broadly the socialist competition in honor of the sixtieth anniversary of the formation of the USSR and for the successful fulfillment of the assignments of 1982 and the Eleventh Five-Year Plan as a whole.

Those taking part in the work of the activists meeting included Deputy Chairman of the UkSSR Council of Ministers, N. F. Nikolayev; and responsible workers of the Central Committee of the Communist Party of the Ukraine, the UkSSR Council of Ministers, and the AUCCTU.

BELORUSSIAN CP CENTRAL COMMITTEE PLENUM HELD

Minsk SOVETSKAYA BELORUSSIYA IN Russian 21 Apr 82 p 1

[Article: "Informational Report on the Belorussian Communist Party Central Committee Plenum"]

[Text] The Sixth Plenum of the Belorussian Communist Party Central Committee was held in Minsk on 20 Apr.

The plenum ratified the decree of the Belorussian Communist Party aktiv meeting of 20 Apr 1982 entitled "Progress in Carrying Out the Belorussian Workers' Socialist Obligations for 1982 and the Tasks of the Republic's Party Organizations Which Flow From the Instructions of Comrade L. I. Brezhnev and the CPSU Central Committee Decree Concerning the Work of the Minsk Party Obkom in Expanding Socialist Competition".

An organizational question was discussed. The plenum freed Comrade V. A. Gvozdev, a member of the Belorussian Communist Party Central Committee Bureau, from his duties in connection with his transfer to other work and move outside the limits of the republic.

BELORUSSIAN CP AKTIV MEETING HELD

Minsk SOVETSKAYA BELORUSSIYA in Russian 21 Apr 82 p 1

[Article: "The Meeting of the Party Aktiv"]

[Text] A meeting of the Belorussian Communist Party aktiv was held in Minsk on 20 Apr.

The progress in the carrying out of the Belorussian workers' socialist obligations during 1982 and the tasks of the republic's party organizations, which flow from the instructions of Comrade L. I. Brezhnev and the CPSU Central Committee decree on the work of the Minsk party obkom in expanding socialist competition, were discussed.

T. Ya. Kiselev, candidate member of the CPSU Central Committee Politburo and first secretary of the Belorussian Communist Party Central Committee, presented the report.

The following people participated in the discussions of the report: V. A. Mikulich, first secretary of the Minsk party obkom; V. V. Prishchepchik, first secretary of the Mogilevskiy party obkom; A. A. Malofeyev, chairman of the Gomel'skiy Oblast Council of Peoples Deputies ispolkom; A. I. Dubko, chairman of the "Progress" Kolkhoz in Grodnenskiy Rayon and Hero of Socialist Labor; A. G. Andreyev, head of the Belorussian railroad; K. A. Shcheglova, a seamstress in the Vitebskaya "Banner of Industrialization" Clothing Factory; V. K. Levchik, first secretary of the Svetlogorskiy party gorkom; V. N. Gotal'skiy, chairman of the Belorussian republic committee of the motor vehicle, tractor and agricultural machine-building workers trade union; M. F. Lavrinovich, general director of the Belorussian association for the production of heavy trucks; and P. S. Palto, field-team leader of a mechanized unit on the "40 Years of October" Kolkhoz in Ivanovskiy Rayon and Hero of Socialist Labor.

A suitable decree was adopted.

Members and candidate members of the Belorussian Communist Party Central Committee, members of the Inspection Committee of the Belorussian Communist Party, the secretaries of party obkoms and the deputy chairmen of oblispolkoms handling industrial, construction and agricultural questions, the first secretaries of party gorkoms and raykoms, the chairmen of trade union oblast councils and republic committees, the chairmen of peoples' control oblast committees, the directors of ministries and departments, and the foremost production workers and innovators participated in the work of the meeting.

KISELEV ADDRESS TO PARTY AKTIV

Minsk SOVETSKAYA BELORUSSIYA in Russian 21 Apr 82 pp 1-2

[Speech by Comrade T. Ya. Kiselev, candidate member of the CPSU Central Committee Politburo and first secretary of the Belorussian Communist Party Central Committee at the meeting of the Belorussian Communist Party Aktiv meeting in Minsk on 20 Apr]

[Text] Comrades! The work days of the five-year plan and the entire public and political life of our country are today under the ever growing influence of the ideas and decisions of the 26th CPSU Congress. The Soviet people are working with firm confidence in their strength and with an understanding of the greatness and complexity of the tasks which they are faced with carrying out.

The preparations for the 60th anniversary of the formation of the Union of Soviet Socialist Republics are exerting an enormous influence on the rise in the workers' political and creative activity. The coming jubilee is a great holiday of the friendship of the Soviet peoples and of the triumph of the Leninist nationality policy. Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, pointed out in his speech to the 17th Trade Union Congress: "At the same time, it is a good occasion for summing up results and for determining and firming up tasks for the future".

Just as throughout the country, the socialist competition in honor of this outstanding date is being expanded ever more widely in the republic. The communist day of work freely given to the state, which was dedicated to the 112th anniversary of V. I. Lenin's birth, was marked by inspired and highly productive work. More than 5.5 million people participated in it. The industrial workers produced items worth almost 38 million rubles. The collectives of many enterprises, shops and sections worked using saved resources. The rural workers toiled in an urgent way on the fields and farms. Quite a bit was done for the organization of public services and amenities and the planting of greenery in population centers. More than six million rubles were transferred to the five-year plan's fund.

The workers of our cities and villages have greeted the recently adopted CPSU Central Committee decree entitled "On the Work of the Minsk Party Obkom in Expanding Socialist Competition and Improving Its Effectiveness in Carrying Out the Decisions of the 26th CPSU Congress and the Instructions of Comrade L. I. Brezhnev" as a new demonstration of the party's concern for implementing the five-year plan's social and economic program. Having given a positive rating to the work of the oblast party organization in this direction, the CPSU Central Committee also pointed out substantial shortcomings.

The CPSU Central Committee decree obliges party committees and organizations to steadily improve the organization of competition and to direct its powerful mobilizing force towards the unconditional carrying out of state plans and socialist obligations.

During the festivities in Tashkent, Comrade L. I. Brezhnev pointed out that the fate of the five-year plan depends on how successfully we cope with the initial, and at the same time the most difficult part of the journey. What are the results of our work during this stage?

The majority of the republic's work collectives have managed the tasks of the first year of the five-year plan. The present year did not begin badly also. The industrial workers completed the plan for the first quarter ahead of time. Production volume grew by 4.6 percent and labor productivity -- by 3.1. Products valued at 121 million rubles were received above the plan -- this included consumer goods worth 38.6 million rubles. The production quotas for tractors, trucks, metal-cutting machine tools, automation instruments and systems, animal husbandry and fodder production machinery, mineral fertilizers, chemical fibers and threads, synthetic resins, plastics, silk fabrics, all-milk products, sugar, refrigerators, furniture and other items were exceeded.

All oblasts and all ministries, with the exception of the Belorussian SSR Ministry of Industrial Construction and State Committee for Publishing Houses, Printing Plants and the Book Trade, fulfilled the product sales plans.

Many collectives are working persistently and rhythmically and are building up production tempos from quarter to quarter. Among them are the "Minskiy Tractor Plant imeni V. I. Lenin", "Gomsel'mash" and "Azot" production associations; the Mogilevskiy "Strommashina" Plant; the Vitebskaya Factory imeni KIM [Communist Youth International]; and the Brestskiy Hosiery Combine.

At the same time, not everything is being done in industry to carry out what has been planned.

In his speeches to the 17th Trade Union Congress and during his stay in Uzbekistan, Comrade L. I. Brezhnev pointed out the necessity to approach the evaluation of work results more critically, see shortcomings and ommissions, eliminate them more rapidly, and learn how to find and use all reserves.

The fact that the republic's industry is carrying out the plans, and even exceeding them somewhat, is good. However, the indicators, which have been achieved, are still lower than the obligations. I will remind you of only two figures. During the current year, production volume should grow by 5.1 percent and labor productivity -- by 3.5. In order to reach the levelprovided for by the obligations, we should have produced items worth 6,323,000,000 rubles during the first quarter.

A total of 6,293,000,000 rubles were produced. As you see, we were short by 30,000,000 rubles.

What were the reasons? They are varied. A number of associations and enterprises are not even coping with the state plan. Thus, the quarterly production volume quota was not fulfilled by 88 associations and enterprises or 7.3 percent of their overall number. They came up short items worth 11.6 million rubles. The total is not so great, but it lowered the overall indicator. According to the plan, the Luninetskiy plant for the production of electrical motors for agriculture came up short items worth 54,000 rubles. Only 4.5 hours of work are needed to produce them. The Mozyrskiy Reinforced Concrete Item Plant of the Belorussian SSR Ministry of Rural Construction was short two hours of work in order to complete the January-March plan. Just think, only two hours! How was it possible not to find this time during the quarter? It is quite evident that the enterprises,which have been mentioned, and many others were able to fulfill the plan. If this did not happen, it is only because some directors are still not working concretely and are controlling production poorly -- and the party committees are not checking on their work sufficiently.

Or let us take the labor productivity plans. A total of 130 associations and enterprises did not cope with them. Many of these collectives are in Rechitsa, Soligorsk, Borisov, and Orsha. Based on this very important indicator, industry in the city of Lida has been lagging behind for a long time.

We have already repeatedly talked about enterprises which are lagging behind. Why do we again have to talk about this. One must admit that some party committees and leaders of ministries and departments are still not taking the trouble to seriously investigate the reasons why individual enterprises are not fulfilling the plan -- even those whose lagging behind has a chronic nature.

On the other hand, flaws are also evident here in the organization of socialist competition. The problem, you see, is not only in the adoption of obligations and the determination of the winners but also in organizing the dissemination of the first-rate workers experiences, the ascertaining of the reasons for the failure of this or that collective, and the finding of ways to overcome them. The CPSU Central Committee decree on the Minsk party obkom directly orients us on this.

It often happens that the greatest activity is displayed only during the stages of adopting obligations and summing up results. The organizational work and the material and ideological suport of the competition are insufficient. At times, obligations are adopted without the necessary economic basis and are sometimes deliberately understated. Naturally, they are easily over-fulfilled in these cases. An appearance of well-being is thereby created.

Thus, the Belorussian SSR Ministry of the Forestry Industry pledged to produce three million rubles of items above the plan during 1982. In actuality, it has produced 3.6 million rubles above the plan during the first quarter. At the same time, the production quotas for fiber board, plywood, lumber from its own raw materials, parquet flooring, and combined products for items intended for cultural, everyday and household uses were not fulfilled. The majority of the ministry's enterprises remained debtors according to their contract obligations. I ask the minister, Comrade A. Ya. Kiykov, how long have you had such a practice?

The direction of competition is a continuous process which includes a serious substantiation of obligations, the mobilization of people to carry them out, an effective economical analysis, and the same effective adoption of measures to correct conditions in those sectors where the threat of falling behind is detected -- that is, the threat and not the falling behind itself. It is necessary to learn how to work without laggards.

The main thing in socialist competition should be the aiming at an ever more complete use of the intensive factors in the growth of production. They are well known. They are, first of all, the speed-up of scientific and technical progress, the rapid incorporation of scientific and technical achievements into production, the use of new and more modern technology, modernization and the replacement of obsolete equipment, and the improvement of the management mechanism.

Of course, these are questions of a -- so to speak -- strategic nature and it is impossible to judge their solution based on the results of one quarter. It is necessary to be concerned with them continuously, literally daily. There is no point in having the periods for designing and assimilating machinery stretch out at times for years and having new models become obsolete even before the beginning of their serial production. Many of the projects of scientific research institutes and design bureaus generally do not get a start in life. How should one assess the fact that ten ministries and departments did not fulfill during the first quarter the plan for such an important indicator as the incorporation of new equipment? For the republic as a whole, only 91 percent of the planned measures, including 64 percent of those planned by the Ministry of the Forestry Industry and 80 percent of those planned by the Ministry of Procurement, were realized. You would in no way call this a concern for the intensification of production.

The rationalizer and inventor movement is not being fully used to raise the technical level of production. For example, almost 23,000 rationalizer proposals, or 14.8 percent of those adopted for incorporation, were not implemented in the republic last year. Half of the suggestions were not used in the Minskiy Refrigerator Plant, and two-thirds of the suggestions were not used in the Mogilevskiy Motor Vehicle Plant. Essentially, work to involve the workers in technical creativity is not being performed on many kolkhozes and sovkhozes and in a number of Belorussian Cooperative Union and Belorussian SSR Ministry of Land Reclamation and Water Resources enterprises. On the average, each rationalizer suggestion provides an economic effect of 1,100 rubles for the republic. It is not difficult to calculate how much the national economy is losing because of the careless attitude toward this work.

It is necessary to remember that an increase in labor productivity will not be assured without an acceleration in scientific and technical progress. Owing to this factor, we are still receiving only a 67 percent increase in the volume of industrial production as opposed to the 75 percent provided for by the socialist obligations and the 83 percent of our Lithuanian neighbors.

Why is this happening? Evidently, because there are still quite a few directors who are trying to rely in the struggle for increasing production not on technical progress but on increasing the number of workers. Thus, the number exceeds the planned one in many of the republic's enterprises, and on the whole for the cities of Lida and Soligorsk. In a number of cases, the plans themselves have been compiled freely, without considering the condition of labor resources whose growth is declining. Out of every ten new workers who will enter the labor market during the current five-year plan, eight will replace those who are retiring. The number of work openings in industry continues to grow.

Where will the manpower come from?

First, it is necessary to sharply increase the rates of mechanizing manual labor. In industry, almost 32 percent of the workers are now engaged in it; in construction -- one-half; and in agriculture -- even more.

Second, it is necessary to insure a decrease in the losses of work time which are still significant and which are even growing here and there. It appears that some party, trade union and Komsomol organizations and management personnel have not taken the necessary steps to carry out the well known decree of the CPSU Central Committee, the USSR Council of Ministers and the AUCCTU entitled "On Further Strengthening Work Discipline and Decreasing the Turnover of Personnel in the National Economy".

If one talks about personnel turnover, it is being decreased. True, this process could take place more rapidly. Based on estimated data, the cost of personnel turnover last year in industry alone was equal to the absence from work of about 15,000 people over the course of the year. This is a lot. It is necessary to engage more actively in the appointing of people in production.

The new forms for the brigade organization and stimulation of work, which Comrade L. I. Brezhnev gave a high rating to in his speech during the 17th Trade Union Congress, have been called upon to play a large role in improving the use of labor resources and in raising labor productivity. We are performing work in this direction. However, they are approaching it formally here and there and are not supporting the creation of brigades with a corresponding restructuring in the organization of production. Annual and quarterly quotas are not being passed to many of them. Last year, only 52 percent of the brigades, operating in industry, worked in accordance with a common job authorization.

It is necessary to ensure everywhere the conditions necessary for a shift to the brigade forms of work organization and payment. It is also necessary to see to it that there is a party group or party organizer in each brigade. Party committees must study the progress in incorporating the new work organization forms and see to it that they indeed assure an increase in production effectiveness and contribute to the work and moral training of the workers, especially the young ones.

Comrade L. I. Brezhnev said in Tashkent: "The policy, which was proclaimed by the party for intensifying production, requires that all economic reserves be involved in the turnover and that all the capabilities, which we already have, be dealt with in a businesslike manner."

In our republic, production assets are more than 51 billion rubles. These are enormous riches. How are they being used? We have experience on which it is possible and necessary to rely. Thus, petroleum products worth dozens of millions of rubles were additionally delivered to the national economy in the Mozyrskiy Oil Refinery owing to the intensification of production last year. The work of this collective received a high rating in the greetings of Comrade L. I. Brezhnev.

The Belorussian Communist Party Central Committee Bureau recently approved the experience of the "Azot" Association collective in the effective use of production capacities. The return on investments is constantly increasing in the Grodnenskoye Spinning and the Pinskoye Spinning and Knitted Fabric Associations, the Mogilevskiy "Strommashina" Plant, and in many other enterprises.

At the same time, all the capacities in the republic are still not being opened up within the norm. Operating equipment, machines and mechanisms are not being kept running at full capacity. Based on Belorussian SSR Central Statistical Administration information, 56 (almost 36 percent) of the 157 installations, which have been rebuilt or reconstructed during the past six years, have not reached their designed indicators although the prescribed periods have already expired. The level of using capacities is low, in particular in the Borisovskiy Plastic Products Plant, the Brestskiy "Tekstil'mash" Plant and in the "Bobruyskshina" Association.

More than 18 percent of the mechanized production lines and 26 percent of the automated lines are being used at less than three-quarters of their design productivity. every sixth line is operating only during one shift.

The insuring of a timely and complete mastery of capacities and a maximum return on capital investments and of each ruble spent on resources is an important task. We must work more topically on its solution.

This also pertains to an equal degree to questions concerning the rational and economic use of material resources. The progressive collectives of Minsk, Vitebsk, Gomel', Novopolotsk, and our other cities have accumulated a great deal of useful experience in saving raw material and material.

However, material expenditures per ruble of commodity production are practically not declining in industry in general. The imperfections in the technical and economic norms and standards are having a negative effect here. For example, the goals for saving metal were so low in the Brestskiy Gas Appliance Plant, the "Mozyr'ptitsemash" Plant and several other enterprises that they were able to exceed them by almost double without any special efforts.

Many collectives are performing purposeful work to increase the quality of the goods being produced. The proportion of products in the highest quality category has reached 22.8 percent of the overall volume of production, and 44 percent in the volume of production subject to certification,with a requirement for the year of 46 percent.

The growth in this production is taking place slowly in a number of branches. Thus, the Belorussian SSR Ministry of Light Industry plans on raising the proportion of items with the Seal of Quality by only 4.3 points during the five-year plan, bringing it to 20.5 percent; the Ministry of the Construction Materials Industry -- by even less, by only 3.8 points; and the Ministry of Local Industry -- by only 2.4 points. Incidentally, these indicators are significantly higher in the corresponding Lithuanian Ministries. In the Lithuanian SSR Ministry of Light Industry, items in the highest quality category reached 22.7 percent last year. Why do Comrades L. N. Nagibovich, V. L. Bil'dyukevich and L. V. Rusakov not learn from their neighbors?

It is necessary to look closely at the quality control systems. We have quite a few of them. However, they are ineffective in many collectives. This especially pertains to the Minskiy Machine-Tool-Building Association, the Grodnenskiy Cardan Shaft Plant, the Baranovichskiy Automatic Line Plant, and others where the output of goods in the highest quality category decreased during the first quarter of this year.

This causes one to prick up his ears. Is there not a weakening of attention and the depreciation of exactingness on the part of party committees here?

There are other deficiencies also in the work of industry. It is necessary to work more energetically and more concretely to eliminate them. We are talking about insuring a 5.3 percent growth in production volume and a 3.6 percent growth in labor productivity during the time remaining until the end of the year. Under these conditions, we will arrive at the level which has been provided for by the obligations. This task is a real one and completely feasible. The March results, when the rates -- necessary for us -- were even somewhat exceeded, testify to this.

Now, let us talk about matters in construction. The first quarter plan for commissioning fixed capital was overfulfilled. All the construction ministries and departments managed their assigned tasks. A number of new capacities were put into operation. An overall housing area, which was seven percent more than the corresponding period of last year, was handed over.

Moreover, almost half of the projects will be commissioned during the fourth quarter this year, just as before. Both the builders and the customers must not forget this. It is necessary to build up the construction rates so as to insure the timely commissioning of projects intended for production, social and cultural uses.

As before many of the shortcomings in construction are connected with the dissipation of capital investments. Thus, the Belorussian SSR Ministry of Trade, which had not earmarked one million rubles to complete the construction of an ice cream factory in Minsk, included five newly begun projects in the plan. The Minskiy gorispolkom, which had not provided capital investments for 13 carry-over projects, began the erection of another 31 projects with an overall estimated cost of 44 million rubles. A similar approach to the use of capital investments is being maintained in the fuel, food industry and procurement ministries and in the

Gomel'skiy and Mogilevskiy oblispolkoms. This is the result of shortcomings both in the planning and in the control of construction.

Transportation is still causing us a lot of trouble. The railroad workers did not cope with the first quarter plan for freight turnover. This indicator was lower even compared to last year. The timely transportation of very important national economic goods was not assured. The commitments for delivering mineral fertilizers to the village for the spring sowing were not carried out.

The question here is not only one of a shortage of rolling stock. The main thing is its ineffective use. The turnover of freight cars slowed down, their empty runs and idle time at stations increased, and the movement speed and average weight of a train decreased.

I think that Comrade A. G. Andreyev, the head of the Belorussian Railroad Administration, should explain today why matters are becoming worse in the sector entrusted to him and report on what is being specifically undertaken to eliminate the irregularities in the movement of freight.

The republic's truck drivers also did not cope with the first quarter plan. During this period, they did not provide for the transportation of 2.5 million tons of freight. On the average, 37 percent of the trucks daily do not go on a trip. Empty runs are about 40 percent. We hope that Minister A. Ye. Andreyev and the directors and the party, trade union and Komsomol organizations in the motor transport industry will correct the situation.

Comrades! It is now an important and exceptionally critical time for the village workers. The spring sowing is in full swing. The indoor period for maintaining cattle is ending.

The state of affairs in animal husbandry was thoroughly discussed during the Fifth Plenum of the Belorussian Communist Party Central Committee. During the preparations for it and the implementation of the decisions which had been adopted, the activity of party, soviet and agricultural organs in using existing reserves to increase the production and purchases of milk and meat and in improving the cattlemen's socialist obligations to achieve high indicators was intensified. As a result of this and also thanks to the help provided by the state, many difficulties in the wintering of the cattle were overcome.

During the period January-March, the production of milk in the public sector increased by 32,000 tons or by five percent in comparison with the same period of last year; and the average yield of milk from a cow -- by 15 kilograms. More cattle and fowl by 1,300 tons (0.5 percent) were sold. The average daily gain in weight of the cattle increased by 27 grams and reached 492 grams; for pigs, it was 11 and 339 grams, respectively. The weight standards of the sold animals grew somewhat. At the present time, all oblasts, except Minskaya, are giving more milk per cow than last year. The volume of its purchases increased by 49,000 tons or 9 percent during the first quarter; and the purchases of eggs -- by 12 million eggs or 3 percent. For the level of the corresponding period of last year, state purchases of livestock and fowl reached 99 percent.

In April, the livestock shipment schedules for the meat combines are being fulfilled. However, Minskaya Oblast was in debt even here. During the 15 days of the current month, it failed to deliver 334 tons of livestock and fowl.

Although for the republic as a whole several indicators -- which describe the development of animal husbandry -- improved, they were insufficient, however, to fulfill the commitments. The main thing is to increase the milk yield from each cow and the gain in weight of the animals during their raising and fattening and to improve the branches' ratio of commodity output to total output. Many farms are seriously lagging behind according to these positions.

The necessary conclusions have still not been drawn from the decisions of the November 1981 CPSU Central Committee Plenum. I would like to cite certain information concerning the state of affairs in animal husbandry in those oblasts whose leaders were rebuked during the fifth Plenum of the Belorussian Communist Party Central Committee.

Let us turn to the figures. With an almost identical supply of fodder, the production of milk in Gomel'skaya Oblast during the January-March period reached 109 percent compared to the corresponding period of last year; and in Vitebskaya -- 99.8 percent. The milk yield from a cow was 110 and 100 percent, respectively. The average daily gain in weight of the cattle during fattening was 105 and 94 percent; of pigs -- 114 and 98 percent; the production of eggs -- 101 and 99 percent. Here is how the data on the sale of animal husbandry products looks. Purchases of cattle and fowl were 108 percent of the level of the first quarter of last year in Gomel'skaya Oblast and 109 percent in Vitebskaya; of milk -- 116 and 102 percent; of eggs -- 106 and 98 percent. The weight of a single head of sold cattle was 336 kilograms in the first one of them and 319 kilograms in the second; of pigs -- 102 and 95 kilograms, respectively.

Consequently, the trouble is not only in the feed but also in the quality of the work. If it were higher, the results would be better both in Vitebskaya and in Gomel'skaya Oblasts.

You will recall that many rayons were subjected to criticism during the plenum. But again the attitude toward the criticism was varied. The leaders of the Braginskiy Rayon (Comrade T. I. Glushakov is the secretary of the Belorussian Communist Party raykom and Comrade L. M. Kryuchkov is the chairman of the rayispokkom), the Orshanskiy Rayon (Comrades V. I. Kagalenok and S. A. Bashkevich), the Dubrovenskiy Rayon (Comrades P. N. Plaksitskiy and A. G. Statsenko), and the Krichevskiy Rayon (Comrades P. G. Chikanov and Z. I. Polkina) reacted well to it. Here, not only has the lagging behind in the production of milk and in the productivity of the cows been eliminated but also an increase to the level of the first quarter of last year has been assured. At the same time, improvements have not taken place on the farms of the Braslavskiy Rayon (Comrade B. S. Lysyy is the secretary of the party raykom and Comrade V. V. Khodolev is the chairmen of the rayispolkom), the Lepel'skiy Rayon (Comrades M. V. Petrochenko and V. F. Lyakhovich), and the Kostyukovichskiy Rayon (Comrades P. P. Mikhunov and A. S. Semkin).

Shortcomings in the development of animal husbandry are being eliminated slowly in the Verkhnedvinskiy, Kamenetskiy, Volozhinskiy, Krupskiy, Soligorskiy, Uzdenskiy, Klimovichskiy, Mstislavskiy, Slavgorodskiy, Chausskiy, and Shklovskiy Rayons. Their leaders are poorly organizing the work of carrying out the instructions of the Fifth Plenum of the Belorussian Communist Party Central Committee.

The state of affairs in Slutskiy Rayon worries us. Here, natural conditions and the material and technical base of agricultural production, including that of animal husbandry, permits the existence of high results. More fodder was prepared for the present wintering than for the last one, and its quality was better. Nevertheless, the milk yield from a cow declined by 10 kilograms, and the average daily gain in weight of the pigs during the fattening decreased by almost five percent and that of the cattle -- by three percent. The swine population decreased by 11 percent. The output of young animals per one hundred females declined. The loss of animals grew. Purchases of cattle and fowl reached only 66 percent of the level of the first quarter of last year. Yes, it could have been otherwise if the wintering of the cattle on a number of farms had not been essentially neglected and if the fodder had not been expended without any control and without the necessary efficiency. The competition between the cattlemen was poorly organized, and the influence of moral and material stimuli was weakened. Several party organizations worked unsatisfactorily with the people. The responsibility of the directors and specialists for the work entrusted to them was belittled.

It is necessary to ask Comrade A. P. Martysyuk, the secretary of the Belorussian Communist Party gorkom: Why did this happen?

During the plenum of the Belorussian Communist Party Central Committee, attention was paid to questions concerning the reproduction of the herd and the growth of the female livestock. With some increase in the number of cattle, the cow population decreased by 1,900 head during the period January-March on the farms of Vitebskaya Oblast, by 1,500 head in Minskaya Oblast, and by 1,000 head in Mogilevskaya Oblast. The swine population also decreased in Vitebskaya and Minskaya Oblasts. The unjustifiably eliminated pig farms are being restored slowly. Evidently, some of our personnel think that the fewer cattle there are, the fewer are the concerns and the easier it is to work.

What is expected, comrades? We are requiring industrial enterprises to provide themselves with animal husbandry departments. This is correct. However, how should one assess the position of the leaders of those kolkhozes and sovkhozes who do not keep pigs even for their intra-farm needs although they have the land? There cannot be two opinions here. Every farm must have a pig-breeding farm.

A few words about horse-breeding. Mechanization is mechanization, but draught animals will always be necessary to perform many subsidiary operations in servicing animal husbandry farms and the private plots of the kolkhoz workers and the workers on sovkhozes. On the kolkhozes "New Life" in Minskiy Rayon and "40 Years of October" in Stolinskiy Rayon and on many other normally large farms, each horse works up to 300 days a year. The "Work" Kolkhoz in Pinskiy Rayon, which has available a large energy supply, uses horses to work lightly contoured fields, and to harvest herbs and natural hay and in other types of work where it is unprofitable to use modern equipment.

However, the decree of the Belorussian Communist Party Central Committee and the Belorussian SSR Council of Ministers entitled "On Measures To Develop Horse-Breeding", which was adopted last year, is being fulfilled on the whole poorly. In comparison with last year, the horse population has decreased by 1,500 and has reached 207,000 or 30,000 less than that provided for by the mentioned document. It is impossible to underrate this question. It is necessary to improve control over the carrying out of the decree.

The wintering of the cattle is ending. As has been mentioned, the first quarter did not bring the desired results in animal husbandry.

Our duty is to move during the current quarter to the planned rates in the production and purchasing of items. It is very important to shift the animals to pasture maintenance in an organized manner and in accordance with the livestock veterinary requirements. It is necessary to do everything necessary so that this period will indeed become a period of a great deal of cheap milk and meat and the decisive period in the carrying out of socialist obligations.

It should be already clear today what needs to be done to raise the productivity of the fields and pastures. It is necessary to firm up the diagrams of the green conveyor and to be concerned about improving the structure of the fodder crops. In this connection, it is necessary to use the recommendations and advice of our scientists which were stated in the article "The Fodder Field: Yield and Return" which was published on 17 April of this year in SEL'SKAYA GAZETA. Incidently, material entitled "Complete the Wintering of the Cattle in an Organized Way" was published in that same edition of the newspaper. It is necessary to arm oneself with this also.

As before, work with animal husbandry personnel and a concern for improving their working and living conditions must be at the center of attention of party, trade union and Komsomol organizations. Comrade L. I. Brezhnev emphasized in his greetings to the participants in the meeting of the Omskaya Oblast rural secondary school graduates: "Modern animal husbandry needs people who have perfectly mastered the equipment and who are skilfully employing everything that is new and progressive". It is necessary that more youth go to work on farms. For this purpose, it is necessary to strengthen the bonds of the kolkhozes and sovkhozes with the schools. Directors and specialists and the secretaries of the party organizations on the farms must meet with the graduates and discuss Comrade L. I. Brezhnev's appeal to the Omskiye school children with them. The party raykoms and Komsomol raykoms are required to head all this work.

As is known, the republic's farmers have adopted obligations to obtain 26-27 quintals of grain, 175-185 quintals of potatoes, 265-270 quintals of sugar beets, 5.3 quintals of flax fiber, and 160-170 quintals of vegetables from each hectare of sown area during the current year.

Quite a bit already has been done to reach the planned frontiers. On the whole, the spring sowing began in an organized manner. More organic fertilizer was laid in than last year. The quality of the seeds is better. The amount of equipment increased, and it has been repaired in a timely fasion. All this is permitting the sowing of spring grain crops, sugar beets and flax to be done in five-six work days and the planting of potatoes -- in nine-ten. In other words, the entire complex of the sowing operations can and should be performed in the optimum time.

Our press has written about everything which concerns the peculiarities of this year's spring sowing. I have in mind a number of editorial articles and articles by our scientists and farm directors and specialists.

What else would we like to talk about during the meeting of the aktiv?

The field work in many rayons and on the farms in Brestskaya, Grodnenskaya, and Gomel'skaya Oblasts has begun and is being conducted well. The farmers of Stolinskiy Rayon, the initiators of the competition to perform field work in an organized and qualitative way, were the first in the republic to complete the sowing of early spring crops. The corn-growers of Luninetskiy, Brestskiy and Ivanovskiy Rayons reported that they had fulfilled the sowing plan right after them. The farmers of Zhabinkovskiy, Ivatsevichskiy, Kobrinskiy, Maloritskiy, Pruzhanskiy, Berezovskiy, Drogichinskiy, Pinskiy, Mozyrskiy, Narovlyanskiy, Petrikovskiy, Svetlogorskiy, Khoynikskiy, Volkovysskiy, Berestovitskiy, Grodnenskiy, Zel'venskiy, Mostovskiy, Svislochskiy, and Shchuchinskiy Rayons are completing it in the best time. The sowing work is taking place at a good tempo in Starodorozhskiy, Lyubanskiy, Bykhovskiy, Glusskiy, Dokshitskiy, Chashnikskiy, and several other rayons.

On the whole, based on 19 April conditions the spring grain crops have been sown on 716,000 hectares or 41.9 percent of the plan. The work of sowing flax, sugar beets and vegetables and planting potatoes has been expanded.

Our people are working well, they are working with the understanding that a spring day will feed the year. The directors and specialists of the majority of the farms are spending the major part of their work time in the field near the units -- there where the foundations for the harvest are being laid. During this extremely critical period, many party, soviet and agricultural organs have reorganized their work routine. Their workers can be found on the farms and in the fields early in the morning and late in the evening. They are helping to effectively solve on the spot questions which arise.

There are quite a few examples of accurate and coordinated work by the mechanized detachments and links, by the directors and specialists of the farms, and by all the participants in the hard sowing work. The newspapers, television and radio report on them daily.

However, the Belorussian Communist Party Central Committee has available information which testifies to shortcomings and completely unjustified delays in the spring sowing. The directors and specialists of some kolkhozes and sovkhozes and, yes, of a number of rayons have spent a lot of time on moving to and fro. Here, they began field work late and are performing it at a slow rate. The optimum periods for sowing spring cereal and leguminous plants are coming to an end for the southwestern zones of the republic and also for a number of rayons in

Minskaya and Mogilevskaya Oblasts. According to Belorussian Ministry of Agriculture data, no cases of spring sowing in super-fast times have been registered but there are many cases of it being late. Even now, sowing units have not been brought to the field on 200 farms. On the whole, the republic's kolkhozes and sovkhozes are lagging behind last year's sowing by 240,000 hectares or approximately by three days.

In a number of places, work in the field begins late and ends early. Such progressive work organization methods as the Ipatovskiy and the Shaturskiy have not been introduced. In a large group of farms, the machine operators are still working in one shift without days off, and this is having a negative effect both on labor productivity and on the quality of the work.

Cases of the movement of unprepared and poorly repaired equipment to the field are common. Here and there, the technical servicing of the machines and mechanisms and the delivery of fuel and lubricants have been organized unsatisfactorily. In this regard, we must submit a serious claim against you, Comrade B. N. Pozharskiy. The organizations of the State Committee for the Supply of Production Equipment for Agriculture must work more accurately and effectively on the sowing. The technologies for cultivating agricultural crops are not being strictly observed everywhere; in particular, the checking on the quality of the soil preparation, fertilizer application, and seed covering is being done poorly.

Losses during sowing are not as noticeable as, let us say, during the harvesting. However, they are large enough. It has been calculated by specialists that each day of delay in sowing as opposed to the optimum periods leads to a shortage of no less than one quintal of grain per hectare. In order to avoid this, a differentiated and agriculturally effective approach to the determination of the optimum sowing period for each farm, for each field and for each crop and the strict observance of it are required. It is now very important to condense the period of field work as much as possible. All machines must be used in the line-group production method during the complete daylight hours, and other types of work -- let us say the preparation of the soil--can and must be done during the nighttime Our progressive farms are doing this.

The winter fields also require attention today. Their share in the production of grain is significant. An investigation has shown that the winter fields are now in poor condition. According to data from the Belorussian SSR Central Statistical Administration, the loss of those, which are being cultivated for grain, has reached two percent of the sown area. This is considerably less than the average multiyear data.

On 19 April, the winter crops had provided fodder on 1.3 million hectares, i.e., on 93 percent of the area. In the next few days, it is necessary to complete their care and, where necessary, to re-sow them with spring grain.

I would like to remind you of the pressing need to see to it that the harvested area corresponds to the sown area on each kolkhoz and sovkhoz and in each rayon and oblast.

The best time for the planting of potatoes has arrived in the republic's southern rayons. Special attention must be paid to the preparation of the sowing material, the good preparation of the soil with fertilizer, observance of the required density of the plantings and then to the effective protection of the crops from bugs, sicknesses and weeds. In this work, one must be guided by the recommendations of the potato growing scientists which were published in SEL'SKAYA GAZETA on 18 April of this year.

The restoration of the former glory of the Belorussian flax growers is a question of honor for us. Comrades, let us do everything so that this year will become the turning point in this respect. It is necessary to eliminate the multiyear lagging behind in the production of flax items and to carry out the plans for their sale to the state.

The sowing of corn is being expanded in the republic. This is correct. However, the increase in its area is still not always being accompanied by a growth in its harvest. It is important everywhere to give this crop a full dose of organic and mineral fertilizer and to incorporate lofty agricultural techniques and industrial technology for raising it in order not only to grow a good body but also to obtain full-value ears.

Along with the performance of the sowing, it is now necessary to take care of the crops and to actively prepare for the laying in of the fodder and the gathering of the harvest. It is necessary to pay special attention to the timely and qualitative repair of the harvesting equipment and to the construction of storehouses and fodder-yards.

The success of the task everywhere and always is being decided by people, by their mobilizing to carry out the tasks facing them and to overcome the difficulties which arise. In order to perform organizational and mass political work during the sowing period, party and party-Komsomol groups have been created on many farms in Stolinskiy, Ivatsevichskiy, Grodnenskiy, Berestovitskiy, Kopyl'skiy, Starodorozhskiy, and other rayons and the work position of each agitator and political information specialist has been determined. Using oral and visual agitation systems, the rural workers are being informed daily about the progress of the competition in sowing, about its progressive personnel, and about their experiences.

Such forms for morally stimulating the participants in the field work as the raising of flags in honor of the competition winners, the publishing of "operational news letters"and "express news letters", the handing over of temporary pennants, etc. are being widely practiced in the republic. All this is having a good effect.

It is very important that party organizations and the agitation and propaganda aktiv be able to single out, evaluate at his true worth and support with a kind word each worker who displays conscientiousness in work and whose spirit aches for the task.

The requirement to improve the organization and raise the effectiveness of socialist competition in agriculture, which was expressed in the CPSU Central Committee decree on rating the Minskiy party obkom, pertains completely to the entire republic party organization. It must be wholly subordinated to increasing our contribution to the solution of the food problem, to building up the production of plant and animal husbandry products, increasing their quality, and using land, equipment and fertilizer more effectively. We are also talking about intensifying the struggle to lower product costs and to increase the profitability of all branches in agricultural production. Far from everything is being done in this regard. We have many farms which are unprofitable and which have a large debt to the state.

Some kolkhoz and sovkhoz directors and specialists are at odds with cost accounting, they engage little in economic analysis, and they concern themselves poorly with lowering the cost of products. Beef, grain and potatoes were unprofitable on a number of farms last year.

At the same time, the experience of very many kolkhozes and sovkhozes confirms that a high profitability in production is assured with skilfull management. I will cite the kolkhozes imeni Lomonosov in Lyakhovichskiy Rayon, "Victory" in Baranovichskiy Rayon, imeni Tel'manin Lepel'skiy Rayon, "Progress" in Grodnenskiy Rayon, "New Life" in Nesvizhskiy Rayon, "Barats'ba" in Pukhovichskiy Rayon, "The 17th Party Congress" in Goretskiy Rayon, and "Lenin's Road" in Kruglyanskiy as examples. Last year, their profitability reached 47-62 percent.

Based on a thorough analysis of the state of affairs on each farm, it is necessary to have an accurate program of measures to strengthen the economy of all kolkhozes and sovkhozes, especially those which are economically weak. Personnel must not be taught to achieve production growth at any cost, as it often happens. High final results must be assured by decreasing labor and material expenditures.

Now about trade and personnel services. For the first time in recent years, we are encountering a case of non-fulfillment of the republic retail trade plan. The ministry of trade underfulfilled the quarterly plan by 2.4 million rubles, and the Belorussian Cooperative Union -- by 15.5 million rubles.

What was the reason? The directors of the Ministry of Trade and the Belorussian Cooperative Union are inclined to explain everything by the market situation changes in buyer demand for several items. There is some portion of truth here. However, it is all a question of the fact that individual trade leaders did not display the necessary energy and enterprise in the struggle to carry out the plan and obligations.

True, although late, something has already been done to eliminate the deficiencies which have been tolerated. The commodity turnover plan was overfulfilled in March. To fulfill the quarterly quota, the Ministry of Trade lacked monetary earnings which its trade network could have provided in less than two hours of work and the Belorussian Cooperative Union-- one-and-a-half days of earnings.

Comrades N. A. Makayed and K. Z. Terekh should draw serious conclusions from this and provide for a normal work rhythm in the republic trade organizations and enterprises.

This requirement fully pertains to the Ministries of Consumer Services and Housing and Municipal Services who fulilled the January-March plan for carrying out personal services by 99.4 and 90.6 percent, respectively. What is the matter here? Have the demands of the population for services really declined? On the contrary, they are continually growing but they are not being fully satisfied. Unfortunately, the number of complaints about the work of personal services enterprises is still great. This situation requires the ministers, Comrades A. L. Grib and A. I. Bezlyudov, to work more energetically and to concern themselves more topically with the problems which arise. It is necessary to provide for the fulfillment of the plans and to raise the standards of providing services to the population. We expect from them more decisive measures against the different types of violations and abuses whose number is significant. I recall that the mentioned ministries have already undergone criticism because of this.

And so, comrades, little has been done and is being done in industry, agriculture and other branches of the republic's economy. All of our capabilities and reserves are far from being fully used. There are still many shortfalls. In order to move to the frontiers which have been planned by us, more persistent and purposeful work is required in all sectors, in each and every one.

The sections and secretaries of the Belorussian Communist Party Central Committee and the leadership of the republic's Council of Ministers must keep a strict watch over how the plans and socialist obligations are being performed by each ministry and department.

As Comrade L. I. Brezhnev pointed out in his discussions with the leaders of the Uzbek SSR, it is necessary to raise the responsibility of oblast and rayon party committees for the carrying out of party policy in local areas. It is also necessary to enlarge their role as organs of political leadership and to provide for their more effective influence on all aspects of production and public life.

However, some party committees lack accuracy and effectiveness in their work and the ability to concentrate on the most important questions in improving production efficiency and indoctrinating people. The paper style of leadership, which Comrade L. I. Brezhnev has criticized, also makes itself felt. For example, the leadership of the Slavgorodskiy party raykom,(its first secretary is Comrade F. F. Lisovich) is enamored of paper-generation and the conducting of every possible meeting and session. The visits of the raykom workers to the local areas have a momentary nature and do not have any noticeable effect on improving the activity of the primary party organizations. The Belorussian Communist Party Raykom Bureau examines many questions and adopts a large number of decrees, but the organization of and the checking on their execution are organized poorly. For example, the party organization of the "40 Years of October" Kolkhoz has been criticized dozens of times from the rayon rostrum during the last two years and its work has been examined twice in the party raykom. And the result? The economic indicators of the farm have declined during this.

Serious deficiencies in working with personnel are being tolerated in the rayon. During the last five years, 15 of the 17 farm directors have been replaced, every second one was dismissed as not having provided for the work sector or because he compromised himself. There is a great deal of formalism in the organization of socialist competition. Some brigade, farm and team collectives do not even know their obligations for this year.

Unfortunately, such shortcomings are not characteristic of the Slavgorodskiy party raykom alone.

The further improvement of the primary party organization's militancy and the communists' vanguard role remains our most important task. Every party member must work well himself and exert by his example a positive effect on those around him. Primary party organizations are obliged to exercise more fully their right to check, investigate more strictly the non-performance of plans and socialist obligations,and struggle more actively against displays of disorganization, mismanagement and lack of discipline. Together with the trade union and Komsomol organizations they must engage more concretely in socialist obligations, seeing to it that it is a school for the worker's political, work and moral indoctrination.

To bring the requirements of the party's economic policy to each working individual, to make them close and understandable to him, and to convincingly show that it is this policy which answers his vital interests and that, therefore, the duty of each one is to contribute to its complete success by his initiative and creative searching -- this is the task which Comrade L. I. Brezhnev has assigned.

Party, soviet, trade union and Komsomol organizations and all our personnel must be guided by this directive in their daily work.

The CPSU Central Committee decree on the Minskiy party obkom arms us with a clear action program for further developing and improving the effectiveness of socialist competition. This document of general party significance has been discussed at a plenum of the Minskiy Belorussian Communist Party obkom. It is necessary that all party committees and organizations in the republic define concrete measures to carry out its requirements.

Now, it is very important to see to it that the initiative of the country's and the republic's progressive enterprises, kolkhozes and sovkhozes and of the expanded competition to greet the 60th anniversary of the formation of the USSR in a worthy manner and to successfully carry out the plans and socialist obligations for this year and for the five-year plan as a whole finds support among all the workers in the cities and villages and that each worker perform his patriotic and international duty in an exemplary way.

As Comrade L. I. Brezhnev has pointed out, internationalism under the conditions of our multinational country is first of all the honest, conscientious and efficient work of all peoples for the common good. It is the ability to place common state interests above departmental and local ones and to insure the accurate work of the country's single national economic complex. It is the timely carrying out of all inter-republic deliveries, the maximum use of their resources and their active participation in the solving of those problems on which the development of the economy and the prosperity of all the people depends.

The communists and all the republic's workers have greeted with satisfaction the CPSU Central Committee decree on the 60th anniversary of the formation of the USSR and the propositions and conclusions stated in Comrade L. I. Brezhnev's speeches during the trade union congress and in Tashkent, and they are studying them with interest. The party committees and organizations and the mass propaganda and information organs have been called upon to reveal the great vital force of Marxist-Leninist ideas, the historic advantages and achievements of socialism, and the outstanding role of our party and the working class in the international rallying of all the country's nations and nationalities in a more active, easily understood and convincing manner using the examples in which our reality is rich.

Elections to the local soviets of peoples deputies and of the people's judges and assesors will soon take place. This is an extremely important and critical political campaign. Everywhere it is necessary to organize the reports of the soviets and their deputies to the people and to analyze how the instructions of the voters are being carried out. The pre-election campaign must contribute to improving the work style of the local soviet organs and to raising their responsibility for the successful fulfillment of the plans for the social and economic development of oblasts, cities, rayons, and production collectives; improving the effectiveness of the economy; satisfying the material and cultural wants of the Soviet people more fully; and improving their living and working conditions.

Comrades! The successful fulfillment of the plans and socialist obligations will be our most fitting gift to the 60th anniversary of the formation of the Union of Soviet Socialist Republics. The very first duty of each communist and of all the republic's workers is to do everything possible for this.

BELORUSSIAN DECREE ON SOCIALIST COMPETITION ISSUED

Minsk SOVETSKAYA BELORUSSIYA in Russian 22 Apr 82 pp 1, 3

[Article, under rubric "Decree of the Meeting of the Activists of the Communist Party of Belorussia, Dated 20 April 1982": "The Rate of Fulfillment of the Socialist Pledges of the Workers of Belorussia for 1982 and the Tasks of the Republic's Party Organizations That Evolve from the Instructions of Comrade L. I. Brezhnev and the Decree of the CPSU Central Committee Concerning the Work of the Party's Minskaya Oblast Committee With Regard to the Development of Socialist Competition"]

[Text] After listening to and discussing the report by Candidate Member of the Politburo of the CPSU Central Committee, First Secretary of the Central Committee of the KPB [Communist Party of Belorussia], Comrade T. Ya. Kiselev, the meeting of the activists of the Communist Party of Belorussia notes with a sense of satisfaction that the instructions of General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev and the decree of the CPSU Central Committee concerning the work of the party's Minskaya Oblast Committee with regard to the development of socialist competition, which are the logical continuation of the ideas of the 26th CPSU Congress and the creative embodiment of Leninist principles of socialist competition, have been accepted in our republic as a combat program of actions for the party, soviet, trade-union, and Komsomol agencies in achieving the further increase in the production and social participation of the workers in the struggle to carry out the party's policy.

The republic's workers, kolkhoz members, and intellectuals, like the rest of the Soviet citizens, unanimously approve and completely support the unceasing creative activity of the party's Central Committee, its Politburo, and Comrade L. I. Brezhnev personally in implementing the socioeconomic and foreign-policy program developed by the 26th CPSU Congress.

In implementing the historic decisions of the 26th CPSU Party, the November 1981 Plenum of the CPSU Central Committee and the workers of Belorussia, under the leadership of the party organizations, broadly extended the socialist competition for the successful fulfillment of the plans and socialist pledges for 1982 and for the five-year plan as a whole, and for the meritorious meeting of the sixtieth anniversary of the formation of the USSR.

The workers in industry fulfilled ahead of schedule the plan for the first quarter of the current year for sales, for output, for increase in labor productivity, and the production of articles with the highest category of quality. Output valued at 121 million rubles was produced in excess of plan, including 38.6 million for consumer goods. On kolkhozes and sovkhozes, during January through March there was an increase in the production of milk, meat, and eggs, and a rise in the average daily weight increases in animals and the milk yield per cow. Most of the farms were well prepared and are carrying out the spring sowing in an organized manner. The construction organizations coped with the fulfillment of their quarterly assignment.

At the same time, critically evaluating the results of the work during the first quarter of the current year in the light of the requirements and principles set forth in the statements of Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions and in Tashkent, the meeting of the activists of the Communist Party of Belorussia feels that the party, soviet, and economic agencies, and the trade-union committees failed to assure the use of the available reserves and opportunities or the force of the socialist competition for the fulfillment, by every branch and by every labor collective, of the plans and pledges for all the quantitative and qualitative indicators. In industry every eleventh enterprise failed to cope with the quarterly assignment for volume of output and every tenth one failed to cope with the assignment for increase in labor productivity. Many associations and enterprises failed to guarantee the fulfillment of the contractual obligations for shipments of output, and have been making insufficient use of the intensive factors for the growth of production. Individual enterprises are failing to observe the normative deadlines for the assimilation of newly activated capacities and are placing incomplete loads upon the equipment, machines, and machinery.

In capital construction one continues to observe instances of dissipation of means, equipment outages, losses of work time and poor quality of operations. Enterprises and organizations of trade and everyday services to the public and BSSR Minavtotrans did not fulfill their quarterly plans. The Belorussian Railroad failed to cope with the assignment for shipment of freight in the established prodcuts list. At many transportation enterprises and branches served by it, effectiveness of the use of means of transportation is low.

In agriculture, the plans for the sale of milk and meat to the state have not been fulfilled, and the productivity of animal husbandry remains low on many kolkhozes and sovkhozes. In a number of places, the optimal deadlines for cultivation of winter crops and for carrying out the spring sowing have been missed; the agrotechnical requirements are not being observed; an incomplete load is placed upon the technology; and there are shortcomings in preparing the livestock for pasture maintenance.

In the national economy, steps are being carried out slowly to improve the economic mechanism and to make the transition to brigade forms of organizing labor and providing incentives for it.

Shortcomings in fulfillment of the plans and socialist pledges for the current year are the consequence of the fact that the level of management of social production on the part of the ministries and departments and the economic personnel does not yet conform completely to the requirements of the 26th CPSU Congress, the November 1981 Plenum of the CPSU Central Committee, or the fundamental principles and instructions of Comrade L. I. Brezhnev with regard to questions of increasing the effectiveness of production and the quality of work in all links of the national economy. The party committees and organizations do not always show to the managers of associations, enterprises, and organizations, kolkhozes, and sovkhozes the proper demandingness for the unconditional fulfillment of the plans and socialist pledges, the observance of state and planning discipline; take an indulgent attitude toward instances of lack of organizational spirit, of poor business practices, and lack of discipline, and reconcile themselves to the fact that some of the Communists fail to show any participation in the labor and social life of the collectives.

Socialist competition is poorly aimed at the resolution of the cardinal problems in the development of the economy. As is noted in the decree of the CPSU Central Committee on the party's Minskaya Oblast committee, in certain labor collectives the greatly activity rate in organizing the competition manifests itself only at the stages of taking socialist pledges and summing up the results, while, during the remaining period, no proper organizing work is carried out. The efforts of the competitors are not yet, in all instances, concentrated on accelerating scientific-technical progress, introducing advanced experience and progressive technological schemes, increasing the labor productivity, achieving the complete use of production capacities, economizing with material resources, improving the quality of output and reducing its production costs.

The meeting of the activists of the Communist Party of Belorussia decrees:

1. To approve and accept for strict guidance the conclusions and principles set forth in the decree of the CPSU Central Committee, entitled "The Work of the Party's Minskaya Oblast Committee in Developing Socialist Competition and Increasing Its Effectiveness in Carrying Out the Decisions of the 26th CPSU Congress and the Instructions of Comrade L. I. Brezhnev."

2. It is necessary for the BSSR Council of Ministers, the party's oblast, city, and rayon committees, the ministries and departments, the Soviets of People's Deputies, the primary party and trade-union organizations to analyze from all angles and deeply the results of the work in all branches of the national economy during the first quarter of the current year, to eliminate the shortcomings, and carry out additional steps to guarantee the unconditional fulfillment of the state plans and socialist pledges for 1982 by every association, enterprise, kolkhoz and sovkhoz, and every collective. The sixtieth anniversary of the formation of the USSR is to be marked by new labor achievements.

The creative initiative of the workers, kolkhoz members, and the intellectuals, and the party-organizational and ideological-educational work as a whole are to be aimed at the more effective use of the republic's created production and scientific-technical potential, and at the guaranteeing of high final results with the smallest material and labor expenditures.

3. The party committees, ministries and departments, Soviets of People's Deputies, and trade-union organizations in the republic are to concentrate the efforts of industrial workers on the acceleration of the growth rates for labor productivity, the economical expenditure of metal, raw materials, and fuel-and-energy resources,

the improvement of the quality of output, and the reduction of expenditures to produce it. Work is to be carried out persistently to introduce new technology and progressive technological schemes, and advanced experience, to raise the level of mechanization and automation of production processes, and to reduce the share of manual, relatively unskilled, and heavy physical labor.

4. The party, soviet, and agricultural agencies in the republic, on the basis of the increase in the effectiveness of vegetable and animal husbandry, are to achieve an increase in production and in the quality of all types of agricultural output, the unconditional fulfillment of the plans and socialist pledges for 1982 and for the five-year plan as a whole. The sowing of all crops is to be completed within the optimal time periods and at a high agrotechnical level, and the proper cultivation of the crops, the prompt preparation for the bringing in of the harvest, and for the procurements of agricultural products and fodders are to be assured. The wintering-over of the livestock and its changeover to summer-pasture maintenance are to be organizationally completed, so that, during the second quarter, the lag that has occurred will be overcome, and the production and procurements of output from the animal farms will reach the planned indicators. Every farm is to fulfill the plans for accumulation of forage by the 1982-1983 stall period and to guarantee the complete fodder needs for socialized animal husbandry and for the livestock that are personally owned by the citizens.

5. BSSR Gosplan, BSSR Gossnab, BSSR Gosstroy, the republic's ministries and departments, the party and soviet agencies, and the managers of enterprises and organizations are to concentrate the capital investments and material and labor resources at construction projects that are scheduled for activation in the next reporting period, for the prompt activation of all the planned projects and capacities, and must constantly reduce the volumes of uncompleted construction. The construction ministries and departments are to work persistently to improve the system of administration, and to coordinate the precise, rhythmical work in all its links. Socialist competition is to be aimed at the better use of the production assets, the material and labor resources, and the guaranteeing of the daily fulfillment by every collective of the established assignments with a high quality of operations.

6. The Administration of the Belorussian Railroad, BSSR Minavtotrans, BSSR Glavrechflot, the Soviets of the People's Deputies, the primary party organizations, and the managers of enterprises are to achieve the more effective use of transportation means; the broad application of progressive technology processes in handling freight shipments; the reduction in the periods of time required for their delivery; the elimination of inefficient shipments; and the precise interaction of all types of transportation.

7. BSSR Mintorg, Belkoopsoyuz, BSSR Minbyt, BSSR Minzhilkomkhoz, the oblast, city, and rayon executive committees, and the party and trade-union organizations of enterprises in trade and the public-services sector must take exhaustive steps to overcome the lag in the fulfillment of plans for the first quarter, and aim the socialist competition at raising the level of efficiency and the quality of the services provided to the public.

8. The party, trade-union, and Komsomol organizations, and the economic personnel, guided by the instructions of Comrade L. I. Brezhnev, are to work persistently to

continue the work of reorganizing the economic mechanism; to introduce the brigade form of organizing labor and providing incentives for it; to prevent a formal approach to this matter; to create for the workers the favorable conditions for the development of their creative initiative and highly productive and efficient labor. It is deemed necessary that every brigade have a party, or party-Komsomol group or party organizer.

9. In conformity with the decree of the CPSU Central Committee on the party's Minskaya Oblast Committee, the Bureau of the Central Committee, the oblast, city, and rayon committees of the KGB, BSSR Sovmin, Belsovprof, and the Central Committee of the LKSMB [Belorussian Komsomol] are to define and carry out steps for the further development of socialist competition and for the raising of its effectiveness in fulfilling the decisions of the 26th CPSU Congress and the instructions of Comrade L. I. Brezhnev. Formalism is to be decisively eradicated from the practice of organizing the competition, the competition is to be viewed as the creative job for the workers themselves, and skillful application is to be made of the various forms of providing psychological and material incentives for the workers. There is to be an increase in the responsibility borne by the ministries and departments, and the republic's soviet and economic agencies, for the creation of conditions for the successful fulfillment by the competitors of the socialist pledges that they have taken, and for the rhythmical operation of all enterprises and organizations.

10. The party committees are to improve constantly the work style and methods, to manifest a greater amount of creativity and initiative, a more businesslike attitude and more timeliness, and are to shift the center of their organizing and mass-political activities directly into the labor collectives. There is to be intensified monitoring of the work performed by the economic personnel, an increase in the demandingness to them for the fulfillment of the planned assignments and the socialist pledges; managers are be educated to have a personal responsibility for the job assigned to them, to take an intolerant attitude to any shortcomings, to take a self-critical approach to evaluating the results of their own labor, and to fight persistently against any manifestations of lack of organizational spirit, of poor business practices, of lack of discipline, of giving preference to local interests.

In mobilizing the masses for the resolution of the urgent tasks of economic and cultural construction, there is to be an increase in the role and responsibility of the primary party organizations. They have been called upon to guarantee the high activity rate of all the Communists in labor and in public life, to make complete use of the right to monitor the activities of the administration, to exert an active influence upon all sectors of production where the fate of the fulfillment of the state plans and pledges is being decided.

All steps are to be taken to strive to increase the educational role of the socialist competition. In oral and printed propaganda, as is indicated in the decree of the CPSU Central Committee on the party's Minskaya Oblast Committee, provision is to be made for the broad publicity and comparability of its results, and the experience of the advanced workers and innovators in production is to be revealed in an efficient and concrete manner. All means of ideological influence are to be used in promoting the reinforcement of labor discipline, in educating in the workers a communist attitude toward labor and public property, and a state approach to the job at hand.

The meeting of the activists of the Communist Party of Belorussia assures the CPSU Central Committee, its Politburo, and personally General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev, that the Communists and all the workers in the republic will consolidate even more closely their ranks around the Leninist party and will apply all their efforts, energy, experience, and knowledge to assuring the successful fulfillment of the historic decisions of the 26th CPSU Congress and the assignments of the Eleventh Five-Year Plan, and will mark the sixtieth anniversary of the formation of the USSR with new labor achievements in all sectors of communist construction.

U.S. SEEKS BINARY CHEMICAL ARMS TO CIRCUMVENT SALT LIMITS

Moscow APN DAILY REVIEW in English 12 May 82 pp 1-3

[Article by Spartak Beglov, APN columnist: "Beware: Binary Danger"]

[Text] In the vortex of the troubles and apprehensions created by the Anglo-Argentine conflict the world has not noticed the mechanism of American politics complete decision-making on an issue the implications of which can overshadow all the other threats posed to mankind, including such most serious ones as the threat of nuclear war.

The Senate appropriations committee has hearings on the Reagan Administration's programme of preparations for chemical warfare.

It is worth making it clear from the very beginning that the U.S. military strategists and politicians have made a stake on a new weapon of mass destruction, the binary gas--a toxic cocktail of two nerve gases which is both odourless and colourless.

The "merits" of even the neutron bomb pale beside the "advantages" of this man-killer. Binary gas does not destroy anything in its way, but it penetrates everything and kills all and sundry immediately. It has another "advantage"--its two chemicals only become nerve gas when mixed after firing. Hence, this weapon is "convenient and safe" for those who might use it.

So, Washington has found a "standby" for nuclear armaments. Why? Aren't the thirty thousand bombs, shells, missile warheads, mines and other nuclear units which the Pentagon already has and which can reduce the globe to ashes several times over sufficient?

In his speech on May 9 President Reagan assured the USSR, the Soviet people and other nations that the United States did not threaten anyone. Why then is it adopting the new weapon? Why does it plan such a sharp increase in the allocations for its manufacture--from 262 million dollars in 1982 to 810 million in 1983 to 1,400 million in 1984?

Answering this question, it is worth recalling that the Pentagon began showing interest in binary gas and started active preparatory work in this field at the same time it began looking for new nuclear weapons delivery vehicles, such as MX, Pershing-2 and Cruise missiles. Strange as this might seem, these searches were stepped up by the nearing signing of the SALT-2 Treaty which set common ceilings to American and Soviet strategic systems. A natural question is: didn't an arms control treaty mean the "STOP" signal to the development of new types of mass destruction weapons?

What is natural to some is not necessarily natural to others, however. It was natural to the incorrigible American pursuers of military supremacy that the SALT-2 Treaty prompted them the idea of getting "absolute weapon" in its circumvention.

This is how the stake on Tomahawks and Pershing-2 missiles capable of dealing a first strike at the USSR from the territory of Western Europe came to their minds.

Meanwhile, secret active work was underway at the headquarters and laboratories of the U.S. military-industrial complex. Efforts were concentrated on the development of binary gas as a more effective means to avoid the arms control process. For the record: the U.S. military placed the first order for binary gas in 1974--the same year the first prototypes of Pershing-2 and Cruise missiles were put into production. It is also appropriate to mention another date, July 1980, when Washington refused to continue negotiations about a convention banning the development, production and stockpiling of chemical weapons and demanding destruction of its stocks. It was the time it was ready to start series production of binary gas.

As the "absolute weapon" was about to be ready, there appeared the need to justify its appearance before the multitude, so to speak. This is how the unprecedentedly false and massive war of words began in connection with the alleged use by the Soviet Union and Vietnam of chemical weapons in Indochina and Afghanistan. It has already become a sinister stereotype of American policy that the Pentagon's unbridled striving to develop new, ever more deadly and destructive weapons is justified by the myth about a nonexistent threat.

The U.S. military leaders are pressing up the legislators for they badly need the requested allocations, which run into hundreds of million dollars, for the production of several million units of ammunition (the design capacity of the binary gas manufacturing plant in Pine Bluff is 70,000 units a month) and for the creation of the delivery system in order to deploy binary weapons in Italy, Britain and other West European countries as well as on American bases along the perimeter of the Middle East and Asia. Isn't it indicative in this context that at the latest session of the UN General Assembly the United States was the only one of the 157 UN member states to vote against the resolution calling upon the countries to refrain from the manufacture and deployment of binary and other types of chemical warfare?

It is legitimately emphasised in the collective statement of Soviet prominent scientists, among whom there are Nobel prize winners, that the shifting of the arms race to the domain of chemical warfare (which is done in accordance with the adopted and future decisions of the Pentagon and Congress in this field) can only exacerbate the international situation and increase the threat of war with the use of chemical weapons which is fraught with very grave consequences for the future of mankind as a whole.

WASHINGTON POST observer M. McGrory makes the following logical conclusion concerning the plans of the U.S. leadership: we have a sufficient amount of nerve gas (he means the 150,000 tons of toxic weapons already stockpiled by the USA-S.B.) to kill each woman and each kid on earth. But this is insufficient for Ronald Reagan.

The international community has the right to say "STOP!" in order to remove the threat of "noiseless" and "absolute" death.

DIFFICULTIES IN LOCAL PARTY COMMITTEES DESCRIBED

Moscow SOVETSKAYA ROSSIYA in Russian 30 Apr 82 p 3

[Article by V. Karpov, first secretary of the Volgograd gorkom: "Trial by Efficiency"]

[Text] I am looking through the materials of the bureau of the gorkom and thinking about the fate of an economic executive with whom I am acquainted. The draft decision proposes "freeing Comrade Bondarenko V.S. from the post of general director of the Stroydetal' Association as a person who did not ensure leadership. . . ." An extreme measure. But there can be no other. And here is why.

The problem of increasing the rates and improving the quality of the construction of housing is an acute one in the city. And its solution depends to a large extent upon the level of industrialization at the construction sites, and, consequently, the first word has to belong to the Stroydetal' Association, since it supplies carpentry products without which the conclusion of the construction of entire houses and other objects is impossible. However, the association dragged out the mastery of the new construction and worked in an uneven manner. The situation was looked into, help was provided, the association was "pulled out" of its difficulties--everything was brought into play. For a month or two it seemed like things were going normally, and then again disruptions.

When the reasons for the lagging were studied, especial attention was directed to the organization of work in the association's apparatus itself, and to the style of the leadership of the collective. One was struck by the split personality of the general director himself. From the rostrum he uttered correct words and called upon his subordinates to "be efficient," but he himself did not demonstrate an example. His flow of words should have been followed by deeds. But there were no deeds. The replacement of efficiency with verbal activeness at various conferences had a destructive effect upon the formation of V. S. Bondarenko's personality. The abilities which he at one time possessed were dissolved in the verbal stream. The most important qualities were lost: a feeling for self-criticism, the ability to influence a situation, and the ability to be an example of personal high organization and of personal responsibility for one's word.

A bitter lesson. In drawing the portrait of a communist and leader who has suffered a defeat as a result of unsuitable methods of leadership, I must also admit our guilt. It has to be confessed that we party leaders are also frequently tolerant of people who are fond of "giving assurances." Maybe, because we believe in people. And it would seem that it has to be that way. But you cannot, as practice shows, rely solely on belief. It is necessary to verify and persistently cultivate efficiency. I mean cultivate--consistently and persistently.

Efficiency is not proclaimed, but is confirmed by practice. By the effectiveness of economic and political measures. But what does an "efficient style" in party work mean? I am posing this question above all to myself. And it is not by chance that I am posing it. Today, as never before, party practice is closely tied in with the solution of diverse economic, socio-cultural, and moral problems. And it is far from simple to find the main link in the overall chain. But it has to be found. Much depends upon this: the ability to correctly organize work and to set a barrier against formalism which frequently reduces our good initiatives to naught. In fact, this is not the least important element in the meaning of work style.

During the first years of Soviet power V. I. Lenin stated: " . . . we must now set as our first, immediate, and most important task precisely the practicality and efficiency of organizational work."

This most important task has in no way lost its political urgency. After the 26th Party Congress we began to connect an improvement of style above all with a deepening of an analytical and scientific approach to work, with an increase in efficiency, and, following from this, initiative. I want to say with especial emphasis: Life itself is demanding a constant improvement of the work style of the party committee and a search for new and more effective forms and methods. The planning of the joint work of the party gorkom and gorispolkom, of the Komsomol gorkom, and of the committee for people's control has become firmly established in our practice. This has not only brought order into the examination of questions and the performance of verifications, but also makes it possible to achieve a more purposeful solution of long-term problems in a complex.

I admit that in the past a great deal of energy and time was lost on a search for an inclusion in the bureau's work plan of some kind of "special" question which had not yet been discussed in a single party committee. Freshness, prestige! But this is a false prestige. For it is not the originality of a question that is important, but the political urgency of one or another problem.

It is clear that there are no ready recipes for the solution of a problem. The practice of party life is constantly making its corrections. In this connection, the skillful and rapid dissemination of the experience of party work takes on great importance. In our view, it is important now not only to learn what to do, but, above all, how to do it. And also--whose experience should be disseminated?

The experience of the party group. In the final analysis, it is here, in the small party collective, that the success of all of our designs is determined. We ourselves understand this very well. We pronounce quite a few speeches calling for "the most serious attention to be directed to the party groups." But, to be honest, frequently things do not go any further than words, and we do not delve into the depths of the life of the primary party collective. We have decided to make a thorough study of the work of the party group of the second sector of transmission-11 shop of the tractor plant. Why the tractor plant? Mainly because at that enterprise more than 90 percent of the workers have shifted to the team method of labor. A gratifying phenomenon. But conflicts frequently arise in the contracting teams. For example, everybody is working "for the common pot," but on the Honor Board there is only the team leader's portrait. And so you have grumblings and conflict in the team. How does the party group operate with contracting, what is its influence on the relationships of people in such situations?

The problem of the creation of teams which work on the basis of final results can only seem simple at first glance. We come up here not only against the problems of breaking up obsolete forms of the organization of labor, but also of breaking up psychology, including the psychology of certain economic executives. The fact is that in forming contracting teams far from all of our economic executives take account of the moral factors: This, they say, is not our sphere, we deal with economics. And the economics is put under the control of the team leader: He is the boss of the team, they say. When the matter is put this way the role of the collective is ignored, which gives rise to conflicts and moral distortions which in the final analysis turn into economic losses. I am profoundly convinced that our most important party concern is to convince leading cadres of the chief thing: Today psychology and economics are inseparable.

I think that in order to successfully carry out the party's decisions regarding an improvement of the economic mechanism the local party committees and party workers have to concentrate basically on overcoming the psychological barriers in the consciousness of people. And in this very difficult process the paramount place has to belong to the party groups. They operate on the front line of production and are capable of actively influencing all of the aspects of the collective's life. Recently we held a city seminar for party group organizers and party organizers of construction sites and construction industry enterprises. The discussion was about strengthening party influence on economic affairs, and on shifting the center of political work directly into the teams. It was a sharp and useful discussion. It has been decided to hold such seminars at construction sites at the beginning of every fiscal year.

Quite a few leaders have been developed in the city party organization who know how to direct production on a scientific basis. Unity of word and deed, coolheadedness, and strict performance discipline mark the style of the leadership of our plant directors: V. I. Fedorov--the steel wire and cable plant, G. A. Sal'nikov--petroleum machine building, and Yu. N. Gavrilov--medical equipment.

But we still have quite a few gaps in the selection of leading cadres and, especially, in the cultivation in them of efficiency and responsibility for their work. One encounters leaders who do not trouble themselves very much with searches for ways to more effectively solve urgent problems, and who are afraid to take personal responsibility upon themselves. The inability to organize work is frequently camouflaged with references to so-called "objective reasons." But when you check, it is not objective, but subjective factors which float to the surface: idleness, a lack of organization, and open irresponsibility.

We frequently still have occasion to correct leaders who commit an administrative style of management, tactlessness, and rudeness in their relationships with subordinates, who forget about the importance of the moral-psychological aspects of directing a collective, who are untroubled about the feelings of people, and who ignore public organizations. The gorkom bureau has given a strict punishment to V. V. Bobrov, the director of an electrical machinery plant, for such methods of naked administrative rule.

A party approach to economic work presupposes not only solid special knowledge, but also the free possession of the art of socializing with people. Unfortunately, not all economic executives understand this. But practice shows that economic tasks are accomplished in those places where the leading cadres combine in their daily work moral aspects and efficiency with a critical evaluation of their actions.

About conferences and meetings. Business conferences are of considerable importance in the work practice of any party committee. But business conferences! This is a good method of enlisting the collective intelligence and experience and of adopting the most correct decisions. We have established this procedure in our gorkom: Before running a conference involving the calling up of people, the sections chiefs are obliged to report to the first secretary on the list of those who have been invited, the purposes of the conference, and the character of the questions being brought up for discussion. If the gorkom secretary does not sanction the conference, he has to seek advice as to how to deal with the questions in another manner. But if an "approved" has been received, then those responsible for holding the conference have to keep a record in a special journal of its results, the time periods involved in carrying out its plans, and which of the gorkom apparatus workers is personally responsible for the realization of proposals.

Strict criteria have been introduced, and the number of conferences have been cut in half. Now they are more organized, and the responsibility of the apparatus workers for holding them and for their results is being increased.

Efficiency is both the quality and the concreteness of a document which is adopted: of the decision of the bureau, party meeting, aktiv, or plenum. Here also a creative search is needed. Is it necessary, for example, to "chew over" in the decisions of party meetings and aktivs that which is clear to everybody (a speech establishing a fact)? It is much more important, it would seem, to define various phenomena, and the reasons for their appearance, and to concentrate the attention of communists on concrete tasks.

Many of us are disturbed by the problem of the "paper stream." We are also giving thought to how to reduce it. This is the fifth year now that a systematic analysis has been conducted in the gorkom of the letters and documents which come to us from government and economic agencies. The reasons and sources are being studied, why one or another document is sent to the party gorkom, and the necessity and usefulness of each such address.

Many years of analysis have shown that most of the correspondence addressed to the gorkom consists of requests to resolve private economic questions. Frequently these requests should be carried out by the authors themselves, or by their chiefs. It is characteristic that the gorkom apparat has spent a very substantial part of its time and effort to satisfy such letter-requests to the detriment of resolving its chief, long-term problems. In addition to everything else, this has given rise to a dependent attitude among leaders, and has compelled the gorkom apparat to take the path of being a definite replacement for economic agencies.

The results of an analysis performed by the general section were once discussed at the gorkom bureau. Recently some interest was shown in the result. I cannot manage without figures: Five years ago the gorkom received 1,042 requests on economic matters; in 1978--879, in 1979--857, and in 1980--647. The stream has weakened, but the vivus of paperwork is strong, and persistence is needed in order to put up a protective barrier against it. And this is important because behind the paper something else can be seen: the fear of certain responsible comrades to take upon themselves a decision over some matter, and a desire by them to shift this to the shoulders of the party committee.

Party efficiency. . . . This is collectedness, a strong feeling of self-discipline, and strict control over the execution of party decisions and of criticisms. It is Leninist exactingness and a lack of mercy for those who are fond of bureaucratic fuss. The most important thing for each of us is not to forget that after the word there must be the deed.

From words to deeds!--This is the principle in accordance with which we educate cadres. And we follow this principle in all of our practical activities.

WEAKNESSES OF POLITICAL INFORMATION SYSTEM IDENTIFIED BY SOCIOLOGIST

Moscow SOVETSKAYA ROSSIYA in Russian 7 May 82 p 2

[Article by N. Bokarev, doctor of philosophical sciences, under rubric "In the Mirror of Sociology": "Political Information"]

[Text] A powerful and rather well-ramified information apparatus has been formed and is in operation in our country. The press, radio, and television, the system of political and economic training, lecturers, speakers, and agitation specialists give the workers a definite totality of knowledge, information, factors, and data that is necessary for correct orientation and purposeful action. The active participation in the multifaceted life of society and the collective requires people to have a high state of being informed, a complete awareness of the questions of the country's domestic and foreign policy, the development of economy and social relations, science and culture, and communist morality.

A major contribution is being made (or at least should be made) to this job by the institution of political information specialists. Sociological studies carried out in various regions of the country and, in particular, in Shchelkovskiy Rayon, Moskovskaya Oblast, where, incidentally, we organized two studies (with a 10-year interval between them), allow us to make the following conclusion: the institution of political information specialists has become an important, constantly operating form of ideological work, which guarantees the high level of information in the workers. Despite the broad extension of means of mass information, the role of spoken political information not only has not decreased, but, on the contrary, has increased. More than 83 percent of the participants in the survey stated that they listen to political information lectures as least once a month. Ten years ago the percentage was only half that.

What stands behind this fact? People are interested in "live" information, in "live" commentaries spoken by a competent person. At political information lectures they can ask any question that arises, and can justifiably count on getting the proper answer But it must be said that only slightly more than 67 percent of the listeners were satisfied completely or to one degree or another by the political information that they received. Every third one was dissatisfied completely or partially. Several people, true, had difficulty in defining their attitude, and this indicates that large opportunities still exist for improving the quality and effectiveness of oral political information. What are they?

This is how the motivations of a state of satisfaction were distributed. First of all, the opportunity for the constant expansion of one's horizon. Then, the link between the information and the life of the collective. Then such factors as the newness of the information, the opportunity to receive a reply to a question that one is interested in, and the interest toward the discussion of the problem. The factors that determine a person's dissatisfaction look "more acute": well-known principles are expounded; problems are discussed superficially; there is no lively exchange of opinions; the information is not concrete.

In the previous research the sequence of the factors was different. At that time the newness of the information enticed more than half the listeners; currently, it is less than 20 percent. In timeliness the political information specialists cannot compete, for example, with the means of mass information, but the listeners expect timely commentary. But, unfortunately, it must be stated that in the sense of increasing the timeliness of the commentary, very little has been done during these 10 years: only 6-7 percent of those surveyed were satisfied, both then and now.

An important function and task of political information dealing with vital contemporary problems in the life of society and the collective is the development of a steady interest in them, a definite and clearly expressed need for their more thorough interpretation. In the course of the surveys we ascertained that among practically all the listeners there arose the need to become more thoroughly acquainted with materials dealing with the topic discussed in the information lecture and simultaneously to share their opinions, to engage in a debate. Obviously, this can serve as an indicator of the effectiveness of the oral political information.

Of course, one should not simplify. The development of a system of indicators of the quality and effectiveness of ideological work as a whole and oral political information in particular is a job that required the expenditure of much labor. It is necessary to account for the entire totality of factors and conditions under the effect of which the complicated ideological process occurs. It is for that reason that even a partial indicator should be used skillfully and that one should always remember that it characterizes some individual aspect of the object being studied. The same discussion that has arisen in a collective on the topic of information is beneficial and sensible only if it is correctly aimed, if it has a precise political orientation.

Something that today has become a peculiarity of the activities of political information specialists is the fact that, more and more frequently, they throw light upon the basic problems of the social development of the collective, and discuss the initiatives and undertakings of innovators of production. But one should not fail to direct attention to the quality of conducting political information lectures. Whereas more than 68 percent consider them to be understandable, only 21 percent of those surveyed consider them to be meaningful. But even fewer people -- slightly less than 8 percent -- consider them to be expressive.

The success of the statement made by the political information specialist depends upon many factors, the first and chief one of which is his level of preparation, his thorough knowledge not only of the problem itself, but also of the problems that relate to it. Of course, in any statement, whatever the topic to which it is devoted, the features that must predominate are the Marxist-Leninist content, and the very close tie-in with the party's policy, with the life of the country, the particular region, enterprise, or collective. But knowledge and skill do not come by themselves. What is needed is work, and self-interestedness: considerably more than half -- two-thirds -- of those participating in the survey stated that the work of the political information specialist corresponds to their interests and preferences, and they are completely satisfied.

Consequently, the party committees succeeded in determining more or less accurately for them the job that appealed to them. But many also feel burdened by their work. For them it is no more than a "work load." The reasons for this are varied. Some people do not have this preference; others are not satisfied by the quality of their own work, as a result of insufficient preparation; and still others are dissatisfied by the listeners' attitude. But it is precisely this that depends upon the political information specialist himself, upon the degree to which he is able to stir up the cognitive activity of the listeners, to force them to express their own views and comments. Incidentally, almost 40 percent of the political information specialist commented on the sufficiently high rate of participation among their listeners (approximately the same number of listeners also mentioned this).

Yes, a very great deal depends upon the political information specialist himself, upon his experience and knowledge. But, just like any other activist in ideological work, he must be taught. He must be helped to improve his skills, he must be helped to acquire knowledge. And it must be said that, practically everywhere, rather precise systems have been developed to prepare those giving informational statements in all areas. Classes are conducted in accordance with special programs in party-training schools and seminars; and seminars at which various kinds of reference material are provided are organized regularly. The political information specialists themselves mentioned as sources the course outlines for various lectures, reports at various conferences, statements on the results of work completed by an enterprise, and collections of related items that have been selected at information and reference centers of the party committees. But a rather large percentage of political information specialists expressed their complete or partial dissatisfaction with seminars, and with the materials that are put at their disposal. And every fourth person stated that he did not know anything about the experience of the best political information specialists. Every fourth one also feels that no work at all is being done to summarize the best experience. All that remains to be added is that even where it is summarized, less than 15 percent of those surveyed are familiar with it.

There are other questions that lead one to serious deliberations.

Ten years ago the study showed that the least experienced political information specialists have a larger work load of public work than the other activists. And as a whole more than 70 percent of the political information specialists had in addition another, and sometimes even several other, assignments. By comparing this data with the recent data, we shall see that whereas the work load borne by the young political information specialists has decreased, the employment rate of the experienced ones has considerably increased: four out of five persons perform other jobs as well. That is, without a doubt, a large percentage.

One can, of course, agree that the people who work actively in public organizations are better informed and are also better trained methodologically. However, one should not forget that they are carrying out that work either during their own free time, or during their work time -- in any case to the detriment either of themselves personally, or their work. Thus, the party committees should be more careful in distributing public jobs, without overloading the activists excessively, so that neither those jobs suffer, nor their basic work.

There is another problem that is related to this one. Among the factors that do not satisfy them, many listeners commented that at political information lectures they frequently hear that which they have already heard at a lecture or in a report at a single political day, in a class at a club or in school, or in a seminar. Standing behind this, as was indicated by the political information specialists themselves, is the fact that the abundance of work loads simply forces them to be repeated.

Our studies detected a large number of other problems. Their comparative analysis does not yet give us the right to say that they are being successfully resolved. Moreover, certain ones are even becoming more serious. Although, to be completely honest, one must say: as a whole the system of political information is operating, is doing its job. But the reserves have been used at far from a complete rate. In particular, the expansion of the listener audience, that is, the involvement of all the workers.

Today, from 15 to 33 percent of the listeners remark that it is only from instance to instance that they listen to political information lectures (depending upon their subject matter). If one considers that approximately 8 percent declined to answer, it will turn out that every second or third person is in the category of "uninvolved," and passive. It is also necessary to consider that the largest number in this category is made up of young people and those who, in the social life of the collective, are completely inactive. The party committees and the organizers of the oral political information lectures should carry out a more thorough analysis of the reasons for this phenomenon. We have attempted to direct attention to some of them, and to analyze them. We hope that the analysis will be aided by our studies, which showed that there are reserves -- and rather large ones -- for the further improvement and raising of the ideological, methodological, and organizational level of the political information lectures.

ESTONIAN TRADE-UNION COUNCIL PLENUM HELD

Tallinn SOVETSKAYA ESTONIYA in Russian 16 Apr 82 pp 1,2

[Article: "With Maximum Concreteness and Efficiency"]

[Text] The second plenum of the Estonian republic's trade union council was held in Tallinn on 15 April. The results of the 17th USSR Trade Union Congress and the tasks of the republic's trade union organizations which flow from the speech of Comrade L. I. Brezhnev, the general secretary of the CPSU Central Committee, during the congress and from the decisions of the USSR trade-union congress, were discussed.

N. Yuganson, member of the Estonian Communist Party Central Committee Bureau and chairman of the Estonian republic's trade union council, presented the report.

K. Vayno, a member of the CPSU Central Committee and first secretary of the Estonian Communist Party Central Committee, spoke during the plenum.

An appropriate decree was adopted on the question which was discussed. A plan for Estonian SSR trade union measures to carry out the decisions of the 17th USSR Trade Union Congress and the tasks which flow from Comrade L. I. Brezhnev's speech to the congress, was approved.

G. Trifonov, a responsible AUCCTU worker took part in the plenum's work.

* * *

It was said during the plenum that the workers of the Estonian SSR, just as all the Soviet people, greeted Comrade L. I. Brezhnev's speech during the 17th USSR Trade Union Congress with enormous enthusiasm. A militant action program for the trade unions and for all Soviet people to implement the historic decisions of the 26th party congress was put forward in this brilliant and thoroughly interesting presentation and in the greetings of the CPSU Central Committee to the trade union congress. The Communist Party invariably regards the trade unions as an influential social force and as its reliable support among the masses.

The speaker and those who spoke during the debates -- R. Shmit, a delegate to the 17th USSR Trade Union Congress and lumberjack in the Tyuriskiy Wood Combine; L. Pudova, a delegate to the 17th USSR Trade Union Congress and chairman of the trade union committee in the "Krengol'mskaya manufaktura" Cotton Combine; and others-- pointed out that the decisions of the 17th USSR Trade Union Congress are permeated with the single concern about how to achieve a further expansion of the trade unions' participation in economic and cultural construction and about how to improve their indoctrinational work in mobilizing the workers to greet the 60th anniversary of the formation of the USSR in a worthy manner and to fulfill and overfulfill the plan for 1982 and the five-year plan in general.

A. Popov, a driver in the Tallinskiy bus fleet; E. Lind, a delegate to the 17th USSR Trade Union Congress and chairman of the republic committee of the construction and construction materials industry workers' trade union; and a number of other speakers said that the solution of these tasks is a very important way for the trade unions to influence the economy's development.

It was reported during the plenum that a group of workers and kolkhoz workers -- delegates from our republic to the 17th USSR Trade Union Congress -- had looked over their personal socialist obligations for 1982 and, following the example of the Moscow workers, had decided to celebrate the 60th anniversary of the formation of the USSR by achieving the highest labor productivity at their work sites.

The republic's workers have widely expanded the socialist competition under the slogan "For the 60th Anniversary of the USSR-- 60 Shock Weeks!" and have decided to greet the significant jubilee with new achievements in carrying out the party's plans. As the results of the first quarter show, the obligations are being carried out successfully in general.

The speakers emphasized that the struggle to carry out personal and brigade production plans ahead of schedule is one of the effective forms of socialist competition. At the present time, more than 60 percent of the workers in industry are working in accordance with such plans. These plans, which have been developed with a consideration for using reserves to increase production effectiveness,must become the core of socialist obligations and counter-plans. In this connection, it was pointed out that the ministries and departments and the republic trade union committees still do not concern themselves in the necessary way with questions of counter-planning and inadequately direct their collectives towards the development of counter-plans.

The trade union committees must support in every way possible and expand the patriotic undertakings of the production innovators and fully use the experience of the progressive workers which has been accumulated during the nation-wide socialist competition and the movement for a communist attitude toward work.

In his speech to the 17th USSR Trade Union Congress, Comrade L. I. Brezhnev pointed out the enormous importance of developing in every way possible the brigade form for organizing and stimulating work. The trade union organizations and economic leaders must carry out concrete and practical measures so that the brigade form of work organization will indeed become the primary one during the current five-year plan.

In connection with his entry into the kolkhoz workers' trade union, Yu. Kask, chairman of the Khar'yuskiy rayon committee of the agricultural workers' trade union, said that the role of both the republic and the rayon committees of this trade union has grown in solving agricultural production problems. At the same time, the improvement in the structure of controlling agricultural production and the creation of agro-industrial associations have placed new tasks in front of the trade unions of other branches. The trade unions of all branches, which are included in the agro-industrial complex or which are fulfilling orders for the village, must expand the competition for the timely and qualitative performance of obligations in delivering everything necessary for agriculture.

A great deal of attention was paid to economic questions. It was said during the plenum that personal and collective economic accounts are the most effective form for the struggle for effectiveness. For example, a total of 460 brigades inaugurated them in the republic's light industry enterprises. This experience deserves dissemination in all branches of the national economy.

The all-round development of the workers' scientific and technical creativity has been and remains the direct and immediate task of the trade unions. The trade union committees must effectively participate in the development and carrying out of the special-purpose combined program for decreasing manual labor in the national economy, which provides for a three-fourfold increase in the tempo of this work.

It was pointed out during the plenum that the party is consistently following a policy of expanding the rights of workers and trade union organizations in the work of controlling production. In practice, this is being realized through workers' meetings, production conferences, collective negotiations, and commissions of trade union committees and the organizations of the Scientific Technical Society and the All-Union Society of Inventors and Rationalizers. However, opportunities for involving the workers in controlling production are still not being used to the necessary degree. At the same time, the high-speed path of developing public production -- by its very nature -- requires that all members of the collectives actively participate in solving the main questions in the life of the enterprise.

The important tasks of the trade unions, who have been called upon to actively participate in solving social questions and the broad program for improving the national well-being, were recalled in the presentations. The work of medical establishments, the construction of housing and the improvement of the workers' treatment and rest in sanitoria and health resorts must be continuously checked by the trade union organizations. A concern for war and work veterans, for improving the work and living conditions of working women, and the improvement of trade and personal services must always be at the center of the trade union's attention.

I. Unt, a delegate to the 17th USSR Trade Union Congress and head of the pedagogic department of the Tartuskiy State University; R. Kiys, director of the Palace of Culture imeni Ya. Tomp; and other speakers concentrated attention on the tasks of the trade unions in forming the new individual -- the conscientious and active builder of communism. The trade union organizations have broad opportunities for this. It is necessary to intensify the struggle for the establishment of a conscientious and truly socialist discipline in each work collective and to struggle even more decisively for the eradication of such negative phenomena as absenteeism, drunkenness, an irresponsible attitude toward the work entrusted, and the desire to live on unearned income. It is necessary to treat cases of infringements on socialist and public property even more strictly.

The main thought -- that the workers of Estonia and all trade union members welcomed Comrade L. I. Brezhnev's speech during the 17th USSR Trade Union Congress and the decisions of the congress with great enthusiasm and that they are filled with the determination to carry out the tasks, which have been assigned, and to make a worthy contribution to the carrying out of the decisions of the 26th CPSU Congress --passed through all the presentations.

It is pointed out in the decree which was adopted that the plenum of the Estonian republic council of trade unions and all the trade union members of the republic are accepting the instructions of our party for unwavering guidance and execution, which were expressed in Comrade L. I. Brezhnev's speech. The workers of the Estonian SSR unanimously and heartily approve the domestic and foreign policy of the CPSU.

In the decree, profound thanks were expressed to the CPSU Central Committee, the USSR Supreme Soviet Presidium and the Soviet government for their tireless concern and enormous attention toward the trade unions. The soviet trade unions have been, are and always will be the faithful assistants of the Communist Party.

VAYNO SPEECH AT TRADE-UNION PLENUM

Tallinn SOVETSKAYA ESTONIYA in Russian 16 Apr 82 pp 1,2

[Speech by Comrade K. G. Vayno, a member of the CPSU Central Committee and first secretary of the Estonian Communist Party Central Committee, at the Estonian SSR Trade Union Council Plenum on 15 April]

[Text] Comrades!

The question, which is being examined during today's plenum, concerning the results of the 17th USSR Trade Union Congress and the tasks of the republic's trade union organizations, which flow from the speech of Comrade L. I. Brezhnev -- general secretary of the CPSU Central Committee-- during it, has exceptionally important significance in the task of implementing in a practical manner the decisions of the 26th party congress and the tasks of the 11th Five-Year Plan.

All the trade union organizations -- the trade union council, republic committees and lower links -- are faced with improving their work, perfecting it and doing this skilfully, consistently and persistently. It is necessary to see to it that the activity of the trade unions corresponds as fully as possible to their position in our society and to their rights and levels of responsibility. We are talking about the need to reorganize the work of the trade union organizations more rapidly and energetically, to concern ourselves more boldly with the new economic and social problems. And to increase the aktiv's qualifications continuously. This is the way the question was posed during the trade union congress. Life itself requires this of us.

Now, we do not have any work collectives in which there are no trade union organizations. In operating where the large ideas of politics and economics are translated into the language of practice and where the people's attitude toward life and society is greatly formed, they are required to reach each individual and to create a situation in which his capabilities and initiative are most fully revealed. Today, concern for the working people and for raising production effectiveness is the most important and main thing in the activity of any trade union organization.

Specific ways to achieve an increase in the level of organizational work by the trade union organizationsand to strengthen their influence on production and the people's way of life were discussed in detail here during the plenum, Comrade Vayno continued. Therefore I will only touch upon some questions to which I would like to attract your attention once again.

The results of the first quarter of the five-year plan's second year are well known to everyone. The republic's industry completed the product sales volume plan ahead of schedule on 29 March; It grew by 2.3 percent. Items worth 25.4 million rubles were produced above the target. If this is compared with the socialist obligation of the republic's workers for the year, it is evident that the proportion of items over and above the plan will be more than half of the assigned total. Thus, we have created a good foundation for the future.

The great deal of organizational, political and indoctrinational work, which is being performed by party, trade union and economic organizations in local areas, is concretely reflected in this. However, we should admit today that the results could have been more weighty. Seven enterprises did not cope with the plans for selling items, and 48 -- with delivery commitments.

What does this testify to? To the fact that, unfortunately, we have still not achieved high results everywhere in socialist competition. You see, these seven collectives and 48 enterprises have socialist obligations in which it is written that the plan would be over-fulfilled and production would be delivered on time. Naturally the entire collective bears responsibility for the carrying out of the obligations. However, the enterprise leaders, i.e., the people who have been invested with the trust of the higher economic organs, party organization and the workers of that collective, must be specifically held accountable for their failure. The trade union committees cannot avoid this responsibility also. We must continuously raise the responsibility of our cadres for work results.

The brigade form of work organization and stimulation has important significance for using production reserves better. I would like to direct your attention to this once again. The experience of a number of the republic's enterprises shows that the full incorporation of the brigade method permits work effectiveness to be noticeably increased. Where daily attention is paid to this form of work organization, the periods for building installations are decreased by 17-20 percent on the average, labor productivity is increased by 20-25, and material and technical resources are saved.

The example of the Tallinskiy House-Building Combine, the "Il'marine" Plant, the "Slantsekhim" Association, and several other enterprises is significant in this respect.

A well organized and effectively and thoughtfully working brigade is a genuine school for developing the workers' management skills and an experimental laboratory for creative initiative. Comrade L. I. Brezhnev said during the trade union congress: "It would seem that it is not necessary to prove the advantages of these brigades to anyone. All the same, the brigade contract is being incorporated slowly and not always consistently."

This remark completely pertains to our republic also. We have still not achieved a truly broad dispersal of the new forms of the brigade work organization and stimulation and -- what is the main thing -- the general and considerable effect from their incorporation. About 20 percent of the workers in industry and construction are working in accordance with this method.

In some places, the brigade form for organizing and stimulating work is being used formally, for accounting. Frequently, everything exists: agreements, estimates, calculations, and schedules based on a brigade contract. However, they have not been reinforced with organizational work and have not been relayed to each worker.

What should a brigade, which is working on true cost accounting, be like? As is known, such a brigade receives the materials itself and is responsible for their expenditure, it takes into account the operation of the mechanisms, and it distributes wages based on the work participation coefficient and the actual contribution of each one to production. There is no brigade contract without these basic principles. Otherwise, there is only the formal name of the brigade contract which does not provide any economic or moral effect.

The directors of the power plant builders' subunits, of the "Tallinstroy" and "Stroymekhanizatsiya" Trusts, of the repair and construction administrations in the ministries and departments, and of a number of "Estkolkhozstroy" organizations -- who are not demonstrating a sufficient yearning to create for brigades the conditions necessary for highly productive work -- deserve serious criticism for their formal attitude toward organizing the work of the brigades. In these organizations, the control apparat does not wish to burden itself, it avoids the additional concerns and responsibilities which each contract agreement with a brigade naturally imposes on it. We must give battle to routine and give full play to implementing brigade contracting.

Comrade Vayno pointed out that the method of brigade contracting, cost accounting and working on one job authorization is, of course, a reorientation of both the directors' and the workers' psychology. It requires great day-to-day attention and help from party and trade union organizations as well as a great deal of organizational work.

Comrade Vayno further said that the participation of the trade unions in the intensification of production and in the improvement of the management mechanism is, understandably, not limited only to a concern about brigades. The introduction of progressive experience is one of the most important tasks in the activity of trade union organization. Here, of course, the number of adopted methods and people, embraced by them, is not important. The end result from the use of progressive experience is important.

Frequently, a good undertaking is discredited and the desired results are not achieved only because of the same thing -- insufficient organizational work. For example, it is difficult to overrate the significance of the Rostov workers' initiative: "To Work Without Laggards". This experience is being widely incorporated in our republic. And it is necessary to say that in those branches where they have approached its incorporation creatively, good results are being achieved. At the same time, many measures, which have been worked out, have remained on paper in a number of ministries and enterprises. Therefore, now -- just as before -- these enterprises are not working stably and are wrecking the plans which have been established. Last year, 19 enterprises did not fulfill production volume quotas. Enterprises of the Ministry of the Construction Materials Industry, the Ministry of the Meat and Dairy Industry, the Ministry of Construction, the State Committee for the Supply of Production Equipment for Agriculture and the Ministry of Motor Transport and Highways are often found among the laggards.

We have approximately the same situation with reguard to incorporating the Shchekinskiy method, the experience of Vladimirskaya and Rostovskaya Oblasts in reviewing manufacturing normsbased on the workers' initiative, and the experience of the Moskovskiy "Dinamo" Plant imeni S. M. Kirov in organizing competition to improve labor productivity based on the personal (brigade) production plans of the workers.

Comrade Vayno pointed out that the republic trade union council and the branch trade union committees must quickly evaluate their work in this respect and find ways to eliminate the formal, hackneyed and -- at times -- the declarative approach to this very important work.

It is also necessary to achieve more purposeful work by the trade union organizations in attracting workers to the struggle for thrift. Last year, a whole series of collectives did not cope with the targets for saving resources. Here, it is difficult to cite so-called objective causes. Disorganization and frequently even simply laxity in work are visible to everyone. Here are typical examples. Because of shortcomings in organizing work, technically defective and incorrectly tuned motors, part of the motor vehicles of the Ministry of Motor Transport and Highways operated with an overexpenditure of fuel. In comparison with the plan, 27 enterprises tolerated a rise in the cost of products; the largest share fell to the overexpenditure of materials.

The public savings reviews and contests to reveal new reserves for saving fuel, energy and other material resources, in which the trade union organizations are participating, and the dissemination of the best experience in this important work are still not providing the desired results.

Comrade Vayno further said that the concern for improving the workers' life is inseparably linked with the concern for developing the economy. One of the most important questions today is the food question. The party is exerting a great deal of effort to effectively solve this problem. Both in agriculture and in the branches of industry connected with it, there are many urgent matters which will not wait and which can and must be attacked immediately in order to improve the supplying of the population with food products.

Critical days have arrived for the village workers -- the indoor maintenance of cattle, the most complicated period, is ending on the farms. Massive spring field work will soon begin everywhere on the fields. One can say with satisfaction that the republic's cattlemen maintained the cattle population under conditions of a severe wintering and with a strained supply of fodder. However, their productivity slumped.

The quarterly plan for milk purchases was fulfilled by only 88 percent and the milk yield from a cow decreased on the average by 130 kilograms during the three months of this year in comparison with the same period of last year. Our purchases of cattle and milk are significantly lower than last year's.

Now, in the village the task -- to perform spring field work in compressed periods -- stands in the same row as the concern for an organized completion to the wintering of the cattle. The distinctive feature of this spring is that the strain will be large because we are faced with performing work which was not completed last year -- to sow part of the winter crops and perennial herbs.

Comrade L. I. Brezhnev said in his speech to the 17th USSR Trade Union Congress that in the solution of the food problem there is "an enormous field for applying the energy of the trade unions. Their direct task is to attract the attention of society to the improvement of product storage and to the struggle against losses ... The trade unions have been called upon to search for concrete ways to untie the initiative and activity of all organizations and workers who have a relationship to food matters".

The trade union organizations are faced with improving their control over the quality of work performance and over the safekeeping and thrifty handling of seeds, fuel and fertilizers. It is necessary to put right the public catering and cultural, personal and medical services of the people who are working in the field.

The concern for the development of subsidiary enterprise farms and kolkhoz worker, worker and employee farm plots is a matter of exceptional importance for trade union organs. During recent years, quite a bit has been done in this matter. During the 10th Five-Year Plan, produce worth more than 224 million rubles was produced on the average during a year on the farms of the population. Gardening cooperatives, which unite more than 34,000 members, are making a weighty contribution.

At the same time, it is necessary to point out that there are still large reserves here. Subsidiary farms have been created only at dozens of the republic's enterprises. The trade union organizations have been called upon to overcome the force of inertia and to take an active position in matters of creating subsidiary enterprise farms. You see, this directly affects the improvement in the supply of that collective with food items.

An urgent task of the trade unions in their work and in their ties with the masses is to reach each working individual, to make the requirements of the party's economic policy close and understandable to him, and to convincingly show that it is this policy which answers his vital interest and that our common duty is to contribute to its full success. Ideological conviction -- this is the main thing which will help a Soviet individual to orient himself in public life, to find his place in the common task, to achieve the goals which have been assigned, and to overcome difficulties.

The more mature our society becomes, the greater is the attention which we can and must pay to the daily needs of the workers -- housing, food, services, health protection, and education -- everything which determines both the well-being and the attitude of an individual.

However, the necessary attention is still not being devoted to this everywhere. For example, how can the trade union committees of the contract organizations of the Ministry of Power and Electrification and the Ministry of Transport Construction reconcile themselves to the fact that sanitary repairs have not been performed for a long time in living and production premises, the workers do not have an opportunity to wash themselves at many projects being constructed, and that dryers for special clothing are not available? Plans for measures to improve living and working conditions have not even been drawn up in the construction administrations of the Estonskaya State Regional Electric Power Station and the Tallinskaya Heat and Electric Power Station.

The dining halls at the Tallinskiy Cold Storage Warehouse No 1, the "Metallist" Plant, the Tallinskiy House of Services, and several other enterprises have not been repaired for years.

In the field of personal services and maintenance which has been called upon to treat the workers' needs with the maximum of attention, one still has occasion as before to encounter cases of an elementary disregard of the people's requirements and low maintenance standards, and a careless attitude on the part of economic leaders and a conciliatory attitude on the part of trade union and public organizations toward this. It is necessary to make control more effective and informal, especially in areas which are directly connected with the people's day-to-day needs.

Comrade Vayno cited the brigade of plasters in the "Tallinstroy" Trust and Hero of Socialist Labor V. Mynzu whom he had met the night before. This brigade is working on the construction of a new building for the Tallinskiy Pedagogical Institute imeni Ed. Vil'de, it is working with great enthusiasm, rhythmically and with high quality. However, the members of this harmonious collective do not feel a genuine concern for themselves in everything. For example, they have claims against the organization of hot food at the work site.

Comrade Vayno pointed out that the trade union committee and the trust directors must listen very carefully to the comments of the workers and take steps to satisfy the daily needs of the builders.

The trade unions have been called upon to carry out more strictly the systematic checking on the performance of the plans for constructing housing, dining rooms, children's and medical establishments, and installations designed for cultural and personal services uses; and the plans for overhauling and routinely repairing housing assets. You see, we have cases of disruption and dragging out in the construction of these projects.

In his speeches at the 17th USSR Trade Union Congress and in Uzbekistan, Comrade L. I. Brezhnev once again pointed out that the 60th anniversary of the USSR, which is being celebrated this year, is the holiday of our dear motherland, a holiday of the friendship of the peoples, a holiday of the triumph of the Leninist nationality policy. At the same time, it is a good occasion to sum up results and determine and firm up tasks for the future.

Comrade Vayno pointed out that, in talking about the trade unions, they must raise the responsibility of personnel for the carrying out of the party's policy in local areas. Our leadership has experienced and intelligent personnel. During recent years, the trade unions have performed significant work under the direction of party organizations to improve the quality of their personnel. At the same time, it is necessary to involve ordinary workers, especially the youth, in trade union work more boldly and to engage in the selection, training and indoctrination of personnel reserves continuously.

Much remains to be done to improve the work style and methods of the trade union organs. The trade union committees must be more militant and more implacable toward shortcomings. We see the solution of this task in the further strengthening of party leadership over the trade unions. By its authority, the party contributes to the increase in the trade unions' influence. Our trade union committees and organizations can successfully solve the complicated problems facing them -- whether we are talking about the economy or about the cultural and spiritual development of the Soviet people. For this, however, it is necessary to be persistent in achieving an increase in the quality of trade union work in light of the new and high requirements.

Comrade Vayno said in conclusion that the Communist Party is devoting a great deal of attention to the work of the trade unions. This is a trust, this is a duty. Your plenum today must make its mark, contributing to the intensification of the work of the republic's trade union organization and to increasing its effectiveness.

The trade union aktiv, which has been invested with a great trust, is present here.

A large burden has been placed on your shoulders -- to organize the work of the trade union organizations skilfully and to make wide-spread use of the workers' initiative. This means to justify the fate of the masses and to contribute to the carrying out of the tasks assigned by the 17th USSR Trade Union Congress, by the instructions of Comrade L. I. Brezhnev, and by the 18th Estonian SSR Trade Union Congress.

Comrade Vayno expressed the conviction that the republic trade union aktiv would cope with these tasks and wished everyone great successes on this journey.

SHEVARDNADZE SPEECH AT GEORGIAN KOMSOMOL CONGRESS

Tbilisi ZARYA VOSTOKA in Russian 6 Apr 82 pp 1-3

[Speech by candidate member of the Politburo of the CPSU Central Committee, First Secretary of the Central Committee of the Communist Party of Georgia Comrade E.A. Shevardnadze at the 32nd Congress of the Komsomol of Georgia on 3 April 1982: "To Raise the Prestige of the Republic Komsomol, to Bring Up Young People on the Personal Example of Communists"]

[Excerpts] Dear comrade delegates!

Friends!

Respected guests!

Allow me in the name of the Central Committee of the Communist Party of Georgia, the Presidium of the Supreme Soviet and the Council of Ministers of the republic and in the name of all communists and all workers of Soviet Georgia to warmly greet from the soul all of the congress delegates and in your person as Komsomols all the young people of the republic and to wish them new successes in work and study and in the struggle for implementation of the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of Georgia!

We are sincerely glad to greet the respected guests of our congress: Chairman of the Committee for Physical Culture and Sports attached to the USSR Council of Ministers Comrade S.P. Pavlov, Chairman of the USSR DOSAAF Central Committee, Hero of the Soviet Union Admiral of the Fleet Comrade G.M. Yegorov, Secretary of the Komsomol Central Committee A.V. Zhuganov, Cosmonaut-Pilot, Twice Hero of the Soviet Union Comrade V.N. Kubasov and all the rest of our dear guests.

Recent years of the life of the republic have been characterized by the formation of positive constructive forms and methods of work and the appearance of new advanced work experience of the republic's party and Komsomol organizations. During this period, the requirements of the most important decrees of the CPSU Central Committee and the Soviet government were intensively implemented on the further development of the republic's national economy, increase in the production output of southern and subtropical crops, on the economic and social development of Abkhazskaya ASSR and of the decree of the CPSU Central Committee adopted in June 1981 shortly after the jubilee festivities of the 60th anniversary of Soviet Georgia summing up the work by the party organization of the republic's workers in the '70s, consolidating what was achieved and determining the further social and economic development of the republic. We received tremendous help and support, which made it possible to markedly reduce the lag behind average-union indicators and for many positions to assume the most forward positions.

In all affairs, side by side with communists, the Komsomols, our glorious youth, showed their best side. The party sent them to the most difficult sectors and the Komsomol has justified its trust with honor.

Today we, not forgetting the intensified struggle against negative phenomena and resting on the solid base of achieved successes, are confidently proceeding forward to our set goal--of overcoming the well-known lag of the republic behind the average generalizing indicators of industrial and general economic development.

Under the guidance of party organizations, the republic Komsomol takes an active part in putting into practice the food program and the program for production of consumer goods.

Young people absorb the creative approach of the communists of Georgia to the solution of pressing problems of the economy.

As is known to the congress delegates, the Georgian party organization has been consistently improving the forms and methods of management of agricultural production and the entire agroindustrial complex.

The basis for improvement of the system of management is to be found in the principles of democratic centralism--this is a combination of centralized supervision on the scale of the rayon with economic independence and initiative of individual enterprises and organizations belonging to rayon agricultural production associations. Practice shows that they are capable of independently solving on a rayon scale problems relating to concentration of efforts of agricultural, processing, transport, construction and other enterprises and organizations while adhering to the aim of increasing production volume and improving production quality through most optimal and effective ways. At the same time, associations, which possess the right of manipulating to advantage financial and material resources independently of the departmental subordination of constituent enterprises and organizations, have pulled up the lagging units and introduced a system of progressive material stimulation, establishing a complex program of economic and social development for the rayon.

I have dwelt in detail on the reorganization of management of the agroindustrial complex because it constitutes the tomorrow of our agriculture, the tomorrow of the processing industry and the tomorrow of our rural areas. And to the extent it is so, every delegate, every Komsomol member should know with what he is dealing and with what he shall run into tomorrow.

In December 1981, the Central Committee of the Communist Party of Georgia and the Council of Ministers of Georgian SSR adopted a decision on the spread of accumulated experience in individual rayons of operation of agricultural production associations and the introduction of this form of operation throughout the entire republic.

The Communist Party of Georgia believes that the republic Komsomol congress will announce the tasks of Komsomol organizations: to study well the introduced mechanism of management of agriculture and to determine its place in the operation of Komsomol organizations of enterprises belonging to these associations. Thus, to organize work in such a way that Komsomol committees and members feel themselves responsible for the end result--an increase in the production of food products.

According to the predicted calculation of our economist-scientists, the national per-capita income, including the consumption fund and personal consumption will grow significantly in the next two decades. The population's monetary and real income will increase. It is especially important that the size of the most important indicator of the population's living standard--public consumption funds--is sharply increased.

Here at the congress, speakers have raised questions of providing young workers, miners, building workers, student families, newlyweds and the like with housing. Requirements in the name of the congress have been addressed to the Council of Ministers, ministries and departments of the republic and the Central Committee of the Communist Party of Georgia.

The Central Committee of the Communist Party of Georgia places the solution of the housing problem before party, soviet and economic organizations as the main social problem of the immediate ten years and the subsequent period.

I seemingly should speak, comrades, of those big shifts in availability of housing to the population that are to take place in the immediate future. By the year 2000 per-capita housing space will increase. Each family will be provided with an individual well-appointed accommodation. Even by the end of the 11th Five-Year Plan there is planned the complete elimination of barracks and cellar housing accommodations and by 1990--the elimination of bad, decrepit collectivized housing accommodations of little value.

At the present time, formation of labor resources in the republic, and even in the country as a whole, is proceeding under conditions of an unfavorable demographic situation. The age composition of the able-bodied population is deteriorating: the relative share of young people in the total size of labor resources is growing smaller. In consequence of this, fewer young men and women are entering the able-bodied age during the 11th Five-Year Plan than during the past five-year period.

Such a demographic situation and statistics of the state of the birthrate acutely set the problem of raising the moral and social responsibility of each young person, each young man and woman, each young family before society, the Motherland, the people. Young people must create in time a strong and healthy communist family.

Demographic tendencies point to how important it is for each "workhand" to be used with high efficiency, how important it is to improve in every way each worker's quality of labor, starting with the minister and ending with the worker, how important it is for the entire able-bodied population to be involved in public production. It is precisely this that provides the guarantee of further rise of the republic's economy.

Comrades! To study communism means to study Marxist-Leninist theory, to deeply and creatively master it.

This constitutes one of the cornerstones of the problem—"youth and ideology." A poet said--we have not studied dialectics according to Hegel! Life has taught without a textbook dialectics to many revolutionary generations. But this does not mean that the theory should be underestimated. Such an approach would lead all of us to narrow over-emphasis of practice. It is impossible to sunder theory from practice, as this leads to crass theoretization, to pedantry, to dogmatism and other negative phenomena against which we are struggling. Life teaches us this, party history and Komsomol history teach us this.

The complexity, newness and scale of the problems of building communism make high demands on the level of awareness and education of the youth and on their political and moral qualities. They, as we know, do not come of themselves but are formed from early years and develop throughout one's entire life.

A young individual has to be well prepared for life, for active labor activity. The degree of his moral and political maturity can be judged primarily on his attitude toward labor. The fact is that labor, as we know, is not just a moral category but also a political and economic one. A basic principle of socialism states: "He who does not work, neither shall he eat." We know this well. But, unfortunately, sometimes the opposite occurs. For this reason, it is very important to train each person as early as possible for socially useful activity. Any delay in this important, I would say, state matter could be detrimental to the individual, which means to society. V.I. Lenin repeatedly recalled the need of inculcating in "all from their early years conscientious and disciplined labor."

In recent years, very important work has been going on in schools, vocational-technical schools, VUZ's, tekhnikums on strengthening of socialist discipline and on struggling against law violations, drug addiction and alcoholism among pupils and student youth and on the legal education of future young specialists. As a result of this, certain positive shifts are to be observed in the struggle against law violations and in preventive work. Rectors, directors, party, trade-union and Komsomol organizations of VUZ's and tekhnikums, schools and vocational-technical schools must intensify their work on the continued eradication of all negative phenomena that unfortunately still exist at schools, vocational-technical schools and in our life as a whole.

It is also necessary to point out certain difficulties and what is left undone in the planning of allocation and especially assignment in production. Despite overfulfillment of plan targets for production of specialists, VUZ's are not fulfilling plans of their state allocation. We still have not succeeded in overcoming shortages of cadres in a number of basic sectors of the economy and regions of intensive development of productive forces. In 1981, only 85 percent of allocated young specialists appeared at work places and still fewer stayed attached. This indicator does not suit us at all.

Republic ministries and departments, party and Komsomol organizations should adopt energetic measures for the establishment of exemplary order in this important state matter.

It is necessary to search for new forms and methods of working with young people. We require of each party organization, each communist maximum candidness and sincerity in dealing with Komsomols, young men and women.

We must fight for the minds and hearts of the young and to literally work with each young person.

We have to admit that in the past a certain drop occurred in the prestige of the Komsomol and authority of the communist.

Young people must clearly understand that the strength of the party is not to be found in the fact that ostensibly membership in the party by itself automatically excludes any violations, lapses and amoral acts by individuals.

No, this is not so. The strength of the party lies in the fact that it is capable of cleansing itself of antipodes, carriers of petty-bourgeois merchant morality, private-ownership psychology and other phenomena alien to us.

For this reason not a single Komsomol, not a single young person should make hasty conclusions from isolated instances of violation of the requirements of the Charter, law and morality of individual party members and Komsomols. Nodar Dumbayev has wisely spoken of this from the tribune of the congress. The overestimation of values and new directions in value orientation should not occur on the basis of superficial impressions, without a deep analysis of subjective and objective reasons giving rise to these or those negative phenomena.

Yes, we still have bribetakers and schemers, squanderers and other antipodes. These in the full sense of the word are traitors. But their existence does not provide a basis for making the conclusion that everything is bad with us.

Georgia, as you know, is a multinational republic, with great, age-old historical traditions of friendship and fraternity of the children of different peoples. Here the young people of more than 80 nations and nationalities live, create and build shoulder to shoulder, as a single family. What could be more wonderful than this?

Each autonomous formation that is part of Georgian SSR--Abkhazskaya ASSR, Adzharskaya ASSR, Yugo-Osetinskaya Autonomous Oblast--is successfully developing its economy and culture--an inseparable part of the economy and culture of the republic and the entire Land of the Soviets. Youth of all the autonomous formations are making their worthy contribution to the common achievements of the republic.

We have triumphantly celebrated the 60th anniversary of the formation of Abkhazskaya ASSR and Adzharskaya ASSR; the same celebration very shortly will take place in Yugo-Osetinskaya Autonomous Oblast.

On the example of territorially small Georgia, one can graphically see how the immortal ideas of friendship and fraternity of peoples bequeathed by the great Lenin can triumph. Actually, such fusion in a multinational state is an unprecedented phenomenon in the history of mankind. Delegations from all regions are taking a most active part in the work of our congress. I especially want to emphasize the solidarity, monolithic character and businesslike approach of the delegates from Abkhazskaya ASSR, which includes Abkhazians, Georgians, Russians, Armenians and representatives of other nationalities. I am certain that this atmosphere of friendship, cooperation and mutual respect, which fuses them into a unanimous, solid collective, reflects the atmosphere prevailing today in the autonomous republic.

Such internationalism, solidarity and active participation in the work of the congress distinguish the delegations of Adzharskaya ASSR and Yugo-Osetinskaya Autonomous Oblast and the representatives of the other nations and nationalities inhabiting Georgia. There are also Kurds here. And you know, how aggravated the problem of the Kurds in the East is at the present time. Among us, this nation is developing like all the others--the Kurds have their own theater, their ensembles; radio broadcasts are conducted in the Kurd language; Kurds have all the rights of USSR citizens--they study at VUZs, work in scientific centers and creative organizations, in industry and agriculture.

Party, Komsomol organizations should display constant concern for the improvement of international relations, not permitting any deviations from those principles that were formulated by the founder of our party and state.

Comrades!

Our republic is a border republic. Tens of military bases of the aggressive NATO bloc are located along its borders. A task of party organizations and the Komsomol of the republic is in every way to increase the political vigilance, to strengthen the ties of the army and the people and to improve the military-patriotic education of the youth. And it is understandable that many delegates, including Comrade A.I. Shirinkin, raised these questions in their speeches.

The Komsomol must more actively and concretely engage itself in strengthening the organizations of DOSAAF. It is unfortunate that Komsomol leaders rarely are in these organizations, which perform a very important state function. Hundreds of thousands of young people in DOSAAF undergo excellent schooling of pre-army training.

A task of the republic Komsomol is, jointly with DOSAAF organizations, to radically improve work with predraftees and with all categories of youth who are going to serve in the ranks of the valiant Soviet Army.

We must always remember that we are living in a very difficult time, in an explosive international atmosphere.

Defense of peace is particularly important today, under conditions where international imperialism is artificially aggravating the atmosphere concerning events in Poland and Afghanistan.

One of the biggest gains of Lenin's party is the victory of its peace-loving policy.

International imperialism would have long unleashed a new world war if it were not for the defensive might of the USSR and the countries of the socialist community.

The higher the level of the defense capability of our socialist Fatherland, the more successful does our economy develop, the more effectively does each one of us work in the sector entrusted to him, the less is the threat of a new world war! Such is the logic of the development of the epoch.

Following this logic, the youth must make a maximum contribution to the development of the economy and culture and work with utmost dedication for the benefit of strengthening the defensive might of our beloved Fatherland.

Yes, the army and the navy defend our peaceful, constructive labor and the cloudless sky over us. But the peace, comrades, rests not only on the powerful shoulders of our fightingmen; peace is defended by every young woman and every young man at a plant lathe and in the scientific laboratory, at a kolkhoz animal-husbandry farm and at the construction site, in the lecture hall and at the wheel of a combine.

We believe that our youth ardently love the Motherland and in their breast there beats the same kind of heart that loves the Motherland as in the case of Zoya Kosmodem'yanskaya and Zoya Rukhadze, Oleg Koshevoy and Shot Gamtsemlidze, Mirza Gelovani, Pavok Korchagin and Yuriy Gagarin.

Our youth are just as faithful to the cause of the party and the cause of Lenin as those generations of young heroes who became immortal at the barricades of the revolution, at the fronts of the Civil and Great Patriotic Wars, in military and labor achievements.

LITHUANIAN FIRST QUARTER PLAN RESULTS ASSESSED

Vilnius SOVETSKAYA LITVA in Russian 23 Apr 82 p 1

[Information Item: "In the Council of Ministers of the Lithuanian SSR"]

[Text] On 22 April there was a meeting of the Council of Ministers of the Lithuanian SSR at which an examination was made of the results of the fulfillment of the State Plan for the economic and social development of the Lithuanian SSR during the first quarter of 1982 and of the tasks to ensure the fulfillment of the annual plan. The Deputy Chairman of the Council of Ministers and the Chairman of the republic's Gosplan A. Drobinis delivered a report.

Note was taken of the fact that as a result of the extensive socialist competitions for a worthy reception of the 60th anniversary of the USSR the quarterly plan for the sale of commodity output was overfulfilled, and the increase in production volume envisaged for the year was ensured. The plans for capital investments and the construction and installation work, the commissioning of residential houses, retail commodity turnover, and the sale of domestic services to the public were overfulfilled. Definite successes were achieved in fulfilling measures in the field of social development.

At the same time, there were shortcomings and omissions in the work of the ministries, state committees, departments, associations, enterprises and organizations, and gorispolkoms and rayispolkoms. The first quarter plan for the procurement of livestock, poultry, and milk was not fulfilled. The plan for the hauling of freight and passengers by general use motor vehicle transport was not fulfilled. There were serious shortcomings in the work of railroad transport. The plan for the development of science and technology was not entirely fulfilled. In the first quarter of 1982 a large amoung of lagging was permitted in the fulfillment of metal output, timber materials, and chemical delivery plans.

The Council of Ministers of the Lithuanian SSR has bound the ministries and the leaders of departments, gorispolkoms and rayispolkoms, associations, and enterprises and organizations to map out and carry out measures for the most rapid elimination of the lagging permitted in the first quarter in the fulfillment of the output production and delivery plans, and also all other planning assignments, and, guiding themselves by the decisions of the November (1981) Plenum of the CC CPSU and the instructions and recommendations of Comrade L. I. Brezhnev contained in his speeches at the 17th Congress of Trade Unions and at the gala meeting in the city of Tashkent, to direct the work of collectives toward a further rise in production efficiency and the fulfillment of the planning assignments and socialist commitments which were established and adopted for 1982.

The ministries and departments of the agroindustrial complex, and the rayispolkoms and their agricultural administrations have been charged with ensuring the timely and high quality performance of the spring sowing on all farms, and also of the work connected with caring for the crops, to carry out in all places the organized shifting of livestock to pasture maintenance, to speed up the repairs on and preparations for work of the agricultural equipment which is necessary for bringing in the feed and the harvest, and to take measures for the maximum use by every farm of every possibility for increasing the production of feed and for its storage and rational use. Individual questions of the fulfillment of the plan were addressed by the Minister of Local Industry G. Simenenko, the Chairman of the Kapsukas gorispolkom K. Subachyus, the Chief of the Main Production Administration for Power Engineering and Electrification Yu. Nekrashas, the Deputy Chairman of the Council of Ministers. V. Kazanavichyus, the Minister of Agriculture M. Grigalyunas, the Chairman of the Moletskiy rayispolkom V. Tsesyunas, and the First Deputy Chairman of the Council of Ministers K. Kayris.

The Chairman of the Council of Ministers of the Lithuanian SSR R. Songayla addressed the meeting.

The Secretary of the CC of the Communist Party of Lithuania A. Brazauskas took part in the work of the meeting.

The appropriate decree was adopted on the question which had been discussed.

TAJIK SUPREME SOVIET RESOLUTIONS ON ENVIRONMENT, ORGANIZATION

[Editorial Report] Dushanbe KOMMUNIST TADZHIKISTANA in Russian, 20 May 1982, carries on page 2 several resolutions adopted at an undated session of the Tajik SSR Supreme Soviet. Resolutions were passed on pollution and environmental protection; on the work of peoples' control committees; and on information of the Ministry of Education and the Ministry of Higher and Secondary Specialized Education concerning the patriotic-international education of the republic's youth in preparation for the 60th anniversary of the formation of the USSR. Additional resolutions were adopted which dealt with R. Nabiyev's release from the duties of chairman of the Tajik SSR Council of Ministers in connection with his election to the post of first secretary of the Tajik CP Central Committee, and the removal of K. Makhkamov from the duties of deputy chairman of the Tajik SSR Council of Ministers and chairman of the Tajik SSR State Planning Commission. No reasons for his removal were given.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

PASTUKHOV REPORT TO 19TH KOMSOMOL CONGRESS

PM040717 Moscow KOMSOMOL'SKAYA PRAVDA in Russian 19 May 82 pp 3-8

[Apparent text of report delivered by B. N. Pastukhov, first secretary of the Komsomol Central Committee, at 18 May morning session of 19th Komsomol Congress in the Kremlin Palace of Congresses: "The Komsomol Central Committee Report and the Tasks of the Lenin Komsomol in Forming a Generation of Politically Active People Who Know Their Job, Love Labor and Know How To Work and Are Always Ready To Defend Their Motherland"--passages between slantlines printed in boldface]

[Text] Esteemed comrades:

The entire life of our Komsomol and its glorious history from the first revolutionary battles to today's achievements in the struggle for communism are illuminated by the party's Leninist attention and its exacting, wise leadership.

We are beginning our work uplifted by the inspiring speech of Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium. (tumultuous, prolonged applause) Its every word is permeated by the party's love and concern for the young generation, faith in the Komsomol's strength and hope that Soviet young people will devoutly preserve and augment that priceless possession--the world's first state of victorious socialism, a society which is building communism. (applause)

Comrade L. I. Brezhnev's speech and the CPSU Central Committee message of greetings to the 19th Komsomol Congress are documents of tremendous mobilizing force which will promote still more active participation by millions of young men and women in work for the practical implementation of the historic 26th CPSU Congress decisions. This is a combat program of activity for the Lenin Komsomol and a fatherly admonishment to the young people of the eighties.

In the red star city of Moscow, under the vaults of the Kremlin Palace of Congresses, where the most daring plans for communist creation are born, at this solemn hour the thoughts and feelings of the 19th Komsomol Congress delegates, all Komsomol members and all Soviet young people are merged in united words of gratitude and thanks to our beloved Communist Party and dear Leonid Ilich Brezhnev! (tumultuous, prolonged applause)

The party--the mind, honor and conscience of our era--is leading the Soviet people from victory to victory. And whatever steep heights may rise up before us, whatever difficulties we may have to overcome, the Komsomol is always with the party in everything--its true son, reliable helper and combat reserve. (prolonged applause)

"Communists are really the unbending core of our society," Comrade L. I. Brezhnev said at the 26th CPSU Congress. That is what Komsomol members and Soviet young people know communists to be like--unbending, aspiring to a lofty goal, ardent patriots, consistent internationalists, giving themselves to the struggle for the people's happiness.

Your own career, dear Leonic Ilich, is a vivid example of selfless service to the cause of the communists renewal of the world. The roads of your life have always coincided with the people's destiny, the fatherland's destiny. A Komsomol member and a communist, you began your career as a worker, you learned the difficult labor of a peasant, you experienced to the full the burden of war, you became a Bolshevik with Leninist tempering, a true continuer of Lenin's immortal cause.

From Leninist communists, from Leonid Ilich Brezhnev, the Komsomol learns to fight and to win. (tumultuous, prolonged applause)

Today, addressing Leonid Ilich Brezhnev, an outstanding politician and statesman of today, ardent fighter for peace and communism and remarkable, wise teacher of young people, Komsomol members and young men and women say: "Thank you, dear Leonid Ilich, for Soviet people's peace and happiness! Thank you for your fatherly concern for the young generation, for the happiness of learning from you revolutionary ardor, Bolshevik, unbending staunchness, ardent patriotism and proletarian, socialist internationalism!" (tumultuous applause)

From the bottom of our hearts we wish you good health and inexhaustible energy. May all your dreams of peace, of the working people's happiness, come true and may your courageous communist's heart beat tirelessly for the sake of our great motherland, for the sake of the triumph of communism! (tumultuous, prolonged applause)

/Komsomol members and Soviet young people unanimously approve and warmly and undividedly support our party's domestic and foreign policy and the fruitful activity of its combat staff--the Leninist CPSU Central Committee and the Central Committee Politburo headed by Comrade Leonid Ilich Brezhnev!/ (tumultuous, prolonged applause)

The Komsomol will struggle indefatigably and selflessly to fulfill the tasks set in the CPSU Central Committee's message of greetings to our congress and put forward by L. I. Brezhnev.

We know that these tasks are not easy, they will require the greatest intensity of effort, organization and discipline. But the Komsomol, educated by the party, has never sought the easy way. Its slogan is always onward, always into the line of fire, through difficulties to victory, and nowhere else! After all, we are led in the fight for communism by Lenin's party, by you, dear Leonid Ilich; you lead us along Lenin's course! (tumultuous, prolonged applause)

Comrades: The Lenin Komsomol has come to its 19th congress ideologically and organizationally strengthened and enriched by new experience. The forms and methods of communist education and the labor, ideological, political and moral tempering of young people have improved. A tremendous influence was exerted on this process by the 110th anniversary of V. I. Lenin's birth and the 35th anniversary of the Soviet people's victory in the Great Patriotic War. The celebration of the Komsomol's 60th anniversary and the presentation of the CPSU Central Committee's commemorative Red Banner to the Komsomol were vivid and unforgettable.

The main event in the period under review--an event of historic significance--was the 26th CPSU Congress. In a Leninist, profound, comprehensive way the congress examined the urgent economic and sociopolitical problems of developed socialism and analyzed the processes of formation of the new person. The historic peace program for the eighties was elaborated and has won the peoples' support.

/The 26th CPSU Congress decisions are Leninism in action. They are of tremendous significance for the further development of Soviet society and have aroused a broad response throughout the world./

The 26th CPSU Congress devoted great attention to the problems of communist education of children and young people and the Lenin Komsomol's affairs. L. I. Brezhnev's high, searching assessment of the Komsomol's activity inspires us and makes us assess what we have done in a principled, exacting, critical way. We cannot be satisfied with what we have achieved or tolerate shortcomings. "It is no secret that in certain young people," Comrade L. I. Brezhnev noted, "being educated and well-informed can sometimes coexist with political naivety, while professional training can coexist with an insufficiently responsible attitude toward labor. This is largely the result of shortcomings in the Komsomol."

The party draws our attention to the profound, vital questions of work with young people and demands an improvement in the education of the young generation. And the Komsomol will still more persistently and purposefully prepare young people for life and for the struggle, increase their labor activeness, strengthen their ideological and moral tempering, improve the harmonious spiritual and physical development of young men and women and the content and style of Komsomol work, establish a lively, creative atmosphere in every Komsomol organization, make its own contribution to the struggle for peace and strengthen the ranks of young internationalists.

Comrade L. I. Brezhnev has said today that the 26th CPSU Congress decisions require great energy and a constant intensity of effort from young people. Permit me to assure the CPSU Central Committee and you, Comrade Leonid Ilich, that we will do everything to ensure that the more than 41 million strong army of the Komsomol displays the staunchest, firmest heroism in mass day-to-day work and that every sector where there are Komsomol members becomes the front line in the struggle to implement the tasks set by the party. (prolonged applause).

I. Working Better, Working More Efficiently. Inculcating a Communist Attitude to Labor in Young People

Comrades: The growth of the socialist motherland's economic and spiritual wealth and defense might and the improvement of the Soviet people's well-being are the impressive results of the heroic labor and creativity of the working class, the kolkhoz peasantry, the intelligentsia and every working person of the multinational land of the soviets. Komsomol members and young people make their contribution to the development of the economy.

/More than half of all Komsomol members now work in the national economy./ And for each of them a special meaning is attached to Lenin's precept that on joining the Komsomol a young person takes on the "task of helping the party to build communism and helping the entire young generation to create a communist society."

Young people's attitude to labor is an indicator of their political awareness, moral maturity and citizenship. It is on the front lines of the 5-year plan that the country's young people grow up and the Komsomol's labor glory is strengthened.

Developing Socialist Competition. Fighting To Improve Labor Productivity, the Quality of Output and Scientific and Technical Progress

The 26th CPSU Congress defined the transfer of the economy onto an intensive path of development as the main direction in increasing the efficiency and improving the quality of all work. A lively response was aroused in young people's hearts by the party slogan: work better, work more efficiently, double and treble our creative efforts. Millions of young men and women are taking part in the competition to successfully fulfill plan targets for the second year and for the 5-year plan as a whole. The patriotic movement /"shock labor, knowledge, initiative and creativity from young people for the 11th Five-Year Plan!"/ is spreading.

Moscow's leading collectives initiated the competition which has been launched in the country under the slogan "60 shock labor weeks until the 60th anniversary of the USSR!" The capital's Komsomol committees are striving to ensure that every worker or specialist takes a step forward every day and achieves new success in his work. This is the aim of personal and team comprehensive plans for improving the efficiency and quality of labor. Young Muscovites are making a worthy contribution to transforming the capital into a model communist city.

The special concern of young Leningraders is to increase the volume of output while reducing the number of workers. More than 180,000 young men and women went over to the method of operating more than one machine tool last year. That is the result of improving professional skills, introducing the latest achievements of science and technology into production and mastering allied professions.

The traditions of Stkahanovite labor are being successfully developed by Ukrainian Komsomol organizations. Here Komsomol committees persistently strive to ensure that all young working people achieve the frontrunners' labor productivity and take up the best experience.

Everywhere the vast expanses of the Soviet motherland are pulsing with selfless shock work. And everywhere Komsomol members, young men and women, are alongside the communists. Some 2 million young guards of labor and 40,000 Komsomol and youth collectives, competing in honor of the 19th Komsomol Congress, have already fulfilled the targets for the first 2 years of the 5-year plan!

/It is the task of Komsomol committees to strive to ensure that socialist competition is strengthened at every plant, on every kolkhoz and sovkhoz, on every construction site, and that it actively influences the education of young working people./ It is important for every young production worker to stubbornly master the experience of frontrunners and innovators and for their achievements to become the Komsomol norm.

The educational force and effectiveness of competition are increased when it is based on accurate calculations and effective organizational and technical measures, when socialist pledges are not "passed down from above," but the person himself rises to the pledges, when they are the result of duty and skill. Komsomol organizations must participate more actively in introducing counterplans, seek collective discussion and defense of pledges, monitor their fulfillment, organize engineering support for workers' initiatives and stimulate the growth of competition participants' professional skills.

Competition is a living, creative matter and it is the opposite of formalism. Nonetheless, formalism is still encountered. In the Komsomol committees of the Cheboksary tractor plant, the Ulyanovsk truck plant, the Smolenskaya AES construction site and a number of others, welters of paper are substituted for real labor rivalry.

It is a law of competition that once your word is given, you keep it. But of the young workers who, for instance, adopted a pledge to introduce a rationalizing proposal, only one in three have kept their words. Only one in four of those taking part in the struggle for high product quality are producing top quality articles.

/Publicity, comparability of competition results and the opportunity to imitate the best experience are of particular significance for young production workers./ It is an important task of Komsomol organizations to skillfully support the frontrunners and show reserves to the laggards. For young men and women who have recently entered production a system of summing up competition results is needed which takes account not only of the level of achievements, but also of the dynamics of their professional growth.

It is important to make more active use of all forms of disseminating and imitating the best experience among young people: professional skill contests, public reviews of production reserves, schools of leading experience.

In 5 years more than 1,500 leaders of Komsomol youth construction teams have scaled the heights of skill and labor organization at Hero of Socialist Labor Nikolay Anatolyevich Zlobin's All-Union School. That is another 1,500 followers and propagandists of the team contract method and well trained educators of young people. (applause) The schools of leading experience led by the celebrated miner G. N. Gitalov and others are wide open for young men and women. But not only masters famous throughout the country head such schools. Sergey Tarazanov is only 26, but his school is already running at Atommash. A graduate of the city vocational and technical school, he was one of the first to master a complex operation in manufacturing nuclear reactors and now teaches this to his comrades. There must be more of these workers' academies in all sectors of the national economy. Here we count on the assistance of trade unions, ministries and departments. Komsomol committees must adopt a more active position in spreading leading experience.

/The significance of collective forms of labor organization for young people is inestimable./ There are more than 600,000 Komsomol youth production collectives in the national economy today. Of course, merely formally bringing young workers together in a team or a Komsomol youth collective is not much use. The collective grows strong when it aims for the resolution of urgent tasks put forward by production and by scientific and technical progress, when it is united by the idea of introducing new, leading methods. It is the task of Komsomol committees to ensure that the number of Komsomol youth collectives increases in all the crucial sectors of production. Comprehensive teams working to a single contract must be set up more actively. In such teams there are significant savings of time, manpower and material resources, discipline is stronger and new worker recruits learn their skills more rapidly. They are a real school of education and of the development of management habits and creative initiative.

/It is extremely important that there are always experienced cadre workers--the young people's mentors--alongside young production workers./ Some 3 million worker teachers are passing on their labor skill and rich experience of life to young men and women. We thank them for the generosity of their hearts, for training the young recruits as innovators and real citizens of their country--not as a duty, but because they want to (applause) The mentors' movement must be developed still more widely in all sectors of production, in science, culture and art, in the health care system and the people's education--in a word, wherever young people work, learn and acquire ideological and moral tempering.

Working better and more efficiently means /also improving the quality of the articles produced/. In the last 4 years the number of types of industrial output awarded the State Seal of Quality has increased by more than 36,000. Komsomol members acted as patrons for one-third of these articles. Latvian Komsomol organizations are participating actively in introducing a republican comprehensive quality control system. More than half of the young men and women there work on the basis of self-monitoring. Every second youth team has the title of "Excellent Quality Collective."

However, many Komsomol committees are still not sufficiently practical and persistent in this work. At the Leninakan Sewn Goods Production Association, Kostroma's Tekstilmash Plant, the Zaporozhye Kommunar Truck Plant and other enterprises a considerable proportion of output still shows defects, yet Komsomol organizations tolerate this. It is necessary to increase the effectiveness of patronage over the production of output which is up to the standard of the best Soviet and world models, to strive for more efficient work by integral-process teams and excellent quality staffs and posts and to develop collaboration among Komsomol organizations on the "workers' relay" principle.

/Labor productivity is decisive in the struggle for high efficiency in the national economy. Komsomol members and young people must participate more actively in introducing new, leading methods./ For instance, it is an urgent problem to eliminate manual, unskilled and heavy physical labor. Putting this labor onto the shoulders of machines and machinery means making labor not only more productive, but more meaningful, interesting and creative. Komsomol organizations must find out where to apply their efforts to resolve this task.

An effective trend in automation and mechanization is the wide introduction of industrial robots and automatic manipulators. Participation in their development and assimilation offers broad scope for creativity and research by young rationalizers and inventors in various sectors of the national economy.

The 26th CPSU Congress set the task of bringing all sectors of the national economy up to the forefront of science and technology. /Komsomol organizations are called upon to participate still more actively in accelerating scientific and technical progress and integrating science and production./

Comprehensive creative youth collectives are an effective form of utilizing the energy and creative daring of young scientists, specialists and production workers. There efforts are aimed at resolving the most important scientific, technical and production problems. There are more than 12,000 such collectives in the country today. In Gorkovskaya Oblast alone the savings from the introduction of their developments totaled more than R20 million over 3 years.

Some 50 years ago some young enthusiasts organized a club called GIRD--"Group for the Study of Jet Propulsion" In those years the country was short of tractors, vehicles and machine tools--essentials--but the young people's creative thought surged ahead without restraint, toward seemingly inaccessible realms of science. The group's name was jocularly said to stand for: "Group of Engineers Working for Nothing" [Russian initials: GIRD]. For nothing in the sense of without pay, but some people added ironically that it meant without results too. Time passed. The enthusiasts' labor, research and daring had echoes in the victorious thunder of the space age. Every schoolboy knows that the space age was brought closer by the outstanding scientists S. P. Korolev, F. A. Tsander and others who began their careers in GIRD.

The baton of scientific daring is being handed on. A creative collective of young physicists and Lenin Komsomol prizewinners from Moscow and Tomsk have developed a pulse generator. Its capacity in short pulses is greater than the capacity of the Krasnoyarsk GES. The generator has wide, tempting prospects.

We are confident that talented new scientists and engineers will emerge in creative collectives and bring our motherland glory. (applause)

The main highways of scientific and technical progress are today associated with the elaboration of 170 state comprehensive scientific and technical programs. Komsomol organizations and councils of young scientists and specialists must join energetically and practically in their implementation.

/Various categories of young people must be involved more actively in scientific and technical creativity/, which now involves more than 21 million people. The result of their quest in the first year of the 5-year plan was R1.5 billion--that is, one-fourth of the country's entire rationalization fund. Our young people's tremendous creative potential is convincingly demonstrated by the all-union exhibition of young people's scientific and technical creativity, now in progress at the USSR exhibition of national economic achievements. But young people's contribution to scientific and technical progress could be even weightier if every useful proposal were introduced into production without fail. To achieve this is the main aim of operation "introduction."

More Komsomol attention is needed in the sphere of management work, in which hundreds of thousands of young people are employed. Success depends on the computer operator, the clerk, the technical secretary, the typist and employees in other categories. It is necessary to increase their sense of responsibility and executive discipline and to involve Komsomol organizations more actively.

Active Participation in Implementing the Food Program

Comrades: The party, consistently implementing a Leninist agrarian policy, is seeking a steady upsurge in agriculture. New evidence of its concern for the people's well-being is provided by the elaboration--on Comrade L. I. Brezhnev's initiative--of the food program. It is based on a high growth rate in agricultural production, above all in production of grain, meat, milk and other products.

One of the main components of our state's might and its invaluable treasure has been and remains grain. Kazakhstan's young grain growers are confidently taking over from the first virgin land workers. The training of worthy farming recruits, the creation of new Komsomol youth collectives, the organization of militant socialist competition, the wide introduction of leading experience--these are the foundations of success by Komsomol organizations in the battle for the Kazakhstan billions [of poods of grain] which have become the workers' norm in the republic.

L. I. Brezhnev has given a high assessment of the deeds of Komsomol members and young people in Uzbekistan, who have taken on care for the cornfields. In 9 years of patronage the production of "amber grain" has increased nearly fivefold! Every sixth youth collective obtains 100 quintals or more corn per hectare, while in the team led by Kumri Khasanova, winner of a Lenin Komsomol prize, every hectare yields an average of 145 quintals of grain. Komsomol organizations also contribute to the steady growth of cotton production.

Komsomol members, young men and women are participating actively in the cultivation of grain and industrial crops, vegetables and fruit in the Ukraine, Belorussia, Azerbaijan, Georgia, Tadzhikistan, Turkmenia, Estonia, Stavropolskiy and Krasnodarskiy krays, Bashkiria, Orenburgskaya and Rostovskaya oblasts and other oblasts. In Moldavia industrial techniques for cultivating agricultural crops have been mastered by all youth teams, which produce half of the corn, sugar beets and sunflowers.

/It is the duty of Komsomol members and young rural workers to display untiring concern for soil fertility, the application of chemicals and land reclamation, to more actively introduce the achievements of scientific and technical progress and scientifically substantiated farming systems and to cultivate stable harvests in all weather conditions.

The central figure in the countryside is the machine operator/. About 3 million young men and women mastered machine operating specialities and improved their skills just in the course of the all-union review of technical training in 1980-1981. But in a number of regions there is an acute shortage of machine operator cadres. The number of Komsomol member machine operators is falling in Kaluzhskaya and Chernovitskaya oblasts and certain others.

In the 11th Five-Year Plan all young rural workers must be taught the mass agricultural professions. The countryside now needs not just tractor and combine operators, but real masters of farming--people with profound, comprehensive knowledge. The standard of farming is the standard of the person working on the land.

It is necessary to cultivate in young machine operators a careful attitude toward machinery and to involve young men and women in building and equipping machine yards, garages, awnings and sites for storing it. In Kirovogradskaya Oblast, for instance, thanks to skillful operation of tractors, their length of service has been extended by an average of 2 years!

/In the thick of rural affairs are young specialists/ who have recently graduated from agricultural VUZes and technical schools. In recent years their numbers have increased perceptibly in the countryside. It is important for their knowledge, energy and creative impulse to receive support and extensive application in the fields and livestock units.

When Aleksey Volosevich, a graduate of the Velikiye Luki Agricultural Institute, became head of the Krasnoye Znamya Kolkhoz in Pskovskaya Oblast, the farm's indicators were below average. Now they obtain as much milk here from 600 cows as a neighboring farm does from a herd nearly twice as big. The kolkhoz has the smallest sowing area in the rayon, yet its gross grain yield is the biggest. The yield of grain crops is nearly 30 quintals per hectare. And this is in nonchernozem conditions!

/The shock front in the countryside is livestock raising./ In the period since the 18th Komsomol Congress more than 500,000 young men and women have been sent into this sector on the basis of a public appeal. A notable contribution is made to the development of livestock raising by the Komsomol organizations of Kirgizia, Kalmykia, Moskovskaya, Kiyevskaya, Kirovskaya, Kostromskaya, Novosibirskaya, Ombskaya, Taldy-Kurganskays and Cherkasskaya oblasts and other oblasts. But the number of Komsomol-member stockmen in the country as a whole is increasing only slowly.

Not all Komsomol organizations display the necessary persistence and practicality in improving work at every livestock unit and complex. Insufficient concern for working and living conditions and organization leads to a high cadre turnover. Komsomol committees in Belgorodskaya Oblast have sent an impressive detachment of volunteers into livestock raising--more than 2,500 people--but the number of young people in the sector has not only failed to rise, it has fallen by nearly 1,000. The number of Komsomol members has fallen at livestock units in Lipetskaya, Yaroslavskaya, Vinnitskaya, Uralskaya and Ternopolskaya oblasts.

Increasing fodder production is a vital question. Following the example of Komsomol organizations in Belorussia, the Kuban and Saratovskaya and other oblasts, more active patronage should be adopted over the cultivation of fodder crops and shock detachments, teams and units for fodder procurement should be set up. Making livestock raising a shock front for young people means doing shock work in every section of the sector, improving the standard of production, playing a more active part in the mechanization and automation of labor-intensive processes, in the construction and modernization of livestock units and the provision of amenities in the territories and introducing progressive techniques into the work regime.

/Keeping young people in the countryside is an important Komsomol concern./ Where people are interested in this, results are achieved. But a breakthrough has not yet been achieved in this crucial matter everywhere.

In a number of places young women are reluctant to stay in the countryside. In 1980, out of every 10 graduates from rural schools who remained to work in agriculture, there were only 2 girls in Novgorodskaya, Chelyabinskaya and Tomskaya oblasts and only one or less in Ivanovskaya Oblast.

One cannot help wondering: where do the local guys look? They might have to stay bachelors. (animation in the auditorium, applause). But seriously, is it now time for Komsomol committees in these and other oblasts to show energetic concern for the variety of labor, leisure conditions, training and the professional development of female rural workers?

Our remarkable girls are the soul and adornment of any collective. And how they can work! Tatyana Likhonosova, a delegate to our congress and Komsomol organizer of a women's Komsomol youth team on the Rassvet Kolkhoz in Rostovskaya Oblast, could tell us about that. The young women masters obtain high grain yields in all weather conditions. This collective, one of the best, was awarded the Komsomol Central Committee prize named for the frontline tractor teams. Tomorrow Tatyana Likhonosova and her machine operator friends will be given named tractors. May your furrow be smooth and your plowing be easy, dear girls! (prolonged applause).

The aims of the food program are those of the whole people, as are the paths toward its fulfillment. It is intended to link in a single agroindustrial complex the production, procurement, transportation, storage, processing and sale of agricultural products. Many young people are employed in all these sectors, and the country's food production line must become a line of Komsomol initiative, zeal and selflessness.

/In resolving the food problems it is important to utilize all reserves and resources./ V. I. Lenin's speech at the Third Komsomol Congress, "The Tasks of Youth Leagues," contains these lines: "Take, for instance, work on out-of-town market gardens. Is that not important? That is one of the Komsomol's tasks." These tasks are important today too, now that the party is doing everything to encourage the creation of subsidiary plots attached to major enterprises, construction sites and rural schools.

Hundreds of young workers at the Leningrad V. I. Lenin Optical Machinery Association, spending leave and free days in their lodgings, procure hay for the subsidiary farm or weed the vegetable patch. With their participation, livestock units for 450 head of cattle, 1,000 hogs, and 150 sheep have been fully mechanized and hothouses covering an area of 5,000 square meters have been built. The subsidiary farm has become a reliable supplier of foodstuffs for the table of the collective's working people.

Komsomol organizations have begun to play a more active part in the development of personal plots. The yard and the domestic plot help young people to learn the taste of agricultural labor and master the necessary skills. Of course, the farmstead kitchen garden or stockyard must mold not petty proprietors, but masters with a sense of responsibility for constantly replenishing the people's larders. Komsomol committees in Odesskaya, Vorohezhskaya, Vladimirskaya and other oblasts are acting correctly in involving young people in raising livestock and poultry on a contract basis and organizing voluntary Saturday and Sunday work to procure fodder for personal plots.

/Patronage over the implementation of the comprehensive program for the development of the RSFSR's non-Chernozem zone has become a shock task for the Leninist Komsomol./ More than 150,000 young volunteers have already been sent there on Komsomol passes. More than 300 major agricultural and land reclamation projects--Komsomol shock construction projects--have been commissioned. The Druzhba, Uzbekistan and Belorusskiy sovkhozes, created with active participation by young people, have begun to yield output. As in the years of the opening up of the virgin lands, the names of the new sovkhozes reflect the participation of young people from the union republics in this nationwide task.

The Komsomol contribution to the development of the non-Chernozem could be still more significant if the labor of young construction and land reclamation workers were better organized, construction sites were fully supplied with machinery and materials and more favorable housing and living conditions were created. When we speak of this we are sure that we will be heard in the relevant ministries and departments. The Komsomol Central Committee rural youth department must also display greater persistence in resolving these questions.

The face of the Soviet countryside is changing year by year. Komsomol members and young men and women will continue to participate actively in developing rural culture and the provision of amenities.

Good roads are an integral part of an efficiently operating agroindustrial complex. Losses in agriculture resulting from lack of roads are counted in billions of rubles a year. Komsomol organizations and rural young people could actively set about building roads. This offers scope for initiative and active participation on the part of the rural Komsomol raykom above all. It is necessary to utilize the young people's construction project method and to involve young people from the cities, students and student construction detachments. Every rural Komsomol organization should have, so to speak, its own Baykal-Amur railroad.

/The modern agrarian sector is closely associated with many sectors of the national economy./ Komsomol committees should devote more attention to the work of enterprises which supply the countryside with machinery and fertilizers and to increasing the efficiency of work by procurement and processing enterprises and give them concrete assistance in strengthening the material and technical base. There must be more Komsomol concern for young men and women employed on the "blue farm"--in the extensive pond-fish farming industry--and for young working people in the fishing fleet, whose contribution to supplying the population with food is becoming increasingly important.

The food program is a program for a broad offensive along the entire front of our economy. And we will do everything possible to fulfill L. I. Brezhnev's instructions given at the present congress and to ensure that every Komsomol organization and every Komsomol member in the countryside and the city knows precisely his place in this cause of the whole people, takes on concrete commitments and gives an account of what has been done. It is the direct duty of the entire Lenin Komsomol and Soviet young people to participate actively in the implementation of the food program outlined by the party and to form a shock detachment in this great state task. (prolonged applause)

Augmenting the Traditions of Militant Komsomol Patronage of Capital Construction and Increasing the Komsomol's Role in Developing the Most Important National Economic Sectors

Comrades: In a few days' time we will be celebrating the 50th anniversary of Komsomolsk-na-amure. The stars of Magnitka, the Dneproges and Kuznetsk, kindled by the First Five-Year Plan, were already burning on maps of the country when the steamers Komintern and Kolumb [Columbus] drew ashore on the banks of the Amur in spring 1932. The Komsomol Columbuses who had arrived on the Amur shores were to kindle a new star and discover a new continent. Its name is the shock Komsomol youth construction project, which has ever since been firmly associated with the life of the Komsomol generations.

/In the period under review the Lenin Komsomol's patronage of capital construction continued and gained new experience./ In all-union shock Komsomol construction projects alone more than 1,000 major national economic projects have been commissioned. They include the Kama Truck Plant, that giant of motor vehicle building, which has reached its planned capacity; the Leningrad and Armenian AES's; the Ust-Ilimskaya, Zeyskaya and Nurekskaya GES's; the Soyuz main gas pipeline; the Kiyembayev asbestos mining enrichment combine; the Nadezhdinskiy metallurgical plant, and many others. Over 4 years nearly half a million young men and women have come to all-union shock projects on Komsomol passes.

It was from this Kremlin auditorium that the first Komsomol detachments left for the construction of the Baykal-Amur railroad. More and more volunteers followed them. We can report to the delegates that the decisions of the 18th Komsomol Congress are being successfully fulfilled. A cohesive multinational collective, its nucleus made up of envoys from the Lenin Komsomol, is working on the line. Some 2,360km of steel track have been laid. Dozens of new cities, settlements and industrial projects have been built. /The builders of the Baykal-Amur railroad fulfill all their pledges with honor, ahead of schedule, and Comrade L. I. Brezhnev has more than once congratulated them on great labor victories./ Comrades, let us say thank you to the young builders of the Baykal-Amur railroad--courageous people and real patriots! (timultuous applause)

Komsomol organizations' efforts must now be directed not only toward competing the laying of the track and preparing for opening it to through traffic, but also toward the accelerated industrial opening up of the Baykal-Amur railroad zone and its agrarian belt and the construction of new cities, plants and factories in Siberia and the Far East.

Young people are building and settling the new regions. In the first shock detachment sent to the Baykal-Amur railroad by the 18th Komsomol Congress, of the 600 volunteers only 14 had families. After a few years, only 13 bachelors are left in the detachment. But not for long: new Komsomol weddings are anticipated.

A generation of Baykal-Amur railroad natives is growing up. For them probably one of the strongest impressions of childhood will be the whistle of the diesel locomotive whose path was built by their fathers and mothers. The life of each of these young citizens will have its own railroad, and the glorious relay of the feats of Soviet generations will never be broken! (tumultuous applause)

/The map of the motherland today shows 135 all-union shock Komsomol construction projects and about 4,000 republic, kray and oblast projects./ Large-scale territorial production complexes have become subjects of Komsomol patronage. But last year one in three shock Komsomol construction projects tolerated serious laggardness and failed to ensure the commissioning of projects scheduled for completion. Of course, it would be incorrect to put all the blame for this on the Komsomol organizations. But what are the Komsomol committee and staff of the Kursk AES shock construction project doing, for instance, when a significant proportion of young people there fail to fulfill their output norms and tens of thousands of man-days are lost due to idle time and absenteeism?

/The practice of the public call-up of young people must be improved./ The practice of sending large detachments of Komsomol members and envoys from all republics, krays and oblasts has earned a good reputation. In a few days' time the fighters of the 2,500-strong all-union shock detachment named for the 19th Komsomol Congress will be sent off to the north of Tywmenskaya Oblast, the Baykal-Amur railroad, Krasnoyarskiy Kray, Komsomolsk-na-amure, the routes of the Russian non-Chernozem and other projects. With all our hearts we wish them success and say: do not let us down!

In 1982-1985, 350,000 young volunteers are to be sent to all-union shock construction projects. In a number of places construction organizations and Komsomol committees are adopting mutual pledges to take better care over selection, job placement and the creation of normal conditions for the work, life and leisure of young people. In the Ukraine and Lithuania candidates for joining the detachments are invited to do a month's probationary training in local construction organizations. This is useful experience.

However, difficulties do occur in organizing the public callup of young people. In different regions and sectors of industry questions associated with sending young volunteers to construction projects are resolved in different ways. The Komsomol Central Committee requests the USSR Council of Ministers to adopt a special document governing the procedure and financial and material backup for the public callup of young people on a countrywide scale. (applause)

Questions of the growth and development of young cities are closely associated with the mass influx of young people into regions being opened up. Following a proposal from the 18th Komsomol Congress norms were revised for new cities under construction and new designs for workers' hostels were elaborated. But the problem of housing and sociocultural and consumer facilities in young cities remains acute. That is why there was such a warm reception for L. I. Brezhnev's remarks in his report at the 26th CPSU Congress to the effect that on-the-spot reports on the commissioning of new industrial projects must only be considered valid if the program for housing, cultural and consumer construction envisaged by the plan is also fulfilled.

/Komsomol organizations must increase young people's role in the construction of housing and sociocultural and consumer facilities/ and seek the full assimilation of resources made available for these purposes. The initiative of Komsomol organizations in constructing housing and sociocultural and consumer projects by the people's construction method in the city of Kaliningrad in Moskovskaya Oblast, Sverdlovsk and Kazan merits development. On kolkhozes and sovkhozes in Dnepropetrovskaya and Kirosvkaya oblasts financially autonomous youth teams have been set up to build housing for young families.

The party stresses that an essential prerequisite for the resolution of all national economic tasks--both in production and in the social sphere--is /the development of heavy industry, and first and foremost the fuel and energy base/.

A gigantic construction area--the Tyumen constellation of 16 Komsomol construction projects--extends over a territory of 1 million square kilometers. One in every four construction workers in western Siberia is a Komsomol envoy and one in every three teams, sections and construction and installation administrations is a Komsomol youth collective.

Participation in the struggle to exploit Siberia's wealth has become the combat cause of all detachments of the Lenin Komsomol. The Komsomol "green light" is on for orders from construction workers, oilmen and gasmen. The young people's selfless labor is bring closer the cherished target of achieving the extraction of 1 million tons of Siberian oil and 1 billion cubic meters of gas a day in the current 5-year plan. Only 5 years ago was approximately how much was extracted in a day in all the country's oil and gas fields together!

As the party teaches, it is necessary to take the wealth of western Siberia by skill and accurate calculation and to adopt a creative approach to the solution of problems which arise. Take, for instance, the tour-of-duty method of opening up new regions. Tens of thousands of young workers from Belorussia, the Ukraine, Bashkiria and Tataria work as members of "flying" trusts and directorates in western Siberia. Unfortunately Komsomol committees often lose sight of them. Firm contacts must be established between base and field Komsomol organizations and control must be established over the development and manufacture of special forms of transport, canteen cars and club cars and prefabricated, well-appointed settlements.

/The Komsomol's participation in the struggle for coal--the bread of industry--has become more active./ On the basis of long-term programs, patronage is being exercised over the major Kansk-Achinsk fuel and energy complex and Pavlodar-Ekibasutz and South Yakutia territorial production complexes. The senior sector has grown perceptibly younger. The average age of its workers has fallen by 4 years recently. The patronage of Ukrainian Komsomol organizations over coal industry enterprises in the Donbass, for instance, has developed successfully. All the same, there are still not enough young people in the mines and open coal pits. Komsomol organizations are called upon to strengthen patronage of the sector, contribute to its modernization, the introduction of comprehensive mechanization in coal extraction and the improvement of labor productivity, propagandize the mining profession more actively and send more young people to mining schools on Komsomol passes.

From the first little starts on the country's power map, from Volkhov and the Dneprogres onward, the Komsomol has played an active part in developing the power industry. Special attention is now required by the construction of nuclear power stations, at which 24 to 25 million kilowatts of new capacity will be commissioned during the 5-year plan.

In virtually all sectors of the national economy the rate of technical progress is determined by the state of affairs in /metallurgy and machine building/. The young working people of the Kharkov tractor plant have proposed the proclamation of an all-union Komsomol campaign for the modernization of retooling of the country's oldest enterprises and the pioneers of socialist industrialization. This initiative must become widespread.

/Transport is the circulatory system of the national economy. The Komsomol is continuing its patronage of its development./ "Rhythm, speed and quality for the Komsomol youth route of the 5-year plan!"--that is the slogan for young railroad workers. Unified Komsomol dispatcher shifts have been created and are operating everywhere. At least 10,000 young men and women must be sent into railroad transport annually.

The sector's Komsomol members must be well aware of a simple but important truth: the iron road means, above all, iron discipline. It is necessary to disseminate more widely the experience of the young railroad workers of the Dnepropetrovsk area, who have created teams of exemplary discipline, and to step up the struggle against the embezzlement of freight. Komsomol committees must thoroughly study the nature of the problems and tasks facing enterprises in motor transport, civil aviation and the maritime and river fleets and give them day-to-day assistance.

The labor of transport workers and the labor of coal and power workers are closely interconnected. Konstantin Snegirev, member of the Komsomol Central Committee and Ekibastuzugol Association excavator operator, has submitted a proposal for examination by the congress: organize socialist competition among young people at enterprises united by the "coal-freightcar-power industry" unified technological cycle. This seems a good idea, and the Komsomol Central Committee working youth department should help implement it.

/In the period between Komsomol congresses Komsomol patronage of the production of consumer goods and the development of trade and the service sphere has been strengthened./ Spinner Valentina Kaplenkova of Ivanovo's F. E. Dzerzhinskiy spinning and weaving factory has been a delegate to the 18th and 19th Komsomol congresses. There has not been a single day in the last 4 years when Valya has not fulfilled two or even three norms in one shift. Everyone lucky enough to buy the beautiful "Valtentina" tapestry fabric in the stores should know that this name was given to the new variety by the factory's artistic council as a token of this remarkable Komsomol member. (prolonged applause). A worthy successor to the Vinogradovas, Gaganovas and Gulubevas ! [reference to celebrated textile workers]

In the period under review Komsomol committees sent more than 650,000 young men and women into trade and consumer services on Komsomol passes, the Komsomol stratum increased considerably and Komsomol organizations began to study the problems of these sectors' development more thoroughly.

However, we just self-critically admit that we did not succeed in entirely fulfilling the task set by the 18th Komsomol Congress for organizing efficient Komsomol patronage of the trade and services sphere. One in three Komsomol committees fails to fulfill targets for the public callup of young people into the trade and services sphere, where there is a shortage of more than 300,000 people today.

The measures being adopted by Komsomol organizations to combat violators of the rules of trade and service and manifestations of rudeness to clients and negligent work are clearly inadequate and ineffective and are not backed up by systematic educational work. This work must be stepped up among young salesclerks and workers in consumer services. We must strive to ensure that exemplary Komsomol youth enterprises in trade and the service sphere operate in every rayon and city.

Responding to the appeal heard here today from Leonid Ilich Brezhnev to set an example of model, selfless work in these sectors, Komsomol members and young men and women will become pioneers of all that is new and advanced in trade, public catering and consumer services and will display constant concern for people's interests. (applause)

Cultivating a Thrifty Attitude Toward Public Property and Fighting for Economy, Thrift and High Labor Discipline

The core of economic policy, it was stressed at the 26th CPSU Congress, is something which seems simple and everyday--/a thrifty attitude toward public property/.

The economy must be economical. That party principle incorporates not only a program for struggling for higher targets in our national economy; it is also a program for educating the new person. Komsomol organizations must form in young men and women the qualities of masters of socialist production and a lofty sense of responsibility for the results of their labor.

The mass involvement of young people in the struggle for savings at every work place and the collective quest for production reserves are promoted by the all-union public review of the utilization of raw and other materials and fuel and energy resources, carried out by the AUCCTU, the Komsomol Central Committee and the USSR Gossnab. Millions of rubles have been saved in the course of this review.

It is noteworthy that in young people's pledges for the above-plan production of output you can read more and more frequently: "Using saved materials" and "with saved energy resources." In this respect today's print run of 10 million copies of KOMSOMOL'SKAYA PRAVDA is special. It has been entirely printed on paper manufactured from raw materials saved by the Komsomol youth collectives of the Solikamsk pulp and paper combine. (applause)

Thrift is akin to creating or augmenting our public wealth. Economists have calculated that significant savings of raw and other materials and reductions in losses of agricultural products could be achieved purely by improving storage, packaging and transportation. These are reserves whose utilization could have a tremendous affect thanks to a thrifty attitude to the people's property.

Thrift presupposes a careful approach. The people have always said: take care of the kopeks and the rubles take care of themselves. The mightier and richer our country becomes, the greater losses result from disregarding kopeks and "trifles." And what "trifles" they are, when, for instance, the loss of a single ear of grain per square meter of area sown amounts to hundreds of thousands of tons of grain over the country as a whole.

"In economic work," V. I. Lenin said, "what is needed is a certain amount of--perhaps the word is not quite appropriate--"miserliness.' And we have not yet learned to be "miserly.'" In all types of work it is necessary to "keep accounts, so that we can become the masters of our entire republic..."

The idea of savings and thrift must grip the awareness of young people as strongly as the idea of shock work, labor records and the production of above-plan output. It is necessary to keep strict Komsomol accounts of savings of material resources and the safeguarding of the people's property. The forms of this work must be lively, interesting and effective. Here, as L. I. Brezhnev stressed today, the main thing is the end results and taking precise stock of them. It is proposed to open an all-union Komsomol tally of savings and thrift in the 11th Five-Year Plan. Komsomol members, young men and women and every Komsomol organization must have personal accounts to record savings and books to record thrift. (applause)

The Komsomol member cannot be indifferent toward thriftlessness and extravagance. Komsomol committees and detachments and staffs of the "Komsomol spotlight," which includes about 5 million Komsomol members, must strengthen ties with people's control organs and erect firm barriers against extravagance, losses and thriftlessness. May the "Komsomol spotlight" mercilessly bring before the public court all kinds of "pilferers," other embezzlers of the people's property, slovens and all who damage the country's interests.

A few words about the use of secondary raw materials. Considerable reserves are to be found here. For instance, in an article entitled "The Golden Glimmer of Tin" KOMSOMOL'SKAYA PRAVDA recently raised the question of the reprocessing of used tin cans, which would make it possible to obtain an additional large quantity of valuable metal. We thank the USSR Council of Ministers, which paid attention to this item and adopted urgent measures. If only the leaders of the "Vtorsyrye" ["secondary raw materials"] system operated so flexibly and with such commitment! It is hard to explain and still harder to justify their inertia, which sometimes reduces to nothing--from both the economic and educational viewpoint--substantial work by young men and women, pioneers and schoolchildren, when poor organization by workers in this system means that old paper, scrap metal and other raw materials which have been collected are wasted.

Thrift is a moral trait. A proprietorial sense strengthens the alloy of economic thought and conscience, economic knowledge and concrete action, concern for our general good and for one's own personal good. Komsomol committees should implement a system of measures to mold in young people a communist attitude to public property. The Leninist idea of "economic education" must be implemented at every place of work, wherever young people work or study.

The economic education of young people requires constant attention. Its effectiveness and quality depend on its links with the living practice of economic work. At the Urals freightcar plant alone, for instance, on the basis of proposals from students at schools of economic knowledge, more than 160 organizational and technical measures were implemented in the first year of the 5-year plan, and more than R300,000 was contributed to the Komsomol savings fund.

The inculcation of thrift begins in the parental home. Family thrift plus family teaching--that is the furrow we must plow. Every family must instil in its child a lifelong devout attitude toward bread and the wise words: scoop up every crumb! (applause)

It is the duty of Komsomol organizations to /cultivate a thrifty attitude and love of nature/. The very essence of communist morality presupposes concern not just for "your own backyard," but for our whole mother earth. And here there must be a place for the pioneers' "green" and "blue" patrols, school forestry, student nature conservation groups and young scientists.

Concern for nature conservation is concern for the country's future. The earth's resources, the riches of our forests, water sources and fields--all must be protected, utilized thriftily and carefully and, wherever possible, augmented.

To protect the land and embellish our cities and villages is a good Komsomol tradition. And it must be followed as they do in mining Donetsk, which luxuriates in greenery and where for a million inhabitants there are a million rose bushes. (applause)

Speaking of thrift, we must not lose sight of a careful attitude to working time. In present-day conditions the loss of just one working minute on a countrywide scale is equivalent to the loss of the results of a day's labor by 250,000 people.

The Komsomol Central Committee and Komsomol committees must still more energetically channel the efforts of Komsomol organizations into fulfilling the CPSU Central Committee, USSR Council of Ministers and AUCCTU resolution "On Further Strengthening Labor Discipline and Reducing Cadre Turnover in the National Economy." Losses of working time due to absenteeism, lateness and failure to turn up for work are still very great in many sectors. There are many young people among those who violate labor discipline. It is necessary to improve the work of public cadre departments and economic analysis bureaus, to do everything to ensure a reduction in equipment idle time, losses of working time and cadre turnover and to mobilize the full force of public opinion and the whole arsenal of forms and methods of individual educational work to combat those who violate labor discipline.

Productive, high quality labor, savings and thrift, organization, discipline and creative energy largely determine the 5-year plan's success. "It is necessary to work better. To compile plans better and fulfill them better," Comrade L. I. Brezhnev said at the CPSU Central Committee November (1981) Plenum. "To organize production better and produce better. In a word, to work more efficiently. That...is ultimately, the main, decisive thing."

II. Educating Politically Active, Conscious Builders of Communism, Utterly Devoted to the Socialist Motherland

Comrades: Millions of young men and women study communism in the ranks of our youth league, purposefully master the experience of earlier generations of revolutionary fighters and their conviction--tried and tested over the decades--as to the correctness of Marxism-Leninism and cultivate in themselves staunchness, courage, devotion to communist ideals, moral purity, patriotism and internationalism. The task put forward by V. I. Lenin is of unfading significance for us: to study communism and raise communists in ourselves.

It is the duty of Komsomol organizations to improve Marxist-Leninist education, strive to ensure that young people consistently master the richest traditions and moral experience of earlier generations and educate Komsomol members and all young men and women in the spirit of implacability toward any violations of the norms of communist morality and various kinds of ugly phenomena which are alien to the socialist way of life.

Improving the Ideological, Class Tempering of Young People and Shaping a Marxist-Leninist World Outlook

Comrades: In his speech at our congress Comrade L. I. Brezhnev has set forth the demands which are made today in forming a comprehensively developed personality. The communist awareness and high political standard of Soviet young people are formed by the whole tenor of the life of the society of developed socialism, and above all by purposeful ideological education work. Komsomol members and young men and women grow up ideologically tempered and utterly devoted to the party's cause, the cause of communism.

The 26th CPSU Congress demanded that ideological work be raised to a qualitatively new level. The process of the communist education of the young generation must be steadily improved. The essence of restructuring ideological work, Comrade L. I. Brezhnev stresses, lies in "making its content more relevant and giving it forms which accord with Soviet people's present-day aspirations and demands."

The most important task is to study Marxist-Leninist theory. The invincible weapon of historical truth helped to crush the old world and to establish socialism and defend it in battle. Today it is helping the young generation to build a communist society under the party's leadership.

In the period under review Komsomol committees, fulfilling the CPSU Central Committee resolution "On Further Improving Ideological and Political Education Work," have sought to ensure that every young person studies revolutionary science profoundly and systematically and becomes an active political fighter capable of really implementing party policy.

Over these years the number of young working people taking part in the Komsomol political study system has increased by nearly 2 million. About 3 million young men and women are studying at lecture schools and people's universities. Political information work has become more profound, and a system for studying young people's public opinion is being established. Counter-propaganda work is being conducted more effectively. The publication of information bulletins entitled "Questions and Answers" has been organized.

The new structure of Komsomol political study, as practice shows, opens up broad opportunities for the consistent, uninterrupted mastery of the science of revolutionary action and systematic study of the works of K. Marx, F. Engels and V. I. Lenin, CPSU documents and L. I. Brezhnev's works. There is a livelier, more meaningful atmosphere in studies in young Leninist schools, schools of sociopolitical and economic knowledge and theoretical and methodological seminars, which are headed by qualified propagandists.

However, certain Komsomol organizations in Primorskiy Kray, the Kalmytskaya ASSR, Kurganskaya Oblast and certain other oblasts have not grasped the essence of the restructuring which is taking place and have only formally replaced study circles with schools. The Komsomol Central Committee propaganda and agitation department has not been sufficiently persistent in seeking to improve political studies.

In educational institutions and in the system of Komsomol political study and economic education it is necessary to create an atmosphere such that every young person is really keen to study theory, that it becomes his inner need to turn to Marxist books and the original sources, that this knowledge is acquired not only by efforts of memory, but chiefly by efforts of thought.

It is the task of Komsomol committees to organize the study of Marxist-Leninist theory in such a way that it merges organically with the practical actions of Komsomol members, with their own life. It happens not infrequently that a young person, after taking a course in social disciplines in school, a vocational and technical institute or technical school, does not know how to use his knowledge in practice or to analyze the phenomena which occur in real life. M. I. Kalinin put this very well. Such people, he said, are packed with scientific texts like a sack is packed with potatoes, but they cannot apply this knowledge in practice. Put a simple, everyday problem in front of them, and they cannot see the wood for the trees. M. I. Kalinin described the resolution of practical questions on the basis of real mastery of the essence of Marxism-Leninism as a "school of Bolshevism."

All the Leninist Komsomol's practical activity must be a "school of Bolshevism." Its meaning and significance is to raise staunch young Leninists whose ideological convictions are a firm alloy of knowledge, convictions and practical actions.

Komsomol organizations, with all the content of their work, must /mold in every Komsomol member and young person an active life stance,/ open up for him the big world of public life, the world of the struggle for the destinies of human civilization and for communism, and lead him into that world not as a dispassionate observer but as an active, effective individual.

All the storms of the world made their way into the life of the cell in which Leonid Ilich Brezhnev passed his militant Komsomol youth. "The country's needs were our needs; we dreamed of a bright future for all mankind, we talked, argued, fell in love, read and wrote poems," Leonid Ilich writes in his "memoirs." "We did not consider ourselves connoisseurs of poetry, we attached most importance to the topicality and political thrust of poems. And we had our own, Komsomol poets."

Time has preserved a page of the Kursk Province youth newspaper KOMSOMOLETS for 1 January 1924, yellowed with age. What bright ardor of revolutionary passions, what turbulent, seething Komsomol romance fill that page! Among the slogans and appeals to strengthen Komsomol ranks, augment efforts in the struggle against ruin and study the history of the Russian Komsomol and the Kommunist Youth International, there is a short poem "to the German Komsomol":

> Boldly, forward! Break your fetters,
> Cast off the Czars' bloody chains,
> With youthful passion and fiery enthusiasm,
> More boldly, toward new happiness!
> To life, to the glorious sun of freedom,
> To the bright ideas of the great creators,
> March boldly, young platoons, Remembering your fathers' behests...!

How moving these lines are, what sincerity they contain, what lively participation in the destiny of those distant German brothers. The poem is signed: L. Brezhnev. (tumultuous, prolonged applause)

Involvement in all that happens in the world is one of the brightest traits of the revolutionary fighter. How could the heart of Komsomol member Brezhnev beat calmly when fascism was beginning to build its perfidious nest in distant Germany! How can the heart of communist L. I. Brezhnev beat calmly when injustice and oppression still exist on earth, when a threat to peace exists!

Today, too, Komsomol members and the country's young men and women are sensitive to the planet's pulse. For them the political map is a living concept.

Comrades! The large army of lecturers, political information workers and agitators talk daily to young people. It is important to continue to improve political information work and lecture propaganda and to make them lively, interesting and--most important--conclusive. It is necessary to extend the practice of question and answer evenings and participation in unified political days. There are still so many inexpressive lectures, lightweight talks, gray, empty wall newspapers and faceless visual aid agitation. It is apposite to recall that the word "agitate," translated from Latin means "arouse," "excite." To arouse a person, touch his mind and heart and incite him to energetic social actions is the noble mission of all who work with young people.

Komsomol agitation trains and the agitation ship Korchaginets have begun to operate more actively. Agitation runs and flights make it possible to do better work in remote settlements and among young construction workers, fishermen and geologists. The task is to make better, fuller use of all means of propaganda and agitation and the potential offered by television, radio and the cinema.

For Komsomol members and young men and women every day begins with the news, with learning about the chronicle of heroic creation and bright human destinies reported by the mass media. /In a single formation with the party press, there are 247 Komsomol and pioneer newspapers, magazines and other periodicals./ Their print run has reached more than 80 million copies.

Komsomol journalists have inherited the remarkable traditions of the Bolshevik press. "Study the lessions of life together and act together!" was the call to readers in the first issue of Lenin's newspaper PRAVDA, whose 70th anniversary we recently celebrated. For our youth press too, the task is to put that slogan into practice. It must still more boldly penetrate reality and more vividly propagandize the socialist [phrase indistinct]

Television is becoming increasingly firmly established as part of young people's life. The creation of the second all-union channel significantly extended its potential. The Komsomol rightly hopes that this will make it possible to make dialogue with young contemporaries more interesting, multifaceted and effective.

/Only well-trained cadres can skillfully restructure ideological work./ The qualitative makeup of propagandists working among young people is improving. Cadres in youth journalism have improved their qualifications and become more stable. Komsomol committees have 420,000 lecturers among their assets. The system of training and briefing them must continue to improve.

High political awareness among Soviet young people is incompatible with religious prejudices. It is necessary to step up the atheist education of young people and resolutely rebuff attempts by church people to distract some young men and women from active public life. The use of ritual is still dying away only slowly in the regions where Islam and Catholicism are traditionally widespread, and the activity of various religious sects has been stepped up. Yet by no means all Komsomol organizations are carrying out atheist work actively and knowledgeably. Not infrequently there has been a slackening of individual education, politically among children and adolescents from families of believers. Komsomol committees must be more persistent in combating the opium of religion.

The formation of a communist world outlook among young people is taking place in the atmosphere of an increasingly acute ideological struggle. Bourgeois ideologists are gambling on the ideological "erosion" of socialism. The class enemy seeks to sow in young people's consciousness the seeds of ideological thistles, individualism and an apolitical attitude. Bourgeois propaganda spreads ideological subversion and psychological warfare to such spheres as music, fashion and leisure. The facts show that some young people accept uncritically the broadcasts of hostile radio stations.

It is the duty of Komsomol organizations to expose the antisocialist, antipopular nature of bourgeois propaganda, give a principled, political assessment of any manifestations of ideology and morality which are alien to our society and cultivate in young men and women a keen class sense, consciousness and political vigilance.

/A mighty source of ideological tempering and the molding of a class world outlook is the history of the party and our motherland and the lives of its outstanding people./ The chapters of the struggle for freedom and the people's happiness are as hot as molten iron. On reading them, every young citizen senses the greatness and purity of the invincible ideas for which the fatherland's best sons fought and gave their lives.

In the period under review the historical and patriotic education of young people has been stepped up. Young people have created thousands of new museums and glory rooms. Publication has begun of the Molodaya Gvardiya [Publishing House] library "The Fatherland's History in Novels, Stories and Documents."

Only active love for the past of our native land can educate, teach and stimulate fine passions. The catalog of Penzenskaya Oblast historical and cultural monuments is a book with more than 600 authors--students and teachers in Penzenskaya Oblast VUZes. The discovery and preservation of relics from the fatherland's history, culture, science and technology bring Komsomol members and young men and women close to the people's priceless spiritual heritage. Such work must be organized everywhere.

In learning about the historical past and creating the present, the young person cannot help thinking about the future. That too is a huge battlefield of ideas. Bourgeois futurologists, the church and politicians try to impose their picture of tomorrow on mankind. U.S. President Reagan, on coming to power, stated: Socialism is doomed, it has no place in the future. An old tune. As soon as the salvo rang out from the aurora, they started predicting our inevitable downfall and assuring people that socialism is a heresy, a utopia, which cannot withstand the struggle against the old world.... But most of these prophets have long been forgotten, while socialism lives on, is developing and is winning the hearts of more and more millions of people. (prolonged applause)

Komsomol organizations must /cultivate the Leninist, communist quality of historical optimism/ in every young person. It is the task of ideological and political education to inspire in every young heart the lofty ideals of communism and a profound conviction of its inevitable victory. Young people must clearly recognize the magnitude and complexity of the tasks facing our country, which is the first to lay the path to a communist tomorrow, and must strive with all their might to bring that future closer and fight for it. (applause)

Educating Patriots and Internationalists, Defenders of the Motherland

Comrades: This year sees the 60th anniversary of the USSR's formation. The CPSU Central Committee resolution in connection with this event /instructs Komsomol organizations to strengthen the patriotic and international education of young people/. Komsomol committees should more convincingly reveal the role of the heroic working class and the Communist Party in the international rallying of working people and the implementation of the Leninist nationalities policy, instil Soviet patriotism in the consciousness of young men and women and show vividly that the achievements of each republic, kray, oblast and labor collective are the result of joint efforts by all the country's peoples.

It is necessary to persistently develop in young men and women a high level of international intercourse and the demand to study Russian--the language of friendship and fraternity. Manifestations of parochialism and national narrowmindedness, which still occur in the consciousness of some individuals, are alien to the Soviet way of life.

Internationalism today is, above all, honest, conscientious labor for the common good. It is necessary to inculcate in young people in all the union republics the desire to join the ranks of those who are transforming Siberia, the Far East and the non-Chernozem. Tadzhik SSR Komsomol committees, in conjunction with vocational and technical education organs, sent a 2,000-strong detachment, the "Tadzhikistan Komsomol," to vocational and technical schools in Gorkovskaya, Ryazanskaya, Tulskaya and Yarovlavskaya oblasts during this academic year. During the 5-year plan years 12,000 young men and women from that republic alone will obtain skills and labor tempering in industrial centers of the RSFSR.

On the eve of the USSR's jubilee every Komsomol organization will hold a Leninist lesson on the "indestructible union of free republics," while cities and rayons will hold all-union sociopolitical lectures entitled "We Are Strong Through Our Leninist Friendship," labor vigils devoted to the fraternal union republics, friendship festivals and festivals of the people's creativity.

The 10th all-union rally of victors in the tour of sites of revolutionary, combat and labor glory of the Communist Party and the Soviet people is devoted to the 60th anniversary of the USSR. Some 60 million participants in this patriotic movement are following the roads of the feat and learning about the immortal traditions of the party and people. It is the task of Komsomol organizations to extend the mass nature of the tour and improve its content.

Shock work for yourself and for those who fell on the revolutionary barricades and in the battles of the Great Patriotic War, competition for the banners of the heroes of the 5-year plans, lessons in courage, heroic and patriotic clubs and lectures, meetings between frontline veterans and young people--all this must be more actively utilized in the patriotic education of young people.

The all-union quest expedition "The Annals of the Great Patriotic War" has begun in Komsomol organizations. Komsomol members and young people meet with people who took part in the war and heroes of the front line and the rear, record their reminiscences, carefully collect relics of the people's feat and surround veterans and the families of the fallen with concern.

Every day, as the students of the Gorkiy No 5, specialized vocational and technical school, which trains cadres for the illustrious Krasnoye Sormovo [Shipbuilding Enterprise], enter the walls of the school, the first thing they see is their cherished portraits, with gold stars alongside them. Pavel Semenov, tankman, fought in Spain, died at Stalingrad.... Petr Koshelev, airman, took part in the breaking of the blockade of Leningrad.... Aleksandr Sutyrin, torpedo boat commander, distinguished in the battle of Kerch.... Eight graduates of this one school were awarded the title of Hero of the Soviet Union and many hundreds were awarded orders and medals. The Volga's backbone is strong. As the roots of a tree take in water from deep down, so the young Sormovo workers draw spiritual strength from the feats of those who left their classes and workshops and went to defend the motherland at its first call.

The 40th anniversary of the Soviet people's great victory over fascist Germany is approaching. The country's Komsomol members will mark this glorious anniversary by stepping up the heroic and patriotic education of young people and will increase their contribution to strengthening the motherland's economic and defense might.

/The young people's grateful memory of those who did not come back from the war, to whom we owe our lives, will never fade./ Nobody and nothing is forgotten! More and more new Komsomol and pioneer remembrance posts will form an honor guard at the eternal flame of glory. The trees of the Komsomol victory park will show green and grow taller every spring.

Eternal remembrance of those who fell in the struggle and eternal glory to the living! Filial thanks to you, dear veterans of war and labor, for your vital feat, for not bending under the weight of the years or of your own wounds, for giving our young people fatherly teaching in the irreplaceable lessons of courage and patriotism. (tumultuous, prolonged applause)

/Komsomol organizations must still more persistently cultivate in the younger generation a sense of historical responsibility for socialism's destiny and for the motherland's prosperity and security./

Cultivating patriotism means cultivating a courageous serviceman and defender of the fatherland who is merciless to its enemies. In the modern world love for the socialist fatherland is impossible without class hatred. "Hatred for the enemy is the guardian of patriotic love," the outstanding teacher V. A. Sukhomlinskiy said. It is necessary to explain more actively to young men and women the aggressive essence of imperialism and to step up the moral, political, psychological and military-technical preparation of young people for service in the ranks of the armed forces.

Taking part in the "Zarnitsa" and "Orlenok" games, 28 million pioneers and Komsomol members learn loyalty and duty. Some 4 million young men and women learn the rudiments of military matters in military-patriotic associations and defense and sports camps created in conjunction with the trade unions, enlightenment organs and DOSAAF committees. It is important to continue to do everything possible to ensure that worthy, well-prepared young recruits enter military formations. It happens not infrequently that guys who join the army are not even capable of mounting the horizontal beam and do not know how to shoot or to subjugate themselves to the strict norms of a soldier's life.

Komsomol organizations must be constantly guided by Lenin's instruction that what intensive military training requires is not enthusiasm, not war cries, not combat slogans, but prolonged, intensive, persistent and disciplined work on a mass scale.

The Komsomol must send its best pupils to military schools and supplement the valiant officer corps. The military professional orientation of young people must be strengthened.

In these May days 18-year-old boys born 18 years after the great victory are taking their places beneath the combat banners of the army and navy. They must learn to act skillfully and confidently in any situation, in extreme physical conditions.

/The Komsomol members of the USSR armed forces are the combat detachment of the Lenin Komsomol./ One in three of them greeted the 19th Komsomol Congress with excellent marks in combat and political training and one in two in a high grade specialist. The best of them are in this auditorium! Their ardent patriotism, staunchness and valor have been marked with the motherland's high awards. Delegates Maj Vasiliy Shcherbakov and Capt Sergey Kozlov wear the gold stars of heroes of the Soviet Union. Such people as they are the personification of the Soviet soldier--the soldier of peace, the internationalist serviceman! (tumultuous, prolonged applause)

Army and navy Komsomol organizations, under the leadership of political organs and party organizations, must continue to ensure that Komsomol servicemen set an excellent example in the resolution of combat training tasks, the skillful mastery of weapons and hardware and the irreproachable fulfillment of military duty. It should be ensured that every young soldier and officer is an ideologically committed, highly disciplined, courageous, skillful defender of the motherland.

The Soviet Army is, for everyone, a school for life. At the plant and in the factory, in the kolkhoz fields, on the shock Komsomol construction project--everywhere we recognize, by their bearing, militancy and ability to set the tone by their deeds, the lads of whom we can say: once a soldier, always a soldier! Permit me to express deep gratitude to the command and political organs of the Soviet army and navy and border and internal forces for their great work in the communist education of the young generation (prolonged applause)

Moral Purity, Spiritual Wealth and High Culture for Every Young Person

Comrades: Among the most important educational tasks is the moral shaping of the personality and the spiritual development of the young generation.

This process is complex and multifaceted and takes place wherever Soviet young people work, study and serve the fatherland. "It is necessary," V. I. Lenin said, "for the whole cause of the raising, education and teaching of modern youth to involve the cultivation of communist morality in them."

The unfading moral ideal for all generations of Soviet people is Vladimir Ilich Lenin. "The Komsomol has taken on a high responsibility--to make Lenin's thoughts, advice and [word indistinct] the constant criteria for its day-to-day activity." [quotation not attributed]

Leonid Ilich Brezhnev's remarkable "memoirs" have become real textbooks for life for Komsomol members and all Soviet young people. Every chapter--"Life by the Factory Hooter," "A Sense of the Motherland," "Malaya Zemlya," "Rebirth," "The Virgin Lands"--nurtures young men and women with the inexhaustible strength of the revolutionary, combat and labor traditions of the party and people and inculcates loyalty to Lenin's precepts, communist ideological commitment, social activeness and the best traits of the Soviet character. Young people, measuring their deeds and actions against those of the real sons of the fatherland, strive to be like them and to take what is best from them, so as to grow up communists.

All our reality is inspired by the bright force of communist morality. Every day it yields examples of true nobility, selflessness, friendship and spiritual staunchness.

Vyacheslav Aksenov set off in the ranks of the first volunteers to work on the construction of the Baykal-Amur railroad. The construction project tempered him, cultivated character and the ability to overcome any difficulties. At the 18th Komsomol Congress Vyacheslav Aksenov was instructed to head the all-union shock detachment of volunteers setting off for the most difficult, Buryat sector of the railroad. Once again, in the construction assaults, he dug cuttings and laid the first kilometers of steel track. The Komsomol's trust was justified! (applause)

Zhadyra Taspambetova, a young tractor operator from Kazakhstan, has achieved a lofty labor and human feat. Despite a terrible accident, she managed to return to the field, to active Komsomol and public work. Her life is illuminated not only by labor, but by the joy of motherhood: Zhadyra has five children growing up. (applause)

Aleksandr Stovba, a young officer from Dneprodzerzhinsk--grandson of a Red Army man in the civil war and son of a soldier in the Great Patriotic War, has displayed unswerving courage in fulfilling his international duty. (applause)

These shining careers--as a worker, a kolkhoz member and a serviceman--are all akin. Their feats have rightly been marked with the motherland's highest award--the Order of Lenin! (prolonged applause)

A notable sign of our times is mass heroism in everyday work. It is in labor for society's benefit that the young person becomes wholly aware of the participation of his moral "self" in the nationwide cause of communist building. This lofty feeling cannot be fostered without a cause, without inspired, creative labor, without a great, socially significant goal. It is important to inculcate in every young person such qualities as collectivism and comradeship, will and endurance, accuracy and efficiency, decency and modesty and a sense of his own dignity. For a young person, kindness, sympathy and sensitivity toward other people's troubles and pain must be the natural manifestation of spirituality, and cultivating this is an important component of all Komsomol work.

Developed socialism has great material and spiritual potential for the increasingly full development of the personality and will continue to increase this potential. But it is important, as was stressed at the 26th CPSU Congress, for every person to know how to utilize it sensibly. And that depends ultimately on what are the interests and requirements of the individual.

It must be admitted that in our life we do--to use Gorkiy's words--meet with "go-getters who start dreaming prematurely about feathering their nests," only today they seek to embellish their "nests" with imported furniture, glassware and carpets.

Some soft-hearted parents literally bend over backwards in the attempt to meet their children's whims, indulge them and acquire or "come by" "prestige" things at any cost. These phenomena are far from harmless, because acquisitiveness and the lust for possessions always result in indifference to anything outside these petty selfish interests. Nothing is trivial in raising children.

slovenliness in dress, the imitation of Ersatz western fashions and behavior and uncritical acceptance of the models presented by bourgeois mass culture are not so very far removed from moral and spiritual decline and political immaturity. It is the task of Komsomol committees to step up propaganda of the Soviet way of life and true human values, to come out resolutely against any regressions toward petit bourgeois, consumerist psychology and against phenomena alien to our morality, like money-grubbing and favoritism, and to form high spiritual requirements in young people. This work is aimed at the depths of a person's inner world. A Komsomol organization's maturity and ability to really reach everyone are manifested in this work.

Komsomol committees must take care to create a sound moral climate in every youth collective and cultivate implacability toward violations of moral norms. Interesting experience in this work has been accumulated in Georgia.

Our society asserts truly humanist principles with regard to relations between people--deep mutual respect, attentiveness and friendliness. Provocative behaviour which offends human dignity, callousness, difference, lack of respect for older people, women and comrades and manifestations of cruelty toward animals and nature must arouse the collective's protests and condemnation.

A role of some importance is played by the style of intercourse, the "linguistic climate." In some places youth jargon, absurd nicknames and other rubbishy vocabulary are excessively widespread. Distorted foreign words--a mixture of "English and Nizhniy Novgorod"-are used needlessly. Komsomol organizations must fight for purity and high quality in speech, which are inextricably linked with a person's overall quality. Foul language must be more resolutely eradicated.

/The desire for constant spiritual enrichment and moral purity are largely formed by the family./ Let us say self-critically that we have not yet succeeded in significantly strengthening Komsomol organizations' attention toward young families.

At more than one Riga enterprise recently visited by Komsomol Central Committee workers, the Komsomol committees did not know how many of their young people had gotten married, how many families had split up and why. They all gave the same answer: they had not counted, had not thought about it. Yet in Riga, as in certain other cities, there is a high proportion of divorces.

It is necessary to develop a responsible attitude to marriage and the education of children, to propagate the ideals of fatherhood and motherhood more widely and to inculcate in young people the habits of running a home, caring for children, collective leisure and physical culture in the family.

It is no secret that a young family setting up in life sometimes meets with difficulties. It needs intelligent, tactful attention. In creating their own family, young people must feel that they are still part of a big, caring Komsomol family.

/Komsomol organizations are called upon to take more care to cultivate the most noble human feelings in their charges paramount among these is respect for and devotion to one's parents./

A mother.... When the czar's satraps sentenced her eldest son to death, she found the strength to support him and did not doubt his choice in life. She found the strength to bless her second son and all her children in their revolutionary struggle.

She died less than a year before Great October--that great hour for her children and for mankind. The name of that great mother--Mariya Aleksandrovna Ulyanova. (prolonged applause) A modest photograph of her accompanied Vladimir Ilich all his life and was always with him in exile, in emigration and underground.

We call our beloved country the motherland, and the most sacred monuments in honor of its sons' feats are monuments to the motherland. A remarkable monument to our mothers is our life well lived, our deeds, our grateful memory. (applause)

Protect your mothers, cherish them, be tender and attentive toward them, be their prop and their glory! I would like to repeat from the platform of the Komsomol congress this impassioned appeal from Rasul Gamzatov, which rang out in the pages of KOMSOMOL'SKAYA PRAVDA and swept across the country. (prolonged applause)

The basis of family happiness and the successful raising of young citizens is love. How important it is to cultivate in every individual the desire to value this eternal, ennobling feeling, the fortress of family ties, the purity of human relationships! We should come out resolutely against trends in certain literary and cinematic works to depict these relationships in a distorted, debased form, against attempts by their authors to present matters as if unscrupulousness and moral degeneracy were typical features of the modern generation: that is how our young people are, they say. It is not young people who are to blame, but these authors' bad taste.

Inadequacies of spiritual development and poverty of the inner world lead to moral bankruptcy. Sociologists confirm that, for instance, among people who have committed crimes you can hardly meet with young people with a deep love of books, the theater or [word indistinct] or who engage in amateur artistic activity. And any number of people who like a drink waste time aimlessly.

/In the period under review Komsomol committees more actively promoted the preservation of public order./ Individual patronage of "difficult" adolescents was further developed, and the best young people were sent into internal affairs organs on Komsomol passes. But preventive work by Komsomol organizations is still not sufficiently practical, consistent or oriented toward the individual. The number of violations of the law among young people and juveniles is falling only slowly. It is the task of Komsomol committees to involve young people more widely in the work of the voluntary people's militia and Komsomol operational volunteer detachments. Every Komsomol member must participate actively in strengthening law and order and propagating legal knowledge.

Drunkenness among young people is becoming a great evil. Komsomol organizations must combat not just individual drunkards but drunkenness as a phenomenon and expose and destroy its roots. It is necessary to fight for a sensible, healthy way of life and meaningful leisure and to be more persistent in antialcohol education and the war against smoking and other harmful habits.

It is necessary to step up work at places of residence. This is still the weak link. A millions-strong family of young men and women lives in workers' students' hostels. The Komsomol Central Committee, in conjunction with trade unions, carried out an all-union review contest for the best hostel. Its results show that where people are attentive to young people's needs and requirements, everyday life is well organized and educational and mass cultural work are well established, the hostel becomes a good home. But a different state of affairs often occurs: a lack of the elementary conditions, neglect, idle pastimes.

Comrades: /It is necessary to reevaluate the role of literature and art in the ideological and moral education of young people and the development of their spiritual world./ Our young reader, listener and viewer is glad that a new wave is rising in Soviet art, that many talented works have appeared in literature, the theater, the cinema, music, painting, sculpture and architecture. (applause)

Soviet literature is a really mighty weapon for education. A tender spring shoot and a fierce bayonet are printed on the cover of the first edition of Nikolay Ostrovskiy's book "How the Steel Was Tempered," which came out 50 years ago. What a joy those first 10,000 copies were! Since then hundreds of editions of the book have come out in dozens of languages, with a total run of more than 25 million copies. That is 25 million bayonets aligned with Korchagin's [hero of the book] and fighting for the one great cause. The character of Korchagin distinguishes our young contemporaries, too. And we are profoundly convinced that this integral, courageous character is worthy of vivid reflection in literature.

Our young people read more than any others in the world. But in youth libraries more than half the requests for artistic literature are not satisfied. Things are no better in school libraries. Yet, a book which you do not read when young is often a book you never read.

Can it be fair for pioneers and schoolchildren to collect waste paper and hand it over for nothing, while others receive books for the same waste paper? It would be correct if each school could supplement its library stock in exchange for the waste paper handed over. There should be great support for the handing over of personal books for public use and the collection of literature for the libraries of young cities, children's homes and boarding schools. It is important to teach every young person not only to read, but to think, to consider what he has read and to collectively discuss books, movies, shows and newspaper articles.

Special mention should be made of works for children and young people. We have remarkable literature, theater, movies and music for children. But as regards books and movies for the very young, here, alongside the undisputed successes, there are also works whose heroes try to entice the young reader or viewer into a world far removed from the purity and justice of the folk tale. Boys and girls are tired of waiting for literary heroes like Gaydar's Malchish-Kibalchish or Timur. It must also be said that children's books and magazines are often printed on poor quality paper in faint type.

In the forefront of the struggle for our ideals is the Soviet screen. The cinema and television do much to educate young people. But in our view the movie lending policy and the selection of foreign movies should be stricter. Many parents and teachers say so, too. We should show the best works of the foreign movie industry, and not rubbish like "A Tall Blond Man in Black Boots" or "Secrets of the Burgundy Court."

Music enters our world as a symphony of reason and lofty feelings. For the first time in history, socialism sets the task of the universal musical education of the people. This work should begin in kindergartens and schools, and fuller use should be made of the potential of cultural institutions, television and radio.

Youth is inconceivable without songs, which help up to build and to live. Unfortunately, painfully few such vivid, talented, genuinely civic works are emerging today. Their place is claimed by hack works containing a little of everything--the "latest news," fashionable form, pseudophilosophy. We hope that the talent of Soviet composers and poets will create remarkable new songs to be taken up by the Komsomol, and that they will be as well loved by young people as "The Young Eagle," "Katyusha," "The Young Guard" and "Easy Youth." (applause)

Discotheques enjoy great popularity. There are more than 10,000 of them in the country. They must become places for really meaningful leisure activities. But often Komsomol committees let this matter take care of itself, and then the discotheques become arenas for narrowmindedness and tastelessness and the propagandization of the stereotypes of bourgeois mass culture. It is necessary to display more active concern for the content and repertoir of discotheques and to train their organizers.

Noisy groups must not crowd out folk instruments or bar the way to the assimilation of the genuine spiritual wealth of the classics from our own country and the world. Komsomol organizations, with the help of cultural institutions and creative unions, must participate more actively in esthetic education, inculcate in young people a longing for the beautiful, create amateur orchestras, choirs, groups and musical lecture courses in schools, vocational and technical schools, VUZes and workers' collectives, hold festivals of patriotic song and take part in the work of clubs. At present 3,000 clubs have no artistic collectives at all. Things are at their worst in this respect in a number of oblasts of Kazakhstan, in Armenia and in Saratovskaya and Orlovskaya oblasts. Komsomol committees have much to do to further develop creative societies and special interests clubs and to involve young men and women widely in amateur artistic activity.

/It is an important instruction from the party to the Komsomol to educate new young masters of Soviet literature and art./ Creative youth councils have been organized under the Komsomol Central Committee and in all republics, krays and oblasts. The traditional all-union conferences of young writers and movie-makers and exhibitions of young artists' work are fruitful. The prestige of the "Red Carnation" international youth festival of political song and of the creative contests and reviews held by the Komsomol Central Committee and Komsomol committees jointly with cultural organs has increased. Social commissions for new authors and creative missions promote a deeper knowledge of life. New names are presented to the reader by the Komsomol Central Committee's Molodoya Gvardiya Publishing House and other central and local publishing houses. The young artist and his formation and ideological tempering must continue to be a profound interest to Komsomol committees.

Unremitting Komsomol Attention Toward Young People's Health, Mass Physical Culture and Sport

Comrades: The party and state display constant concern for the all-round development of physical culture and for strengthening the Soviet person's health. A new manifestation of this is the CPSU Central Committee and USSR Council of Ministers resolution "On further developing mass physical culture and sport."

/Alongside the Komsomol badge, the "Ready for Labor and the Defense of the USSR!" badge must shine on every Komsomol member's chest./ Komsomol committees are improving health work and mass health work and mass physical culture work and ensuring that fitness and systematic sports activities are a requirement for every young person. Every year about 50 million people take their places at the start within the "Ready for Labor and Defense" system. Komsomol and youth light athletics and ski cross-country races, shock construction project spartakiads and contests for Komsomol Central Committee club prizes have become a good tradition.

However, for many young men and women sport is still only a spectacle. As yet nearly two-thirds of young production workers are not involved in regular physical culture and sport. A large number of students, schoolchildren and students at vocational and technical schools and technical colleges are not up to the "Ready for Labor and Defense" norms. Komsomol committees are directly responsible for this. In Azerbaijan, Turkmenia and Vladimirskaya, Murmanskaya, Orenburgskaya and Permskaya oblasts up to one-third of physical culture collectives do not take part in the "Ready for Labor and Defense" all-round sports competitions. We must strive to ensure that all young men and women are constantly involved in physical culture, sport and tourism. Here Komsomol and pioneer workers and activists must set a personal example.

/Physical fitness and the love of sport must be developed from the early years./ Unfortunately, modern standard designs for kindergartens make no provision for a mini-sports hall, paddling pool or other simple, inexpensive sports facilities.

Interest in sport is sharply increased when boys' idols--famous sportsmen--work with them. Girls are led into the splendid world of artistic gymnastics by Irina Deryugina, member of the Komsomol Central Committee. Vladislav Tretyak does not grudge time and effort for work with young hockey players. Yurik Vardanyan's school for young athletes enjoys great popularity. We have 180,000 masters of various types of sport. A sports guide must come to every class and pioneer patrol! (applause)

/There are many omissions in sports work in educational institutions./ One in 10 students is exempted from the "Ready for Labor and Defense" norms for health reasons. Nonattendance at studies in VUZes due to illness has increased Physical education faculties still organize extracurricular activities only poorly. The student sports society is named for a proud, bold bird, the "Storm Petrel," and its flight can and must be mightier and higher.

It is important to increase the prestige and significance of school physical culture lessons. On the basis of the experience of Kiev schools, the system of home physical training exercises should be introduced more widely, and physical training should permeate the whole routine for schoolchildren. Morning exercises, fitness and concern for deportment and figure must be inculcated from childhood, for a lifetime.

More than 20 million boys and girls take part in the "Starting Points of Hope" competitions between classes. Children compete enthusiastically for the "Leather Ball," "Golden Puck" and "Wicker Ball" [reference unknown] Komsomol Central Committee club prizes. But as yet for many school and neighborhood teams the first start is the last. Their competitions must be held regularly. The Komsomol Central Committee and the USSR Committee for Physical Culture and Sport should organize a sports club for girls, too, as popular as, say, the "Golden Puck."

The question of teaching young people to swim should be considered particularly keenly. To this end better use must be made of existing sports facilities, the organized summer holidays for young pioneers and schoolchildren and natural water areas. Komsomol attention should also be devoted to tourism--its organization, content and material and technical base.

It is the task of every Komsomol organization to take a concrete part in the Komsomol 3-year plan for the construction and modernization of sports facilities. A few years ago the Kharkovskiy Komsomol Obkom Public Sports Design Bureau elaborated a design for a sports complex for one residential district in the city. The Yunost sports complex is now one of the best. It has five sports halls, a swimming pool and a playing area. Some 5,000 boys and girls have learned to swim there, 200 people attend athletics classes and 150 adolescents are learning wrestling; in all 1,500 Kharkov people are involved in the sections.

Komsomol organizations must make better use of existing sports bases and facilities. It is again necessary to mention the shortage of sports equipment and kit, especially for children and young people. It does not require great expenditure to produce simple equipment and ensure that a "mini-sports hall" can be arranged in any apartment.

Sports and health combines and physical culture and sports clubs attached to housing operation offices, housing administrations and culture and leisure parks have proved their usefulness. There is an urgent need to increase the number of sections and financially autonomous groups operating on self-financing principles and extend the network of institutions where parents can receive advice on the physical development and fitness of children. The experience of sports work in residential areas acquired in Leningrad, Minsk and Penza should be introduced more persistently.

Physical culture and sport are developing only slowly in the countryside. More than half of all kolkhozes and sovkhozes and one-third of rayon centers have no sports facilities. We must strive to ensure that questions of physical culture and sport become an integral part of plans for the socio-economic development of farms, as is the case in Krasnodarskiy and Krasnoyarskiy krays.

Mass sport and physical culture are the firm foundation on the basis of which the high achievements and international prestige of Soviet sport are formed. /The Lenin Komsomol is rightly proud of the outstanding sporting successes of its glorious pupils--champions in the Olympic Games and world and European championships./ Anatoliy Karpov won the title of world chess champion for the third time in a fierce sporting struggle. (applause)

The 22d Summer Olympics were a major sporting and public event. A weighty contribution was made to their successful running by Moscow, Leningrad, Kiev, Minsk and Tallin Komsomol organizations. The Komsomol exercised patronage over the construction and modernization of olympic sites and the training of cadres for the olympic cities and took part in organizing the cultural program for the 1980 Olympics.

Soviet Olympians secured a brilliant, convincing victory in the unofficial team score. I would like once again to warmly and cordially thank them and to say: Keep it up in new sporting battles! (tumultuous applause)

Special Komsomol attention should be devoted to those sports in which Soviet sportsmen have not yet achieved significant successes, and also to work at children's and youth sports schools.

Komsomol organizations must improve the ideological and moral tempering of sportsmen and cultivate collectivism, will, courage, a sense of duty and loyalty to the collective and the sporting community--the best qualities of Soviet sportsmen.

Serious concern must also be devoted to improving the conduct of fans. Unhealthy agitation, blind worship of teams and sports "stars" and exaggerated passions over their victories and defeats must be resolutely eradicated.

Recently we all learned with tremendous pride that courageous Soviet mountaineers have carried out a victorious attack on Everest--the planet's highest peak. Other heights are also within the reach of Komsomol members. Physical culture and sport help young men and women to scale new heights in work, study and military service. Will, strength, courage and daring have always been honored by our people, and it is the Komsomol's noble task to invest every young person with these characteristics.

III. The Komsomol and the Tasks of Preparing a Generation of People Possessing Up-to-Date Knowledge, Loving Labor and Knowing How To Work

Comrades: The student tribe becomes bigger every year in our country. Tens of millions of people are now studying in schools, vocational and technical schools, technical colleges and VUZes. For them, the main labor and civic duty is study, the struggle for deep, lasting knowledge, ideological tempering and preparation for life and socially useful labor.

In the period under review Komsomol committees sought to increase the role of Komsomol organizations in the communist education of students and young people engaged in study and to actively promote the fulfillment of the people's education program elaborated by the party.

Improving Komsomol Work in Schools and the Activity of the Young Pioneers Organization

The businesslike, creative alliance between the Komsomol and the schools has strengthened and been enriched with new content, and all Komsomol detachments have stepped up their attention toward it. The activity of school Komsomol organizations and the ideological, political, labor and moral education of students have improved. The effectiveness of the summer labor semester has increased and about 10 million schoolchildren take part in the work of labor associations annually. For the first time there has been an all-union rally of secretaries of school Komsomol committees. Concern for children's homes and boarding schools has become more practical. Komsomol teaching detachments have become established.

/One of the most important tasks of school Komsomol organizations is cultivating a responsible attitude to study./ The pupil spends 10,000 study hours within school walls. It is the Komsomol's duty to help the teacher to fill each of those hours with intensive mental work, the joy of learning and love of books. It is important for Komsomol comradeship to be manifested more reliably with regard to study and for the movement "not a single laggard," which has reached many schools, to be backed up by concrete, meaningful work.

An interest in knowledge cultivates scientific and technical creativity and agricultural experimentation. As yet only one in five schoolchildren takes part in the youth scientific and technical creativity movement. Komsomol organizations must more actively support clubs for young technicians and naturalists, schools for various areas of knowledge and the "little academies of sciences."

Attached to the Komsomol committee of the I. V. Kurchatov Institute of Atomic Energy there is a school of natural sciences, which 300 Moscow schoolchildren attend with interest, and its five branches in various cities have more than 1,000 kids. They are given lectures by academicians A. P. Aleksandrov, Ye. P. Velikhov, I. K. Kikoin and B. B. Kadomtsev and other well-known scientists. How education would gain, if the Kurchatov people had more imitators.

The base for students' scientific and technical creativity must be developed. Many young technicians' stations are sited in unsuitable premise. The range of goods for them in the trade network is poor.

/In the modern school study and labor go together, they are cultivated together./ The network of training shops and sectors at enterprises and interschool production training combines is constantly growing. But there are many schools where labor education is still unsystematic and poorly organized. Theoretical knowledge is not reinforced with practical work and sometimes the schoolchildren do not really work, but play at work.

The call signs of the summer labor semester were heard throughout the country for the first time 10 years ago. Labor and leisure camps and labor detachments of city schoolchildren have become a firm part of life. More than 6,000 schoolchildren in the top grades work at Ivanovskaya Oblast's textile enterprises annually, for instance. Last summer alone they produced output worth R14 million and gave 2,000 textile workers the opportunity to take holidays in the summer months. There is also much that is promising in the work of student production teams. Mechanized harvesting detachments and comprehensive livestock raising units are created on the basic of such teams.

It is the task of Komsomol committees to improve the organization of the summer labor semester. Today only one in five labor and leisure camps has a fixed base and is provided with the necessary equipment. At many schools in Vietbskaya, Ryazanskaya and Tashkentskaya oblasts and Dagestanskaya ASSR student production teams do not have their own sections or machinery, confine themselves to growing just one crop and stop work by the beginning of July.

There is an urgent need to supplement and clarify the legal foundations for the activity of labor associations of schoolchildren and elaborate a standard economic contract. We should organize the production of agricultural machinery and simple tools specially designed for adolescents and children and for labor at home.

The labor activity of a schoolchild in the family and in school should be a subject of constant attention in the collective and an integral part of the entire education process. Komsomol organizations cannot fail to be disturbed by the fact that many schoolchildren do not know how to hold a hammer, mend a switch, sew or cook and are not used to clearing up after themselves at home or in school. It must be noted that only one in five school graduates chooses a job in accordance with his particular labor training. Every year several tens of thousands of yesterday's schoolchildren spend a long time not working, trying to get into some institution or other so as not to have to start work in a shop, the fields or a livestock unit. It is necessary to inculcate in people from their early years a love of and taste for labor and the desire to join the ranks of the glorious working class or the kolkhoz peasantry.

A remarkable initiative has been put forward by the graduates of rural schools in Omskaya Oblast, who have decided to go to work in livestock raising--the shock front in the countryside--and link their destiny with that of their home kolkhoz or sovkhoz. The young people of Omskaya Oblast were sent warm, cordial greetings by L. I. Brezhnev. This initiative must be widely supported--just as the Kostroma schoolchildren's initiative was once taken up. (applause)

The Komsomol has 95,000 Komsomol organizations. And in each of them Komsomol initiative must shine as a bright torch. /It is school Komsomol organizations which must, first and foremost, be characterized by a lively, creative atmosphere./ Komsomol raykoms and gorkoms must devote greater attention to their activity. This was again confirmed by the discussion in the Komsomol Central Committee secretariat of the question of the work of the Komsomol and Pioneer organizations in Minsk's No 28 School.

The country entrusts its most precious thing--its future, its new recruits--to the teacher. In answer to the appeal of the 18th Komsomol Congress more than 30,000 young people from among the ranks of young workers, demobilized servicemen and school leavers have entered teacher training institutions on Komsomol passes. Volunteers--the best young teachers--have been sent for teaching assaults on remote rural schools.

Leonid Ilich Brezhnev's heartfelt words that we must be generous with attention to the teacher rang out from the platform of the 26th CPSU Congress. Komsomol assistance to teachers must be constant and effective. And it begins with close attention to people graduating from teaching VUZes. The ranks of the teachers must be supplemented first and foremost by those who have given a good account of themselves in working with Pioneers in the teaching detachment as productive leaders.

We have 680,000 teachers who are Komsomol members. They are called upon to give day-to-day assistance to the Pioneer and Komsomol aktiv in organizing a full life in student collectives.

Comrades: /Tomorrow, the Komsomol, schools and our whole country will celebrate the 60th anniversary of the V. I. Lenin All-Union Pioneers Organization, which unites 20 million children and adolescents./ Permit me, on behalf of the congress, to cordially congratulate our jubilee Red Scarf Brigade, Pioneers of all generations, leaders, teachers and parents on the noteworthy festival. (tumultuous, prolonged applause)

Soviet Pioneers are warmed by the fatherly love and concern of the party and the Soviet state. Comrade L. I. Brezhnev's visit to the Artek Pioneer camp was a moving event in their life, as were his participation in the international children's festival "for a happy childhood in a peaceful world" and his fatherly appeals to the young generation of our country and all the planet's children.

Today we speak with pride of the glorious 60-year career of the Soviet Pioneer Organization. Pioneers took part with enthusiasm in the elimination of illiteracy and fought fearlessly against socialism's enemies and the fascist aggressors. Pavlik Morozov, Lenya Golikov, Valya Kotik, Zina Portnova and Marat Kazey will always be in the front ranks of the combat Pioneer columns. They gave their most precious thing for the motherland--their young lives. A proposal has been made to erect a monument to the young heroes' glory in the Artek Camp. (prolonged applause)

The life of Pioneer detachments and troops is rich and varied. Pioneers take part in the 5-year plan of shock labor deeds, nature conservation and the "My Motherland--the USSR" expedition, exercise patronage over the little Octobrists [communist organization for 7 to 11-year olds], take part in the Zarnitsa games, follow the routes of the people's feat and go on geological expeditions.

The Pioneer organization's activity must take fuller account of the principles of independent activity and of the particular features of age groups and individuals. The All-Union Pioneer Organization Central Council has been slow to implement the provision of the 18th Komsomol Congress on a differentiated approach to work with Pioneers.

The Komsomol Central Committee recently adopted a resolution on work with older Pioneers. It advises devoting special attention to students in the seventh and eighth grades, assigning them to "senior Pioneer detachments," training Pioneer instructors and making certain changes to the uniform and symbolism for older Pioneers. It is also necessary to amend and expand the regulations on the Pioneer organization and to make provision for little Octobrists in the third grade to be admitted to its ranks from the age of nine.

The Councils of Pioneer organizations and Komsomol committees must step up the sociopolitical thrust of the work of troops and detachments and more actively introduce elements of play and adventure into their life. Every Pioneer action must have a high emotion charge. It can hardly be correct, for instance, for the horn signal and the drumbeat to be replaced by a tape, for the camp fire and the gathering to be replaced by a formalized show, for the interesting, difficult march with obstacles to be replaced by an easy walk. Vivid ideological life for the children, expressed in heartfelt enthusiasm and filled with pure thoughts--that is what adventure means.

The Pioneer columns are led by 82,000 senior leaders. They do much that is good, but they must do even more. Komsomol committees, together with people's education organs, must systematically train and retrain leaders and arm them with knowledge and leading experience. It cannot be tolerated that every year yesterday's 10th-graders come to tens of thousands of Pioneer collectives with no special knowledge or skills and that one in three new leaders leaves the troop without working out the year. The problem of the detachment leader remains acute. We propose to the USSR Ministry of Education that the speciality of educator leader be introduced in teacher training institutes. The Komsomol Central Committee Higher Komsomol School and zonal, republic and oblast Komsomol schools must make a more substantial contribution to training Pioneer cadres.

Komsomol committees and Pioneer councils should make fuller use of the potential of institutions outside school and of Pioneer camps and take more account of the special features of the work of troops and detachments in schools and extended-day groups and residential areas. That is the only way to successfully implement the party's demand for Pioneer work to cover all aspects of Soviet children's life.

/Special Komsomol concern must surround the family's first helpers in raising a child--children's preschool institutions./ In view of the fact that in the next few years schools will go over to education from the age of six, questions of preschool education are acquiring great social significance and the role and responsibility of kindergarten teachers--among whom are many Komsomol members--are growing.

One more thing. The saying current in certain cities and settlements that it can be much harder to get into a kindergarten than into a VUZ is not entirely without foundation. This problem is particularly acute in new cities. In Nizhnevartovsk, Surgut and certain other cities, for instance, only half of the children have the opportunity to attend kindergartens and creches, yet the plan for commissioning preschool institutions is only being 50-60 percent fulfilled. Kindergartens and creches which are not commissioned on time means more mothers' hands not employed in production. At the recent report and election conferences proposals were put forward on declaring the construction of children's institutions to be Komsomol construction projects. In our view, these proposals are correct. (applause)

Developing Komsomol Patronage of the Vocational and Technical Training System

Comrades: The vocational and technical training system has become a true forge of skilled cadres and genuine school of the working shift's labor and ideological-moral education. During the 10th Five-Year Plan two-thirds of the workers who went into industry had acquired a trade in vocational and technical training institutions. A reliable addition to labor collectives!

/Some 4 million young men and women are now studying in the country's vocational and technical training schools. In the period under review 2 million people received Komsomol authorization to train at vocational and technical schools. Over 40,000 production pacemakers went to work in the vocational and technical training system in answer to the Komsomol's call. One in three of the masters and teachers of the 8,200 vocational and technical schools is a Komsomol member. Komsomol work in vocational and technical schools has become more meaningful. Over R100 million of capital investments has been put to use by Komsomol-youth detachments in the construction of new schools and hostels. We note with satisfaction that firm, businesslike and creative cooperation has been established between the Komsomol and vocational and technical school organs.

An example of model work is being set by Leningraders. The city and oblast have set up a modern training and material base and have prepared highly skilled engineering and teaching cadres. The comprehensive plan for the development of vocational and technical training is an integral part of the plans for Leningradskaya Oblast's socioeconomic development. Responding to a call from the heart, dozens of heroes of socialist labor and people's deputies and hundreds of distinguished workers, production pacemakers and innovators have entered vocational and technical schools. Twice heroes of socialist labor V. A. Smirnov and A. P. Mikhalev have become vocational and technical school masters. During the last two five-year plans, Leningrad's vocational and technical schools trained over 500,000 highly skilled workers. The transition to the training of workers with secondary education has been completed. Comrade L. I. Brezhnev gave a high assessment of these Leningrad achievements in his greeting to the participants in the celebratory meeting of Leningrad City and Leningradskaya Oblast school-graduates who had declared a wish to study at vocational and technical schools.

The work of the Chelyabinskaya Oblast Komsomol organization which, with VUZ students' and teachers' help, has set up scientific and technical societies for vocational and technical school students, is distinguished by a thoughtful attitude toward the shaping of the young work shift.

In the 11th Five-Year Plan vocational and technical institutions are faced with training 13 million skilled workers. The task is large-scale and complex.

The main task in the work of the schools' Komsomol organization is to increase the responsibility of young men and women for acquiring knowledge and mastering their chosen trade and for fostering a communist attitude to labor. Komsomol committees must more actively promote the improvement of the schools' training and educational process. There are considerable reserves in the struggle to make students' knowledge profound and firm. Only 17.7 percent of future production workers are scoring "4" or "5" [out of a possible 5] in general educational subject ratings. In a number of republics, krays and oblasts there are many unjustified absences from classes and the student drop-out rate remains high.

Komsomol organizations are faced with the task of introducing on a broader scale the best experience on the struggle for knowledge by school and student Komsomol members and with making more active use of such forms as Olympiads, thematic societies and mutual aid groups. The vocational and technical training system's prestige now depends greatly on improving general education. The reason why Sverdlovsk's No 61 specialized state vocational and technical school receives three applicants for each place is that it has excellent teachers and a remarkable study and material base, many students obtain nothing but "good" or "excellent" grades, 25 percent of graduates received a high grade and 10 percent obtain a diploma with a distinction. The school's students enter examinations to VUZes on equal terms with the best school graduates.

The arrogant and condescending attitude of some parents, children and even schoolteachers to vocational and technical schools must be overcome once and for all. Here is an extract from the character reference of a graduate of a school in Moskovskaya Oblast's Noginskiy Rayon: "Not suited for work, does not like work, recommended for vocational and technical school." (animation and laughter in the hall) Komsomol committees must take a more active part in vocational guidance toward working trades and in staffing vocational and technical schools.

The utmost attention must be paid to rural vocational and technical schools. Many are equipped with obsolete equipment and visual aids and over 300 have no study farms at all. There are still too few training cadres for stockraising.

Concern for students' study and everyday conditions and for inducing them to stay in production must permeate the entire activity of Komsomol organizations and teachers' collectives. Over 300,000 students live in private apartments and only half are able to vacation in summer in a well-organized way. Many vocational and technical schools do not have the facilities for technical or creative activity or sport. Matters are especially bad in construction schools. One in three have no hostel or study and industrial workshops. This point was also made at the 18th Komsomol Congress but matters are improving only slowly.

/It is incumbent upon Komsomol committees to be attentive to the fate of vocational and technical school graduates, and to see that everyone finds his place in the labor collective,/ becomes established in it and acquires self-confidence. As a result of indifference and disregard for young people's needs, nearly 50 percent of young men and women change jobs each year at industrial enterprises and construction projects and about 30 percent change jobs in the countryside.

The existing system for the distribution of young cadres suffers from depersonalization--school-leavers are not sent to a specific job but to an enterprise in general. Experience convinces one that personalized distribution and distribution to those enterprises and teams where students have undergone practical training are more efficient. In Leningrad, Barnaul and Novokuznetsk, for example, this has made it possible to considerably improve the keeping of vocational and technical school graduates in their allotted jobs.

The Komsomol must pay the utmost attention to all aspects of the life of the newcomer to production: vocational improvement, continuation of education, everyday conditions. It is a matter of honor for all Komsomol committees to worthily fulfill the party's assignment of surrounding the working shift with constant attention and leading it into life along the paths of work.

Komsomol Concern for the Training and Education of Young Specialists

/In the system of young people's communist education an important place is assigned to Soviet higher and technical colleges in the current 5-year plan./ It is a civic stance on the part of the Soviet student, whose shaping is a very important task for the VUZ Komsomol, to study conscientiously and to the utmost of his ability and to be of real benefit to society from his student days onward.

Excellent-rated students, nearly 500,000 of them, and the 5,000 scholarship students are the front line in the struggle for knowledge. At the same time, 1 student in 10 receives an unsatisfactory examination grade and over half receive a "three" in their tests. Greater exactingness must be firmly displayed toward those who treat study irresponsibly.

Among all academic subjects we must highlight in particular the social disciplines, which, in S. M. Kirov's words, study "the resistance of the classes opposing us." An interesting experiment is being conducted at the Tula Polytechnical Institute. Students groups there have assumed collective responsibility for the preparation for and successful passing of tests and examinations in social disciplines by every student. Work on original sources, day-to-day political reports, debates and reciprocal aid have been organized on a broad scale. The Komsomol organizer is a member of the examinations commission. He takes part in the discussion of gradings. Each person's social work is taken into account here. Consequently, the success rate and sociopolitical activeness have increased in the senior grades too.

The Komsomol committee and the scientific communism department headed by Prof Valentin Aleksandrovich Miroshnichenko are the initiator and heart and soul of the experiment. He is a man who has had a hard, astonishing life. He volunteered for the front. He was wounded eight times. He suffered total blindness. But his Komsomol, Korachagin-like character and passionate desire to learn were triumphant. "Hundreds of students helped me to write my dissertation--this was the Komsomol committee's decision," the professor recalls. "Articles and monographs were read aloud and I summarized them in my head." The students are proud of their tutor. It is a tremendous joy that such people are side by side with VUZ youth in the Komsomol system! (prolonged applause)

The all-union competition-review of study groups carried out by the Komsomol Central Committee together with the AUCCTU and the USSR Ministry of Higher and Secondary Specialized Education is an efficient means of improving academic and educational work in student collectives. Its content must be further improved.

Over 80 percent of future specialists are involved in scientific work. From academic research to the creation of aircraft, submarine apparatus and industrial robots and from the design of the simplest structures to participation in implementing the "energy" and "West Siberian oil and gas" programs--such is the range of interests of the student scientific and technical associations operating in the majority of the country's VUZes.

An artificial earth satellite built by Moscow Aviation Institute students has been put into orbit. This is a gift from Soviet students to the 19th Komsomol Congress and the beginning of the implementation of the "Student Intercosmos" program, in which future specialists from the fraternal socialist countries are participating. (prolonged applause)

We are faced with the task of making students' scientific creativity as mass-scale and effective as the construction detachment movement. In addition to realistic course and diploma planning the creation of students' scientific centers, design bureaus and detachments and comprehensive creative teams with the participation of young production workers should be on a wider scale. The practice of concluding cooperation contracts between student and labor collectives--between VUZes and enterprises, faculties and shops, courses and sections and groups and teams--is worthy of attention.

The third working semester has become an organic component of the academic and educational process. Work within student detachments helps each student to become acquainted with the experience of collective labor, to consolidate acquired knowledge in practice and to temper the will and character. We are rightly proud of students' selfless labor on construction sites and in agriculture, transport and health care organs. For 10th Five-Year plan results 1,700 active participants and organizers of the patriotic movement were awarded orders and medals of the USSR.

Volgograd and some other cities have found interesting forms of students' work in the national economy throughout the academic year. In a number of VUZ centers student detachments have been set up which work on formulating and introducing projects for the modernization and retooling of production. Komsomol committees must actively develop long-term forms of students' collective labor and creativity, the best traditions of the patriotic movement and forms of unpaid socially useful labor.

Some 4 million young men and women are now working in VUZ and technical college evening and correspondence sections. It is incumbent upon Komsomol raykoms and gorkoms and VUZ and enterprise Komsomol committees to pay greater attention to them as well as to working youth school students, to help them to obtain in-depth and firm knowledge without time out from production and to become skilled experts.

Komsomol organizations can and must do considerably more to improve young students' everyday and leisure conditions and to fortify their health. It is necessary to disseminate on a wider scale the experience of Tomsk, Rostov and Kharkov where joint councils on student hostel affairs have been set up and where student canteen trusts, inter-VUZ polyclinics and leisure bases are operating.

One student in 10 is now married and half the families have children. However, there are virtually no hostels for students with families and they are clearly not being allocated enough places at children's institutions. A number of VUZ centers in the Ukraine have accumulated positive experience in the solution of this problem. However, these are only isolated examples. It is quite clear that student families need greater attention.

Participation in the training of highly skilled experts is a noteworthy tradition of the Lenin Komsomol. And this tradition must be strengthened and developed. The prestige of engineering work should be raised among young people, the profession of mining engineer, metallurgist, machine builder and power worker should be actively propagandized and a responsible attitude to job distribution work, a readiness to go to the most difficult and hard-fought areas of production, education, health care and culture should be inculcated. Education does not finish with the receipt of a diploma. The urgent demand of the time is to persistently and continuously replenish one's knowledge and to learn, learn, learn. (prolonged applause)

IV. Improving Organizational Work. A Lively Creative Atmosphere in Every Komsomol Collective

Comrades: /Since the 18th Komsomol Congress the role of the Lenin Komsomol as the party's active assistant and combat reserve has continued to grow, its practical activity has become wider in scale and its participation in the administration of state and social affairs has intensified./ The Komsomol's structure has improved, relations within the Komsomol have developed, and the qualitative composition of Komsomol cadres and aktivs and the level of their training have improved. The Komsomol's financial situation and material base have strengthened.

We learn the art of organizational work, living ties with mass youth and Leninist style from the party.

/The Komsomol is the truly mass organization of all Soviet youth. Its ranks number 41.7 million young men and women./ The majority of Komsomol members work in diverse spheres of the national economy, culture and social administration. The number of young Komsomol workers has grown in recent years. There are now over 14 million of them or nearly 35 percent of the Komsomol's membership. This is the largest proportion of workers throughout the postwar years.

The number of Komsomol members engaged in agriculture has increased bu over 1.1 million. The proportion of Komsomol members in trade, the light and food industries and the services sphere has grown. There are now more Komsomol members among agricultural experts. There are over 2 million engineers and technicians and nearly 300,000 agricultural experts in the Komsomol. One agronomist, livestock expert and teacher in five and one doctor in six in the country is a Komsomol member. The general educational standard of Komsomol members is rising and two-thirds of them have higher or secondary education.

/The Komsomol is a truly international youth organization./ It unites young men and women from over 100 nations and ethnic groups of the Soviet Union. The number of indigenous Komsomol members in the Komsomol organizations of union and autonomous republics, oblasts and okrugs is increasing. At the same time, these organizations are becoming increasingly multinational. This is a vivid manifestation of the general features of the process of the formation of the Soviet people, a new historical community of people.

The growth in the Komsomol organizations of Tyumenskaya, Irkutskaya and Kamchatskaya oblasts, Krasnoyarskiy and Primorskiy krays and Yakutskaya and Buryatskaya ASSRs is a further confirmation of our young people's burning desire to make their contribution to implementing the program outlined by the party for transforming Siberia and the Far East.

The Elnin Komsomol's prestige and power of attraction is growing. Nearly 20 million young men and women were accepted into the Komsomol's ranks between the 18th and 19th Komsomol [Congresses] and Komsomol membership increased by 4.3 million.

On entering the Komsomol, young people link their best plans and dreams with it and strive to be in the front rank of the fighters for communism. "I ask to be accepted as a Komsomol member," requested Sergey Lysenkov, a 14-year-old schoolboy from Orenburgskaya Oblast who worked in last year's difficult harvest as a combine harvester assistant. "I ask you to consider me as a Komsomol member," Irkutskaya Oblast's Kazachinsko-Lenskiy Komsomol raykom was asked by Nina Vyatkina, a young construction worker on the Baykal-Amur railroad, on the eve of the commissioning of the Lena-Kunepma section. "I want to be in the front rank and with my Komsomol card in hand to defend my beloved motherland if necessary," guards Private Mikhail Yakimchuk said at a Komsomol meeting 1 day before the opening of the Zapad-81 exercises. How well these lines compare with what the writers' fathers wrote before battle, before going with the first train to the virgin lands and on the eve of all great tests.

However, individual Komsomol committees underestimate the importance of admitting to the Komsomol the best representatives of working youth, or increasing the Komsomol presence and consequently influencing the most crucial sectors of production in the decisive sectors of the national economy. For instance, the number of construction workers who are Komsomol members has declined substantially in the Altayskiy Kray and Chitinskaya Oblast organizations. Perhaps the volume of construction has fallen off here? Or there are fewer young people on construction sites? On the contrary. That means that it is something else which is the matter--a lack of purposeful work with young men and women.

If the ranks of a Komsomol organization with a basis for growth are not being swelled, there is just one conclusion: it does not enjoy authority among young people. Every such organization must be seriously investigated and helped to put matters right.

Great harm is caused by a formal attitude toward the admission of young men and women, particularly schoolchildren, to the Komsomol. Individual Komsomol committees violate the principle of an individual approach in work with non-Komsomol young people. Some 19 students at the Novosibirskaya Oblast DOSAAF school became Komsomol members in just one day. Having written dictated applications they went together to a Komsomol meeting where they were admitted to the Komsomol. An hour later a Leninskiy Raykom Bureau was held which approved the decision of the primary party organization. But by the end of the day the newfound Komsomol members had already been taken off the books. Such "expeditiousness" causes great harm to the cause of education.

The Komsomol Central Committee and Komsomol committees must continue to resolutely put a stop to the desire of individual Komsomol workers to cover up their idleness with impressive entry in a statistical report. We stress once again most clearly that the numerical strength of the Komsomol is not an end in itself. The growth of the Komsomol ranks has never been achieved and will not be achieved by reducing exactingness toward entrants. It is necessary to persistently improve work with non-Komsomol young people, to step up the propaganda of the glorious traditions and heroic history of the Komsomol and to mold in young men and women a profound respect for the Red Banner of their organization and for the Komsomol card and badge. The day he joins the Komsomol must be a notable event which each young person remembers all his life.

/There are 450,000 primary organizations in the Komsomol./ It is essential to display constant concern for their consolidation. "It is a matter," the 26th CPSU Congress stressed, "of ensuring that a lively, creative atmosphere is created in every Komsomol organization." This graphic, broad formula expresses the main thing--Komsomol life should be politically rich, filled with socially useful deeds, interesting and dynamic and marked by a desire to display "your initiative and enterprise" in everything.

The Komsomol organization of the Sverdlovsk-Passazhirskiy depot locomotive operation shop has 172 Komsomol members. The majority are assistant locomotive drivers and locomotive drivers and are constantly on the move. The Komsomol members' complex work conditions are no obstacle to the cause. In the shop there is a friendly and cohesive Komsomol collective which can cope with crucial, major matters. The "shop Komsomol power station" provides 1.5 million kilowatt-hours of electricity a year--this saving is the result of the skilled driving of electric trains. All the Komsomol members take part in the Lenin examination and improve their professional and political standard. Here they have forgotten long ago the meaning of being in arrears on their membership dues or failing to appear at a meeting without valid reason.

/There is a lively, creative atmosphere where man is the focus of attention of the organization/, where Komsomol initiative and enterprise are fully displayed. The Komsomol committees' task is to step up individual work with young men and women, to seek to ensure that one and all are involved in useful business and have assignments.

Today about 500,000 Komsomol members have been elected to soviets of people's deputies and over 2 million to leading organs of trade unions and other public organizations, and 9.5 million are engaged in elective Komsomol work. It is important to select assignments correctly, to help the Komsomol member to take his first steps in the public field and to fully ensure an outlet for his energy and initiative. More active use must be made of all forms of individual work, and young people must be recruited more extensively to take part in the administration of the affairs of production and educational collectives and in the national economy.

Our country is on the threshold of a major political event--this June the elections to the local soviets will take place. Komsomol committees have joined in the election campaign everywhere. This is a good school for the young people's political activity.

A comprehensive form of ideological-political, labor and moral education is the Lenin examination. Its content must be constantly improved. Evidently the time taken for sociopolitical certification should be revised so that production workers adopt socialist pledges and personal comprehensive plans simultaneously. These and other questions of the organization of the Lenin examination must be studied attentively by the Komsomol Central Committee.

A lively, creative atmosphere is an atmosphere of collectivism and a high degree of mutual exactingness, of Komsomol comradeship and the strict assessment of Komsomol members' deeds and actions in the spirit of the requirements of the Komsomol rules. Strict sanctions must be imposed on those who take no part in social work and work and study carelessly. There cannot and must not be any lenience toward those who violate the norms of our morality, who behave in an unseemly fashion. This is precisely the high exactingness which the party teaches us.

Take a question like the registration of Komsomol members. Every year about 12 million Komsomol members move from one organization to another. A natural process. But some young men and women display a lack of discipline here and lose their organizational link with primary organizations. Komsomol committees must display more principlemindedness and exactingness here.

The Komsomol meeting is the supreme organ of the Komsomol organization, a school for the social activeness of young men and wmen. It involves summing up the results of what has been done and is a launch pad for new achievements. Every meeting must leave its mark on the life of the Komsomol cell, arouse the Komsomol members' thoughts and feelings and mold efficiency and principlemindedness, a critical attitude toward shortcomings and a rejection of verbosity.

The 19th Komsomol Congress was preceded by reports and elections in the country's Komsomol organizations. They took place with enormous attention from the CPSU Central Committee and local party organs and became an exacting review of the Komsomol ranks. The majority of meetings and conferences were distinguished by a high degree of organization, efficiency, heightened exactingness and criticism and self-criticism. The meetings voiced many comments and specific proposals for improving Komsomol work. It is important that they, like the decisions of the report and election meetings and conferences and congresses, should all be consistently implemented.

/In the period under review the structure of all echelons of the Komsomol was improved./ In connection with the creation of production and science-and-production associations and agroindustrial complexes the process of enlarging primary Komsomol organizations continued. Over 8,000 Komsomol committees have been granted raykom rights. Under these conditions the role of the lower-level cells, which are closest to the life and deeds of young men and women, is enhanced.

The Komsomol has 2 million shop and equivalent organizations and Komsomol groups. However, Komsomol groups have still not been created in many Komsomol and youth collectives in industry and construction. That is a grave shortcoming. Under the conditions of the widespread transition to the team method of labor organization and incentive more attention must be paid to the creation of Komsomol groups and their work.

Comrades: The activity of the Komsomol Central Committee in the period under review has been aimed at fulfilling the tasks set by the party, ensuring collectivity of leadership, strengthening discipline and organization and developing intra-Komsomol democracy. There have been 10 Komsomol Central Committee plenums and regular bureau and secretariat sessions which have examined questions relating to the Komsomol's participation in the development of the national economy, the intensification of young people's ideological and moral education, the improvement of work with general educational school pupils, the further organizational and political consolidation of the Komsomol ranks and other questions.

The Komsomol now has 14 republic, 158 kray and oblast, 10 okrug and about 4,400 city and rayon Komsomol organizations. The practice of reviewing Komsomol organizations' work has improved. The republic, kray, oblast, city and rayon organizations which have been awarded the Komsomol Central Committee challenge Red Banner "for successes in young people's communist education" deserve the most favorable comment.

Komsomol Central Committee challenge Red Banners have been presented in perpetuity to the winners in the survey of the fulfillment of the 25th CPSU Congress decisions--the Ukrainian, Belorussian, Uzbek, Kazakh, Georgian, Azerbaijan, Lithuanian, Moldavian republic Komsomol organizations, the Moscow and Kiev city organizations, the Altayskiy and Khabarovskiy kray organizations and the Bashkirskaya, Voronezhskaya, Gorkovskaya, Ivanovskaya, Kaliningradskaya, Leningradskaya, Moskovskaya, Rostovskaya, Sverdlovskaya, Chelyabninskaya, Donetskaya, Kustanayskaya, Tashkentskaya and Khmelnitskaya oblast organizations. (applause)

The Armenian, Georgian, Latvian, Lithuanian and Estonian republic Komsomol organizations, which have celebrated their 60-year jubilees, have been awarded lofty awards of the motherland for their active participation in socialist and communist building and fruitful work on the young people's communist education. (prolonged applause)

At the same time the Kamchatskiy, Severo-Osetinskiy, Tuvinskiy and several other Komsomol obkoms are not persistent enough in resolving the tasks facing them. Blame here also rests with the Komsomol Central Committee, and primarily its Komsomol organs section, which has failed to display consistent exactingness toward them and to render them the necessary aid. /Komsomol raykoms, gorkoms and okruzhkoms are an important component./ The level of primary organizations' activity largely depends on their vigor and competence and on thoughtful analysis and daily practical aid.

Komsomol committees, beginning with the Komsomol Central Committee, must improve the style of their work with even greater persistence. Regimentation, bureaucratism, a plethora of papers and resolutions, verbosity and other manifestations of a formal bureaucratic approach toward matters frequently penetrate our Komsomol milieu. And that leads to a discrepancy between word and deed, to a situation where individual Komsomol workers sometimes lose their modesty and ability to assess their own activity critically. The Komsomol style work must be imbued with efficiency and specificity, a scientific approach and a high degree of exactingness ruling out any manifestations of complacency and indifference, formalism and conceit.

/The party teaches the Komsomol to resolve in close unity tasks of ideological and organizational work and to display a comprehensive approach toward ideological-political, labor and moral education./ This is an important guarantee of the further enhancement of the militancy of the Komsomol ranks and the Komsomol members' vanguard role in labor, study, and Soviet young people's social affairs.

Comprehensive plans for young people's communist education elaborated under the leadership of party committees have become widespread in recent years. They make it possible to deploy forces better and coordinate the efforts of all organizations engaged in young people's education. The Komsomol's cooperation with state, trade union and other public and economic organs has strengthened. However, the potential for comprehensive planning is not being used fully by Komsomol committees. It is important to study in greater depth the processes taking place among the young and give better consideration to their requirements, interests and improved standard of education and culture.

The Komsomol's link with scientific organizations has strengthened, and the range of research topics relating to youth problems has expanded. An important role here belongs to the Komsomol Central Committee and USSR Academy of Pedagogical Sciences social council for the study of youth problems. The study of public opinion among young people and work with letters and comments sent to Komsomol organs and the editorial offices of youth publications require unremitting attention.

The CPSU Central Committee resolution "On Further Improving Monitoring and Verification of Execution of Decisions in the Light of the 26th CPSU Congress Decisions" stresses that verification of the execution of decisions remains a bottleneck in organizational work. This also applies fully to the Komsomol.

The fulfillment of decisions taken by Komsomol committees depends largely on how topical and clearly and specifically formulated they are. Empty phrases and general appeals only disorganize work. "All our decisions must be backed up by thoughtful, precise organizational measures," L. I. Brezhnev said. "What must be done and where and within what deadlines, who is specifically responsible for a given sector and who--once again, who specifically--verifies execution."

Comrades: /The growing demands on the Komsomol's activity oblige us to constantly improve the selection, placement and education of cadres and activists. The Komsomol Central Committee, with the most active support of party organs, has taken the necessary steps to ensure that all sectors of Komsomol work are headed by politically mature, competent and skilled youth organizers.

The detachment of young communists working in the Komsomol has increased by one-third in the past 4 years and has increased fivefold by comparison with the mid-sixties. The party nucleus in the Komsomol consists of almost 1.5 million communists, combatants selflessly devoted to their cause and capable by their words, deeds and personal example of enthralling young men and women. CPSU members and candidate members now head about half the primary Komsomol organizations.

In the period under review workers, kolkhoz members and national economy specialists were actively promoted to Komsomol work. All secretaries of union republic Komsomol Central Committees and Komsomol kraykoms and obkoms, 90 percent of Komsomol gorkom and raykom secretaries and one-third of primary Komsomol organization secretaries have higher education while half have engineering and technical, economic or agricultural education. Two-thirds of Komsomol raykom, gorkom, obkom and kraykoms and Komsomol Central Committee first secretaries have been through a school of labor tempering in plant shops, in mines, on construction sites, and in fields and livestock units.

Working in the Komsomol is not only a great honor but also a tremendous responsibility. Militancy and a lively creative atmosphere in Komsomol collectives depend largely on the ability, efficiency, conscientiousness, initiative, high moral qualities and human charm of the Komsomol workers and activists. They must live in the midst of young people and constantly heed their voice. This must be a requirement and rule for every Komsomol leader. No references to pressure of work or "current business" can serve as justification for those who rarely visit the construction site, livestock units, workers' hostel or evening school, where the young men and women work, study and relax.

In the period since the 18th Komsomol Congress the system of training and retraining Komsomol cadres and activities has improved, the network of Komsomol schools has expanded and their study facilities have strengthened. The new Olympiyets training center has begun to operate, where over 16,000 primary Komsomol organization secretaries have already been trained. The Komsomol Central Committee Higher Cooperative School has improved the standard of its training and educational and scientific research work. The system for training Komsomol cadres and activists must be improved constantly. Every Komsomol worker and activist must have a program for his continuous education and must work regularly on himself.

However, youth "leaders" who have stopped developing, who have fenced themselves off from young people with a paper barrier, who are indifferent toward their duties and some of whom even behave in an unseemly fashion, have not disappeared. Such people have no right to work in the Komsomol. Treasuring the party's trust and the trust of his comrades in the Komsomol--there is no higher duty for the Komsomol worker and activist. (prolonged applause)

The 26th CPSU Congress' demand that all those promoted to leading work should be tempered in the midst of life and undergo the schooling of the labor collective must be persistently implemented.

In 1972, after graduating from sovkhoz-technical college, the young specialist Viktor Gavrilenko was sent to the XXII Sezda KPSS kolkhoz. He was drafted to work in a lagging brigade and then, when he had taken charge of it, he was rapidly able to bring it up to the level of the leading ones. He graduated from the agricultural academy without time out from work and became the kolkhoz's chief agronomist. Viktor has firmly acquired the glory of a master producing good harvests, a production innovator and an active public worker. A delegate to the 17th, 18th and 19th Komsomol congresses, member of the Komsomol Central Committee and winner of the order of the labor Red Banner, Viktor Gavrilenko has graduated from a great school of public and Komsomol work. He is now secretary of the Gomelskiy Komsomol Obkom. His experience of life, love for people and his job and principlemindedness have won him merited authority.

Educated by the party and raised on practical deeds in fulfilling its decisions, Komsomol cadres are constantly swelling the ranks of party, trade union and soviet organs and are being promoted to responsible economic and administrative work. This is yet more graphic evidence of the great trust placed in the Komsomol.

Comrades: /The point of the life and activity of the League of Youth Leninists lies in the struggle for the party's cause./ Emulation of the communists and utilization of the CPSU's rich experience are a guarantee of the Komsomol ranks' ideological and organizational firmness.

The communists nurture their young successors with unremitting, ruly paternal attention, in an exacting and demanding way. The entire multifaceted, titantic activity of our party's combat headquarters--the CPSU Central Committee--is imbued with Leninist concern for the future of our motherland, for the younger generation and for the Komsomol's deeds. Questions relating to work with young people and party leadership of the Komsomol are kept constantly in sight by union republic communist party Central Committees, party kraykoms, obkoms, gorkoms and raykoms and primary party organizations.

/The Lenin Komsomol has paid constant and great attention to the preparation of new party reinforcements from among the young people./ In the period between the 25th and 26th party congresses the Komsomol recommended over 2.3 million of its best alumni for the party ranks.

In December 1921, on familiarizing himself with the draft of one of the resolutions of the 11th conference of the Russian Communist Party of Bolsheviks, V. I. Lenin made comments of fundamental importance directly touching on the preparation of a party reserve via the Komsomol. "It seems to me," Vladimir Ilich noted, "that on this point it is essential to impose stricter conditions and verification of the fact that Komsomol members admitted to the party have, first, studied really seriously and learned something and, second, gone through a long probationary period of serious practical work (economic, cultural and so forth)."

These words of Lenin's sound just as acute and topical right now. To become a communist is a great honor and tremendous responsibility for every Komsomol member. The responsibility of the Komsomol organizations and Komsomol committees for recommending them to the party must also be high.

The Komsomol checks its every step against the party. Exceptionally important, determining significance for the Komsomol's activity attaches to the congresses of our Communist Party. It is proposed to introduce, in line with the schedules adopted by the CPSU, schedules for holding republican Komsomol congresses and report and election conferences. It is proposed to introduce changes to the Komsomol rules; to hold All-Union Komsomol and union republic Komsomol congresses once every 5 years and report and election conferences every 2-3 years. (applause)

Steadily following Lenin's party--that is where the Komsomol sees the supreme point of its activity. (applause)

V. Struggling More Actively for Peace and Against War and Strengthening Young People's Anti-Imperialist Solidarity

Comrades: The Komsomol and soviet youth organizations, loyal to Lenin's behests on the international brotherhood of working people, are developing fruitful ties with their contemporaries abroad. Over 1,350 national and international youth and student organizations of various political and ideological leanings from 140 countries--that is the range of our contacts. Virtually all republic, kray, and oblast Komsomol organizations and representatives of all categories of young people take part in their implementation. /The main avenue of cooperation is the struggle for peace and against the threat of war./

The peace program for the eighties put forward by the 26th CPSU Congress has become a banner for the Komsomol's activity in the international youth movement. /The Lenin Komsomol and all Soviet young people wholly and fully support the foreign policy course of the CPSU and the Soviet state and the titantic activity of Leonid Ilich Brezhnev, that outstanding standard-bearer of peace, and the new peace initiatives he has advanced. (tumultuous applause)./

The clouds of war have recently been gathering over our planet again. United States and NATO militarist circles are trying to disrupt the military-strategic equilibrium and are developing and building up the production of new weapons of mass destruction, including neutron and chemical weapons. They are adopting the monstrous doctrines of the permissibility of a "limited" nuclear war and a first nuclear strike and are stoking an atmosphere of military hysteria.

The young are becoming increasingly aware of the threat looming over them of becoming the victim of the U.S. and NATO militarist circles' adventurist policy. The senseless arms race imposed by these forces is diverting enormous funds from social programs and depriving many millions of young men and women even in the most developed countries of the capitalist world, dooming them to unemployment and preventing them from receiving an education and enjoying the benefits of culture and sport.

Under the conditions of the exacerbated international situation great significance was attached to the holding in Helsinki in 1981 of the world forum of youth and students for peace, detente and disarmament, which showed clearly that only the collective efforts of all those who hold peace dear can erect a firm barrier on the path of war and the arms race.

The aggressive actions of the opponents of detente are generating protest and prompting millions of young men and women in all countries to join the ranks of the active fighters for peace. We express our warm support for the broad young people's masses' demonstrations against the NATO strategists' sinister plans to turn West Europe into a launchpad for new U.S. nuclear missiles. Soviet young people say a firm and resolute "no to U.S. missiles in Europe! No to aggression and war! We shall not let the world be blown up!" (tumultuous, prolonged applause)

Peace is not a gift from heaven, its preservation and consolidation require daily, hard struggle, L. I. Brezhnev has said today. Millions of young Soviet men and women have sent to NATO headquarters their angry demands for the halting of the arms race and the elaboration of senseless plans for nuclear warfare.

Komsomol committees must continue to use various forms and means for raising vigorous and aware young fighters for peace. The Komsomol sees it as its task to actively explain among broad strata of foreign youth the peace-loving foreign policy course of the CPSU and Soviet state and expose bourgeois propaganda's fabrications concerning the alleged "Soviet threat," we believe it is essential to hold an all-union "Soviet youth peace march" which will include demonstrations, meetings, marches, labor stints and other initiatives and actions expressed Soviet young people's desire to curb the arms race and safeguard peace throughout the world. (tumultuous applause)

Practical actions in the struggle against the threat of war and participation in the young people's antimilitarist campaign developing throughout the world must become for young Soviet men and women who are building communism a school of ideological and political maturation, a school of civic maturity, patriotism and internationalism.

Comrades: /In building a new society and struggling against the nuclear threat the Lenin Komsomol acts with the youth leagues of the socialist community countries./ The indestructible unity of the socialist states' fraternal communist and workers parties is a firm foundation on which fraternal friendly ties are built between the young men and women of the USSR and their contemporaries from Bulgaria, Hungary, Vietnam, the GDR, Cuba, Laos, Mongolia, Poland, Romania and Czechoslovakia. There are no forces in the world capable of disrupting this inspiring unity. The Lenin Komsomol will always be true to this unity. (tumultuous, prolonged applause)

The participation of our countries' young people in the construction of very large-scale CEMA projects, the Soyuz gas pipeline and Mir power system, and in joint selfless labor at the Kursk magnetic anomaly and the nuclear power station in Hungary, on the West Siberian oilfields and machinebuilding construction sites in Cuba, at mining industry enterprises in Mongolia and industrial projects in Vietnam has become a veritable school of internationalism. The miners of the 60-Letiye Oktyabrskoy Revolyutsii Mine in the Donbass and the Paskov Mine in Ostrava are working in rhythm.

The 26th CPSU Congress and the congresses of the fraternal parties outlined new prospects for the socialist community's development. Long-term targeted programs are of enormous significance in the CEMA countries' cooperation. For instance, the Free German Youth has come out with a fine initiative, proclaiming the construction of two sectors of the gas pipeline from Urengoy to the USSR's western border a central youth project. This initiative is close to us: the Komsomol has declared the gas pipeline's installation an all-union shock Komsomol construction site.

The nature and scale of mutual relations between youth organizations now make it possible to learn from each other all that is best and progressive and to borrow the most interesting forms of young people's ideological-political, labor and moral education. The desire to study attentively and make extensive use of the fraternal countries' experience must become the pivot of the expanding ties between the Komsomol organizations of provinces and cities, related enterprises and student collectives. International competition has been further developed. Hundreds of youth collectives supported the initiative of the young longshoremen of Odessa and Varna to launch competition in honor of the Soviet and Bulgarian Communists' congresses under the slogan "two congresses--one goal."

Our opponents are bending over backwards to use lies, slander and concentrated acts of ideological subversion to poison the consciousness of young people in the socialist countries and to fragment the youth leagues ideologically and organizationally. This was confirmed by the events in Poland where counter-revolution, relying on the support of foreign reaction, tried to attract young people to its side and use them as a blind tool in the struggle against socialism's gains in people's Poland.

Life confirms that only on the basis of Lenin's tested organizational, political and ideological principles can the youth leagues act in the role of the vanguard of the younger generation and oppose the class enemy's subversive activity. We express the firm conviction that the fraternal youth leagues in Poland will be the PZPR's reliable assistants in the struggle to consolidate socialism in Poland. (prolonged applause)

... Some 6KM from the River Bug, in the small village of Okopy, there is a modest obelisk with a star: "Aleksandr Fedorovich Zolotenin, born 1926, died 21 July 1944." This is the first inch of liberated Polish soil and, they say, the first grave of a Soviet soldier on it. One of 600,000 graves. The exploit of the Soviet serviceman and liberator will live on in young patriots' hearts. (prolonged applause)

Soon the peoples of the world will celebrate the 40th anniversary of Europe's liberation from fascism. The Komsomol warmly supports the proposal of the socialist countries' fraternal youth leagues to hold in 1982 through 1985 the "Pamyat" [Memory] international relay of patriotic deeds devoted to that notable date. (applause)

Today the song and grandsons of those who saved mankind from the horrors of fascist enslavement are standing guard over our peoples' peaceful gains. The crucial task of the socialist countries' youth organizations is to strengthen the tested brotherhood in arms of the Warsaw Pact countries' armies.

The defense of socialism's gains is young people's international duty. For almost 25 years U.S. imperialism has been vainly trying to prevent revolutionary Cuba from building a new life. The Komsomol angrily denounced the provocative U.S. policy with respect to the Cuban people and resolutely states: "The island of freedom is not alone! Hands off Cuba!" (tumultuous, prolonged applause)

The peoples of Vietnam, Laos and Kampuchea are carrying out socialist transformations, defending their independence and sovereignty and struggling for peace and stability in Southeast Asia under exceptionally complex conditions. Soviet young people will continue invariably to strengthen their friendship and to render international support to the younger generation in these countries in building a new life and defending their revolutionary gains. (prolonged applause)

In the period since the 18th Komsomol Congress our traditional relations of friendship with Yugoslav youth organizations have continued to develop.

The Komsomol supports the desire of DPRK working people and young people for the country's peaceful democratic unification without outside interference.

Komsomol members and young Soviet men and women fully share our party's principled position with respect to China voiced in the decisions of the 25th and 26th CPSU congresses and in Comrade L. I. Brezhnev's speech at the celebrations in Tashkent. In accordance with the party line the Komsomol will resolutely oppose Beijing's hegemonistic course and its alignment with the policy of imperialism in the world arena and will advocate the normalization of Soviet-Chinese relations and mutual understanding between the young people of the USSR and the PRC.

In the period under review the Komsomol's cooperation with youth organizations in Asia, Africa and Latin American countries has expanded markedly. The Lenin Komsomol is invariably in solidarity with the anti-imperialist struggle of the liberated countries peoples and will consistently strengthen its internationalist cooperation with the young fighters for national and social liberation and against the imperialist policy of neocolonialism, diktat and aggression, against fascism, Zionism, racism and apartheid. (prolonged applause)

The Komsomol will continue to comprehensively develop its friendly ties with the youth leagues of Angola, Democratic Yemen, Congo, Mozambique, Ethiopia and other states with a socialist development and to render them fraternal assistance. (prolonged applause)

The Soviet Union's young men and women express their ardent solidarity with the young Afghan patriots who are making their contribution to the cause of progressive transformations in the country and are taking an active part in the activity of the national fatherland front. Relations between the Komsomol and the Democratic Youth Organization of Afghanistan are strengthening, becoming richer and acquiring new facets. We have rendered and will continue to render our Afghan friends all-around internationalist support and aid. (tumultuous, prolonged applause)

Our congress warmly greets the young people of Nicaragua, which has won its independence in revolutionary battles and is courageously defending it today. (tumultuous applause)

We express our resolute support for the patriots of El Salvador, Guatemala, Chile, Uruguay and other countries where terror and violence rule, where thousands of young fighters are languishing in police torture chambers.

The Komsomol warmly welcomes the birth of the Republic of Zimbabwe and expresses its solidarity with the people and young people of Namibia and South Africa who are waging a selfless struggle for freedom and against racism and apartheid. (prolonged applause)

Young Soviet men and women resolutely support the struggle of the Arab countries' peoples and young people against imperialism and reaction and advocate the withdrawal of Israeli troops from all Arab territories occupied in 1967 and the implementation of the legitimate national rights of the Arab people of Palestine, right up to the creation of their own independence state, and an all-embracing and just solution to the Near East conflict. (prolonged applause)

Questions of the anti-imperialist struggle were at the center of the attention of the world conference of youth for the establishment of a new international economic order held in Mexico in 1980, the international "youth, development and peace" conference held in our country last year and a number of other youth events. However, the situation requires new initiatives.

The Komsomol will promote by every means the development of young people's anti-imperialist solidarity and the consolidation of the alliance of world socialism and the national liberation movement. We are in favor of holding an international conference on problems of young people's anti-imperialist struggle for national liberation and peace.

/The Lenin Komsomol is strengthening by every means its friendship and proletarian solidarity with the communist youth leagues in the capitalist countries and is in solidarity with the struggle of the young workers and working people against the omnipotence of capital and for democratic rights and freedoms./

The further aggravation of the general crisis of capitalism, the growing recession phenomena in the economy, unprecedented inflation, the rise in unemployment and the decline in living standards are acutely affecting the position of young people. From school to the ranks of the unemployed: that is the fate of millions of young men and women in the capitalist countries. One-fourth of unemployed Americans are young people. Four out of every 10 unemployed in West Europe are under the age of 25.

While building up the arms race and increasing expenditure on the maintenance of the military-industrial complex, the capitalist states are cutting back appropriations for education, health and social security needs. All this is leading to the further exacerbation of social contradictions. Young people can understand from their own experience that in bourgeois society there is not and cannot be class peace and they are actively joining the struggle for their rights. Police truncheons and water cannons are turned on them and plastic bullets, tear gas and the full might of the repressive apparatus are brought into play. Bourgeois propaganda wages psychological warfare against the young.

We rejoice in the successes of the capitalist countries' youth leagues in the struggle against oppression by the monopolies and for the interests of young workers and all young working people and their mounting role in the antiwar movement. The Komsomol builds its cooperation with the fraternal leagues by using as its guide the principles of Marxism-Leninism and proletarian internationalism, pursuing the spirit of comradeship and equality and on the basis of the unity of their goals in the struggle for peace, democracy and socialism. (applause)

Every youth league is constructively seeking ways and means of struggling to achieve common tasks while, naturally, taking into consideration the features of the youth movement in its own country. Here differences are possible in approaches toward the solution of specific questions of the class struggle and the assessment of particular phenomena of international life. However, the results of cooperation cannot fail to be affected by the actions of those league leaders who prefer to put existing differences of view to the force. Sometimes they make statements which depict absolutely unobjectively, as in a distorting mirror, the state of affairs in the Soviet Union and the other socialist community countries and their domestic and foreign policy. By these actions they are essentially helping to fan the noisy anti-Soviet and anticommunist campaigns whose organizers are the forces of imperialism and reaction. Giving a principled assessment of these phenomena, the Komsomol will continue to defend the unity of the ranks of the international communist and democratic youth movement for the sake of the ideals of peace and socialism. (applause)

The Komsomol attaches great significance to joint actions with young socialists and social democrats and awaits corresponding steps from them. On questions of the prevention of war and the consolidation of peace it is important to develop cooperation with all democratic, peace-loving forces. The Komsomol is prepared to actively support all initiatives useful to the cause of peace, democracy and the defense of young people's vital interests. (applause) The holding of a world meeting of young working people could serve to galvanize the struggle against the omnipotence of the monopolies and the growth of militrism and for democratic rights and freedoms.

The institution, in October 1980 at the meeting in Budapest, of an all-European structure for cooperation among young people and students was an important result of many years of searching for mutually acceptable political and organizational foundations for joint actions in the interests of peace and detente. The exchanges and contacts undertaken within its framework attest to the desire of broad forces of the continent's youth movement to promote the implementation of the provisions of the Helsinki final act.

The Komsomol assesses highly the results of the 11th world festival of youth and students in Havana, which graphically demonstrated to the whole world the strength of anti-imperialist solidarity and the desire of the world's youth and students for peace and friendship. We advocate the continuity and development of the glorious traditions of this movement and the holding of a 12th world festival of youth and students. (applause)

The United Nations, as is well known, has proclaimed 1985 international youth year. We are in favor of the events held in this connection leading to a real improvement in the socioeconomic position of the young and serving their interests and the cause of peace and the peoples' cooperation.

The Komsomol and the USSR youth organizations committee work actively in the international organizations with the biggest mass membership--the WFDY and the international union of students. The Komsomol will continue to promote in every way the consolidation of the anti-imperialist unity and to enhance the role and effectiveness of these associations in the struggle for peace and disarmament and in defense of the rights of the younger generation. The 11th assembly of the WFDY which is to open soon in Prague is designed to be an important milestone on this path.

An important role belongs to international tourist exchange in the development of cooperation. Today the logo of the Komsomol Central Committee's Sputnik international youth tourism bureau can be encountered in 88 countries. In recent years 800,000 foreign guests have followed its itineraries while 670,000 young men and women have traveled abroad. Komsomol organizations must pay special attention to ensure that when they travel abroad the envoys of Soviet youth bear the truth about our motherland and the Soviet way of life.

Komsomol members and Soviet young people are fully aware of their international responsibility for the historical destiny of socialism and for clear skies over the earth. May the ranks of the young fighters for peace strengthen, may the banner of the peoples' friendship, the banner of proletarian solidarity, flutter proudly over the planet! (tumultuous, prolonged applause)

Comrades: It is as though spring itself has entered this fine palace. May itself is a festive month for Soviet people, a fine month marked by so many memorable events. With the signs of spring, in this festive auditorium you can clearly sense the breath of our wonderful, strenuous, swift-moving times.

Responsibility to the party and to the country which raised us unites the delegates to the 19th Kosmosol Congress and millions of young hearts. Some 48 years ago the Moscow truck plant workers' "combat leaflet" announced: "A plant Komsomol conference is being prepared. It will sum up the results of work on the verification of the execution of V. I. Lenin's instructions. It will be impossible for a hollow, empty phrase or self-satisfied complacency to get into the rules governing it. It will be a militant day of serious, self-critical discussion of the work of the entire plant Komsomol organization and of each Komsomol member individually." That was how the Lenin check was born during the first 5-year plans.

Today the entire Lenin Komsomol is being checked out. We are reporting on what we have done and are undergoing a test of our political maturity and the depth of our revolutionary aspirations.

Today the most heartfelt words, the most cherished thoughts and aspirations of Soviet young people are addressed to the great and wise communist party, its Leninist Central Committee, the Central Committee Politburo and Leonid Ilich Breznhev. We will never tire of repeating our paramount precept: the party's leadership is the inexhaustible life-creating source of the Komsomol's strength and enthusiasm and a reliable guarantee of all our victories and achievements. (tumultuous, prolonged applause)

For Komsomol members and Soviet young people it is a great happiness always to march alongside the communists, to be the heirs and continuers of the cause of the revolutionary fighters and the first builders of a new life.

This year the Soviet people will celebrate the 65th anniversary of Great October, which opened a new era in the history of mankind. Raising the Russian proletariat to carry out the decisive storming of the old world, the great Lenin and the party of Bolsheviks he created had the most profound faith in the young people's creative powers and revolutionary enthusiasm.

How many harsh trials our people have withstood, and how many hard roads they have traveled! Komsomol members and Soviet young people have followed the party of communists confidently and valiantly--to storm the Reichstag and to storm the virgin lands, to storm space and to storm new frontiers of communist creation. In battles against our enemies, in the battles for communism, the youth of the land of the soviets was matured and tempered. In the single formation of their generation our Leninist Komsomol and the young people of the eighties are marching firmly alongside their communist fathers to greet the next century. (tumultuous, prolonged applause)

We are well aware that the revolution is continuing. It lies in the vastness of our plans, the scope of our achievements and the Soviet people's selfless heroic struggle to implement the historic decisions of the 26th CPSU Congress. The militant creative spirit of October is inextinguishable and it burns with a bright flame in the hearts of young Soviet men and women. The Komsomol members and young people of our country will bear aloft through life the banner of Lenin, the banner of October! (tumultuous, prolonged applause)

Long live the CPSU--the inspirer and organizer of all our victories. (tumultuous, prolongdd applause)

Long live our great multinational motherland--the USSR! (tumultuous, prolonged applause)

Long live the bright future of all mankind--communism! (tumultuous, prolonged applause which does not die down for a long time. All rise. Toasts are proclaimed in honor of Lenin's party, its Central Committee and the CPSU Central Committee Politburo).

USA INSTITUTE'S KOKOSHIN ADDRESSES KOMSOMOL CONGRESS

PM270953 Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 82 p 4

["Abbreviated" version of speech delivered at 19 May session of 19th Komsomol Congress by Dr of Historical Sciences A. A. Kokoshin, chief of a department of the USSR Academy of Sciences Institute of the United States and Canada, under the general heading "Debate on the Komsomol Central Committee and Central Auditing Commission Reports"]

[Text] At the 26th CPSU Congress, on behalf of our party and state, Comrade Leonid Ilich Brezhnev once again stated the Soviet Union's firm policy of peaceful coexistence, disarmament and mutually advantageous international cooperation. Some time has passed, and look what strong resistance the imperialist reactionaries' counterattack has encountered from peace-loving forces. An upsurge of unprecedented scale and depth is taking place in the antiwar, antimilitarist movement in West Europe. A similar movement is also growing daily in the United States. The increased threat of nuclear war has mobilized the masses to take strong action. Young people are joining increasingly vigorously in this action.

The present scope of the antiwar movement in capitalist countries once again shows convincingly how accurately in its analysis of international relations our party takes the real spirit of the times and the peoples' real needs into account. And this realistic analysis of the international situation serves us young social scientists as a supreme example of a scientific Marxist-Leninist approach to the most important specific phenomena of the present.

Soviet young people wholeheartedly approve the CPSU's peace-loving foreign policy and its new peace initiatives. Recent news reports indicate that the profoundly thought-out and bold new peace initiatives advanced by Leonid Ilich Brezhnev at the congress have elicited a very broad response from the world's people and from young people in very different countries! (applause)

The creation of approximate military equality and parity through the Soviet Union's efforts is an achievement of tremendous historic significance for all mankind.

Imperialist reactionaries and adventurers are challenging us, and we must do everything to destroy their illusions about the possibility of upsetting the military equilibrium. The achievement of "victory in nuclear war," the waging of so-called "limited wars" with impunity, our "exhaustion" in the arms race--all this is doomed to failure.

Not only moral but also intellectual superiority is on the side of peace in the global confrontation which has developed between peace-loving forces and imperialist reaction. However, this superiority must be demonstrated with the profoundness of scientific reasoning and all the ardent conviction of fighters for Lenin's cause. Communists win political battles primarily because their world outlook, strategy and tactics are based on a profoundly scientific analysis of the situation.

Young scientists, too, must make their contribution to resolving the tasks set us by Comrade Leonid Ilich Brezhnev and in B.N. Pastukhov's report.

My coevals and colleagues are today addressing foreign audiences increasingly actively. Sometimes this has to be done in a very hostile atmosphere, displaying vigilance and endurance. In the course of the struggle for the consciousness of the world's youth we impose our convictions on no one, but we actively uphold the lofty humanist ideals of developed socialism and struggle against false stereotypes of our society.

Allow me, comrade delegates, on behalf of the country's young scientists, to assure the dear Communist Party, its Leninist Central Committee headed by that indefatigable fighter for peace Leonid Ilich Brezhnev and the Lenin Komsomol that we will devote all our energy to strengthening the might of our motherland--the chief guarantor of tranquility and peace on earth! (applause).

YUGOSLAV DELEGATE ADDRESSES KOMSOMOL CONGRESS

PM251455 Moscow KOMSOMOLSKAYA PRAVDA in Russian 22 May 82 p 6

["Abbreviated" version of speech delivered at 29 May session of 19th Komsomol Congress by Ivan Kozlovacki, secretary of the League of Socialist Youth of Yugoslavia conference presidency]

[Text] I would like to take the opportunity to once again express satisfaction at the level and extent of cooperation achieved by our two youth organizations in the spirit of the mutual relations existing between the SFRY and the Soviet Union and the Soviet Union and between the LCY and the CPSU. A special personal contribution to our relations, which were forged in the joint struggle against fascism, was made by comrades Josip Broz Tito and Leonid Ilich Brezhnev. (applause).

This year, 1982, is characterized by great political activeness in our country; it is a year of congresses and conferences of all the sociopolitical organizations in the SFRY. The League of Socialist Youth of Yugoslavia and the entire younger generation are preparing actively for their congress. All our work is aimed at deepening socialist self-management, the fraternity and unity of the nations and ethnic groups and all the gains of the national liberation war and the socialist revolution. The League of Socialist Youth of Yugoslavia is joining actively in the working class' struggle to resolve urgent questions relating to socioeconomic development and other tasks facing our society.

In recent years we have witnessed a very serious exacerbation of the international situation. Not only are existing hotbeds of crisis not abating, more and more new hotspots posing a great threat to world peace are emerging. And this situation undoubtedly has an impact on the international youth and student movement.

In effecting international cooperation the League of Socialist Youth of Yugoslavia is constantly guided by the fundamental principles of the policy of nonalignment. Our youth organization cooperates with more than 450 national youth and student organizations in the world with the most diverse political and ideological views, actively implements the principles of the nonalignment policy and expresses all-round solidarity with the struggle of the world's people and young people for national independence, freedom, social progress and socialism.

In concluding my speech I would like to wholeheartedly thank you for your invitation to participate in your congress and to wish you great successes in the Komsomol's work to implement the program tasks whose fulfillment will confirm once again the Komsomol's tremendous contribution to the social development of your great socialist country and also to congratulate you on the 60th anniversary of the USSR's formation. (applause).

ROMANIAN DELEGATE ADDRESSES KOMSOMOL CONGRESS

PM271047 Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 82 p 8

["Abbreviated" version of speech delivered at 20 May session of 19th Komsomol Congress by Pantelimon Gavanescu, first secretary of the Romanian Union of Communist Youth Central Committee, under the general heading: "Greetings From Foreign Guests"]

[Text] Our motherland's younger generation is sincerely gladdened by the splendid successes achieved by the Soviet Union's people under the CPSU's leadership in all spheres of life since the day of the victory of the Great October Socialist Revolution and appraises highly the activity of Soviet youth in building a communist society in your country. I take the opportunity to convey to you wishes for great new successes in this activity on behalf of Romanian youth. (applause)

Under the RCP's leadership our country's working people are implementing the decisions of its 12th congress and carrying out a program to build a comprehensively developed socialist society and to advance Romania toward communism. Romanian young people, whose aspirations and desires are organically linked with the RCP's policy, are creatively applying the general natural laws of socialist building, taking our country's historical, social and national conditions into account, acting enthusiastically in all spheres and successfully fulfilling the role of an important social force in our country.

In the spirit of the active and consistent foreign policy of our party and state the Union of Communist Youth [UTC] brings to the fore the development of friendly relations and cooperation with the youth organizations of all the socialist in our country.

In the spirit of the active and consistent foreign policy of our party and state the Union of Communist Youth [UTC] brings to the fore the development of friendly relations and cooperation with the youth organizations of all the socialist in our country.

In the spirit of the active and consistent foreign policy of our party and state the Union of Communist Youth [UTC] brings to the fore the development of friendly relations and cooperation with the youth organizations of all the socialist countries. We also maintain ties and express combat solidarity with the youth of national liberation movements, with the youth organizations of developing and nonaligned countries and with communist, revolutionary, progressive and democratic youth organizations on the common platform of struggle against imperialism, colonialism and neocolonialism, for peace, security and independence and for the creation of a better and just world.

In the UTC's international activity special attention is devoted to developing cooperation and friendly relations with Soviet youth. The fruitful results of the meetings between Comrade Nicolae Ceausescu, general secretary of the RCP and president of Romania, and Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, have brought about the continuous deepening and activation of relations between the UTC and the Komsomol. I am very pleased to note the developing friendly relations between our organizations, the different forms of cooperation and the mutual interest in exchanging experience of the activities of our countrys' youth. Romania's UTC will continue to develop friendly ties with the Komsomol in the spirit of peace and on the basis of the fruitful friendly relations between our parties, countries and peoples. (applause).

'PRAVDA' NOTES IDEOLOGICAL VALUE OF ELECTION 'CAMPAIGN'

PM191435 Moscow PRAVDA in Russian 14 May 82 p 1

[Editorial: "Taking the Party's Word to the Voters"]

[Excerpt] Soviet people are preparing in an atmosphere of labor and political activeness for the elections to local Soviets and people's courts which are to be held on 20 June in all the union republics. Electoral okrugs and sectors have been formed and election commissions created. Leading workers, kolkhoz members and representatives of the intelligentsia are being nominated as candidate deputies. They will soon begin to hold meetings with the voters. The measures associated with the elections are taking place on the basis of the schedules laid down and in strict accordance with the requirements of the USSR constitution, the constitutions of union and autonomous republics and election law.

In stepping up the election preparations, ideological workers strive to propagandize vividly and in a well-argued way the historical advantages of socialism and the 26th CPSU Congress' course of further developing the economy, science and culture, increasing the people's well-being, developing socialist democracy and strengthening legality and law and order. It is important to illustrate all this with concrete facts taken from life. In a number of places they are holding excursions to the 5-year plan's new construction projects, and colorful display stands have been prepared relating the successes of working people in the city and countryside in the period between elections.

In the party's organizational and ideological education work increasing significance is attached to developing a high political culture in Soviet people. The election campaign creates good opportunities for this. But it is by no means only a matter of explaining the provisions of the USSR constitution and citizens' rights, freedoms and duties. It is necessary to strive for respect for the constitution and state laws to become the norm in every person's behavior.

At the same time it is necessary to reveal the nature of social and national oppression in the world of capital and to resolutely expose the falsity and hypocrisy of bourgeois democracy. It is our duty to counterpose to the class enemy's subversive political and ideological activity on the part of every Soviet person profound convictions, political consciousness and vigilance and readiness to defend the motherland and the revolutionary gains of socialism.

It is important to display concern for the effectiveness of mass political measures. Here the most important thing is not the quantity of such measures, but their content and practicality, how convincing the arguments are and how confidential the tone is in addressing an audience, how closely the questions raised are connected with the practice of communist building and Soviet people's aspirations. Where people forget this and tolerate formalism, success is not achieved. No instance of an inattentive, formal attitude to people can be allowed to escape a principled assessment.

The election campaign's success depends on the selection and placing of ideological cadres. Party organizations which devote priority attention to this question are acting correctly. Thus agitation collectives in Moscow, Leningrad, Kiev, Sverdlovsk and many other cities are being reinforced with communists, production frontrunners, leaders of enterprises and institutions and workers in science and culture who have the necessary theoretical training and experience of mass agitation work among the voters. Seminars are being organized for secretaries of party committees and party bureaus, leaders of agitation collectives and chiefs of agitation centers. Agitation workers have made their way to the remotest regions of our country. Their attention has not bypassed the shepherds of Turkmenia, the fishermen fishing in the ocean, the sheep farmers of Yakutia--in a word, all Soviet people, wherever they work.

Young voters who will be voting for the first time require special concern. For instance, Petukhovskiy party raykom in Kurganskaya oblast, having decided to organize a meeting with young voters, asked them a preliminary question: How do they see their native city's future? They received about 150 letters in reply. Their value lies in practical proposals, in the young people's deep commitment and in their desire to see their city still more beautiful and well-appointed. The young men and women had a sense of involvement in state affairs and saw once again that their voices, their opinion would be heard and taken into account. The practice of creating young voters' corners where meetings are held with deputies and party, war and labor veterans also merits dissemination.

The election campaign is vivid evidence of the profoundly democratic nature of our socialist society and the Leninist party's unbreakable ties with the masses. And it is necessary to do everything possible to ensure that the election campaign, as always, takes place in a well-organized way and to a high political standard and helps increase the working people's creative activeness.

U.S. 'PROOF' OF CW IN INDOCHINA TURNS OUT TO BE PENICILLIN

PM251217 Moscow PRAVDA in Russian 22 May 82 p 5

[S. Vishnevskiy "Rejoinder": "Ten Drops in a Glass of Water"]

[Text] "I hope you will find the time to read this document. I hope you will persuade your voters to do the same," U.S. State Department spokesman Richard Burt exhorted in March when presenting members of Congress with the government report "Chemical Warfare in Southeast Asia and Afghanistan."

Those who found time to read this bulky report saw that it was packed with fantastic anti-Soviet and anti-Vietnamese fables but contained no factual evidence. The authors of the work themselves lamented the extremely great difficulties of obtaining "examples" to attest to the use of chemical weapons by the "Reds." Burt himself lamented that a "persistent reluctance" to accept Washington's stories as true is being displayed in the United States and abroad. He practically admitted that the enigmatic twig and leaf which was much publicized by the State Department last fall causes many Americans to sneer.

The March falsification convinced nobody but the most naive simpletons. Then a signal was sent from the banks of the Potomac to American embassies with a categorical demand at any cost to procure "material evidence."

Fred (Zabitotski), instructor of special purpose punitive troops in Thailand, set his green beret at a jaunty angle and set off on his quest with a pure American businesslike approach. He did not seek far....Soon Fred appeared at the U.S. Embassy in Bangkok and solemnly placed on the table some ampoules containing a transparent liquid. Here it is, the material evidence! The diplomats and intelligence workers rejoiced. The precious cargo was carefully packed and dispatched urgently across the ocean with diplomatic couriers.

In a Washington laboratory they spent a long time brewing up the contents of the ampoules. Experts in gas masks and protective suits cautiously analyzed the terrifying liquid. Alas, they were quite unable to detect any type of chemical warfare agent. The telephone kept ringing. Their bosses were losing patience; when would the sensational results of the analysis finally arrive?

And the sensation broke. With supreme amazement, the experts discovered penicillin in the ampoules. Ordinary penicillin. From a pharmacy.

They wanted to stamp the experts' conclusion "top secret." But some State Department official blabbed to reporters, and the whole curious story was published in NEWSDAY. The disheartened State Department leadership is raging at the U.S. ambassador in Thailand: Why did you palm us off with pharmaceutical products? The ambassador nods toward the swindler Fred (Zabitotski), who played a dirty trick on the bosses.

It is high time to recommend to the experts and their chiefs a liquid which is indeed of Russian origin: An infusion of mint and haws. It will not be much use as material evidence for the falsifiers, but it will be very useful for calming their agitated nerves. Ten drops in a glass of water.

TEXT OF COMMUNIQUE ON AUSTRIAN PRESIDENT'S VISIT PUBLISHED

PM021431 Moscow PRAVDA in Russian 30 May 82 pp 1, 4

["Soviet-Austrian Communique"--PRAVDA headline]

[Text] At the invitation of the USSR Supreme Soviet Presidium, Dr Rudolf Kirchschlaeger, federal president of the Republic of Austria, paid an official visit to the Soviet Union 25 through 29 May 1982. The Austrian head of state and the persons accompanying him visited Tashkent, Samarkand and Kiev as well as Moscow.

Meetings and conversations were held during the visit between L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, N.A. Tikhonov, member of the CPSU Central Committee Politburo and chairman of the USSR Council of Ministers, and A.A. Gromyko, member of the CPSU Central Committee Politburo and USSR foreign minister, and Dr R. Kirchschlaeger, president of the Republic of Austria.

The following took part in the talks:

On the Soviet side--A.I. Blatov, aide to the general secretary of the CPSU Central Committee; N.D. Komarov, USR first deputy minister of foreign trade; M.T. Yefremov, USSR ambassador to Austria; and A.P. Bondarenko, chief of a USSR Foreign Ministry section;

On the Austrian side--Dr W. Pahr, federal minister of foreign affairs; Dr J. Staribacher, federal minister of commerce, trade and industry; Dr (V. Lobyl), office director in the president's chancellery; Dr H. Kiedermann, Austrian ambassador to the USR; and Ambassador Dr (F. Bauer), political director in the Federal Ministry of Foreign Affairs.

Questions of bilateral relations and prospects for their further development and also topical international problems of mutual interest were discussed during the conversations. The conversations were held in the businesslike, friendly atmosphere characteristic of the relations between the USSR and Austria.

L.I. Brezhnev and R. Kirchschlaeger noted that the personal contacts between the leaders of the Soviet Union and Austria have a fruitful impact on the development of the cooperation between the two countries in various spheres and help to deepen the mutual understanding and strengthen the trust between the USSR and the Republic of Austria.

The sides again emphasized the enduring importance of the state treaty on the restoration of an independent and democratic Austria. This treaty, the status of permanent neutrality enshrined in the constitution, and also Austria's joining of the United Nations opened up before the country extensive opportunities to play a positive role in the world. The policy pursued on this basis and Austria's commitment to the ideas of detente made a substantial contribution to the maintenance of stability in Europe.

The sides expressed satisfaction at the onward development of Soviet-Austrian relations in the political, economic, cultural and other spheres. Even in the more complex international situation, these relations retain a stable character and reaffirm in practice the importance and usefulness of cooperation between states with different social systems.

Both sides voiced a positive assessment of the attained level of economic ties, which are developing steadily on the basis of the long-term agreement on trade and payments in 1976-1985 and the long-term program for the development and deepening of economic, scientific, technical and industrial cooperation in 1981-1990. The great importance of the accords on participation by the (Fest-Alpine) concern in the construction of a metallurgical plant in the USSR and also by Austrian firms in the construction of the "Yamal-western border of the USSR" gas pipeline was noted in this connection.

The sides stressed their determination, while displaying a solicitous attitude toward what has been achieved, to continue to step up the pace of economic cooperation, to improve its effectiveness and to practice more widely new forms of economic ties. They will also promote the development of mutually advantageous trade on a more balanced basis. The practical resolution of these tasks is to be the focus of attention for the Soviet-Austrian Joint Commission on economic, scientific and technical cooperation.

In the interests of strengthening relations of good-neighborliness, the sides advocate further developing the contacts and ties between parliaments, ministries and departments, trade unions and youth, women's and other organizations. They also advocated expanding exchanges on both a collective and an individual basis in the spheres of science, culture, sport and tourism.

In their examination of international problems, L.I. Brezhnev and R. Kirchschlaeger were unanimous that the preservation and consolidation of peace is the cardinal task toward whose resolution the efforts of all states must be directed. The sides expressed serious concern at the growth of international tension and the emergence of new hotbeds of crisis in the world. Under these conditions they advocate a resolute turn toward a policy of detente and constructive cooperation between states.

A vital need of our time is to end the arms race and to eliminate existing hotbeds of crisis. The sides advocated the immediate taking of measures for disarmament in the spheres of both nuclear and other armaments in such a way as to achieve the lowest possible level of armaments while maintaining the military balance. They pointed to the great importance of achieving positive results at the Geneva talks between the USSR and the United States on the limitation of nuclear arms in Europe, and also at the upcoming talks on the limitation of strategic arms.

The sides reaffirmed that the implementation of general and complete disarmament embracing both nuclear and conventional types of armaments remains the ultimate goal of the USSR and Austria.

L.I. Brezhnev drew the attention of Austria's president to the Soviet Union's recent proposals and initiatives, which, he emphasized, are dictated by the desire to strengthen international security and defend peace on earth.

The president of the Republic of Austria greeted with staisfaction the Soviet Union's readiness to seek ways leading to the consolidation of world peace. In this connection he also welcomed the USSR's readiness for a constructive dialogue with the United States at summit level.

The Soviet Union and Austria express the hope that the upcoming second UN General Assembly special session on disarmament will lend fresh impetus to efforts to limit the arms race. They will vigorously promote the success of its work.

During an exchange of opinions on the situation in Europe the sides stressed the great importance of preserving and deepening detente, which must also embrace the military sphere. In this connection they reaffirmed their determination to promote in every possible way the continuation of the process initiated by the conference on security and cooperation in Europe, and to implement consistently and in full all the principles and provisions on the final act adopted in Helsinki.

The Soviet Union and the Republic of Austria advocated the adoption at the Madrid meeting of generally acceptable material decisions on all sections of the final act. They advocate that agreement on convening a conference on measures to strengthen confidence and security and on disarmament in Europe be reached in Madrid. The draft final document submitted by the group of neutral and nonaligned countries represents a suitable basis for the positive conclusion of the meeting in Madrid.

Noting the importance of the Vienna talks on the reduction of armed forces and armaments and associated measures in Central Europe, the sides expressed the hope that progress and specific results would be achieved at them.

Expressing serious concern at the increasing tension in the Near East, the Soviet Union and Austria stressed the need for the speediest all-embracing and just settlement in the region. Integral elements of such a settlement are the withdrawal of Israeli troops from all the Arab territories occupied in 1967, the implementation of Palestinian Arab people's legitimate national rights, including the right to form their own state, and also the safeguarding of the right to security and sovereignty of all the states of the region, Israel included. Such a settlement can be achieved only if all the interested sides, the PLO included, take part.

In discussing the situation in other parts of the world the sides expressed the unanimous opinion that any disputed issues must be resolved by peaceful means alone. They consistently advocate strict observance of the principle of the nonuse of force in international relations.

The Soviet Union and Austria stressed the important role of the United Nations as an instrument for the maintenance of peace and international security and also for the development of peaceful cooperation among all states and proclaimed their intention to do all in their power to ensure the effective functioning and further strengthening of the United Nations on the basis of strict and unswerving observance of its charter.

L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, and Dr R. Kirchschlaeger, federal president of the Republic of Austria, expressed satisfaction with the exchange of opinions that was held and stated that it had been useful for the further successful development of relations between the USSR and Austria in the interests of peace and cooperation in Europe.

Dr R. Kirchschlaeger, federal president of the Republic of Austria, invited L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, to pay an official visit to Austria. The invitation was accepted with thanks. The dates of the visit will be agreed through diplomatic channels.

SOVIET NEWSPAPER FACSIMILE TRANSMISSION DESCRIBED

PM141425 Moscow SELSKAYA ZHIZN in Russian 7 May 82 p 3

[Reportage by A. Gusev, scientific editor of the Journal Radio, under the rubric "Today is Radio Day, the Holiday of the Workers in All Communications Sectors": "Newspaper Transmitted Through Space"]

[Text] Radio communications, radio broadcasting, television--these words have become part of our lives. Radio has become a customary prefix to the names of a number of sciences. Radar [radiolokatsiya], radioastronomy, radiophysics, radiometry and many more radio sciences have won the rights of "full representatives" of radioelectronics. All the same, every time you come across the ubiquitous radioelectronics, you cannot help wondering at its rapid development. It has, so to speak, firmly seized a bridgehead and is extending it--it is mounting a successful attack on all sectors of science and technology.

Take publishing, for instance. Until quite recently people living in remote cities in the country received the central newspapers the following day at best. Now they can read them at the same time as muscovites. Radioelectronics takes the credit for this. A system of transmitting newspaper pages by phototelegraphy has been created and is operating successfully. The matrices from which the newspapers are printed are being shipped by electromagnetic waves instead of aircraft.

A print of the newspaper page is placed in the phototelegraphic apparatus. And its special analyzing device analyzes what it sees and converts it into electric signals, gradually, one narrow strip after another, like a combine in the fields at harvest time. If there is a light section in the strip, one signal is given, and if it is dark, another. These signals pass along land and space communications lines, undergoing various transformations en route, to the local printing houses, where there is another phototelegraphic apparatus, the receiver.

Here everything goes strictly according to schedule and without interruptions--the printers and communications workers work harmoniously. And that is understandable: for the time taken to transmit a newspaper, short though it is (one page takes about 2 minutes), it is necessary to interrupt communication on 60 telephone channels.

The reverse task is resolved at the point of reception: the signals received are translated into visible form. By exposing the film to electric light in sections in the phototelegraphic apparatus it is possible to reconstruct the transmitted pages. They then develop the film, make prints from it, prepare the matrices and start printing the newspaper without delay. In the morning it reaches the reader.

Thus newspapers cross hundreds and thousands of kilometers in a matter of minutes, thanks to radioelectronics. Sixteen central newspapers, including SELSKAYA ZHIZN, are sent in this way to Khabarovsk, Irkutsk, Tbilisi and other centers--in all, to more than 40 major cities in the country. In the current 5-year plan the delivery of newspapers through space will be extended. This will be made possible by the new Moskva satellite communications system with its compact ground equipment.

Satellite communications systems are a young, rapidly developing sector. Thanks to this sector 15 years ago the inhabitants of a number of cities in Siberia and the Far East were for the first time able to see live television coverage of the Red Square parade by way of a space linkup through the Orbita system.

Now three space communications sytems are operating in our country--Orbita has been joined by Ekran and Moskva. It is through them that the main task in the sphere of television development is being implemented in the 11th 5-year plan--the transmission of the first and second all-union programs to five broadcasting time zones at convenient times for television viewers. They have already made it possible to extend the television coverage zone and reach 86.5 percent of our country's population.

Together with professional communications workers, the holiday is being marked by the many thousands of radio enthusiasts, or, as they are still called, the experts of the "people's laboratory." The range of their creativity is very great--from the simplest radioelectronic toys and receivers to space relay stations.

Yes, it was by the hands of radio amateurs in the USSR Dosaaf space technology laboratory that the Radio-3 to Radio-8 satellites, put in orbit late last year, were created. Hundreds of radio amateurs--shortwave and ultrashortwave--communicate successfully through them.

The amateur radio designers also make a great contribution to our national economy. They respond with concrete deeds--the creation of new instruments, devices and adaptations--to the party and government appeal for new ways of improving production efficiency and quality and ways of reducing the expenditure of electricity, materials and labor.

KOMSOMOL DELEGATES ADDRESS 19TH CONGRESS

PM031543 [Editorial Report] Moscow KOMSOMOLSKAYA PRAVDA on 20-23 May carries abridged accounts of the speeches delivered by delegates to the 19th Komsomol Congress. There follow extracts from speeches dealing with international and domestic issues of current interest.

Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 1982, p 2.

USSR Honored master of sport A. Ye. Karpov, three times world chess champion and chairman of the board of the Soviet Peace Fund:

"In their endeavors to squash the wave of the antiwar demonstrations in the West, imperialism's propaganda centers are doing their utmost to spread the myth of the supposedly passive attitude of our youth toward the struggle for peace. This is a lie. Loyalty to the Leninist policy of peace is embodied in concrete.Loyalty to the Leninist policy of peace is embodied in concrete deeds. Deeds such as, for example, the hundreds of thousands of protest messaages sent to NATO's Brussel headquarters. As chairman of the board of the Soviet Peace Fund I know well the practical contribution of our youth to the common struggle against the threat of war.

"People in our country are educated from childhood in the spirit of patriotism and internationalism. The activity of the Soviet Peace Fund is founded of the same high moral principles. Trains, ships and aircraft depart from various countries, carrying baby food, children's clothes and equipment for infirmaries, hospitals and kindergartens. The proposal made in the Komsomol Central Committee report to hold an all-union peace march of our youth merits special attention. The Soviet Peace Fund board will give all possible support to this important humanistic action. (applause)"

Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 82 p 4.

A.P. Aleksandrov, president of the USSR Academy of Sciences:

"We must express tremendous gratitude to our Central Committee and to Leonid Ilich Brezhnev, who spent the war from its first day in the most dangerous places and the most difficult positions. He well knows from the example of his own life what tremendous harm in every sense war does to mankind, and he puts all his energy into ensuring that you and all people on earth can live under conditions of peace. (tumultuous applause)

"You are now living under totally different conditions from those we lived under at your age. The first task posed by Great October--to deliver the people from poverty and forced labor--has been resolved successfully. And you are as accustomed to this as to the successes of cosmonautics. A very great deal now depends on how you understand and fulfill the party's slogan 'Do everything for the working people's well-being and for the harmonious development of everyone's personality.'

"It is sometimes thought that this slogan chiefly defines the material aspect. And yet it is far broader! And you will impoverish yourselves if you interpret this slogan only in the material sense. You must not slide into Philistinism. The development of your spiritual and creative potential and knowledge, participation in technical creativity, profound knowledge of literature and art--this is what will enrich your lives far more than any superfashionable clothes or furniture, any motorcycle or car!

"Do not deprive yourselves of the tremendous spiritual wealth of culture, science and art which has not been opened up before you through the labors of the older generation. Everything depends on you. If you think about this and direct all your energy toward assimilating the great spiritual heritage created by older generations and make your creative contribution to developing our great motherland and our people, then your lives will be happy and full, and I would like to wish you all just such a life! (tumultuous, prolonged applause)"

Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 82 p 5

A.M. Stepanova, senior salesperson at Tomsk's Central Department Store:

"Leonid Ilich Brezhnev said of young people in the trade and services sphere that the majority of them are good, honest workers. At the same time he pointed out that 'in many places both our stores and our consumer service enterprises are still not working as we would like.' The resolution of this problem must be the most important, chief task for us Komsomol members and young people working in trade. Questions of the professional honor and dignity of the Soviet salesperson must be sharply examined and principles upheld at our Komsomol meetings. We must resolutely combat those who use their profession for mercenary motives and who live according to the principle 'You scratch my back and I'll scratch yours.' We must speak loudly about violations, at the tops of our voices! (applause)

"We can influence the quality of consumer goods. One of the forms of this influence is the competition among integral process teams of excellent quality. It is our direct duty to develop it more widely.

"Mainly young people live in the Siberian oilmen's cities. Last year approximately 1,000 babies were born in the city of Strazhevoy, for example. This gladdens us; the family of Siberians is being replenished. But the young families living here without their parents have a pretty tough time. Despite the fact that the construction plans for children's establishments are being overfulfilled, many young mothers are forced to stay home because of the shortage of creches, and the city services sphere is understaffed to the tune of more than 300 people. In our opinion, the norms from which the planners proceed when constructing kindergarterns and schools and the funds for children's commodities and cultural and domestic goods must correspond to the rapid growth of young cities and the high birth rate in them, and must be higher than in established cities. We hope that the planning organs will head this suggestion. (applause)

"Another issue. We sometimes encounter in the streets of our cities garishly and provocatively dressed boys and girls who are convinced that they are keeping in step with the times. It is simply painful to see such self-deception. We still are not really tackling the job of fostering in youth the need to dress with taste. Our industry has neither enterprises nor lines specializing in the production of young people's clothes. Nor are there young fashion stores. Indeed, why not open 'goods for youth' stores alongside firm enterprises for the sale of goods for children, as KOMSOMOLSKAYA PRAVDA proposed recently.

"The time has come for the ministries of light industry and trade, specially, to tackle this question. The Komsomol Central Committee must also determine the organizational forms of Komsomol's participation in resolving it."

Moscow KOMSOMOLSKAYA PRAVDA in Russian 21 May 82 p 7

G.N. Seleznev, chief ecitor of KOMSOMOLSKAYA PRAVDA:

"Active penetration of life, struggle against shortcomings, broad ties with the masses, the mobilizing, 'commissar' principle of the printed word--the youth press leans this from its senior comrades and primarily from Lenin's PRAVDA, whose 70th anniversary we solemnly celebrated recently.

KOMSOMOLSKAYA PRAVDA's ties with the Komsomol committees are strengthening; large-scale joint measures have been conducted with a whole number of union republic Komsomol central committees, Komsomol kraykoms and obkoms and their youth newspapers. At the same time we must admit self-critically that we, too, are partly to blame for the unresolved problems mentioned by Leonid Ilich Brezhnev and in the Komsomol Central Committee report.

"There is nothing more important for us than concern for the ideological and moral tempering and the spiritual shaping of youth. It is particularly important to remember this today, when imperialism's propaganda machine is making desperate, refined attempts to erode the ideological, moral and, in the final analysis, class positions of Soviet youth. We must not ignore this. It is dangerous not to struggle against it.

"The spiritual life of Soviet youth is imbued with civic spirit. It is not a withdrawalinto oneself, as is happening increasingly frequently in the West, it is not away from the world but, on the contrary, into the world,into reality, into social activeness that its ardor is directed.

"Here is a characteristic example. At the end of last year the Komsomol members of Barnaul machine tool-building plant and 'Rostselmash' suggested publishing in the newspaper a protest postcard to be cut out and sent to the leaders of the aggressive NATO bloc, who are planning to deploy new missiles with nuclear warheads in West Europe. Six months have passed. And today the operations staff operating inside KOMSOMOLSKAYA PRAVDA reports to the congress that 8,197,000 signatures have been appended to the protest messages sent to NATO's Brussels headquarters. (applause)

UZBEK UNION OF TEACHERS CONVENES WITH CONGRESS

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 18 May carries on page 1 a 1,200-word report of the Uzbek Teachers' Union Congress held in Tashkent on 17 May. Two thousand teachers and representatives from workers' collectives and party and Komsomol organizations as well as delegates from the other union republics gathered for the congress. The congress was opened by USSR Supreme Soviet delegate and teacher, M.S. Samatova. S. Sh. Shermukhamedov, minister of education, spoke at the congress concerning the successes and progress of Uzbek education during the years since the formation of the USSR, and in particular during the last couple of years. He predicted the successful completion of the project to turn every type of school over to the cost-free utilization of textbooks by 1983-84.

M.A. Prokofyev, USSR minister of education, appeared at the congress as did ministers and deputy ministers of education from the Ukraine, Belorussia, Kazakhstan and Georgia. Candidate member of the USSR CP Central Committee Politburo and first secretary of the Uzbek SSR CP Central Committee, Sh. R. Rashidov, and other members of the Buro were present and A. A. Abakumov, responsible official of the USSR CP CC; M.I. Kondakov, president of the USSR Academy of Pedagogical Sciences; and T.P. Yanushkovskaya, chairman of the Central Committee of the Trade Union for Workers of Education, Higher Schools and Scientific Institutions, also participated in the proceedings.

RASHIDOV SPEECH AT MONUMENT DEDICATION

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 27 May publishes on page 1 a 2,000-word speech by candidate member of the USSR CP CC Politburo and first secretary of the Uzbek SSR CP Central Committee, Sh. R. Rashidov, at the occasion of the opening of the monument "Friendship of the Peoples of the USSR" in Tashkent. He spoke about friendship and brotherhood--"the source of our historical victory in all fields of economic and cultural construction, in the struggle for peace and social progress." Much of the speech was devoted to the Uzbek soldiers who distinguished themselves in World War II and to those people who took in homeless orphans despite their nationality.

Rashidov emphasized that the monument demonstrated the open-hearted and maternal nature of the Uzbek people towards their fellow Soviets and toward their international friends, as evidenced by the international film festival being held in Tashkent at that time.

"The monument of friendship will always symbolize the verity of the brotherhood of peoples and the immortal work of the great Lenin."

RASHIDOV GREETS INDIAN MINISTER OF INFORMATION, BROADCASTING

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian 26 May 82 p 1 carries a 400 word report of the reception by Candidate Member of the USSR CP CC Politburo and First Secretary of the Uzbek SSR CP Central Committee, Sh. R. Rashidov, of Vasant Puroshottam Sathe, Indian minister of Information and Broadcasting. Rashidov spoke to Sathe of the "dynamic development of the Uzbek economy and culture," the ideas which came out of Brezhnev's historic visit to Tashkent, the importance of Brezhnev's peace initiative and of the feelings of friendship and closeness the people of Uzbekistan feel for the people of India.

The Chairman of the USSR State Committee for Cinematography, F. T. Yermash, and the Indian Deputy Minister of Information and Broadcasting, Suresh Matkhur, also participated in the discussions.

KAZAKH LEADERSHIP AT MAY DAY PARADE

[Editorial Report] Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 2 May 82 carries on page 1 a 2,000 word report on Kazakhstan's May Day Parade. The following Kazakh leaders attended: member of the CP CC Politbureau and Kazakh CC first secretary D. A. Kunayev; Kazakh CC bureau members K. M. Aukhadiyev, B. A. Ashimov, Ye. F. Bashmakov, V. A. Grebenyuk, S. N. Imashev, K. K. Kazybayev, Z. K. Kamalidenov, O. S. Miroshkhin, N. A. Nazarbayev, Yu. N. Trofimov, D. T. Yazov, Kazakh CC bureau candidate member S. S. Dzhiyenbayev; Kazakh SSR Supreme Soviet Presidium deputy chairman A. P. Plotnikov; Kazakh SSR Council of Ministers deputy chairmen E. X. Gukasov, Sh.Zh. Zhanybekov, E. S. Karbovskiy, K. D. Kobzhasarov, T. G. Mukhamed-Rakhimov; War Council member and political director of SAVO [Red Banner Central Asian Military District] Lt Gen V. F. Arapov; LKSM [Komsomol] Central Committee first secretary S. A. Abdrakhmanov; Alma-Ata oblispolkom chairman V. P. Belyakov; Alma-Ata gorkom first secretary A. K. Zhakupov; and Alma-Ata gorispolkom chairman A. D. Koychumanov.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

AZERBAIJAN SSR

SHORTAGE OF IDEOLOGICAL LITERATURE IN AZERBAIJANI

[Editorial Report] Baku KOMMUNIST in Azerbaijani 11 February 1982 p 3 carries an 800-word article by N. Abdulazimov, director of the Political House of the Kirovabad gorkom, on the preparation and level of expertise of propagandists in Kirovabad. One of the points made is that on subjects of ideology "there is a shortage of books for the mass reader on this subject in Azerbaijani."

SKILLED WORKER CADRES POORLY TRAINED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 2 February 1982 p 1 carries a 1,000-word lead editorial on the importance of training more skilled workers. It is pointed out that "there are still serious shortcomings in the preparation of workers for production and in the growth of specialists." Singled out for mention in this regard are the Ministry of Communal Housing, the Ministry of Agriculture and the Main Gas Administration.

BOOK SHORTAGE DISCUSSED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 14 February 1982 p 3 carries a 1,350-word discussion of the book shortage. The first part is a statement by J. Memmedov, first deputy chairman of the AzSSR State Publishing Committee; he attributes the shortage to "the growth of the cultural level of the society and the raising of the intellectual level." He refers to books in private libraries as "dead capital," implying that some people are hoarding them. Z. Salahova, deputy chairman of the Republic Voluntary Bibliophile Society, notes that "from this year onward, 'book exchange' departments in large book stores have been set up by order of the Republic State Publishing Committee."

AUTHOR REPORTS ON TOUR OF AMERICA

[Editorial Report] Baku KOMMUNIST in Azerbaijani 2 February 1982 p 4 carries a 2,200-word article, the first page of a 2-part article, by Jabir Novruz describing a 17-day tour of America which he undertook as a member of the delegation of the USSR Society for Friendship and Cultural Relations with Foreign Countries. The first part of the tour took them to Washington, Pittsburgh and Cleveland. The guide was a woman of Ukrainian descent who "never emerged from the program schedule and constantly repeated the same words and ideas."

KOMMUNIST 3 February 1982 p 4 carries a 2,000-word continuation of the article, in which the journey continues to Chicago, Minneapolis and ends in New York. The entire essay is singularly uninformative.

MUSLIM BURIAL TRADITIONS CRITICIZED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 12 February 1982 p 2 carries a 3,800-word article by Academician F. Kocherli heftily criticizing certain aspects of Muslim burial rites as now practiced in many parts of the AzSSR. A teacher writes from Kirovabad that "sometimes mourners mark the death on the 1st, 3d, 7th and 40th Friday evening following the death." In other regions "5 horned beasts are sacrificed to honor the death." The author points out that "wherever Soviets of peoples deputies and labor collectives participate and lead burial rites, or wherever workers are deeply involved with questions of lifestyle, there socialist customs and traditions are firmly entrenched in the lifestyle." The author finds the Muslim traditions too expensive.

ISLAMIC ACTIVITY 'INFLAMED' BY IMPERIALISTS

[Editorial Report] Baku KOMMUNIST in Azerbaijani 19 February 1982 p 2 carries a 2,200-word article on Islam in the AzSSR by G. Mustafayev, director of the Department of the History and Theory of Atheism at the S. M. Kirov Azerbaijan State University, and A. Gurbanov, docent at the M. A. Aliyev Azerbaijan State Fine Arts Institute. In speaking about religious-freedom guarantees under the Constitution, they add that "however, this is not to say that there are not parasites, addled ones, swindlers--in a word, schemers who claim to be mullahs who view religion as a source of income and damage communist education among the people, especially among the youth." In reference to the "holy" places and the mullahs watching over them and making a living through them, it is noted that "one can meet situations wherein there is an attempt by them to exploit such places." Pointing out the destructive effect religious movements have on ideology, they say "this can explain this religious activity as a result of the political-religious movements occurring in Iran which borders the south of our republic--this activity was inspired by the imperialists who inflamed it by various means."

IBRAGIMOV NOVEL PUBLISHED IN TEHRAN

[Editorial Report] Baku KOMMUNIST in Azerbaijani 10 February 1982 p 4 carries a 450-word Azerinform release on the appearance of a Persian translation of Mirza Ibrahimov's 1948 novel about the national liberation movement in Southern Azerbaijan, "The Coming Day." The dispatch notes that "if one takes into consideration that the book was written in 1948--at a time following the quashing of the democratic movement in Iran--the political optimism and astuteness of the author is invested with an even greater influence."

AZERBAIJANI LITERATURE PUBLISHED IN AFGHANISTAN

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 12 February 1982 carries a 200-word "Letter From Afghanistan" by Shahin Fazil about the first four issues of the magazine "Women of Afghanistan" in which poems, short stories and feature materials by Azerbaijani writers have been translated into Pushto and Dari and reprinted.

EXCERPTS FROM 'ON THE ROAD OF REVOLUTION' PUBLISHED

[Editorial Report] Baku AZARBAYJAN in Azerbaijani, No 12, 1981 pp 21-27 carries a selection of excerpts from the Southern Azerbaijani "political-literary" magazine INCILAB YOLUNDA [On the Road of Revolution] (Tehran), No 12. The excerpts are: an editorial introduction by a Southern Azerbaijani author H. Sadig which notes the death of the Soviet Azerbaijani poet Rasul Rza; a poem to Rza by Imran Salehi; a conversation with the author M. Shami on the importance of using folklore in literature (as well as two poems by him); and an anti-American short story in the form of a folk tale by M. Guloghlan.

POET ON DIVIDED AZERBAIJAN

[Editorial Report] Baku AZARBAYJAN in Azerbaijani No 12, 1981 p 15 carries a poem by Memmed Araz, "What Do We Say to These Summer Winds?" which is addressed to his "neighbor brother." The last quatrain reads: "I am from Tabriz, Nakhchyvan and Ganja/ And I have seen the dead upon the barricades/ I am learning to divide the earth/ Though divisions win nothing."

ANTI-AMERICAN POEM FROM SOUTHERN AZERBAIJAN

[Editorial Report] ADABIYYAT VA INJASANAT in Azerbaijani 19 February 1982 p 8 carries an anonymous poem reprinted from DADA GORGUD (Tabriz) No 12 entitled the "Owner of Capital." The poet begins by mentioning the tyranny of Chingiz Khan, changes the theme to "parasites" then ends with the line "Certainly, he is as much a master at shedding blood as America."

LIFE IN TEHRAN SLUMS DEPICTED IN SHORT STORY

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 26 February 1982 p 4 carries a 2,200-word short story, "Life in the Ruins," by the Southern Azerbaijani author Seyfeddin Daghly. It concerns a homeless boy who takes shelter in a ruined caravansary in the south of Tehran during the winter. In this time, he overcomes a fear of dogs and befriends one, who saves his life by keeping him warm and bringing him food when he is sick.

CHRONOLOGY OF NEWS EVENTS FROM IRAN AS REPORTED BY AZERI LANGUAGE MEDIA

[All news reported appears on p 3 of Baku KOMMUNIST]

--2 February 1982: Report on Nabavi's news conference in Tehran on the financial claims directed by Iran against the United States.

--16 February 1982: Report on press conference given by A. Tavakkuli on planned expansion of industrial growth.

--17 February 1982: CIA accused of interfering in Iranian affairs in 1979 through manipulation of Banisadr.

--17 February 1982: Iranian president says purpose of Weinberger trip to Arab countries to raise sentiment against national liberation movements in the Islamic East.

--23 February 1982: Report on explosion in Tehran killing 11 in a military garrison. "Dozens of such explosions and armed attacks have killed at least 1,200--state and religious personnel, parliament deputies and regime supporters." It is alleged that these attacks are conducted by Shahist and other groups supported by the CIA.

--23 February 1982: 250 million riyals have been allocated for conducting industrial scientific research.

--23 February 1982: 15 "armed smugglers" killed on the Iranian-Pakistani border were carrying 40 million riyals of illicit goods, primarily narcotics. These were to be delivered to the "Afghani basmachis."

--25 February 1982: Islamic tribunal has 3 shot for treason in Shiraz; one of them was a battalion commander.

--25 February 1982: 9 safe houses seized and 24 arrests made "in 2 northern provinces."

--25 February 1982: On 23 February 9 Iranians killed in clash with Kurdish insurgents near city of Salmas (Kurdistan).

--25 February 1982: Death toll in military garrison explosion in Tehran rises to 15.

CSO: 1830/366

EDITORIAL ATTACKS WIDESPREAD MARKET FRAUD

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 February 1982 carries on page 1 a 1,000-word boldface editorial titled "Let Us Observe Trade Regulations Strictly." The living standards of the people were considerably enhanced during the last 5-year plan. Much has also been achieved during the current 5-year plan and consumer goods production has been increased, product quality improved and products made more marketable. There remain, however, many deficiencies in trade and trade services.

Trade services workers are part of a key economic sector and bear major responsibility since they have such an immediate relationship and immediate impact upon the public. They must maintain trade regulations strictly but things are quite different in this area than they should be.

Among abuses that have been discovered are under-the-counter sale of goods to some, but not to other customers; artificially created shortages and the distribution of goods in high demand through secondhand stores at high profit; bribe taking for preferential treatment, particularly in rural areas with but one trade outlet; and unwillingness on the part of store operators to submit to audit.

The editorial calls on trade service workers to eliminate these abuses and obey the rules and demands of increased responsibility and control. The editorial also sees the need for a general improvement of trade services, particularly the goods distribution system, and a greater effort towards marketing research.

INDUSTRIES MUST INCREASE AUXILIARY FOOD PRODUCTION EFFORTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 February 1982 carries on page 1 an 800-word boldface editorial entitled "The Agrarian Departments of Industries." Reliable supply of meat and other agricultural products is one of the most important social and economic goals of the party. Auxiliary food production enterprises of industries are making major contributions in this area and the practice should be spread throughout the KaSSR.

Experience has shown that industries making an effort to maintain auxiliary food production enterprises reap rich rewards. Food produced, moreover, not only provides nutritious meals in factory cafeterias but has national importance as well. Last year industries delivered more than 11,000 tons of meat, more than 14,000 tons of milk and many other products to purchasing organizations. Some 900 auxiliary food producing enterprises now exist in the republic with 200 to be formed in 1980 alone.

The editorial provides numerous examples of successful enterprises in a variety of industries but sees no reason for complacency since there have been serious lags in the development of auxiliary food production in some sectors. Many industries, moreover, maintain little more than flower gardens. It is important, the editorial concludes, not just to organize auxiliary food enterprises but to set out to make them profitable. Among problems facing operators of Kazakh auxiliary food enterprises are assignment of lands too distant or of little economic value, fertilizer shortage, lack of hay and feed, equipment shortage and poor organization in agencies administering and assisting auxiliary food enterprises.

FIFTY YEARS OF SUCCESS FOR EMBI PETROLEUM INDUSTRY'S AUXILIARY FOOD PRODUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 February 1982 carries on page 4 a 1,000-word article by Q. Mulikov, head of the Workers Supply Administration of the Embi Oil Production Union, on the history and present state of union auxiliary food raising enterprises. The article is published under the regular rubric "The Rich Yields of Auxiliary Enterprise."

Major attention is being devoted to the development of oil fields in western Siberia and Kazakhstan. As the oil fields develop the need grows for attention to good living conditions and food for workers. Special effort has been made in the latter area at Embi since the very beginning of oil production there, nearly 50 years ago.

Mulikov traces the history of auxiliary food production at the Embi Oil Production Union from its origins during World War II up until the present. During the last 5-year plan the industry's auxiliary enterprises delivered 200 tons of poultry, 12,000 eggs, 3,816 tons of potatoes, 29,000 tons of vegetables, 2,396 tons of fruit and other products to the tables of union workers, 1.6-1.9 million rubles of agricultural products a year.

Industry auxiliary food production will be the object of a large scale investment program in the future to expand the material and technical bases of the enterprises and increase productivity. The range of food products will be extended with emphasis on livestock raising. Embi auxiliary food production enterprises also supply potatoes, vegetables, other garden products, fruits, berries, eggs, poultry and other food to area markets.

IRRIGATION CONSTRUCTION IN TALDY-KURGANSKAYA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 12 February 1982 carries on page 2 a 1,200-word article by A. Zhabbarkhanov, chief of the Taldy-Kurganskaya Oblast Water Enterprise Construction Trust, on irrigation in Taldy-Kurganskaya Oblast and on the Work of his trust. The article is published ununder the regular rubric "Problems, Suggestions, Proposals."

The Semirychye is rich in rivers, lakes and other bodies of water. In accordance with a 1966 CC CPSU Plenum resolution particular attention is being devoted in one part of the Semirychye, Taldy-Kurganskaya Oblast, to use these waters to grow wheat, rice, corn and sugar beets in irrigated fields. Grains are now grown in some 272,000 hectares of such lands and 286 million rubles have been spent on oblast irrigation. During the 11th Five-Year Plan 37,000 new hectares of irrigated fields will be added and 60 million rubles spent. This effort will involve considerable irrigation and construction work on the part of the Taldy-Kurganskaya Oblast Water Enterprise Construction Trust.

Zhabbarkhanov reviews past and present work of the trust whose base was considerably strengthened during the last 5-year plan. He examines the new methods, new equipment and new technology in use, major successes in the use of deep subterranean waters in particular. Among problems facing the trust is a shortage of cadres making it difficult to staff new irrigation projects and maintain old.

OBLAST KARAKOL INDUSTRY HIGHLY INEFFICIENT

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 5 February 1982 carries on page 3 a 1,800-word article by regular commentator Saytqazy Dosymov on problems of the Dzhambulskaya Oblast karakol industry. The article, published under the regular rubric "Problems, Suggestions, Proposals," is the first of two on the subject and looks at the problem from a regional perspective.

There are three karakol raising rayon in Dzhambulskaya Oblast, Talas, Sarysu and Moyynqum. Each is desert or semidesert with essentially similar environmental conditions.

There were 831,000 karakol in the three rayon at the beginning of the 10th Five-Year Plan but only 745,300 at the end of 1981. Thus the three rayon suffered a loss of 85,700 sheep at a time when republic herds as a whole grew by 194,000. Moreover, it is clear that there was a qualitative as well as a quantitative loss since present herds contain a higher percentage of young sheep than those of the past and are now poorly structured for efficient karakol raising. Seeking explanations for the declines, Dosymov discovered a local karakol industry that is highly inefficient and badly run.

There are, for example, relatively few purebred karakol in the three rayon and little attention to proper breeding practices. Moreover, too many lambs are being raised for meat and wool and much less attention is being devoted to valuable karakol skins. Poor care of animals is also a problem and there is a general lack of concern for karakol by-products. Plans for the production of rennet, for example, a product used to manufacture pharmaceuticals and in the chemical and food industries, were fulfilled by only 48 percent and almost a third of what was produced was of poor quality. Dosymov also notices incompetent slaughter of karakol and incompetent tanning as factors adversely effecting karakol skin quality.

WATER SHORTAGE LIMITS OBLAST KARAKOL INDUSTRY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 12 February 1982 carries on page 6 a 1,700-word article by Sqytqazy Dosymov on problems of the Dzhambulskaya Oblast karakol industry. The article, published under the regular rubric "Problems, Suggestions, Proposals," is the second of two on the subject and focuses on the key limiting factor of water shortage.

The "Talas" and "Tugisken" Sovkhoz are among many situated along the Talas River in an area of desert and semidesert. In the summer sovkhoz livestock are supported by water in the Asa and Talas River beds or from artesian wells. In the winter they graze in the desert itself.

The Asa and Talas, however, have been drying up over the last 10-15 years and the two sovkhoz, situated at the end of the old water courses, now receive very little water. Although the problem is now critical little is being done to respond to the problem on account of official waverings.

The only ray of hope lies in the USSR Council of Ministers decision to encourage actively the karakol industry in the USSR. Under current plans, 2.7 million karakol skins and 350,000 slaughtered overage ewes will be produced in the KaSSR by 1985, 365,000 skins and 40,000 ewes in Dzhambulskaya Oblast. In accordance with this decision numbers of sheep raised will be increased and two special feed complexes built. To support the feed complex, in turn, the Oyyq irrigation system, irrigating some 17,400 hectares of crop land and 8,800 hectares of pastures, will be put into use.

In the meantime, however, sovkhoz such as the "Talas" Sovkhoz must rely upon their own resources to build up and maintain karakol herds. However, this will strain area resources and there are questions about the eventual completion of the irrigationproject at all since construction is seriously lagging. If the system is not completed sovkhoz herdsmen will be back to a hand to mouth existence. This is the very thing that is making the life of the herdsman so unattractive to the younger generation.

Dosymov provides a history of the "Talas" Sovkhoz and underlines the many successes achieved under difficult conditions there in the past. He suggests, however, that problems are likely to develop in the future as karakol production is built up, interrupting the train of successes, if the key water issue is not resolved.

KUSTANAYSKAYA OBLAST ENERGY SYSTEM STRIVES TO MEET AGRICULTURAL NEEDS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 February 1982 carries on page 2 a 1,000-word article by D. Kovalenko, chief of the Regional Administration of the "Kustanayenergo" Energy Enterprise, on the past achievements, present state and future plans of his enterprise. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th Congress of the CPSU."

Industries of the "Kustanayenergo" administration have achieved major successes in producing and delivering electrical and thermal energy to consumers, producing millions of kilowatt hours and thousands of gigacalories above plan goals in 1981. This was achieved, among other things, through re-equipment, fuel economy and careful attention to electrical system organization.

Kovalenko gives particular emphasis in his article to the system goal of efficient and reliable supply of energy to agriculture. He notes the extensive use of electrical substations and auxiliary electrical lines to this end.

The current 5-year plan calls for a 37-percent increase of total output, an 18-percent increase of electrical energy generation and a 35-percent increase of thermal energy production for the "Kustanayenergo" system. Among problems possibly preventing achievement of these goals are lagging construction, technical problems, a lack of long-term planning in some cases, poor coordination of projects and funding problems.

ECONOMIST CALLS FOR NEW METHODS TO OFFSET OILFIELD DEPLETION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 5 February carries on page 1 a 600-word article by M. Aqdauletov on new methods to increase oil yields and offset oil field depletions. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th Party Congress."

The Kazakh oil and gas industry is currently developing at a rapid pace in connection with the opening of new wells in Western Kazakhstan. State plans for 1981-85 calls for a production of 24.5 million tons of oil and 7.9 billion cubic meters of gas. Much effort, however, will be required to achieve these goals.

One major problem area is maintaining production in oil fields that are becoming depleted. That measures in this area have not always been adequate is clear from declining production in fields under the "Embaneft'" and "Mangyshlakneft'" and other petroleum production unions. Aqdauletov discusses current and proposed solutions to this problem including careful location of wells in relation to oil-bearing strata, water pumped into well-heads to maintain pressure, hydraulic pumping, hardening of well faces with plastics and other chemicals and simultaneous production of oil from several horizons by a single well. Above all, Aqdauletov stresses, the greatest possible productivity must be achieved from existing wells, existing equipment, existing labor and other resources.

LACK OF COOPERATION BETWEEN SYSTEM, CONSUMERS HINDERS RURAL ENERGY SUPPLY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 February 1982 carries on page 1 a 900-word article by engineer V. Safonov on problems presented the Kokshetavinskaya Oblast electrical system by a lack of cooperation between the system and consumers. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th Party Congress."

Workers of the Kokshetavinskaya Oblast electrical system number more than 800 and are working hard to supply their region with electrical energy. Regional power demands, however, continue to grow and this complicates the problem of energy supply for system workers. One solution is conservation and the elimination of waste. Efforts are also underway to expand the electrical supply system and improve power generation.

Among the many difficulties hindering system operation are a lack of cooperation between the power system and rural consumers. Rural consumers, for example, alter local power systems and add equipment without consulting system officials. The result has been damage to power relay stations, damage that requires time and effort to make good, and an inability of the electrical system to make an accurate appraisal of system load, especially during winter months. Some control must be exercised over consumers and the system must increase efforts to instruct rural consumers in efficient organization of electrical facilities and safety. Conservation is not just the affair of electrical system workers but directly concerns consumers as well. Cooperation between consumers and the electrical system will eliminate the generalized waste that continues to be rampant.

PAVLODAR CONSTRUCTION ORGANIZATIONS CONSTRIBUTIONS TO BAYKAL-AMUR MAINLINE CONSTRUCTION REVIEWED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 February 1982 carries on page 2 a 700-word article by O. Qaliev on the contribution of the specialized "Kazakhbamstroy" construction and installation convoy to the construction of the Baykal-Amur mainline. The people of Pavlodarinskaya Oblast are taking a leading role among the people of Kazakhstan in their contributions to the construction of the Baykal-Amur mainline. One expression of this activism is the purposely created "Kazakhbaristroy" specialized construction and installation convoy under the "Gavpavlodarstroy" trust. As the main line advances the convoy will become a major construction organization.

Qaliev describes the express rail links now operating between the Pavlodar supply base and the mainline construction front. He notes the many specialized rolling stock units assigned the convoy that make it a veritable workers base and settlement on wheels.

MINISTER REVIEWS KAZAKH CONTRIBUTION TO BAYKAL-AMUR MAINLINE CONSTRUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 7 February 1982 carries on page 2 a 900-word interview with Oraz Beysenov, first deputy minister of Construction of Heavy Industry Enterprises KaSSR, on Kazakh contributions to Baykal-Amur mainline construction projects. Beysenov is interviewed by T. Bekniyazov, place and time not given. It appears under the regular rubric "60 Shock Weeks for the 60th Anniversary of the USSR."

Beysenov answers questions on the KaSSR contribution to Baykal-Amur mainline construction, the specific tasks of Kazakh constructors, plans for the future and what is being done to fill out the ranks of constructors now on the job. In his answers Beysenov focuses on the "Kazakhbamstroy" construction and installation convoy, the first real Kazakh contribution to the railroad project.

He notes the difficult conditions under which the collective works in cold, impenetrable and describes its efforts to build facilities for railway workers at the Char Station where the eastern and western sections of the railway will meet in 1984. The population of Char is expected to reach 10,000 in the near future.

PRODUCTION LAGS SERIOUSLY AT KEY COAL PRODUCTION UNIT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 February 1982 carries on page 2 a 400-word article by O. Qaliev on coal production problems at the Bogatyr' cut of the Ekibastuz-Pavlodar Coal Production Complex. The article is published under the regular rubric "Verifying Fulfillment of Tasks."

The Ekibastuz-Pavlodar Coal Production Union is obligated to produce 73 million tons of coal this year. Some 52 million tons of this will be produced at the Bogatyr' cut. Production there, however, was 609,400 tons short and amounted to only 86 percent of the planned total for January and was 363,000 tons below production totals for January 1981. Difficult weather conditions that interrupted and washed out mine railways and interruption of electrical power were given as reasons for the short fall. Qaliev notes, however, that nearby mines were subject to identical conditions but still overfulfilled plans.

NEW KAZAKH PRODUCTION UNION IMPROVES SUPPLY OF SPORTING GOODS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 February 1982 carries on page 4 a 900-word article by A. Serikbaev, head of the KaSSR "Kazsporttorg" Production Union, on the role of his production union in Kazakh sporting goods production. The article is published as part of a continuing series of articles devoted to health and sports.

The resolution of the CC CPSU and USSR Council of Ministers on "Further Enhancement of the Mass Character of Physical Education and Sports" calls for increased production of mass consumption sporting goods, especially those intended for young children and teenagers, and improvement of production quality. Serkbaev discusses comprising 22 republic industries producing sporting goods, in achieving the goals. He notes the many gains that have been made since the organization of the union due to the administration of sporting goods production as part of one system and their unified distribution.

Serikbaev also discusses the many problems that still remain to be solved before production will meet a growing popular demand. These include an inadequate assortment of goods, shortages of items in demand, the need to import many items that could be produced in the KaSSR and inadequate attention to producing goods for children. Serikbaev calls for general expansion of the quantity and scope of union output to meet future needs.

PRODUCTIVITY GAINS FROM WELL-ORGANIZED RECREATION SYSTEM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 February 1982 carries on page 4 a 2,000-word article by B. Iliyasov on the well-organized recreational system of the Sokolov-Sarybay Ore Enrichment Combine. The city of Rudnyy, center of the Kazakh iron ore industry, is a city of sports and health enthusiasts with more than 46,000 participants, 40 percent of city population, in mroe than 50 city sports organizations. Among them are some 10,000 workers of the Sokolov-Sarybay Ore Enrichment Combine, 55 percent of the plants labor.

As a result of this high level of worker participation the combine has become known as a health combine while productivity and work quality have been increased and labor turnover decreased. Iliyasov describes the factory recreational system, which focuses on sports and athletics but also includes tourism, hunting, fishing and family recreation, in detail. His account emphasizes its good organization competent staff and abundant equipment.

KAZAKH HOT SPRINGS SANITORIUM TREATS OCCUPATIONAL AILMENTS

[Editorial Report] Alma-Ata BILIM SHANE ENGBEK No 12, December 1981 carries on page 19 a 900-word article by Doctor of Medicine Erkin Berlibekov and Zhumaghazy Igisinov on the Rakhmanov Mineral Hot Springs of the Altay. The article is published under the regular rubric "Health, A Great Treasure."

The Altay is known for its mineral wealth but each rock, each canyon and body of water also have their own special values and histories. Among these noteworthy features of the Altay are the Rakhmanov Mineral Hot Springs.

Discovered by the semi-legendary hunter Rakhmanov and his son, the springs became a gathering place for local and regional sufferers of a variety of ailments, in the early 19th century and drew the attentions of numerous Czarist investigators. With the Great October Socialist Revolution the lakes passed into the hands of the people but the remoteness of the local forced the Soviet Regime to close the springs in 1934.

Local people, however, were undaunted in their pursuit of health and continued to use the springs. In 1960 the decision was made to build a 150 bed sanitorium on the site to serve nonferrous metal industries workers. The sanitorium opened in 1967 after much difficulty and has since operated for 17 seasons with up to 300 persons served each summer. The waters are 36-39°C in winter and up to 42°C in summer.

The Rakhmanov facility treats a variety of ailments but specializes in occupational illnesses. It is the first USSR Sanitorium, for example, to treat production line vibration stress syndrome . Current plans call for the expansion, re-equipment and the organization of the existing sanitorium into a 1,800 bed facility by the end of the current 5-year plan. The authors emphasize the importance of the total, restful environment of the sanitorium in treating workers.

NEW SOCIALIST WAY OF LIFE REFLECTS CHANGED ROLE OF WOMEN IN SOCIETY

[Editorial Report] Alma-Ata QAZAQSTAN AYELDERI in Kazakh No 12, December 1981 carries on pages 18-19 a 1,600-word article by Q. Shulembaev entitled "A Socialist Way of Life and New Customs." The socialist way of life is a product of the Great October Socialist Revolution. It is a complicated social phenomenon that cannot be expressed in economic, political or lifestyle terms alone.

Its basis is in the Marxist classics and must be understood as a totality of human relationships and social actions.

Against this background Shulembaev examines traditional Kazakh customs and practices and shows how they were rooted in the religious and patriarchal feudal relationships of the past and must be understood in terms of these relationships. The new customs and traditions of the socialist way of life that are replacing the old customs reflect a changed society.

In discussing the new customs Shulembaev notes the changed position of women in them reflecting a breakdown of the patriarchal feudal values. He notes, however, many old customs that survive under the new system but stresses their new, socialist content.

LIBRARIES RESPOND TO RAYONS' MULTIETHNIC CHARACTER

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 12, December 1981 carries on page 5 a 700-word article by N. V. Lyubovenko, director of the Sayram Rayon (Chimkenskaya Oblast) centralized library system. The article is entitled "Work With Young Readers" and is concerned with the multi-ethnic character of the local population and the needs of young readers.

Representatives of 43 ethnic groups live in Sayram Rayon of Chimkenskaya Oblast, of 82 schools there 39 are taught in Uzbek, 26 in Kazakh, 5 in Russian and the remainder are mixed schools. Much is being done by the rayon library system to respond to this ethnic diversity in meeting the needs of young readers; such things as ethnic surveys of school age population to structure library collections properly.

There are now 118 libraries in the rayon working with these goals in mind, some 60 in villages and around 50 in schools. They have 200,000 volumes in their collections including 45,000 in Kazakh, 70,000 in Uzbek and 86,000 in Russian. Some 34,000 library users account for a circulation of 500,000 volumes a year.

Lyubovenko discusses efforts to select books not only to correspond to the ethnic mix of library users but also to accord with differences in age as well. He also reviews the educational and ideological work of his library system.

RICHES OF KAZAKH MOTHER TONGUE MUST BE PRESERVED

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 12, December 1981 carries on pages 14-15 a 1,200-word article by Omirzak Aytbaev on the importance of preserving the linguistic riches of the Kazakh mother tongue. The article is entitled "Mother Tongue-Great Tongue" and is published under the rubric "Spoken Culture."

Language is a most remarkable expression of man's culture and intellectual life, a fact noted by the Marxist philosophers, language is also a school in values, one that is not to be taken lightly.

Aytbaev calls for proper use of the Kazakh mother tongue through preserving its purity, using native Kazakh vocabulary for old and new ideas and guarding the cultural riches of the language. Proper language use, he says, is also the sign of a man's knowledge and culture. Throughout the article Aytbaev emphasizes the people as a fountainhead of linguistic riches, in the proverb for example.

ECONOMIC IMPORTANCE OF DECLINING GRASSLANDS STRESSED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 February 1982 carries on page 3 a 400-word letter by Sh. Khalyqov on the need to reverse declines in shi (Casia Crostia splendens or Stipa splendens) grass lands. The letter is published under the regular rubric "Man and Nature."

Shi grasses grow in many parts of the KaSSR and have been used for various purposes for centuries by the Kazakhs, as fodder for livestock, particularly in the difficult winter months, as latticework and doors in yurts, as broom and as textile fiber. There are now some 700,000 hectares of shi grass lands in the KaSSR but this represents a great decrease over the past.

Khalyqov calls for a reversal of the present trend towards decline in shi grasslands and gives many examples to illustrate the great usefulness of the grasses today, as Kazakh livestock herds are being built up. The grasses, after all, grow readily and permit substantial yields from a minimal investment.

PLANS MADE TO PROTECT DIMINISHING REED RESOURCES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 February 1982 carries on page 2 a 100-word unsigned notice on plans to protect diminishing reed resources, the question of proper use, increase and protection of reeds was raised in a 29 October 1981 SOTSIALISTIK QAZAQSTAN article and specific suggestions were advanced on preserving reed fields in the semirychye. The Alma-Atinskaya Oblast agricultural administration as discussed the problem with other KaSSR oblast agricultral administrations and has announced concrete measures. They include putting reed fields under the protection of local economic units and fire prevention efforts.

RESPONDING TO WORKERS IMPORTANT PART OF SOVIETS WORK

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 February 1982 carries on page 2 a 1,100-word article by A. Yeremenko, chairman of the Executive Committee of the Semeyskaya Oblast Soviet of People's Deputies, on the need to improve responses to workers petitions and suggestions. The article is published under the regular rubric "In the New Age of Soviet Work."

The people of the Soviet Union hold all power in their hands and make their will known through letters, suggestions and requests. L.I. Brezhnev has stressed the importance of proper response to these letters, suggestions and requests on the part of party and Soviet organization as a means for them to establish a meaningful connection with the masses and has called for sensitivity and efficiency of party members and officials since the people have boundless faith and trust in them and freely present their views and feelings on all aspects of Soviet life.

Yeremenko discusses efforts to improve responses to workers letters, suggestions and requests in Semeyskaya Oblast in detail noting the many successes achieved. He claims that 8 out of 10 letters received are now being dealt with quickly and efficiently and stresses their importance in indicating problem areas, proposing solutions and helping form policy. Yeremenko underscores the effectiveness of the new "open letters" now being directed to newspapers, other organizations and special collection boxes in particular.

Among problem areas mentioned are "bureaucracy" in personal dealings with workers on the part of party and soviet officials and, in some cases, lack of a system for meeting workers at all. Major areas of complaint in workers letters seem to be consumer goods production and trade services.

EDITORIAL SUMMARIZES ROLE, FUNCTIONS OF KAZAKH LABOR UNIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 February 1982 carries on page 1 a 900-word boldface editorial on the role and functions of Soviet and Kazakh labor unions. The editorial is published to note the opening of the 12th Congress of Kazakhstan Labor Unions.

Labor unions, which are active, mass social organizations, have important responsibilities in carrying out the historical resolutions of 26th Party Congress which set goals for the economic and social development of the Soviet Union. This is because the communist education of workers, resolution of problems of economic and social construction, enhancement of the material living standards of the people and other key tasks are part of the daily agenda of labor unions.

Lenin himself defined the role and functions of labor unions in a socialist society as schools of management, of enterprise and of communism. Today Soviet labor unions are not only educating the workers in the spirit of communism but are mobilizing the workers to manage production and carry out plans for the economic and social development of Soviet society; thus the high evaluation of Soviet labor unions offered by L.I. Brezhnev in his report to the 26th Party Congress.

The editorial reviews the present state and programs of Kazakhstan labor unions, which now include 7 million workers in their tanks, in detail. It notes the important role of labor unions in organizing socialist competition, in administering Soviet social security, in monitoring adherence to labor law and in providing various cultural and domestic services. In all 2.88 million workers have served in union sanitaria, rest and nursing homes and in union tourist establishments. Unions also provide sports and physical culture facilities and organize competitions.

OFFICER OUTLINES FUNCTIONS OF KAZAKH LABOR UNIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 February 1982 carries on page 2 a 1,800 article by V. Fomin, secretary of the KaSSR Labor Unions Council on the current role and functions of Kazakh labor unions. The article is published to note the 12th Congress of Kazakhstan Labor Unions.

Today activist representatives of the largest republic mass organization, the Kazakhstan labor unions, are meeting in their 12th congress. Organization by republic labor unions to carry out the decisions of the 26th Congress of the CPSU and the 15th Congress of the Kazakhstan CP, facets of mass education work and various past achievements will be discussed in detail at the congress.

Fomin discusses the role of Kazakh labor unions in terms of the broad responsibilities and major obligations assigned by the 26th Party Congress, what is being done to meet these responsibilities and obligations and individual union functions. The latter include organization of socialist competition, initiatives in the area of worker management of production through production conferences, administration of collective contracts and of social security, organization of various labor, scientific and technological associations and societies, providing various cultural, recreational and health services, social control in cooperation with various government and economic organizations and education.

GENERAL IMPROVEMENT IN KAZAKH TRADE SERVICES NEEDED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 February 1982 carries on page 1 a 900-word boldface editorial on trade services workers. Trade plays an important part in enhancement of the material living standards of the people and its role grows as the economy expands and the demand for goods and services increases. One sign of official interest in this area is the CC CPSU and USSR Council of Ministers resolution "On Measures To Develop Trade Further During the 11th Five-Year Plan and Improve Trade Services to the People."

Some 173,700 persons work in the KaSSR trade services system and in most cases they are successfully meeting demands for increased quality and quantity. Deficiencies do, however, remain and problem areas include poor marketing research, poor marketing, violation of trade regulations, waste and inefficiency and poorly trained cadres. The editorial calls for general improvements, particularly insofar as the education and preparation of trade services workers is concerned. Their proper moral and psychological attitudes are of the utmost importance if trade services workers are to meet current requirements responsibly.

ILI FLOOD THREATENS CATTLE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 February 1982 carries on page 4 a 600-word report on recent serious flooding along the lower Ili by B. Abdullin. The Ili has been frozen over for some time. This year "Bestorangghy" Sovkhoz of Kurti Rayon (Alma-Atinskaya Oblast) established its winter cattle pastures in the Ili estuary as it has in years past since the grass cover is rich in the area and it is easy to pass the winter there.

Although cattle herds have been pastured in the estuary for years without incident the repose of the herdsmen was recently shattered when late one evening the ice cracked on the Ili and a wall of "red water" up to 6 feet deep swept over low lying areas on both banks of a river. Only quick thinking on the part of herdsmen and sovkhoz officials prevented disaster and permitted an orderly evacuation without major loss. The floods also affected neighboring sovkhoz and extended as far as Lake Balkash. According to area "old timers" nothing similar had ever happened before and the flood was completely unexpected. Abdullin describes relief efforts in detail.

EDITORIAL STRESSES IMPORTANCE OF VALUABLE LAND RESOURCES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 26 February 1982 carries on page 1 a 900-word boldface editorial entitled "The Land, Mother of All Riches." Protection of the land is absolutely necessary since land is the basis of all wealth; not only do we draw our food from the land but it is the source of our minerals as well. Thus protection of the land has been official policy since the very first years of the Soviet regime in accordance with the instructions of Lenin himself. Recently, increased attention in this area has found expression in new environmental laws, among them all-union and republic land laws that are designed to protect the fertility of the land, the basis of agricultural production, ensure efficient land use and increase output.

The current emphasis in agriculture is on increasing yields from existing land resources, that is to say, per capita land is now on the decline in the Soviet Union since expanses of new land are no longer available for development and if the food needs of a growing population are to be met better use will have to be made of agricultural lands presently in use to increase average yields per hectare.

The editorial discusses two processes harming agricultural lands in Kazakhstan in detail, namely erosion and the destruction and damaging of agricultural lands on account of industrialization and mining. It notes that erosion not only destroys land but also lowers fertility even when not actually destroying land.

There are now some 70 million hectares of land in Kazakhstan subject to erosion and a considerable effort must be made to protect them. In southern Kazakhstan the problem, moreover, is compounded by complications with irrigation. In terms of industrial and mining development the editorial calls for other regions to follow the example of Karaganda and restore strip mine lands and refuse heaps to use.

OPINIONS DIFFER ON HERDING CAMELS IN MANGYSHLAKSKAYA OBLAST

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 12, December 1982 carries on pages 181-188 a 4,300-word article by Marshal Abdikhalyqov on the past and present of camel raising in Mangyshlakskaya Oblast. The camel seems inseparably associated with the Caspian coast of Mangyshlakskaya Oblast as can be seen from the folklore of the region. The camel, moreover, was more than just a symbolic animal there but also one of the pivots of local livelihood in the past, especially in terms of long range trade and the supply of the many commodities imported by the Kazakhs from oasis cities. There were about 120,000 camels in the area in 1891, an estimated 78,000 in 1905 and some 30-40,000 today in two specialized camel raising kolkhoz.

Although a long term decline in local camel numbers is evident there is now renewed interest in camel breeding in Mangyshlakskaya Oblast and numbers are on the rise once again as prices for camel wool, camel kumiss and other camel products rise. A renaissance is taking place for the camel in the region but many problems must be solved before real progress can be made.

Abdikhalyqov examines these problems in a series of short discussions with kolkhoz officers and others involved in local camel breeding. From the discussions it is clear that although regional camel breeding has now turned the corner there are serious disagreements about how best to herd camels in the area on an industrial basis and a severe shortage of herdsmen and others experienced in camel raising on account of the long term decline in camel raising. Real growth will only come when these problems have been resolved but there seems to be, unfortunately, hesitation in high places perhaps reflecting the disagreements of those on the scene themselves.

SUCCESSES OF SOVIET CIVIL AVIATION HERALDED ON AEROFLOT DAY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 14 February 1982 carries on page 4 a 1,100-word article by T. Madighozhin, first deputy head of the Kazakh Civil Aviation Administration, on the current state and future prospects of Soviet and Kazakh civil aviation. The article is published to note Aeroflot Day.

Air transport workers of the KaSSR are greeting their traditional holiday, Aeroflot Day, with new achievements. Air transportation has continued to improve year after year as a result of party attention. The scope of service has been expanded, many new airports, airfields and other air facilities have been built and major advances are being made in automatization, including automatic ticketing, new, more efficient aircraft such as the IL-86 airbus, which now carries 20 percent on Soviet air traffic, have been put into service. Current plans call for a 1.3 fold increase in total air traffic during the current 5-year plan.

In terms of the KaSSR Madighozhin notes a general improvement of service there also, the many new facilities such as the Karaganda Airport, largest in the USSR, and new technology such as television information systems. In 1982 more than 7 million travelers will be transported by air in Kazakhstan and 62,500 tons of freight. Kazakh civil aviation also makes an important contribution to agriculture through such things as aerial spraying.

OFFICIAL LACK OF CONCERN, ENVIRONMENTAL PROBLEMS HINDER FISHING INDUSTRY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 February 1982 carries on page 3 a 1,300-word article by A. Qusbaev, chief director of the Zaysan Fishing Industries Production Union of Vostochno-Kazakhstanskaya Oblast, on various problems currently facing his production union. The article is published under the regular rubric "Let Us Carry Out the Decisions of the 26th Party Congress."

Sparkling lakes and streams are the glory of the Altay and since the construction of the Oskemen and Buqtyrma State Electrical Stations artificial seas have also appeared. Fishing has expanded based upon these reservoirs.

The Zaysan Fishing Industries Production Union which controls local fishing is working hard to fulfill goals advanced by the 26th Party Congress with respect to further expansion of the variety of available foods from fish and improving quality. Although the industry was once among those lagging in plan fulfillment timely and well-thought out measures have now turned things around and the industry has been able to achieve plan goals in quantity and quality since 1979. Some 350 fishermen are now united in 34 well-equipped brigades of the production union.

These successes notwithstanding, problems still remain. The Buqtyrma reservoir is a major area of concern for the production union which is attempting to stock this large body of water with fish to full capacity. Falling water levels in the reservoir, however, have adversely effected natural breeding of fish there making stocking from fish farms necessary. Plans in this area, however, have often been seriously underfulfilled. For example, only 1.5 million carp fry out of 23 million planned were raised last year and the production union badly needs help in this area. Part of the problem is lagging construction of needed facilities.

Equipment is also a problem area since new equipment is slow in being delivered while old equipment is difficult to maintain. Factory repairsmen, moreover, have been unable to meet the needs of production union fishermen fully. Qusbaev also laments lack of ice drilling equipment for winter fishing and an official lack of concern for fishermen. Fishing, he says, is an important economic activity in the republic but many economic and social projects urgently required by the production union are not even planned for the future; the production union as a whole, moreover, has received very little money. The Ministry of the Fish Industry must devote attention to Zaysan fishing.

SHUL'BA ELECTRICAL STATION RISING ON BANKS OF ERTIS

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1982 carries on page 1 a 600-word article by M. Tokeshev, Zh. Atantaev and E. Sydyqov on construction of the 1.35 million kilowatt capacity Shul'ba State Electrical Station, one of the major projects of the current 5-year plan in Kazakhstan. Five years ago the Shul'ba was empty, featureless steppe but its condition has changed radically since 4 June 1976 and the beginning of construction on what will be the Shul'ba State Electrical Station.

First priority was assigned to housing and other facilities for station workers and a smart new city is now arising in the area. Its population is expected to reach 25,000 in the future. This, however, is only the beginning since 230 million rubles have been allotted for Shul'ba construction and only 35 million have been expended thus far.

Among Shul'ba projects currently being undertaken is a 254.8 cubic kilometer capacity reservoir, 70 kilometers by 15 kilometers in size. Problems associated with Shul'ba construction include lack of stable cadres and difficulties with technical equipment. Some 28 million rubles of work is to be completed during the second year of the current 5-year plan.

REVIEWER HERALDS NEW ANTHOLOGY OF EARLY KAZAKH LITERATURE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 18 February 1982 carries on page 4 a 600-word review of a new anthology of early Kazakh literature by Doctor of Philology B. Uakhatov. The review is part of a regular series published in SOTSIALISTIK QAZAQSTAN.

Peoples employ various means to recall their pasts. One is literature. Literature is an aesthetical expression of a people's spirit, feelings, world view and appearance. It is a popular art that is expressive of the collective experience of a people's past and the difficulties that have been overcome, a form that preserves the past for the present. Literature thus has an historical as well as aesthetic side.

Ghylym Press has recently issued a volume entitled "XV-XVIII Ghasyrlardaghy Qazaq Poeziyasy" (Kazakh Literature in the 15th-18th centuries) that is comprised of surviving examples of the literary heritage of the Kazakh people from these centuries. The book appears in response to a growing interest in early Kazakh literature and is one of a number of similar volumes that have appeared in recent years.

The author of the new anthology, philologist A. Derbisalin of the Literary History section of the Literature and Arts Institute imeni M.O. Avezov of the Kazakh Academy of Sciences, has provided a well-done, fully annotated, scholarly edition of works printed before and after the revolution and of manuscript materials. An informative essay on the literature and its context introduces the volume. The review stresses its superiority both in terms of the scope of its content and scholarship to anything previously published.

PLANS TO IMPROVE UNION RECREATIONAL AND TREATMENT FACILITIES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 February 1982 carries on page 1 a 900-word boldface editorial on the current state of Kazakh recreational and treatment facilities and plans for the future. Protection and improvement of the health of Soviet citizens is a primary goal in the Soviet Union. One clear expression of this is the recently enacted CC CPSU, USSR Council of Ministers and All-Union Trade Unions Council resolution "On Measures To Improve Treatment and Rest in Sanitoria and Nursing Homes Further and Develop the Control System for Convalescent Institutions."

Current emphasis in these areas finds clear expression in the KaSSR where 700,000 persons recovered their strength in more than 20 union rest institutions during the last 5-year plan alone. During that same period many new facilities were built and others renovated or re-equipped at a considerable expenditure of funds. This has resulted in an overall improvement of service.

Problems, however, still remain and foremost among them is lagging construction of needed facilities. In addition, some possibilities for broad development of recreational and treatment facilities are not being exploited as they should be. The editorial also sees the need to build up the material and technical bases of the facilities, to improve organization and service, for better control, emphasis on family recreation, more recreational facilities in connection with large industrial projects and strict responsibility, especially in terms of environmental protection. Traditional methods of medical treatment, dietetics and physical culture also require further development. The editorial ends by noting official intentions to expand recreational and treatment facilities greatly in the future.

KAZAKH ARCHITECTS URGED TO HEED ENVIRONMENTAL, HISTORICAL CONSIDERATIONS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 February 1982 carries on page 1 a 900-word boldface editorial on the functions and duties of architects. The shape and beauty of Soviet cities influence economic and cultural development and asthetic levels. What this means in practice can be seen in Alma-Ata with its well-designed, well-laid out and beautiful structures. Alma-Ata expresses the concern and creativity of Soviet architects.

The editorial stresses the importance of the work of architects today, new goals advanced at the 26th Party Congress and their many successes. The work of the Kazakh Red Banner of Labor Order State "Kazgopstroyproyekt" Institute is singled out for particular praise since institute architects have made savings of materials, fuel and energy an active part of their work.

Among problem areas singled out is failure of architects to take specific natural and climatic conditions and peculiarities of people's lives and industrial specialization into account in their plans. Also a problem in recent years with the reconstruction of older, historical cities is failure to look at these cities as organic unities and establish a connection between the old and the new by preserving the old and designing new buildings within the historical architectual environment. The USSR Supreme Soviet law "On Protection and Use of Historical and Cultural Monuments" is playing an important role in this area but observance of the law is often strictly formalistic.

Rural reconstruction is also an area of difficulty. Here the need is to accord with national building traditions and save on materials. Quality and beauty must not, however, be forgotten and in rebuilding the whole complex of rural life must be taken into account. It is urgent with the current interest in agricultural development to promote better housing for rural workers.

MONUMENTS OF THE PAST, ENVIRONMENT MUST BE RESPECTED

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1982 carries on pages 26-27 a 1,900-word article by Aqselev Seydimbekov on the past, historical and cultural monuments and natural environment of Turghayskaya Oblast. The article is published under the regular rubric "Readers Share Their Thoughts."

Preserving the historical and cultural heritage of the past is no less important today than protecting the natural environment since just as the natural environment is necessary for man's livelihood and biological existence so the historical and cultural environment is necessary for man's intellectual life and spiritual happiness. Man's historical and cultural environment also engenders a love of homeland, people and nation.

The Torghay is located in the center of the KaSSR and is a land rich in historical associations. The Turgayskaya Oblast Council of the KaSSR Society for the Protection of the Historical and Cultural Monuments of the Past has registered 144 historical and cultural monuments, 28 architectual monuments and 61 archaeological sites. In fact so rich is the area in this regard that it might be considered a great open air museum.

Seydeimbekov discusses the long history of the Torghay, legends associated with its past, some of the surviving monuments and the great beauty of the natural environment of the area. He laments the fact that although there is much concern for the past in the Torghay many monuments still need protection. Among them is the alleged tomb of the 18th century Kazakh nationalist ruler Abilkhayyr Khan, who is closely associated with the events leading to the voluntary submission of the Kazakhs but whose monument is now in a delapidated condition with much of the surviving building material long since removed for other purposes, and various early architectual ruins including structures with some of the world's earliest arches. The latter have unfortunately been the objects of dynamiting by pot hunters in search of treasures.

Seydimbekov concludes that it is of the utmost importance that we maintain a feeling for the past and its monuments that after all represent the creativity and artistic expression of the common people. To be sure, he says, history does not stand still and a new cultural legacy, of socialism, is being added to the old. This new culture must be respected but we must also protect the historical and cultural monuments of the past and the natural beauties of the environment.

KAZAKH TRADITIONAL MILLET PREPARATION METHODS MUST BE PUT TO WIDER USE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1982 carries on pages 30-31 a 900-word article by Zhumabay Istaev, Saghmybek Altaev and Qanat Kuzembaev on traditional Kazakh methods for processing millet as a food grain and current attempts to reproduce traditional methods on an industrial basis. The article is published under the regular rubric "Readers Share Their Thoughts."

Millet is widely grown in the world with more than 400 varieties cultivated. The grain has been grown since ancient times in the KaSSR and is a most important component of the traditional Kazakh diet.

The authors describe the preparation of aqtalghan tary, "Kazakh parched millet," involving a complicated hydrothermal process that enhances the food value of the millet, improves its storability and makes it into a highly appetizing and nutritious food. They note current efforts to reproduce traditional preparation methods on an industrial basis as a result of research carried out at the Alma-Ata branch of the Dzhambul Technological Institute and describe the processes involved.

Development of traditional crops they conclude, is an important area of interest at present. Among them is the millet of the Kazakhs and especially fine and appetizing foods are produced from millet processed in the traditional manner. This traditional technology should be put to a broader use for the good of the whole people.

MOSCOW NOTES BUTCHER KAZAKH LANGUAGE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 19 February 1982 carries on page 15 a 200-word letter by Sh. Tayyrova, director of the Alma-Ata Recording Studio, replying to a 15 January 1982 letter by reader Abduali Danaev complaining of gross orthographic errors in notes to a recording made by the studio that made the notes virtually incomprehensible. Tayyrova acknowledges the problem but notes that her studio sends its tapes and record note texts to the All-Union Melodiya Firm in Moscow that reviews all tapes and notes before releasing them to a factory, in this case, in Tashkent. The problem arose, she claims, at the factory through a lack of careful control. Complaints have been made before on this type of problem, she continues, to Melodiya, in 1979, for example, when a recording of songs by the traditional band Qurmanghary had to be withdrawn and the album cover reprinted due to horrendous errors in the notes. The matter has been raised with Melodiya once again, she concludes, and we hope that help will be forthcoming from the KaSSR Ministry of Culture in solving the problem.

ACADEMICIAN TRACES ORIGINS OF KAZAKH LITERARY CULTURE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1982 carries on pages 10-12 a 4,300-word article by Academician Alkey Maghulan on the life and times of Orazmambetkhan and his connection with the earliest literary culture of the Kazakhs. The article is published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia."

Orazmambetkhan was an intellectual member of the Kazakh aristocracy who devoted his life to scholarship and the strengthening of the Russian nation. At the time of his death in the early 19th century at the hands of the False Dimitrii in defense of Boris Godunov's line Orazmambet left behind in a highly ornamental silver inlaid chest a marvelous library collected at the end of the 16th century expressing the life and literary culture of the Kazakhs of the 15th and 16th centuries. Although the chest and its books were destroyed in the 19th century enough is known about its contents to draw some conclsions about Orazmambet himself, his life and times and the contemporary culture of the Kazakhs.

Marghulan discusses Orazmambet's own life, the contents of the library chest and the works of Qadyrghali Zhalairi, whom he calls the first Kazakh intellectual and literary figure and who was the teacher and close friend of Orazmambet. Concerning Orazmambet himself we learn that he was from a distinguished aristocratic line, received an excellent traditional education and lived the typical life of the Kazakh nobleman until 1588 when he was seized during a hunt by czarist agents. At court, the astute Orazmambet soon endeared himself to his Russian captors and assimilated to their culture. As a consequence Orazmambet soon became a major political figure during the reigns of Feodor and Boris.

Orazmambet's library was gathered before and during his Moscow residency and included various works connected with the Kazakhs of the 14th and 15th centuries, contemporary documents, including letters sent by the Kazakh khans to secure his own release, and works commissioned by or otherwise closely associated with Orazmambet and the line. Among the latter works was a highly valuable history by Orazmambet's teacher Qadyrghali Zhalairi, the best and most important single source for early Kazakh history.

Throughout the article Marghulan reiterates the close relations between Kazakhs and Russians as witnessed by the fact that both Orazmambet and Qadyrghali spoke Russian and the lack of expressions of real animosity towards Russia in surviving documents. Marghulan seems to suggest that Orazmambet's library was as much a reflection of the then state of relations between Kazakhs and Russians as it was of Kazakh culture itself. Thus Russia would seem to have been assigned a direct role in the rise of a Kazakh literary culture. Marghulan, incidentally, goes to great lengths to establish the Kazakhness of the books and documents in question as compared to other literary expressions of other Turkic peoples of the same period.

KAZAKH DEFENSE COMMISSIONER ON STRENGTHENING MILITARY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 23 February 1982 carries on page 3 a 1,300-word article by Major General B. Esmambetov, KaSSR Commissioner of Defense, entitled "A Strong National Defense." The article is published to note Soviet Army and Navy Day. The armed forces of the USSR are highly respected and esteemed as a bulwark of the nation as can be seen from roles assigned them in the current Soviet constitution and from the pronouncements of Soviet leaders including L.I. Brezhnev.

Brezhnev, moreover, has called for an enhanced defense effort to counter deteriorating international conditions. The American ruling class has rejected the policy of detente, is interfering in the affairs of other nations and is carrying out a policy of military adventurism. The Chinese are also doing their part to form a general anti-Soviet front. Under these conditions the defenses of the USSR must be strengthened and the power of Soviet military forces increased.

Esmambetov emphasizes the victorious tradition of the Soviet military since the time of the 1917 revolution and the fact that Soviet armed forces have been maintained at a high level of efficiency. He stresses, moreover, the spiritual as well as physical readiness of the Soviet soldier to fight.

Turning to the KaSSR, Esmambetov notes successes in educating youth physically and mentally for the military and in military patriotic education in general. He notes the role of local soviets in these areas in particular and ends by recalling that readiness for war is part of the Soviet peace policy.

TREES, GREEN AREAS POORLY CARED FOR

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 February 1982 carries on page 4 a 600-word article by N. Baygharaev on poor care for trees and green areas in some parts of Zhalaghash Rayon of Kzyl-Ordinskaya Oblast. The article is published under the regular rubric "Man and Nature."

Who does not long for green grass and a cool garden. Some, however, do more than wish and actively plant trees and create green areas. Numerous forests and groves named after such individuals recall their concern for nature. Young people are often particulary active in this regard.

Concern for nature as reflected in the creation and care for forests and other green areas, however, is not universal and is totally lacking in some areas. Trees, for example, recently planted along a road and the pride of the rayon were allowed to die for lack of care while some green areas are choked with weeds. Bahgharaev calls for an end to attitudes of this kind and active efforts to impress young people with the need to protect and care for all green areas, forests in particular.

MINISTRIES RESPOND TO WATER POLLUTION CHARGES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 February 1982 carries on page 4 a 200-word article reproducing a letter by T. Sadvakasov, KaSSR deputy minister of nonferrous metallurgy, written in response to a 7 January 1982 SOTSIALISTIK QAZAQSTAN editorial on protection of KaSSR water resources. The editorial announced new Soviet and KaSSR water protection laws but also outlined problem areas including lack of supervision over implementation of water protection measures, failure to construct or complete water protection facilities and equipment and failure to use appropriate funds fully. The Ministry of Nonferrous Metallurgy and the Ministry of Housing and Municipal Services and factories belonging to their systems were singled out for criticism.

Sadvakasov accepts the criticism of the editorial on behalf of his ministry and acknowledges the fact that it has not been protecting water resources properly. Measures are, however, being undertaken to overcome the problem and a program has been drawn up and approved for intensification of the struggle to maintain the purity of rivers, lakes and other bodies of water during the 11th Five-Year Plan. New facilities will be built and put into service to protect water resources and new technology is planned to eliminate exhaust of industrial wastes into bodies of natural water. The matter has also been taken up, he says, by the KaSSR Ministry of Housing and Municipal Services.

REDUCED RIVER FLOW THREATENS LAKE BALKASH

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 1, January 1982 carries on pages 8 and 9 a 1,200-word article by O. Tlenbekov, chief of the Kazakh Hydrometeorological Scientific Research Intitute's laboratory, on reduced river flow and other problems threatening Lake Balkash. The article is published under the regular rubric "Journalistic Ecological Laboratory."

Lake Balkash plays an important role in the economy of the KaSSR and is one of the largest bodies of water in the USSR. The lake is situated in the south-eastern part of the Kazakhstan arid zone, extends over a territory of 600 kilometers, west to east, and contains 19,000 cubic kilometers of water.

Lake Balkash is divided into two unequal halves separated by the 4.5 kilometer wide Yzynaral Narrows. The water of the western half is little mineralized fresh water suited for agricultural and other uses. It supplies fresh water to surrounding settlements and industries. Mining, metallurgy, fishing, hunting and agriculture have developed in the region based on lake waters giving Lake Balkash a considerable economic significance. Changes in the depth and hydrochemical regime of the lake are thus having a large impact.

Although the depth of Lake Balkash has varied over a range of 3.5 meters during the last hundred years (lake depth was 340.7 meters Baltic Standard in 1946, for example, and 343.0 meters in 1961), the lake was hydrologically balanced and maintained a more or less constant size over the long term. Mineralizationwas also constant.

Some 80 percent of lake water was supplied by the Ili but Ili flow has now been much decreased on account of construction of the 28 cubic kilometer capacity Kapshaghay Reservoir to support a hydroelectrical station (1970). This, coupled with decreased flow from other rivers feeding the lake on account of large-scale irrigation(500,000 hectares at present, 1.4 million in the future including rice fields now being developed along the Ili) has created a crisis since the level of the lake has dropped dramatically since completion of the Kapshaghay Dam (by 1.4 meters).

The reduced level of the lake has lead to a gradual end to the circulation of waters between the western and eastern halves of the lake. Since this circulation was the mechanism whereby mineralization levels were kept low and constant in the western half of the lake water quality is now declining there and much of the water, with the exception of those parts of the lake directly filled by the Ili, is now too mineralized to supply as fresh water to surrounding communities.

Still more changes are to be expected in the future if present trends continue, threatening not only the lake itself but the economy and ecology of the entire region, especially if the amount of irrigated land continues to be expanded. As possible solutions to the problem Tlenbekov suggests a dam across the Uzynaral Narrows with sluice gates to prevent mineralized waters in the eastern half of Lake Balkash from flowing back into the western half, strict protection of the local environment and pastures and more research on irrigation. He also proposes dropping the planned level of the Qashaghay Reservoir from 485 meters Baltic System to 480 meters. But the first priority, he says, must be the supply of drinking water to local settlements and industries.

CSO: 1830/366

SEMINAR ON ATHEISTIC EDUCATION IN DARGANATA

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 2 February 1982 page 2 carries a 300-word report by M. Taganov, deputy director of the Propaganda and Agitation Section of the Darganata Raykom, on a recent seminar on atheistic education. "The seminar participants stressed the necessity for an unremitting struggle against harmful remnants of the past."

STRUGGLE AGAINST ISLAM EMPHASIZED IN CHARDZHOU

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 4 February 1982 page 2 carries a 1,200-word article by J. Khemrayeva, secretary of the Chardzhou raykom, on "strengthening the influence of atheistic education." Related to decrees of the 26th CPSU Congress, questions of strengthening atheistic education among the populace, means of struggling against harmful remnants of the past, the implanting of new traditions and rituals and similar questions are being discussed and planned." Recently, "48 student conferences and evenings on the themes 'Islam and Women,' 'Let Us Struggle Against Harmful Remnants of the Past!' and 'Youths and Atheism' were held." With regard to priorities, "we are giving primary importance to revealing the social roots and reactionary content of the prayer, the fast, the sacrifice and similar things."

ISLAM THRIVES IN COUNTRYSIDE

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 10 February 1982 page 1 carries a 1,100-word lead editorial on atheist education. It is observed that "in most rural areas religious customs are preserved in family life. Thus, in the struggle against harmful remnants of the past new progressive traditions and rituals must be substituted for them. The atheistic education of the population and the formation of their material world-view is directly related to raising the living culture." A number of rayons are weak in this regard: Koneurgench, Saragt, Kalinin and Gokdepe rayons and the outskirts of Ashkhabad. It is also that "the sacrifice is marked as a celebratory event in recent years in the rayons of Ashkhabad, Gavers and Bakherden." It is directed that all party, soviet and Komsomol organizations, school principals and teachers "must think consequently about the harmfulness of ancient religious traditions and remnants such as reciting the prayer, fasting, making the sacrifice and pilgrimages to the saints."

TEJEN AND MARY PARTY ORGANIZATIONS MUST STRENGTHEN MILITANCY

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 16 February 1982 page 1 carries a lead editorial of 1,100-words on the need to strengthen the militancy of some raykom and primary party organizations. "We must say that insufficient attention has been given to increasing the militancy of the Tejen and Mary raykoms and primary party organizations. A number of enterprises in these rayons are continually lagging behind."

ATHEISTIC EDUCATION STRESSED IN VEKILBAZAR RAYON

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 17 February 1982 p 2 carries a 1,200-word article on the stress now being placed on atheistic education in the Vekilbazar rayon by D. Seyiliev, secretary of the Vekilbazar raykom. Noting that "in the last 3 years there have been five meetings on the question of atheistic education for the people in the office of the raykom" the coordinating role of the party is described: "the raykom, in conducting atheistic propaganda scientifically and to the point, coordinates the work of primary party, profsoyuz and communist organizations, the 'znaniye' house of culture administrations and general education schools. This kind of workstyle increases the effectiveness of political-mass measures conducted among the population, assures an influential workers' movement in the struggle against harmful remnants of the past and helps to implant new traditions and rituals." Only one new tradition is mentioned: after a couple gets married "a bouquet of flowers is placed on the monument to those who died heroically in the Great Fatherland War."

IDEOLOGICAL WORK WEAK IN ASHKHABAD OBLAST

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 24 February 1982 p 2 carries a 1,250-word report on the XVth Komsomol conference in Ashkhabad in which various shortcomings in their work were discussed: apathy, lack of contact with youth, inadequate stress on socialist competition, lack of participation "in the struggle against old religious remnants," crime, drunkenness and not going to work. "The basic reasons for these shortcomings is the weak application of ideological and political education work among the youth masses."

DIRECTOR OF 'ATHEISM HOUSE' DESCRIBES ACTIVITIES

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 6 February 1982 p 2 carries a 1,350-word article by D. Khajmyradov, director of the "House of Scientific Atheism" of the TSSR "Znaniye" Society, on recent activities. In the "House" exhibits are on display such as "Marxism-Leninism Classics on Religion and Atheism," "Oriental Intellectuals on Religion," "Turkmen Literary Classics Reveal the Clergy," "New Celebrations and Traditions Are Being Established." Also, "lectures are considered the most basic forms of propaganda." Recent topics include: "The Present Ideological Struggle and Religion," "Discussions on the Qur'an," "The Historical Truth About 'Holy Places'" and "The Role of Socialist Traditions in the Defeat of Religion." Problems include the small number of atheist lecturers ("hardly a thousand"), the youth and inexperience of cadres and the inadequacy of technical equipment (the film projector cannot run standard-sized films). Some of the problems are being resolved by sending cadres to "fraternal republics" for additional training.

FOCUS ON RURAL MEDICAL SERVICES

[Editorial Report] Ashkhabad SOVET TURKMENISTANY 12 February 1982 in Turkmen p 1 carries a 100-word lead editorial on the importance of the village doctor. "At present, 83 hospitals, more than a thousand paramedical centers and 40 ambulances serve the rural population. In the 11th Five-Year Plan 90 ambulances will be put into service." Some regions have shortcomings in rural medical services. "For example in Gyzylbayyr village in Byzyletrek rayon construction of the village hospital has lagged from year to year. Since there is no hospital here the sick patient has to travel between 100 to 120 kilometers to the rayon center or to a neighboring rayon. In the 'Leningrad' kolkhoz in Darganata rayon no possibility exists to serve the people well. On the 'Bolshevik' kolkhoz in Saragt rayon medical services are significantly below the demands of the time."

CONSUMER FOOD PRODUCTION FALLS BELOW JANUARY QUOTA

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 16 February 1982 p 1 carries a 300-word Turkmeninform release on a republic meeting of trade workers. It was noted that "consumer food factories were unable to meet production quotas."

SHORTCOMINGS IN CONSUMER GOODS INDUSTRY

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 17 February 1982 p 1 carries a 1,100-word lead editorial on shortcomings throughout the consumer goods sector. "One often runs across violations of the laws of Soviet trade such as giving purchasers short weight and hiding goods in demand and selling them surreptitiously." Certain types of consumers are virtually deprived of services altogether: among these are gas workers, canal workers and herdsmen in distant and isolated regions.

SHORTFALL IN COTTON QUOTA DISCUSSED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 13 February 1982 p 2 carries a 4,500-word "Round Table" featuring B. Kasyet, chief agronomist of the (TuSSR Ministry of Agriculture) Cotton Administration and A. V. Gudratullaev, director of Cotton Growing Technology at the Agriculture Scientific Research Institute, who discuss reasons behind the 59,000 ton shortfall in the 1981 cotton quota. Kasyev notes that "agrotechnical measures were taken too late." Gudratullaev adds that "one of the fundamental reasons for the low level of production and the fact that the cotton bolls did not open up on time was the application of nitrogenous fertilizer in too great a quantity too late."

AGRICULTURAL EQUIPMENT REPAIR TO BE EXPEDITED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 13 February 1982 p 1 carries a 1,100-word lead editorial stating that "this year expediting the repair and improvement of agricultural equipment" is a priority. Shortcomings in this regard are noted throughout the TuSSR.

NEW RIVER SHIPS COMMISSIONED IN ARAL'SK--A number of new ships built in the yards of the Central Asian Shipping Works imeni Red Banner of Labor were given over for disposal to river sailors. One of them was christened the "Zelili." It is a contribution to the immortalization of the works of the classical Turkmen poet Gurban-Durdy-Zelili, whose 200th jubilee is to be marked this year. Now work is being done to prepare the "Zelili" to go forth into the Jeykhun [Amu Darya]. [Text] [Ashkhabad SOVET TURKMENISTANY in Turkmen 25 February 1982 p 4]

PRACTICE OF NEW TRADITIONS NOT INTERESTING ENOUGH

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 26 February 1982 p 2 carries a 1,300-word article on the inculcation of "new traditions" by Yo, Khojaev, Candidate of Philosophical Sciences. He points out that "the role of new traditions in purging man's mentality from the remnants of religion is very great." However, "we must state that in some parts of Ashkhabad, Mary and Dashkhovuz oblast's funeral ceremonies are conducted on the basis of old, or, more correctly, religious traditions." If new traditions are not convincing, "it means that protests can be launched against them." In the wedding ceremony the new tradition requires an oration by a deputy of the local Soviet. As the author notes, "all of them are not qualified as orators." A seminar on oratory at the rayon level is recommended. In some cases primary party organizations are apathetic with regard to new traditions. "In Danev, Chardzhou and Kerki rayons this question has only been examined once in the last 3 years. This is very little. Most of the commissions basically do not function; they do not even keep minutes of their meetings."

COMPENDIUM OF TURKMEN BOOKS IN ARABIC SCRIPT

[Editorial Report] Ashkhabad Sovet TURKMENISTANY in Turkmen 28 February 1982 p 4 carries a 1,400-word book review by P. Azymov and S. Atanyyazov of the recently-published "Turkmen Books Published in the Arabic Script" by Almaz Yazberdiev. The work is considered to be essential for the study of Turkmen literature and bibliography in the pre-Revolutionary period.

TRANSCAUCASIAN DRAMA FESTIVAL TO BE HELD IN ASHKHABAD

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 28 February 1982 p 1 carries a 1,100-word lead editorial saying that because of the success of the Central Adian Drama Festival held in Ashkhabad in 1980 "the TSSR Ministry of Culture decreed that a drama festival of the Transcaucasian republics is to be held this year." No schedule is given.

NEWS FROM AFGHANISTAN

Ashkhabad SOVET TURKMENISTANY in Turkmen

6 February: Guerrillas of the "Islam Party" repulsed by the Afghan Democratic Republic Army on the southern Afghan border.

6 February: Democratic Organization of Afghani Women support Palestinian independence in a letter sent to Palestinian women.

10 February: More than 450 teachers have graduated from special courses and will teach throughout the country.

10 February: Pushtuni tribes living on Pakistan-Afghani border have resolved to "expel counterrevolutionaries" from their province. This decision was transmitted to Pakistan.

11 February: A number of provincial meetings have taken place to elect delegates to the Afghan People's Democratic Party General Conference (to be held in March 1982).

18 February: Preparations begun for spring planting. At a recent meeting sponsored by the Agriculture and Land Reform Ministry in Kabul questions of perfecting the distribution of chemical fertilizers, insecticides and animal vaccinations were discussed.

24 February: Cultural exchange agreement signed between Cuba and Afghanistan.

CSO: 1830/366

SAMARKAND OBKOM CHIEF ON EVE OF REMOVAL VIEWS LEADERSHIP QUALITIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 February 1982 carries on page 2 a 1,300-word article by Bektash Rakhimov, first secretary of the Samarkand Obkom, titled "A Matter of the Principle of Partiynost'." Rakhimov devotes this article to a review of those qualities which the Communist Party expects of its leaders, and without which a leader cannot spearhead the rapid development of social and production forces. Foremost, the party leader must be able to realistically appraise progressive socioeconomic and political trends. Rakhimov states that a clear expression of high leadership norms may be found in production successes, and remarks that workers of Samarkand Oblast completed the 1981 plan for production of industrial goods ahead of time, while Samarkand cotton growers harvested 545,000 tons of cotton. Furthermore, special attention has been paid to commandeering skilled and educated elites to manage the oblast economy. The first secretary cites several individual partkom leaders who are "modest, principled, and exacting," which are among the most important leadership qualities. The modest, principled leader does away with outmoded and rigid connections, is concerned with the future, and endeavors to introduce the newest lifestyles and customs. Such leaders are ruthless in taking action against improper conduct and management violations, such as exaggerating figures, exalting phony records, and indulging in localism, formalism, and pomposity. Rakhimov criticizes conceited leaders who disregard others and consequently separate themselves from the nation and the collective, contract the sickness of lack of principles, and eventually become rude, apathetic, and immodest. He refers to several cases in recent years in which such leaders have failed to realize production plans and, as a result, have been removed from their positions. Rakhimov cites the CC CPSU Decree "On the work done by the Samarkand Oblast Committee of the Uzbekistan Communist Party to carry out the decisions of the 26th CPSU Congress that relate to increasing the vanguard role of communists and to developing their activism in social life," and its provisions for instilling principles in cadres through meetings and strong political indoctrination. In conclusion, he vows to increase the struggle to mold leaders with the lofty principles of sound economic management, modesty, and exactingness. An UzTAG report that appeared in PRAVDA VOSTOKA 24 February 1982 on page 1 stated that at a Plenum of the Samarkand Obkom, B.R. Rakhimov was removed from his post as first secretary and replaced by Rashid S. Ashuraliyev, a deputy chairman of the Council of Ministers of the UzSSR.

EDITORIAL CITES IMPROPRIETIES AMONG SAMARKAND OBKOM LEADERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 February 1982 carries on page 1 a 1,300-word double-column lead editorial titled "Loyalty to the Debt of Partiynost'." The editorial focuses on unacceptable modes of behavior by communists. A number of letters have reached the editorial office complaining about party members who blemish the name communist through their improper behavior. Some communists are nonactivists, do not fulfill daily and monthly plans, show up late for work, sit around teahouses and restaurants, and throw sumptuous banquets and parties. These letters also reveal that some communists are amassing personal wealth and showing it off. Others are rude to workers, yell at them, and withhold the respect due them. Still others forget that laws apply to one and all, and that theft of money by anyone will not be tolerated. The editorial cites the CC CPSU Decree "On the work done by the Samarkand Oblast Committee of the Uzbekistan Communist Party to carry out the decisions of the 26th CPSU Congress that relate to increasing the vanguard role of communists and to developing their activism in social life," and stresses the correctness of its criticism of communists who fail to fulfill production plans. The editorial concludes that the most important task of party work is to educate cadres in a spirit of modesty and candor, of responsibility toward work assignments, and of loyalty to the debt of partiynost.

UZBEK INTERNAL AFFAIRS MINISTER ACCENTS CRIME PREVENTION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 February 1982 carries on page 3 a 1,500-word article by K. Ergashev, UzSSR minister of internal affairs, titled "The Most Important Thing Is Man's Education." Ergashev begins the article by observing that emphasis of police and social organizations should be directed toward prevention of crime, since it is easier to turn a person headed for crime away from this path than it is to rehabilitate him. He is especially critical of plant managers who turn away people sent to them by police organs on the pretext that the plant is no place to educate such people. In his opinion, communications between police organs and enterprises must be strengthened as part of the focus on elimination of parasitism. Ergashev turns to another serious problem, that of theft of socialist property. Petty theft at industrial enterprises is on the rise.

NEW UZBEK CHAIRMAN OF AGRICULTURAL EQUIPMENT SUPPLY DISCUSSES TASKS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 February 1982 carries on page 3 a 1,300-word article by M. Igamberdyyev, chairman of the UzSSR State Committee for the Supply of Production Equipment for Agriculture, titled "The Power of Mechanization." Igamberdyyev reviews some of the Committee's achievements during 1981, but notes that the 1981 plan for production of consumer goods was not fulfilled, economizing on energy and fuel resources was low, and repair of engines and equipment was behind, especially in Kashkadarya, Surkhandarya and Fergana Oblasts. Igamberdyyev considers the work of the Roskomsel'khoztekhnika to be a crucial factor in the mechanization and chemicization of agriculture. Consequently, 1982 plans, which call for a 3.7 percent increase in production volume, reconstruction and reoutfitting of 15 repair enterprises, and substantial improvements in the speed and quality of repairs, must be met. The State Committee will focus on repair and updating of livestock economies, where technical equipment is especially below standard. Igamberdyyev concludes by stressing that special attention will be paid to increasing the skills of cadres through formation of special courses and seminars and attendance at higher and secondary schools.

SAMARKAND OBLAST SHEPHERDS CALL FOR HALT TO LAMB SLAUGHTER

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 February 1982 carries on page 1 a 900-word article by Toldi Qodirov, chief shepherd on "Moybuloq" Karakul Raising Sovkhoz in Kushrabat Rayon of Samarkand Oblast, titled "Honorable Debt." Qodirov, a shepherd for the last 30 years, urges that steps be taken to improve the stock of karakul sheep. He attributes the decline in stock quality to the neglect of the principle of exchanging male sheep of one herd with those of another. He also calls for a firm halt to the slaughtering of female lambs for their pelts during lambing season in order to meet karakul pelt quotas. A related problem arises from the practice of slaughtering early spring lambs while holding back late season lambs for further growth. Qodirov urges the opposite practice, because early spring lambs get accustomed to increasingly warm weather and thus can bear summer heat better than late season lambs. Finally, Qodirov comments on the increase in number of stock. Because of the shortage of feed, both male and female lambs are not fully developing. He advises feeding all newly born lambs special feed mixtures, and calls on specialists to formulate appropriate feed measures. Tashkent SOVET OZBEKISTONI in Uzbek 19 February 1982 carries on page 3 a 900-word article by Norboy Ergashev, hero of Socialist Labor and chief shepherd on "Ghozghon" Sovkhoz in Nurata Rayon of Samarkand Oblast, titled "Honor of Livestock Raising." Ergashev devotes much of this article to the development of karakul raising on this sovkhoz in recent years, and to its plans for 1982. He concludes that there is a single crucial task, which is to assure that every female lamb is held back for further growth, and that none is slaughtered for its meat or skin until it reaches a weight of 50-60 kilograms.

PUMPING STATION, CANAL TO IMPROVE WATER SUPPLY IN DZHIZAK STEPPE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 February 1982 carries on page 2 a 200-word article by newspaper correspondent N. Mirzayev titled "Water Comes to the Steppe." Mirzayev reports that construction of a second pumping station in Zarbdar Rayon of Dzhizak Oblast has been designated a shockwork project. The pumping station will lift water from the Syrdarya River to a height of 36 meters and enable an agricultural turnaround in the Dzhizak Steppe. Thus far, the "Gidrostroy" Trust has completed a large volume of work on the project, with removal of half a million cubic meters of soil, pouring of 32,000 cubic meters of concrete, and assembly of 5,000 tons of metal structure. Workers have pledged to pour another 3,000 tons of concrete, assemble 12 pumping and electrical equipment units, and complete the basin that will hold the water, by 1 April 1982, Lenin's birthday anniversary. When fully completed, the pumping station will supply 20,000 ha of land with water and double the cotton harvest in Zarbdar Rayon. Tashkent SOVET OZBEKISTONI in Uzbek 18 February 1982 carries on page 3 a 100-word report by E. Suvonov titled "Water Has Come to the Steppe." The report states that workers of the "Gallyaaralvodstroy" Trust have completed 1,552,000 rubles worth of construction work on the Tuyatartar Canal that runs through the "Uzunbulak" Sovkhoz in Bakhmal Rayon of Dzhizak Oblast. Water brought to the steppe through the canal will make it possible to reclaim 500 ha of land.

UZBEKISTAN FLOOD RESEARCH CENTER PROPOSED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 February 1982 carries on page 4 a 900-word article by A. Umarov, docent in the Department of Hydraulics of Tashkent Polytechnical Institute imeni Beruniy, titled "Is It Pos Possible To Prevent Flooding?" The article begins with the observation that 70 percent of all floods that take place in the Soviet Union occur in the Central Asian republics, with Uzbekistan ranking among the hardest hit. Umarov points out that special departments and groups for the study of floods have been formed in scientific research institutions around the country in recent years, including the "Kazglavselyezashchita" Office subordinate to the Kazakh SSR Council of Ministers. The author feels that the time has come for the formation of a republic and regional scientific research center for the study of flood characteristics and warning and preventive measures. A course on flood studies, such as that introduced at Moscow State University, should be organized as a step toward training cadres in this field. Current studies at various institutes around the country are oriented toward drafting recommendations for designing water works safe from floods and toward computing flood parameters. Such research, in Umarov's opinion, should be unified. Most importantly, he concludes, specialists in flood studies must be trained at republic universities and at the Tashkent Institute for Motor Vehicle Transport and Roads and the Institute for Engineers for Irrigation and Mechanized Agriculture.

UZBEK TRADE UNION ROUNDTABLE DISCUSSES MECHANIZATION, AUTOMATION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 February 1982 carries on page 2 a 1,700-word report by A. Korjovov, newspaper reporter, titled "The Future of Mechanization." This report excerpts remarks made by participants in a roundtable of the Republic Council of Uzbekistan Trade Unions. T. Tormisheva, chief of the Department of Labor Defense and Technical Security of the Council, says that every year more than 400 mechanized and automated lines, shops and sections go into operation, more than 300 units of machinery are modernized, and close to 8,000 workers are freed from manual labor. P. Nurmirzayev, chairman of the Republic Committee of the Trade Union for Workers in Forestry, Paper and Lumber Processing Industries, says that despite some successes in recent years, many enterprises still neglect the task of mechanization and automation. Finally, Ye, Vasil'chenko, chief of the Department for Labor Conditions of the UzSSR State Committee for Labor, confirms the recent emphasis on phasing out manual tasks. However, the number of people engaged in manual labor in industry is declining too slowly due to insufficient exploitation of scientific and technological progress. Even in mechanized and automated shops, many tasks are still done manually. As an example, he cites the cotton ginning industry, which is 95 percent mechanized, but where loading, storing, bundling, wrapping, and preserving are done by hand. The same reliance on auxiliary workers is also found in canning plants, meat and dairy combines, tea packing, tobacco and candy factories.

EDITORIAL RAPS INEFFICIENCY IN UZBEKISTAN CEMENT INDUSTRY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 February 1982 carries on page 1 a 900-word lead editorial titled "Efficiency is the Main Criterion." The editorial points out that efficiency in the industrial sector not only depends on attracting additional labor, but also on labor productivity. Furthermore, it is very important to reduce the amount of manual labor through mechanization and automation, and to strictly observe economical utilization of resources. Alarm has been raised that enterprises of the cement industry are not taking steps to fully utilize existing production forces and resources. In 1980, utilization of existing production forces stood at 82 percent, but in 1981, this figure dropped to 69.9 percent. Because such forces were not fully utilized, production fell by tens of thousands of tons of cement and 31 million slabs [shifer]. Several enterprises fell into backward status due to breach of contracts. The editorial concludes with the admonition that Uzbekistan's industrial workers must firmly execute orders for higher efficiency in 1982.

SHORTAGES HAMPER CONSTRUCTION AT UZBEKISTAN METALLURGY PLANT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 25 February 1982 carries on page 2 a 600-word article by newspaper special correspondent E. Khojayev titled "When Will the Pace Quicken?" The article deals with the slow pace of construction work on a new rolling mill at the Uzbekistan Metallurgy Plant, Khojayev underlines the importance of the project by stating that presently sheet metal is brought to Central Asia from long distances at a transport cost of more than 7 million rubles a year. When completed, this rolling mill will supply the Central Asian region at five times less the cost. Although slated to begin operation in 1983, only 6.9 million rubles of the allocated 35 million rubles have been appropriated for this project in the last 3 years. Yet, construction continues at a snail's pace during 1982. The chief engineer of the trust in charge of construction tells the correspondent that responsibility lies on the doorstep of those in charge of supplies, who have failed to provide workmen with machinery, roofing and reinforced concrete materials. The secretary of the plant's party committee informs the correspondent that the fault rather lies with the labor force, which lacks forward brigades and is not fully utilized. Work on one project stopped for a month and a half due to insufficiency of workers, but the secretary complains that the other workers could have continued the job. The correspondent concludes that the real problem is a lack of mutual cooperation between planners, suppliers, and workers.

SHURTAN GAS COMPLEX EXPANDING

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 February 1982 carries on page 1 a 100-word report from UzTAG titled "Vast River of Gas From Shurtan." The report states that the second section of the Shurtan Gas Complex is finished and will make possible an increase in excavation and processing of gas from 4 billion to 8 billion cubic meters per year. Excavation and processing of natural gas at the complex is slated to reach 20 billion cubic meters annually by the end of the 11th Five-Year Plan. The Syrdarya and Tashkent Heating Power Stations, as well as several large enterprises of the building materials industry, will operate with gas from Shurtan.

KARAKALPAKISTAN TELEVISION TOWER COMPLETED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 February 1982 carries on page 1 a 100-word report from UzTAG titled "New Teletower." The report states that in Kungrat City of the Karakalpak ASSR a television tower standing 350 meters above the level of the Aral Sea has been delivered for use. Thanks to the early completion of construction by the Leningrad "Spectsatal' konstruktsiya" Trust, the population of Ustyurt and Kyzylkum Rayons can now get Moscow television programming. Moreover, the population of the southwestern region of Mangyshlak Oblast in the Turkmen SSR can easily get these television broadcasts by means of retransmitters.

UZBEKS ADVISED TO RID CUSTOMS OF RELIGIOUS SIGNIFICANCE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 February 1982 carries on pages 2 and 3 a 1,800-word essay by S. I. Vorob'yova titled "Socialist Law and Customs." The essay emphasizes that propagation of socialist law and new customs and traditions is an important method of instilling communist morality and a scientific world-view in people. In the development of new customs and traditions, it is crucial to wage a wide-scale fight against religious vestiges. Progressive customs of the people must be supported, while their religious encrustations must be removed. Unfortunately, there are still people who cling to the old customs and do not adopt the correct attitude toward vestiges of the past in order to adapt them to modern needs. Such people annually observe the Passover [paskha] and the Ramadan Fast, just as though these belong to the people's customs and traditions. There are also people who embrace customs and traditions that are harmful and nonbeneficial to society under the pretexts that they are "national." Vorob'yova cites the CC CPSU Decree "On the work done by the Samarkand Oblast Committee of the Uzbekistan Communist Party to carry out the decisions of the 26th CPSU Congress that relate to increasing the vanguard role of communists and to developing their activism in social life," which stressed the need for waging a sharp struggle against harmful customs and traditions and reactionary ceremonies.

NAMANGAN OBLAST FORMS SCHOOL FOR ATHEISM LECTURERS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 February 1982 carries on page 2 a 200-word report by newspaper correspondent A. Niyozov titled "School of Atheists." The report states that the Political Education House of the Namangan Obkom and the Oblast Filial of the Republic Scientific Atheism House have formed a 2-year school for advanced training of atheism lecturers. Among those taking part in these studies are deputy chairmen of rayispolkoms, instructors of raykoms, deputy editors of rayon newspapers, directors of methodology departments of rayon people's education departments, second secretaries of rayon Komsomol committees, and others. The first classes included lectures by E. Hayitboyev, director of the Obkom Propagit Department, and by A. Mahkamov, Namangan Oblast Representative of the Council on Religious Affairs of the USSR Council of Ministers. The latter spoke on "Problems in the Observation of Soviet Laws Concerning Religious Worship."

UZBEK AUTHORITIES PUSH NEW CUSTOMS IN MAHALLAS, COUNTRYSIDE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 February 1982 carries on page 2 a 1,200-word article by newspaper correspondent H. Abdusamatov titled "Important Direction of Ideological Work." The correspondent relates the remarks of workers involved in propagation of new Soviet customs. Z. Gafurov, chairman of the Kirov Mahalla Committee in Akmal Ikramov Rayon of Tashkent City, reports that ideological and indoctrinational work of this kind has been most effective when carried out where pensioners, the elderly and the invalid actually live. Gafurov states that more than 7,000 people live in Kirov Mahalla, including 30 doctors and candidates of science, hundreds of teachers, technical engineers, medical, transport and trade workers, more than 200 communists, several hundred Komsomol members, and dozens of veterans. The Mahalla Committee takes their occupational, educational, age and other characteristics into consideration for its propaganda work. Its goal is to explain to each person the importance of the new customs in their present prosperity and cultural life. Occasions such as engagement parties, assigning passports to young people, honoring the elderly, or seeing off youths to the army, are ceremoniously observed. A. Mamatmurodov, deputy chairman of the Kolkhoz imeni Dzerzhinskiy in Bekabad Rayon of Tashkent Oblast, reports that the rising standard of living and political and ideological work in rural communities is having an effect on the elimination of vestiges of the past and old customs from the consciousness of farmers. Occasions such as welcoming youths on the collective farm, honoring production and competition winners, graduating from secondary school, assigning passports to young people, seeing off youths to the army, and Navroz [spring] and harvest festivals, are ceremoniously marked in accordance with the new customs.

UZBEK ACADEMICIAN SCORES MORAL, ESTHETIC SLIDE IN COUNTRYSIDE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 February 1982 carries on page 2 a 1,700-word article by Academician E. Yusupov, vice-president of the UzSSR Academy of Sciences, titled "Living Standard and Man's Education." Yusupov observes that various republic ministries and administrations, under the leadership of Sharaf Rashidov, first secretary of the CC CPUz, have devoted much attention to raising the standard of living in the rural areas. He points out that a high standard of living does not consist merely of new housing, conveniences, and household articles, but also of high moral and esthetic standards, which must be developed through the process of education. While many villages are adorned with new housing, wide roads, and gardens, the level of taste leaves much to be desired. In many homes, unmatching curtains droop, plaster falls, and furniture is tasteless, and after a few years, many of these originally lovely homes completely deteriorate. Moreover, some people have so many possessions, such as cars, television and radio sets, and furniture, that it is impossible to even get in the door. Such tastelessness and mediocrity cannot be traced to the individual characteristics of villages. Yusupov also complains that many homes are being built according to the erratic preferences of individuals. He feels that a force which can make a difference is the village intelligentsia, composed of young people who leave the village to get a university education and then return to work in the village.

Unfortunately, he says, many of these soon get reaccustomed to rural life, and after a few years are hardly recognizable as university graduates. He calls for increased attention to educational and ideological work among such people. Yusupov also criticizes neglect of progressive and new customs, while harmful vestiges of the past continue to inflict material and spiritual harm on the people in villages. In particular, farm workers throw away their hard-earned money on lavish weddings and feasts, fall into debt, and bring detriment to the well-being of their children. Finally, Yusupov has several comments on the filthy, unkempt, and tasteless clothing of rural Uzbeks. He recounts that he was recently in a Moscow marketplace with a scholar from the North Caucasus, and there saw an Uzbek selling melons for 4 rubles a kilo. His colleague from the North Caucasus wondered how an Uzbek could sell a melon for 30-40 rubles and still be unable to afford a decent suit of clothes. Yusupov ends the article with the observation that this is a sad commentary on a nationality with many centuries of rich heritage.

EDITORIAL URGES HIGHER LIVING STANDARD FOR UZBEK COUNTRYSIDE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 February 1982 carries on page 1 a 900-word lead editorial titled "Perfection of People, Beauty of Villages." The editorial deals with the question of housing and public services in rural areas. It points out that while the movement to eliminate khutor-type villages and to restructure farm settlements into agrocities has "peaked," nonetheless many resources have not been utilized. Most importantly, a basic plan for the reconstruction of villages has yet to be drawn up and the general construction of trade services and public institutions has been neglected. Typically, village soviets permit building of new homes without design plans even though public services cannot be provided them. The editorial emphasizes that such services are an inseparable part of the spiritual formation of Soviet man. Raising rural living standards demands an increase of ideological and mass political work among the rural population. In particular, the editorial identifies the struggle against vestiges of the past, old customs, and traditions that are alien to the Soviet way of life, as the most vital task of today. It decries the fact that farm workers waste a considerable part of their assets for weddings and ceremonies, but sees this as the result of the failure of educational work and a lack of involvement in problems of living standards.

EDITORIAL CRITICIZES UZBEKISTAN TRADE SECTOR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 February 1982 carries on page 1 a 1,000-word lead editorial titled "Courtesy of Trade Workers." The editorial focuses on the treatment salespeople accord customers and on the supply of consumer goods by the trade sector. It states that the republic, state and cooperative trade system suffers from serious deficiencies in supplying consumers with goods. Staples such as soap, salt and matches, are being produced in sufficient quantities, but they either remain in the warehouses or are held back by trade workers. Waste, theft, and concealment of state property can be traced to serious failures in the process of selection, training, and replacement of cadres. The editorial demands that party, trade union, and Komsomol organizations improve educational and mass political work among trade collectives. Trade organizations and enterprises must increase productivity, quality, discipline, and supervision. Trade workers must be scrupulously honest, courteous and sincere, and must safeguard state property. People who seek to accumulate personal wealth, violate trade principles, covet state and cooperative property, and are crooked in their dealings, have no place in the trade sector. The editorial concludes that fulfillment of trade turnover plans depends on the proper behavior and skill of salespeople.

UZBEK ACADEMICIAN DISCUSSES HISTORY, BIMILLENIAL OF TASHKENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 February 1982 carries on page 2 a 1,500-word article by Academician A. Sadykov, president of the UzSSR Academy of Sciences, titled "City of Brotherhood." The article appears in connection with the 2000th jubilee of Tashkent to be celebrated in 1983. Over the following years, Tashkent became the "Beacon of Socialism in the East" and is today one of the largest industrial centers in the country. The number of heavy, light and food industrial enterprises surpassed 450 in the 1970s. Representatives of local nationalities form the majority of industrial, technical, engineering, and skilled workers. Sadykov dwells on the removal of industrial enterprises and more than 200,000 orphans from the Western front to Tashkent during World War II, and then on the reconstruction of Tashkent after the 1966 earthquake. His final remarks concern the international relations of Tashkent, including export trade to 60 countries, sister city ties with seven foreign cities, and numerous annual conferences and symposia.

BABUR'S LITERARY, HISTORICAL IMPORTANCE DISCUSSED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 1982 carries on page 3 a full page of features devoted to Zahiraddin Muhammad Babur (1483-1530), noted as the author of Uzbek poetry and historical memoirs, as well as the founder of the Moghul State in Northern India (1526-). In a 1,200-word article by Ghulom Karimov and Begali Qosimov titled "'Do Your Best For the Nation'," Babur's historical importance is emphasized. The authors argue that Babur was a ruler who tried to establish a strong, centralized government and to administrate sensibly. For this reason, his campaigns in Afghanistan and India had "a very positive significance for thie history of these countries and peoples." They consider it a mistake to classify Babur among the hated world conquerors, because he was also a great writer. They quote Jawaharlal Nehru, who considered Babur the most civilized and refined man of his time. In a 1,200-word article by Ne"mat Otajonov titled "The 'Baburnama' Tours the World," translations of Babur's memoirs, which record events in Fergana, Transoxiana, Afghanistan, Khorasan and India, are surveyed. In a 1,200-word article by Omonulla Valihanov titled "The Poetical Arts of Babur," the lyrical poetry of Babur is discussed.

UZBEK COMMENTATOR NOTES PROGRESSIVE ASPECTS OF IRANIAN REVOLUTION

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 19 February 1982 carries on page 7 a 500-word commentary by N. Muhammadiyev under the "Commentator's Pulpit" rubric titled "Dangerous Game." The commentator reviews recent American actions aimed at stepping up the arms race and creating more tension through deployment of Pershing missiles in Western Europe. He asserts that the United States, in its suppression of national liberation movements and support of dictatorial regimes, seeks to become the sole government in the world. Naturally, such policies are encountering stiff resistance in many regions, of which Iran may serve as an example. It has been 3 years since the Iranian Revolution ended 2,500 years of the rule of the Shahs, and resulted in the establishment of an Islamic Republic. This revolution struck a sharp blow against U.S. imperialist designs in the Near and Middle East. While the United States has imposed economic sanctions and SAVAK agents have engaged in terrorist activities, the country has nonetheless seen the initiation of "a number of progressive changes.' Banks, insurance companies, and 70 percent of the industrial enterprises of the country have been nationalized. The grip of foreign monopolists on the country's oil operations was thrown off. Workers have seen their minimum wage doubled and a 44 hour work week introduced. Special committees for elimination of illiteracy and for supplying food to the poorest families have been formed. Muhammadiyev concludes his commentary with the statement: "Soviet peoples greeted the Iranian Revolution with sympathy. In the years since, good neighbor relations between our countries have continued. Today, our country is taking part in building many industrial projects in Iran. The scale of our cooperation is ever expanding. All of this is a shining expression of the sympathy of the Soviet people for the Iranian Revolution and the antiimperialist struggle of the Iranian people."

UZBEK COMMENTATOR CLAIMS THIRD WORLD TARGET OF U.S. BIOCHEMICAL ARMS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 12 February 1982 carries on page 7 a 700-word commentary by M. Kamolov under the "Commentator's Pulpit" rubric entitled "Defenders of Peace." Kamolov asserts that the Soviet Union, along with a number of socialist countries, are trying to implement a program of progress toward peace in the face of U.S. and NATO attempts to increase tension in the world. He criticizes U.S. responses to Soviet proposals at the Geneva talks for reduction of nuclear arms. In particular, he claims, the United States is starting production of chemical and biological weapons, and there is information that the United States "is using these weapons in fighting peoples struggling for their freedom." Moreover, Kamolov states, the United States has decided that the Near East, Africa and the Indian Ocean region are a zone of vital importance to its interests. In the remainder of his commentary, Kamolov touches on Soviet peace efforts at the Madrid talks of the European Security and Cooperation Council, which the United States is trying to turn into a forum for propaganda against the Soviet Union and Poland. He concludes that the mutually friendly relations that exist between socialist and various Western countries serve as a refutation of such efforts.

ARMS BUILDUP HURTS AMERICA'S POOR, SAYS UZBEK COMMENTATOR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 February 1982 carries on page 3 an 800-word commentary by A. Meliboyev under the "Commentator's Pulpit" rubric in the world news section titled "Who Is Entangling the Knot?" Meliboyev criticizes the recent U.S. proposal to drop plans for deployment of Pershing-2 missiles in Western Europe if the USSR removes its SS-20, SS-4, and SS-5 missiles. He states that acceptance of this plan would mean tipping the military strategic balance in favor of the United States. Meliboyev outlines disarmament proposal which Brezhnev recently discussed with representatives of the Socialist Advisory Council for International Disarmament, which demonstrates once more the principled path followed by the Soviet Union toward establishing peace. The West, on the other hand, pursues a different path. Arms buildup is currently the most important issue in the United States, whose government recently submitted a plan to Congress calling for $263 billion in military spending for 1983. This comes, he points out, at a time when the U.S. national debt has surpassed $1 trillion, and when $25 billion has been cut from social programs. As a result, some 875,000 people have been denied food stamps, and 700,000 people have been removed from the welfare rolls.

CZECHS TO BUILD AGROINDUSTRIAL COMPLEX IN KARSHI STEPPE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 14 February 1982 carries on page 2 a 100-word report from UzTAG titled "Czech Builders to Uzbekistan." The report states that the "Druzhba-Shurtan-Urengay" agroindustrial complex of the "Soyuzuzbekgazprom" will be built in the Karshi Steppe with the help of Czech construction workers. In addition to building apartment buildings, a school, club, and other public facilities, the Czechs will outfit the livestock farm of the complex. On 8-12 February 1982, a group of Czech specialists and of Moscow representatives of the Czech firm "Stroyeksport" visited the proposed site and toured several sovkhozes in Kashkadarya Oblast in order to determine the amount of building materials and time needed to complete the complex.

SOVIET-VIETNAMESE COOPERATION PACT FETED IN TASHKENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 February 1982 carries on page 3 a 200-word report from UzTAG titled "Dedicated to a Glorious Year." The report states that on 15 February, a ceremonial meeting of Tashkent public figures was held at the Tashkent Polytechnical Institute to mark the 25th anniversary of the signing of the cultural cooperation pact between the USSR and Vietnam. Speakers stressed that the signing of this pact marked an historic stage in development of fraternal friendship between the two countries, and that workers of Uzbekistan heavily contribute to the strengthening of this pact. Not only are many kinds of industrial goods exported to Vietnam, but Vietnamese specialists are being trained at higher educational institutions of the Uzbek SSR, and a program for the exchange of cultural delegations is being implemented. The student Nguen Thiu Ban, on behalf of Vietnamese students in Tashkent, expressed sincere gratitude to Soviet friends for their aid to this homeland.

TURKESTAN MILITARY DISTRICT AIR FORCE COMMANDER PLEDGES READINESS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 February 1982 carries on page 3 a 700-word article by Lt Gen N.K. Martinyuk, commander of the Turkestan Military District Air Forces, titled "Army of Friendship and Brotherhood." Martinyuk begins this article, which is published in conjunction with Soviet Army and Navy Day, with remarks on the multinational composition of the Soviet Army since the first days of its formation. From the 4 May 1918 Decree of Lenin creating the Turkestan Front, the military power of the armed forces increased and its political and ideological unity grew stronger, so that the foundation for victory in the Great Patriotic War was laid. The wounds of the war have long since healed, and the Soviet people has lived in peace for nearly 40 years while building a developed socialist society under the leadership of the Communist Party. The concern of the party and government can be seen in the present condition of the armed forces. The Air Force is equipped with planes that are launched in reaction to sound and are armed with missiles, bombs and radioelectronic equipment. The armed forces comprise strategic missile, land, air, and naval forces. Martinyuk turns to the world situation, and remarks that the positive changes initiated by the Soviet Union in international relations are not to the liking of the imperialist and reactionary forces, who are stepping up the arms race in response. The U.S. administration spreads propaganda about the "Soviet military threat" and heats up the "cold war," while the Chinese leadership actively assists these policies. Under such conditions, the Soviet people and its army must be ready to strike a blow against any aggressors. Martinyuk concludes with the statement that the soldiers and air forces of the Turkestan Military District, who preserve the southern borders of the Homeland, are ready to carry out any orders of the Communist Party of the Soviet Union in defense of the Homeland.

STATE OF THE UZBEK THEATRE DISCUSSED

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 5 February 1982, p 6, 3,700 words. "Thinking of the Future of the Theatre and the Fate of the Genre" Discussion between Chief Director of the Tashkent Muqimiy Uzbek State Musical Theatre, Bakhtiyar Ikhtiyarov, and drama critic Muhsin Qadirov. Qadirov points to a number of problems he sees in the work of the Muqimiy Theatre. He illustrates this by pointing to the fact that in the 1950's and early 1960's the theatre was filled with excited audiences. But this has changed. Now the theatre-goers with good taste go elsewhere. Since the late 1960's the Muqimiy Theatre's plays have been directed at unsophisticated audiences. The Muqimiy Theatre has rather mechanically adapted works intended for drama theatre to the musical theatre. Discussed proceeds to touch on such subjects as the lack of top-notch actors, the need to increase the number of native musical instruments in the theatre's orchestra, and the need to improve the theatre's repertoire. Ikhtiyarov complains that most of the actors graduating from the Tashkent Ostrovsky Theatre and Arts Institute do not meet the needs of the theatre for lead actors who can sing, dance, act and speak on stage. He also calls for creation of a folk musical instrument ensemble and folk singing ensemble.

WESTERN TRANSLATIONS OF CLASSICAL UZBEK WORK

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 19 February 1982, No 8, p 3, 1,200-words. Ne"mat Atajanov "'Babirnama' Travels the World" by Zahiriddin Muhammad Babur. This work, because it gives a chronological account of great historical events which took place in Ferghana, the Maveraunnahr, Khorazm, Afghanistan and India, has been viewed by both Western and Oriental scholars with great interest. There have been translations into Russian (two printings), Latin, English (four translations, eight printings), Hindu and Turkish. In the Middle Ages there were four Persian translations made, three of which were done in India. First interest in the work in Europe was by a Dutchman in 1705, but it was not until a hundred years later that great interest was aroused. The contribution to the world fame of Babur's work by English scholars was especially great. Besides translating and publishing Babur's works, they also studied his life. Atajanov provides an outline of the most important translations and works about Babur. In reference to more recent times, he notes a two-volume Ottoman Turkish version with notes printed in 1944-46. This translation aided Uzbek scholars in determining the proper transcription for a 1960 edition. In Pakistan interest in the "Babirnama" has grown, too. As a result, there have been several Urdu translations of Babur's works, including one of the [entire?] Babirnama. There have also been many articles, such as some devoted to Urdu lexical elements in the "Babirnama."

PLAYS OF 1981 REVIEWED

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 19 February 1982, No 8, p 7, 1,000 words "Dramatic Composition--Basis of the Art of the Theatre" Report on meeting of the Dramatic Composition Council of the Uzbekistan Writers' Union. (Main report given by Berdiali Imamov carried on page 4 of same issue.) Comments by deputy Chairman of the board of the Uzbekistan Theatre Society, Bahriddin Nasruddinov: Currently there are 28 theatres in the republic. Every year they offer audiences 130-140 plays. Nearly half of these are by Uzbek authors. However, outside of the UzSSR plays by Uzbek authors are almost unknown. Critic Bahadir Ghulamov's comments: Strongly criticized the play "Hedgehog Without Spines." "The author's position is incorrect; this must be given serious thought by the kollektiv of the theatre together with the author." Chief producer of Yash Gvardiia Theatre Habibulla Fayziev responds: The theatre will make the appropriate conclusions from B. Ghulamov's remarks. Hafiz Abdusamatov [editor of Sharq yulduzi] comments: "If one looks carefully, it appears that not a single new work was staged in Tashkent theatres. This cannot be viewed indifferently." "It's true, translated works are also needed. But, nevertheless, it is necessary to strengthen attention to national dramatic composition. There is no way to excuse the fact that during 1981 the Hamza Uzbek State Academic Drama Theatre staged only one original work."

NEW PRIZES ESTABLISHED FOR KARAKALPAKH LITERATURE

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 19 February 1982, No 8, p 7, 150 words. "Prize Established" announces prizes for various genres of Karakalpakh literature; also established, special prize for translation of Karakalpakh literature into Russian and other languages of the USSR and for Karakalpakh translations of works originally appearing in other languages of the USSR.

STUDY OF UZBEK CLASSICAL LITERATURE IN 1981

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 26 February 1982, No 9, p 4, 1,200 words. Aziz Oayumov "The Heritage and Today" article primarily devoted to reviewing achievements and weak spots in studies of pre-Soviet (especially classical) Uzbek literature in 1981. It is noted that the complete collected works of Navoi are to appear in 20 volumes by 1985.

UZBEKISTAN THEATRICAL SOCIETY HOLDS SIXTH CONGRESS

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 5 March 1982, No 10, pages 1 and 7, 2,600 words. "The Art of the Theatre--To the Level of the Demands of the Times." Report on sixth congress of the Uzbekistan Theatrical Society which opened 3 March at Tashkent's Hamza Theatre. The major report on the state of the theatre was delivered by the president of the society's presidium, S. A. Eshantorayeva. She noted that there are 28 professional theatres in the republic, numerous people's theatres and drama and amateur theatres, as well as over 10 state concert organizations. They perform in Uzbek, Russian, Karakalpakh, Tatar, Korean, Uyghur and other languages. In the course of the last 5 years they gave over 32,000 performances which were attended by audiences totaling nearly 12 million. Over the last 5 years 500 young artists have entered the Theatrical Society. The organization's membership now stands at 2,065. Much of Eshantorayeva's report concerns the question of repertoire. Why, she asks, are there so few heroes such as cotton growers and those working on land reclamation on today's Uzbek stage? Every year over the last 5 years there have been 130-140 new plays staged. They totaled over 700 [sic]. But among them there were only 49 new works by Uzbek authors, and even the quality of those few left something to be desired. There have also been relatively few classical plays staged. Eshantorayeva criticizes the phenomenon of playrights straying from the topics she feels should be at the center of their attention. As things stand now, experienced playrights work on primarily historical and historical-revolutionary themes and young playrights write on narrow everyday topics. Production and labor have not occupied the place they should in the plays. Eshantorayeva examines the repertoire of the Russian-language theatres in the republic. The Gorky Academic Drama Theatre, interoblast drama theatres, Tashkent's Russian Theatre for Young Audiences, the Russian group of the two opera and ballet theatres, the Russian puppet theatres in Tashkent, Andijan and Samarkand, and kollektivs of opperetta theatres all should perform the best works of Uzbek authors. This has not always happened, as is evidenced by the fact that over the last 5 years the Gorky Academic Theatre staged only two Uzbek works. Eshantorayeva praises the experience of the Sirdarya and Surkhandarya Uzbek theatres in putting on plays in the Russian language. [OZBEKISTAN ADABIYATI VA SAN"ATI also carries summary of comments by other speakers.]

MORE DISCUSSION OF REVISED ORTHOGRAPHY PROPOSAL

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 5 March 1982, No 10, p 3, 2,000 words. Shavkat Rahmatullaev "To Create Anew or To Amend?" Part one of a two-part article on the new orthography proposal. Most interesting is the author's criticism of the fact that the proposal did not address the question of changes in the writing system [grafika]. "It is necessary to express a strong protest at the proposal's avoidance of the controversial questions of our writing system."

TRANSLATION WORK OF 1981 REVIEWED

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 26 February 1982, No 9, p 4, 1,000 words. "On Considering the Development of

Translation." Report on meeting of Uzbekistan Writers' Union Belles-lettres Translation Council. Meeting devoted to a review of work in 1981. Report at the meeting revealed that in 1981 there were 258 works translated into Uzbek at Ghafur Ghulam Literature and Art Publishers from the literatures of peoples of the USSR and socialist countries; the total for other countries was 150. Among the areas of work which need improvement, the report said that the quality of translations needs attention. The question of achieving more translations directly from the original into Uzbek [rather than through Russian] was also raised. The director of the adolescent literature section of Yash Gvardiia Publishers, Hajiakbar Shaykhov, lamented the paucity of experienced translators knowing both Russian and Uzbek. He called upon the Translation Council of the Uzbekistan Writers' Union to work more seriously in preparing qualified translators.

TOO FEW RUSSIAN LANGUAGE LITERARY WORKS PUBLISHED IN UzSSR

[Editorial Report] Tashkent OZBEKISTAN ADABIYATI VA SAN"ATI in Uzbek 5 March 1982, No 10, p 7, 400 words. Ya Khojaev "Let's Create Artistically Solid Works." Report on meeting of Russian Literature Council of the Uzbekistan Writers' Union. It was noted that although the ranks of writers writing in Russian in the republic have broadened and the editions of their works have increased, there are a number of shortcomings. In particular, there were only eight titles of [literary] works by Russian authors published. At the same time, nearly 80 manuscripts are lying about in folders at publishers. The period for reviewing and editing them has come to be very long. The speaker expressed confidence that the Russian editorial offices of the publishers, in particular Ghafur Ghulam Publishers, would put an end to the shortcomings which were pointed out.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

CAPTURE OF SOUTHERNBORDER VIOLATOR REPORTED

LD111331 Moscow PRAVDA in Russian 7 Jun 82 p 7

[Report by Maj I. Kozlov: "27 Minutes of Life on the Border"]

[Text] "There are no accidental arrests on the border. We regard that recent arrest as a classic one. Captain Slobodskiy was deservedly awarded the order of the Red Star and several of his subordinates the medal 'for distinguished service in safeguarding the USSR state border.' A complex situation arose, but the border guards operated skillfully, confidently and bravely."

"How long did the search last?'

"Just 27 minutes." [From a talk with the border detachment chief]

We are driving along a winding road to the detachment's small white house perched on the slope of the mountains scorched by the burning sun. Only recently spring was erupting here but now the last small islands of green are burning away.

At the entrance to the post we are met by the smart, mean captain; he has a swarthy, suntanned face, blue eyes and a welcoming smile. I introduce myself. Mikhail Petrovich Slobodskiy talks about himself:

"I have an ordinary, routine life story. I was born in Siberia in 1950. My father is a miner. There was school and sports activities. Before the army I became a candidate master of sports in unarmed combat. Then I served in the border troops in the Far East and went to the academy. And I have now been serving for 10 years here in the south."

With the captain I recreate the events of that memorable day. It began quite well, even festively, one might say: First, it was a Sunday and there was a movie in the evening and, second, Ensign Vasiliy Andreyevich Kolomiytsa, the detachment's warrant officer, was celebrating his birthday. In the morning the soldiers hung up a colorful banner of congratulations at the entrance, and the orderlies polished the floors particularly enthusiastically, believing, not without justification, that it would be a present for their warrant officer. But when the movie operator was already preparing the film for the projecter and Nina Vasilyevna, the detachment chief's wife, was busying herself with the festive dinner, preparing her "trademark" dishes--Manty and Chebureks--the order "to arms!" was heard.

The first to receive the alarming news was the duty signaler, Private Igor Dyadishchev--the alarm system had gone off, he reported to Captain Slobodskiy, the commandant's officer and the detachment headquarters. The Lenin room was vacated, the rows of stools were pushed aside. Lance Corporal Anatoliy Novichikhin, the detachment duty officer, handed out weapons, ammunition, radio sets and flare guns. The engines roared and the cavalrymen saddled their mounts.

Meanwhile the detail under the command of Sergeant Nikolay Mishchenko was patroling the border strip [kontrolno-sledovaya polosa]. When the call signal came, within a few seconds the border guards had rushed to the site of the border violation--here was where the training sessions and crosscountry runs came in useful. The alert group and the road blocks were on their way when a report from Mishchenko came over the air: tracks had been discovered; to judge from his prints, the violator had hidden in a gorge leading to a series of ridges. The prompt information helped the detachment chief to take the correct decision.

Captain Slobodskiy and privates Gnoyevoy and Chechkov galloped to a high ridge from which the natural boundary could be discerned. The remaining members of the alert group headed by Sgt Aleksandr Popov, an intructor in the dog handlers' service, advanced to the place where the tracks had been discovered. The gorge through which the violator was running forked and the spy could at any moment change direction, so all hope rested with the search dog Rex.

In the border violation zone Sergeant Popov noticed on the border stip an empty zinc ammunition box: Mishchenko had used it to cover up the tracks so that the mountain breeze would not sweep them away. The sergeant lifted the box, took out a special instrument, and pressed the handle of a miniature pump several times. Now the violator's scent would be reliably stored in the ampoule: If the dog suddenly lost the scent, this unique promoting device would help the seeker to return to it.

Rex jerked at the leash and set off at a sharp angle along the hilly ground covered with a thin layer of salt. The alert group hid behind a ledge, diving into the labyrinth of narrow rocky corridors.

On the summit of the ridge they received the latest radio report from Popov: the violator had turned left. Captain Slobodskiy ordered Gnoyevoy to move along the summit and ordered the road block under the command of Sergeant Sirayev to advance to the region of a small plateau: it was here that the detachment chief proposed to detect the spy.

Slobodskiy looked at his watch: "It's time he appeared." Some 2 minutes later a man ran out from behind the crest of a ridge. He was moving boldy and confidently--you could sense he had been trained.

The captain raised his hand and the border details began to descend cautiously from the crest. When the violator was in the center of the plateau the border guards rose up from all four sides. The violator rushed to the right and then to the left, then looked round and slowly raised his hands.

Young reinforcements recently joined Captain Slobodskiy's detachment. As usual the young men were familiarized with the sector and taken to the plateau. They were slightly disappointed: What events they had missed. Well, their whole service is ahead of them.

CONFERENCE ON IDEOLOGICAL EDUCATION HELD IN UKRAINE

[Editorial Report] Kiev PRAVDA UKRAINY in Russian on 26 May 1982 publishes on page 2 a 175-word RATAU article on an all-union conference-seminar devoted to improving ideological and political-educational work within "organs of internal affairs." The conference-seminar was held in the western Ukrainian city of Ivano-Frankovsk, but no date was provided. According to the article, Colonel General Yu. M. Churbanov, first deputy minister of the USSR Ministry of Internal Affairs, delivered a report in which he "emphasized the necessity for reorganizing education in accordance with the demands of the times and raising the efficacy of ideological and political work." Among other Soviet officials participating in the conference were I. I. Skiba, first secretary of Ivano-Frankovskiy Obkom, and Colonel General I. Kh. Golovchenko, Ukrainian internal affairs minister.

SHEVARDNADZE ADDRESSES PRIMARY PARTY ORGANIZATION CONFERENCE

Tbilisi ZARYA VOSTOKA in Russian 4 May 82 pp 2-6

[Speech by Candidate Member of the Politburo of the CC CPSU and First Secretary of the Communist Party of Georgia E. A. Shavardnadze at First Republic Meeting of Primary Party Organization Secretaries on 27 April 1982: "Consolidate the Experience Which Has Been Gained, Increase the Authority of the Primary Party Organizations Even More!"]

[Excerpts] Comrades!

Today for the first time a meeting of primary party organization secretaries and, moreover, a republic meeting, is taking place here. And it is gratifying that this first experience of ours has, without doubt, succeeded. A genuinely good meeting has resulted. A good, interesting, useful, and in many respects instructive discussion has taken place. Not only today's exchange of opinions is meant, but all of the work which has been done during recent days.

After demonstrating its indestructible fidelity to the Leninist norms of party life and principles of party leadership, the October (1964) Plenum of the CC CPSU developed measures to overcome elements of subjectivism and voluntarism and of naked administrative rule in party leadership, restored the united oblast and kray party organizations, and again created rayon party committees, concentrating in them the leadership of all of the primary party organizations. As is stipulated by the By-Laws of the CPSU, the party organizations and their leading agencies were again organized in accordance with the territorial-production criterion--the only correct and tested Leninist criterion.

Comrade K.U. Chernenko, member of the CPSU Central Committee Politburo **and Central Committee secretary, as well as other members of the Politburo, Central Committee secretaries, first secretaries of the union republics, party kraykoms and obkoms, are carrying out great theoretical and practical work in affirming the Leninist style, Leninist methods, in further perfecting party organizational and political work, developing inner-party democracy, and strengthening the primary party organizations.**

Recently the greatest attention has also been devoted to the lower level party elements in the international communist and workers' movement, something which is witnessed by the recent Prague Conference of Secretaries of the CC's of the Communist and Workers' Parties of the Socialist Countries which worked on the issues of party organizational work.

The Communist Party of the Soviet Union was represented at the conference by the Secretary of the CC CPSU Comrade I. V. Kapitonov who delivered a report.

For you and I it is especially important that at the conference in the capitol of Czechoslovakia, as has been noted, there took place a wide exchange of work experience on increasing the role of the primary party organizations in carrying out party policy, in their influence on the life and affairs of labor collectives, and in the accomplishment of the social and economic tasks which have been mapped out by the congresses of the fraternal parties.

All of the materials and all of the documents of this conference are being published in the periodical PARTIYNAYA ZHIZN', and we strongly recommend to all of you, primary party organization secretaries, that you acquaint yourselves attentively with them and study them. This will provide you with a very great deal.

Today we have the concluding stage of the work which has been done during the week. I would say that today's meeting is the beautiful finale of the republic meeting. Note should be taken here, first of all, of the very rich, although brief, reports by the Second Secretary of the CC of the Communist Party of Georgia Comrade G. V. Kolbin, the Secretaries of the CC Comrade G. N. Yenakidze and Comrade D. I. Patiashvili, and the Chief of the party organizational work section and Member of the Bureau of the CC Comrade S. Ye. Khabeishvili. These reports provide a profound revelation of the various aspects of the activities of the primary party organizations, and the forms and methods of their work. I also have in mind here the very interesting and thorough addresses by the participants in the discussion.

At the same time, during the course of the republic meeting, not only the strong sides, but also the weak sides of the work of the primary party organizations came to light.

Since we are speaking today about the primary party organizations, I shall permit myself to remind you that in the decree of the CC CPSU on the Tbilisi gorkom it is stated, in particular:

"The gorkoms and raykoms are showing insufficient concern for improving the work of the primary party organizations, and for strengthening their influence on the work of enterprises and institutions. In many primary party organizations effective measures are not taken to increase the activeness of communists and their initiative, and to develop criticism and self-criticism."

And further:

"The Tbilisi gorkom is not going deeply enough into the work of the party organizations of republic ministries and departments to improve the work of the apparatuses and to educate leading cadres," and so forth.

This is How Matters Stood in 1972.

When you re-read the decree of the CC CPSU on the Tbilisi gorkom which was adopted on the initiative and personal instructions of Comrade L. I. Brezhnev, alongside the above extracts from this party document there take their place other evaluations which were made 10 years later. Permit me to cite these evaluations also.

At the 26th CPSU Congress it was noted that the Communist Party of Georgia had achieved a substantial increase in the republic's economic and social development rates.

During those days it was said:

--Things are going well in Georgia.

And several months later, in May of last year, during the days of the celebration of the 60th anniversary of the victory of Soviet power in Georgia and the formation of its Communist Party, Leonid Il'ich Brezhnev noted that our republic's contribution to the country's common property was now constantly growing, that in 10 years the production of industrial output had doubled, and the average annual production of agricultural output had increased by 1.5 times, that the assignments of the 10th Five-Year Plan for the basic indicators of economic and social development had been fulfilled ahead of schedule, and, finally, that Georgia had taken a confident start in the 11th Five-Year Plan.

And as a summary of all of these successes achieved by the republic there were the words of Leonid Il'ich:

--Things are going fine!

That Is How Matters Stand in 1982.

However, as has already been said, we have gathered here not only in order to emphasize the strong sides in our work.

We must, as always, concentrate our attention on still unaccomplished tasks, on that which still has to be done in order to strengthen the efficiency of the primary party organizations even more and to increase the vanguard role and authority of every organization and every communist.

This is our chief goal. And this is the purpose of our meeting.

In the field of economics, these tasks consist above all in completing the assignments of the current economic year and of the entire five-year plan ahead of schedule.

The successful accomplishment of this task depends to a large extent upon our labor collectives and upon the primary party organizations which have to direct their efforts toward putting all internal reserves for increasing the efficiency of social production into action, and making full use of the advantages of economic management under the new conditions of planning and economic stimulation.

It cannot be tolerated that at a number of industrial enterprises, especially those, strange as it may seem, of union subordination, a substantial lagging in production growth rates has been permitted. Certain enterprises and associations have even decreased their production volumes.

There are also shortcomings in agriculture. There are farms which are not meeting their planned assignments. The yields of a number of agricultural crops are still low, livestock productivity is low, and the feed base is poorly developed.

There are also quite a few omissions in capital construction. The first quarter plan for the commissioning of fixed capital has been fulfilled by only 80 percent, and for amounts of capital investments and construction and installation work--93 and 96 percent, respectively. Capital investments are being utilized in an extremely unsatisfactory way in such branches as construction and the construction components and details industry, motor vehicle transport, road works, trade, domestic services, and so forth.

The most vulnerable place in the economy continues to be material and technical supplies for production.

These and many other shortcomings in the economy were recently discussed at a joint meeting of the Bureau of the CC of the Communist Party of Georgia and the Presidium of the republic's Council of Ministers when they totalled up the work results for the first quarter of this year.

However, it is far from an accident that we are raising these questions today. The elimination of shortcomings depends to a large extent upon how the primary party organizations struggle against them. And it is precisely through the elimination of these shortcomings that we have the path to the accomplishment of our cardinal, strategic task--to overcome the republic's lagging behind the average union level, and, as Leonid Il'ich said, to pull ourselves up in certain essential economic development indicators.

We will be able to achieve this only if all of the reserves for our quantitative and qualitative growth are put into action.

Such reserves and possibilities--moreover, considerable ones--exist in every branch, in every association, and at every enterprise. We convince ourselves of this every time that we visit plants, factories, kolkhozes and sovkhozes, and construction sites. And every time we come up against the fact that these reserves are being used very poorly. This applies both to fixed productive capital and capacities and to raw material, material, financial, labor, and other resources.

I shall stop to consider such a chief reserve as labor productivity--this basic indicator of the efficiency of social production.

The data indicate that in the first quarter of this year the assignment for this indicator was not fulfilled by almost 12 percent of our industrial enterprises and associations. Every fifth enterprise of the Ministry of Light industry and the Ministry of Construction did not fulfill this assignment. In Rustavi the plan for this indicator was not fulfilled by almost 23 percent of the industrial enterprises, in Chiatura--by 53 percent, and in Tskhakaya--by 28 percent.

Almost 260 industrial enterprises, or more than 30 percent, decreased their level of labor productivity. This is an alarming tendency.

A decrease in the growth of labor productivity means direct losses of working time. What this leads to can be seen from the following.

Last year in the republic's industry as a whole the total losses of working time accounted for, on the average, by a single worker exceeded the average union indicators by 1.5 times.

One asks: What, above all, if not the primary party organizations, is supposed to wage the most resolute struggle against losses of working time and against instances of truancy and the failure to appear at work?

Another problem is the rational and economical use of material resources. Here also large losses occur. Last year the fulfillment of the assignments to reduce expenditure norms looked like this: for rolled ferrous metals this indicator came to 40 percent; boiler and furnace fuel--41 percent; electric energy--50 percent; diesel fuel--89 percent; motor vehicle gasoline--74 percent; and for thermal energy there was an overexpenditure.

The comrades who spoke here, particularly the Secretary of the Party Bureau of the Tkvarchel'skaya Mine imeni Lenin Comrade S. A. Adleyba, correctly described the necessity of influencing an improvement of the entire economic work of an enterprise by means of the organizational and political work of the primary party organizations. At the same time, it is also true that the indispensable condition for such an improvement is precise and substantiated planning. Of course, production assignments have to be backed up by the appropriate material and technical supplies. For when real conditions are created for a collective, and when its goals and prospects are clearly delineated, the primary party organization is then able to more successfully mobilize it for the achievement of these goals and to create a good creative atmosphere in it. There is no doubt that the necessary order has to be brought into planning. It is this which will serve as a basis for the move to the new system of economic management.

It can be noted with satisfaction that the republic's party organizations are doing a great deal to shift enterprises and associations to the new evaluative criteria. The work of more than 400 of our enterprises is now being evaluated by the normative net output indicator. They produce more than 55 percent of the industrial output produced in our republic.

The process of transferring enterprises to the new evaluative indicators and criteria has to be accelerated. However, this should only be done on the basis of serious preparatory work which has to be led by the primary party organizations of enterprises and associations.

In connection with this, I would like to designate certain problems which, in our view, are of fundamental importance for the organization of systematic management of the economy--from the republic agencies to the most primary elements.

Gennadiy Vasil'yevich Kolbin was completely correct in speaking about the necessity for the principle of the concretization of the efforts of party, government, economic, and public organizations for the achievement of the best final results to be carried out from top to bottom, since it is this that is the basis and the foundation of the system of the management of the republic's social and economic development.

This system has yielded a great deal on a republic-wide scale. The task now is to expand the framework of this system, and to introduce it more actively not only in the oblast, city, and rayon elements, but also at every enterprise. As can be seen from the speeches of our comrades, quite interesting experience has been gained in this field. And it is above all the primary party organizations which have to engage in a study of this experience and its introduction in order that the principle of the concentration of efforts becomes the chief and basic management principle in the labor collective also, receiving there its concrete expression.

To put the issue this way means to follow a single goal: to increase the responsibility of the primary party organizations for the fulfillment of the state plans and assignments and socialist commitments, to ensure the uninterrupted operation of enterprises, and to improve production efficiency and output quality.

Like that of the entire party, the largest concern of the primary party organizations is the concern for man, for his well-being, and for improving his standard of living. The party's slogan: "Everything in the name of man, and for the good of man," has to be put into practice in every labor collective, in every party organization, in all of the spheres of our economy, and in all of the areas of social life.

First of all, we have to accomplish the tasks of housing construction more efficiently. This, it can be said, is the issue of issues and the problem of problems. One has to pay tribute where it is deserved: In recent years our construction workers have achieved considerable successes in this area. For the ninth year in a row, the housing commissioning plan is being fulfilled. Compared to the first year of the 10th Five-Year Plan, last year the amount of capital investments in housing construction from all sources of financing increased by 34 percent.

You will note what great and entirely legitimate dissatisfaction is caused in the population by the fact that residential houses are put into operation with large work incompletions, and that the quality of finishing and plumbing work is very low. The primary party organizations and the appropriate control agencies have to deal with all of these questions very seriously. This matter does not demand special material expenditures. It is simply necessary to put one's heart into it, and a desire to raise our construction workers, and, in the first place, communists to the accomplishment of these tasks.

It must at all costs be seen to it that any party organization, in whatever sphere it operates, in whatever sphere it acts, everywhere and in all places, and always and in everything shows a maximum concern first of all for people, for satisfying their most essential needs and requirements, and shows a maximum of concrete attention to the concrete man.

Decisive improvement is required by the organization of health care where the primary party organizations have to take all necessary measures to strengthen the struggle against manifestations of irresponsibility and incompetence on the part of some medical personnel, and against unceasing instances of extortion. The problems of the organization of health care in the village and of the role in this matter of the primary party organizations were well discussed in the report by the Secretary of the Party Bureau of the Dmanisskiy Rayon Hospital Comrade Z. A. Efendiyeva. One has to agree with him that the great army of communists in health care is still carrying out its vanguard role poorly in this sphere of activity.

This also has to be thought about by the party organization of the agencies of social security which have to show a more caring and a more attentive attitude toward those who have gone to their deserved retirement.

The work of the primary party organizations of trade, public catering, and domestic service enterprises gives rise to very serious anxiety. What kind of vanguard role of communists can be discussed here, if they themselves frequently turn out to be involved in unseemly acts, and take the road of crime?

Let us think about it, comrades: How could it have happened that bribe-takers, embezzlers of state property, plunderers of the people's goods, and extortioners have found themselves in the party? And could this not influence the authority of the primary party organization, the authority, if you wish, of the entire party?

We know that a good name is easier to lose than to restore. We still have much to do to make up for the moral damage which was inflicted upon the party by certain workers in the sphere of trade and domestic services with party cards in their pockets, to restore the prestige of this occupation itself, and to restore the good name of certain primary party organizations. We would like to see the city and rayon party committees direct especial attention to this.

To show concern for man, means to show constant concern for strengthening discipline and socialist law and order. In recent years a large amount of work has been conducted in this direction, and to a large extent it has created an improvement of the psychological morale climate in the republic and an increase in the civic consciousness and social activeness of the masses.

We are waging a consistent and well-directed struggle for a thorough strengthening of discipline at all levels and in all of its manifestations, and for the universal establishment of an atmosphere of high party exactingness. With time, this movement for a strengthening of discipline and law and order and for the eradication of all kinds of negative phenomena which have come into being in labor collectives and primary party organizations became a mass movement, and a systematic nature was imparted to it. With the help of workers' groups and commissions to strengthen discipline and the struggle against negative phenomena which were created at CC sections, obkoms, gorkoms, and raykoms, in ministries and departments, and in the party organizations of large enterprises these processes became controllable.

We regard the results of a sociological questionnaire conducted in primary party organizations and labor collectives which indicate that the vast majority (93 percent) of the respondents are unanimous in their opinion to be very instructive. They amount to the fact that the positive changes which have occurred in the socio-economic and psychological morale life of the republic and its individual regions and in individual labor collectives are the result of the consistent and effective struggle of party committees and leading party cadres of the rayon echelon against negative phenomena and for a firm observance of party and state discipline, the result of increased exactingness and of the responsibility of everyone for his work. This opinion is especially important for us, since it was stated by those who constantly and directly have contacts with party committee leaders and know their strong and weak sides well.

For some time now, statistical reporting on the state of discipline has been instituted on a republic-wide scale. Now, with the experience of Telavskiy Rayon as a basis, a system is being developed of up-to-date weekly information for party committees on the state of affairs at every economic object which will help to work out and adopt timely preventive measures to stop possible violations and abuses.

As a result of all of this, socialist law and order is becoming stronger and stronger. The number of personal property and apartment thefts has been decreasing, the discovery of automobile thefts has improved, and the number of the more dangerous types of crimes has decreased.

However, the struggle to strengthen law and order is, as we have already said more than once, a matter not only for administrative agencies. It is important that the role of labor collectives, and the role of primary party organizations and of all communists and all Komsomol members should become increasingly great. It is as a result of this that certain primary party organizations have removed themselves from this important matter and that the struggle against crime is being waged unsatisfactorily in Akhmetskiy, Gudautskiy, Sagaredzhoyskiy, Tianetskiy, and Chokhataurskiy Rayons, and in the city of Tskhatubo.

How can the party organizations of such large and leading collectives as the Tbilisi Machine Tool Building Plant, the Kutaisi Motor Vehicle Plant, and the Rustavi Metallurgical Plant ignore the fact that the number of law violations there is not decreasing, and that the workers of these enterprises commit murders and hooligan actions, and participate in the theft of cars, while our comrades do not raise the alarm.

It is obvious that matters have to be organized in such a way that the party committees and party organizations systematically, every week, and, if necessary, then every day examine the state of the observance of law and order and take concrete measures against violators.

We call upon the voluntary people's druzhiny, the soviets of public law and order points, and the preventive soviets to take more aggressive actions. The assignment of druzhinniki to internal affairs agencies has to be practiced more often.

Recently a new form of control over reactions to instances of crimes and law violations began to function in our own republic which is carried out directly by the CC secretaries in their branches. I want the comrades to know to what level we are raising the struggle against law violations. Every day, on the basis of the data of the Ministry of Internal Affairs' daily summary the party organizations of the affected enterprises and organizations are sent letters for every instance of a law violation containing concrete instructions from the CC secretaries. It is very important for every law violation to become a subject of special consideration for the primary party organizations and for concrete measures to be taken for each of them.

The struggle against parasitism is another important direction of work in reducing the crime level on which the efforts of our primary party organizations are now concentrated. This is a very serious problem for us, since people who are not involved in socially useful labor become an active nourishing soil for the commission of crimes, not to mention other aspects. Recently the Secretariat of the CC approved a new form of struggle against parasitism in which the chief role is assigned to the party organizations of enterprises to which people who have been avoiding work are assigned for permanent attachment to production.

However, unfortunately, we still have quite a few cases of an irresponsible attitude toward the struggle against parasitism and, in essence, the showing of indulgence to parasitic, criminal elements. This is the only way that one can evaluate the position of the leaders of the Kutaisi Mobile Mechanized Column of the "Gruzkoopstroy" Trust who issued false employment documents to two inveterate repeater criminals who had not worked in this organization for a single day. The Bureau of the Kutaisi gorkom drew the most serious conclusions from this fact. But the communists knew what was going on in their organization. Why did they permit it?

And one more thing. In the struggle for the moral purity of every person, every individual, a decisive role is played by the position of the collective in which he lives and works, and the positions of the primary party organization. And if this position is active, if it does not permit any compromises, any deviations from the norms of socialist morality, there will be no place in such a collective for bribe-takers, plunderers, illegal businessmen, con-men, and other antipodes of the socialist way of life.

Let us say it candidly: If the party organizations of many of the labor collectives of Ambrolaurskiy Rayon had been up to the mark and had been able to oppose a handful of business operators in time by taking a principled and uncompromising position, there would not have been the ill-famed "juice case." We would not have had a minister bribe-taker, if the party organization of the Ministry of Finance had also been faithful to our unshakable party principles. Here, of course, there was negligence on our part, on the part of the Central Committee of the party and the republic's government.

Unfortunately, the situation is sometimes such that a party organization remains uninvolved in all of these matters until some emergency occurs in a labor collective: a theft, a bribe, a murder. . . . Only then does a discussion begin: How could it have happened that a human being, a communist, could have fallen so morally? But why let things go that far? Would it not have been more correct to invite the communist in time to the bureau, simply for a conversation in the party committee, to discuss his behavior at a party meeting, and to warn him against incorrect actions--in a friendly and, at the same time, principled way. Then the person would not have made a misstep, would not have taken a crooked path, and would not have embarked upon crime.

We know that cases of theft, bribe-taking, deception, distorted reporting, mismanagement, and so forth are discovered, as a rule, by the checks of superior agencies. But these violations take place before the eyes of the primary party organizations, before the eyes of communists. Everyone sees it, and everyone knows it. And everyone is silent. Why? Because, as we believe, not all of our primary party organizations show the necessary fighting qualities. Because some people have lost their class approach to evaluating individual phenomena, some people have ceased giving every fact the necessary political evaluation.

However, only with a class, principled, party approach will we be able to discern the phenomenon behind the individual facts, and to see behind each unseemly act the deep processes which have their own soil and their own nourishing environment. This soil is nourished as a result of our failures in the struggle against the carriers of negative, antipodal, antisocial phenomena, as a result of our failures in studying and forming the inner world a man and in establishing him as an individual. And who is supposed to conduct all of this work, if not our party organizations?

This is why when we speak about the necessity for ensuring systematic work aimed at the prevention of all kinds of law violations, encroachments on socialist property, and other anti-social manifestations, we place in the forefront the role of every labor collective, and of every trade union and Komsomol organization with the primary party organization taking the lead. This is the work of the primary party organization--to lead the activities of all public organizations and to direct them on a daily basis into a concrete channel, always remembering that the moral atmosphere in a labor collective is the basis for its successful functioning.

Comrades! Since we are talking about the fact that maximum concern has to be shown for people, for the concrete person, I would like to consider one more question.

In his report, Dzhumber Il'ich Patiashvili has already spoken about the achievements of our agricultural production, and about the tasks facing our rural primary party organizations in carrying out the food program and in the formation of the republic's agroindustrial complex. These issues were also raised by many of the discussion participants.

Here I would like to mention something else--the problems of the social development of our village, and the matter of overcoming the essential differences between town and country.

Of course, large changes have taken place in recent years in the village. And this was correctly discussed today by the Secretary of the Party Committee of the kolkhoz in the village of Ingiri in Zugdidskiy Rayon Comrade O. Sh. Tsaava, who stated with satisfaction that this village has in all respects reached the level of the city, that now they are not disturbed about the problem of labor turnover but, on the contrary, people are trying to remain in the kolkhoz. It was pleasant to hear such words. They reflect a reality of rural life. Indeed, the borders between the work of a kolkhoz worker and a worker are increasingly being effaced. The two forms of socialist property are increasingly becoming like one another. As was noted at the party congress, the village's social structure is greatly influenced by the development of inter-farm organizations in which both the kolkhozes and state organizations participate. There is also the effect here of the changes in the forms of the organization of the payment of labor for kolkhoz workers, and the application to them of the social security system which has been established for workers and employees. The creation in rural localities of industrial enterprise branches is of considerable importance.

In all of our work we have to base ourselves on the rural intelligentsia. It also comprises a large detachment in our republic. Recently at a plenum of the Akhmetskiy raykom the question was considered of a more active enlistment of the rural intelligentsia in the accomplishment of social and economic tasks. A good and important issue. It was studied on the basis of a preliminarily conducted sociological study. A check showed that a substantial section of the rural intelligentsia was aloof from the social and political life of its rayon, although many are ready to take active part in it. Today these questions were raised in her report by the Secretary of the Kistaurskaya territorial party organization of this rayon Comrade N. G. Iosebashvili. She quite correctly said that in the accomplishment of all tasks an important role belongs to the primary party organizations which have to concentrate the efforts of the rural territorial, kolkhoz, and other party organizations and coordinate their activities.

I think there would be sense in holding a republic meeting of the rural intelligentsia at which all of the issues which agitate us could be discussed. This is something to which rural communists and primary party organizations could apply their energy.

In addition, account has to be taken of the fact that our villages are far from homogeneous. They differ from one another depending upon the level of their socio-economic development, and upon their historical, geographic, and natural and climatic conditions.

There are villages in which there is not even a radio, which are rarely looked in at by the mobile movies, and which have long been waiting for a good lecturer, not to mention the fact that the population here does not have even the elementary conveniences and is in need of better medical and cultural services. Things have gone so far that in one of the ward hospitals of Onskiy Rayon there is not even a single doctor. What kind of hospital is this without doctors? In 78 village out-patient clinics, not a single T/O doctor's position has been filled. There are incomplete doctor cadres in the medical institutions of Ambrolaurskiy, Chkhorotskyskiy, Aspindzskiy, Khobskiy, Chokhtaurskiy, Tsalendzhikhskiy, and Ordzhonikidzevskiy Rayons, and there are 10-20 vacancies for doctors in Karel'skiy, Bolnisskiy, Khashurskiy, and other rayons. These matters have to be looked at very sharply and with principle in the Ministry of Health Care.

The state of hygiene in most rural medical institutions is bad. It is for this reason that the proportion of rural inhabitants who come to city hospitals for treatment comes to more than 43 percent.

Should not the party organizations in the village, including the primary ones, occupy themselves with all of these questions? It is you, the party organization secretaries, who have to persistently seek ways of furthering the economic and social development of our villages.

Serious work has to be undertaken on a scientifically valid solution of the problems of cooperation between the economically strong farms of the lowland zone and the low capacity agricultural enterprises of the mountainous rayons and of a subsequent planned distribution of profits with regard to their share of participation, the optimal siting of agricultural production, and the development of an economically advantageous branch of the agroindustrial complex.

A great deal has to be done by the party organizations of our VUZes in order to increase even more the prestige of our higher education which in recent years, it can be said, has in a certain sense restored its authority. The barrier which has been created against negative phenomena and protectionism in the entrance to the VUZes has determined the social composition of our student body. Two-thirds of today's students are the children of workers and kolkhoz workers. Almost one-half of the communists in the VUZes are students.

The creation of a harmonious system of management for the process of the communist education of students and pupils has imparted a new form and new content to party work in the VUZes and secondary schools: the institution of VUZ prorectors, deputy deans of faculties, and deputy directors of secondary specialized educational institutions for ideological and educational work.

The ideological tempering of the student youth and the formation in it of high political and moral qualities has to be given the chief emphasis in all of the joint work of the party committees and the rectorates and in trade union and Komsomol organizations. It is very good that it is the accomplishmetn of these tasks on which the party organization of Tbilisi State University is concentrating its efforts, seeking to obtain the more systematic management about which the Party Committee Secretary Comrade G. A. Lordkipanidze spoke so interestingly.

School party organizations must not ignore cases of a lack of objectivity in evaluating the knowledge of pupils, and also violations of pedagogical ethics and of the moral laws of the Soviet school by certain teachers. We need less showy measures and more useful deeds aimed at overcoming the formalism in evaluating the results of teachers' and pupils' work.

We regard it as a large achievement that during the 10th Five-Year Plan all of the schools of the vocational and technical educational system went over to full secondary education, and this sharply increased their authority, and radically changed the attitude toward this system by the broad public.

However, the primary party organizations still have to do a great deal in order for the graduates to better become permanently assigned to production and for there to be an active introduction of the experience of the Leningraders and the Sverdlovsk people on the personal assignment of vocational and technical school graduates.

There has to be a practical solution of the problem of directing the graduates of the eighth grade of general educational schools into vocational and technical schools. Only 17 percent of them enter these educational institutions, while the average indicator in the country is 35-40 percent. The schools are slow in being staffed with experts in production training who have a higher education.

As you see, comrades, we have plenty to do. Big problems have to be solved. There are serious tasks before us. These tasks have to be accomplished, in the first place, by the labor collectives led by the primary party organizations. Communists have to accomplish these tasks.

This is why the decree of the CC CPSU on the Tbilisi gorkom ordered that daily concern be shown for strengthening the efficiency of the primary and shop party organizations and party groups, and their influence on all of the aspects of the life and work of labor collectives.

This demand, this instruction was placed at the basis of all of the work to strengthen the primary party organizations, and if we are to be consistent to the end--at the basis of all of our work as a whole, for it became completely obvious to us that the struggle against the serious shortcomings and work inadequacies in all of the spheres of the republic's life--economic, social, political, and in the spheres of party organizational and ideological educational work--had to be begun in the lowest elements--in the labor collectives, and in the Primary Party Organizations.

This is why immediately, as soon as the republic's party organization began the active implementation of the decree on the Tbilisi gorkom, when the apparatus of the Central Committee had been strengthened, when a number of organizational measures aimed at a serious renewal of gorkom and raykom cadres had been adopted, the center of gravity of all of our work began increasingly to move to the primary party organizations, there where the fate of every matter and every initiative is decided.

How, by what means, by what methods, and by what forms of work did we bring about a strengthening of the primary party organizations, an increase in their capacity, and an increase in their role and importance in the accomplishment of the most important socio-economic tasks and the solution of the most important social and political problems?

What kind of levers do we now have with the help of which we must continue to improve the management of this process and adjust the mechanism of the operation of the primary party organizations even better?

First of all, this lever consists in a consistent improvement of the information provided to the primary party organizations. For the better informed they are, the greater will their role become as the vanguard of the labor collective.

We have built up a certain experience in this. I have in mind the publication of the monthly Information Bulletin "In the CC CP of Georgia and the Council of Ministers of the Georgian SSR" which goes to every primary party organization; and the special letters which are sent by the Central Committee to the primary organizations; and the organization of meetings and discussions with primary party organization secretaries in the Central Committee, and in the obkoms, gorkoms, and raykoms.

Important current information is obtained by communists directly in the primary party organizations during the class days in the political education system which in a number of cases are conducted by leading workers of the republic. To this should be added the organization of single information days, single political days, regular meetings between responsible workers and labor collectives, and so forth. All of this, of course, helps to provide systematic information for communists on the most important issues. Incidentally, the fact that single political days, as well as sociological studies on important problems which are meaningful for people, have gone into the practice of the party committees of Georgia, as well as other regions of the country, was mentioned in yesterday's editorial in PRAVDA.

We have to thoroughly expand this work and find new channels and new ways and means which will make it possible to improve the information level of communists. The party has no secrets from the people. However, the communists and the primary party organizations have to be better informed than the broad masses of workers. Communists have to know everything--the difficulties and the unsolved problems, and, as you know, we have enough of them. Communists have to be up-to-date about what leading agencies are concentrating their efforts on and what their plans are--only then will the primary party organizations be capable, as we say, of constant mobilization readiness, and only then will it be possible to move them for the accomplishment of urgent tasks.

A direct and confidential conversation has to be conducted with the primary party organization secretaries, with the broad party aktiv, and with every communist. We have to share with the primary party organization secretaries and with communists everything that causes especial concern in us, and sometimes alarm, without hiding anything from them and concretely defining the place which they have to occupy in the struggle against difficulties and shortcomings. At the same time, along with the information which goes from the top to the bottom, there has to be a counter-flow of information coming from the bottom to the top, from the primary party organizations to superior agencies, which is undoubtedly of great importance for the adoption of correct managerial decisions that take account of the opinion of our party public and of the broad masses of workers.

Toward this end, it is necessary to improve the content of the weekly bulletin--"Current Party Information"--which we have been publishing for more than six years, and to diversify it. Things have to be organized in such a way that it not only informs the republic's leading personnel and the CC apparatus about the most important and interesting events in the life of the primary party organizations and the local party committees, but also increasingly becomes an effective means of struggle against shortcomings. We must in every way increase the effectiveness and the actual yield of every item of information, and more frequently discuss at the Bureau or Secretariat of the CC the questions which are raised on the pages of the bulletin. It would be useful to introduce this experience more widely in the city and rayon committees and in the primary party organizations. Incidentally, the first steps have already been taken in this direction. An exchange of information between the party committees and the primary party organizations will help us to activate the work of the lower party echelons even more and to increase their efficiency.

Secondly, the role and importance of the primary party organizations and their authority have to be increased by us by means of a profound and detailed study of the opinion of communists on the most diverse questions.

We attribute especial importance to the primary party organizations in the selection and placing of cadres. They have become the best advisors and the best recommendors for party agencies in this important matter. It can be said that today not a single promotion and not a single appointment to an established position occurs without a serious and deep study of the opinion of the primary party organization and of the communists as a whole.

This kind of practice has to be thoroughly expanded. It is at the party meeting that the practical and political qualities of every candidate should be discussed. Life shows that workers who have been selected on the basis of the recommendations of collectives, primary party organizations, and communists better justify the confidence that has been shown in them, are more successful in work, and relate to it with a feeling of greater responsibility.

A communist must always feel that his opinion is being carefully listened to, patiently studied, and taken into account in the development of decisions.

The practice of recent years convincingly indicates that the recommendations and criticisms which are obtained from the party aktiv help to better prepare for a forthcoming congress or plenum or aktiv meeting, to go in more detail into the issues being discussed, and to find more effective ways of accomplishing tasks.

Things have to be done in such a way that the proposals and thoughts of communists and the problems raised by them which are published by us regularly in individual collections continue to receive a real return and find a practical use.

Interesting and useful work is being performed by the Center for the Study, Formation, and Forecasting of Public Opinion. Today Soliko Yevtikhiyevich Khabeishvili has already spoken about the fact that a special sociological study of more than 180 primary party organizations in which the opinion of 9,000 communists was studied was performed for our meeting.

The results of the questionnaire showed that most of the communists were of the same opinion regarding the necessity for promotions being made to leading party, government, and economic work, as a rule, with regard to the opinion of all communists, with the candidacy being discussed beforehand at a party meeting: for the discussion and approval at open party meetings of candidacies for inclusion in the reserve for admission into the ranks of the CPSU ; for preliminary discussions in the primary party organizations of the drafts of the long-term work plans of the raykoms (gorkoms); and for the raykoms (gorkoms) to regularly keep the primary party organizations informed about the activities of the party committee bureau and apparatus.

Such is the opinion and such is the wish of our communists. And we shall guide ourselves by this in our future work.

We have to make better and fuller use of social information for a study of the socio-political processes taking place in labor collectives and primary party organizations, and to conduct a constant search for the most effective and optimal ways of accomplishing the most important socio-economic tasks with the help of public opinion.

The chief task is for all of the proposals of communists, and all of their criticisms, whether expressed during sociological surveys, at party meetings, at plenums, or at aktiv meetings, to reach the appropriate agencies, for concrete practical measures to be taken for every criticism and proposal, and, finally, for communists to be informed in their primary party organizations about the measures which have been taken.

The system which has been created in our republic for this purpose in the Central Committee has to be improved, expanded, and applied to the oblast, city, and rayon committees and to the primary party organizations.

Thirdly, the establishment in labor collectives of high ideological and moral principles is a powerful lever for increasing the efficiency and authority of the primary party organization. We are called upon to do this by the decree of the Central Committee of the CPSU "On a Further Improvement of Ideological and Political Educational Work" whose third anniversary is falling during these days.

In the report by Guram Nikolayevich Yenukidze and in the speeches by the comrades during the discussion it was shown sufficiently persuasively how the primary party organizations are more and more becoming genuine centers of ideological and political education, and how it is precisely here that the party's demand regarding an overall approach to the organizaiton of all of education is being carried out.

I would like to add to what has been said that it is time, finally, in ideological educational work to reject cliched phrases and standard ready formulas and to seek and find new forms and methods of ideological influence on the consciousness of people. After all, it is the ideological workers, as Comrade L. I. Brezhnev has said, who have to be to the highest extent characterized by a feeling for the new.

It is very important that the primary party organizations conduct all of the work on military patriotic and international education in close connection with the party organizations of the units and subunits of the Red Banner Trans-Caucasian Military and Transcaucasian Border Guard Districts, seeking new and more effective work forms and methods, and borrowing valuable and useful experience from army political workers. This is very vividly and convincingly discussed in the report by the First Secretary of the Administration for the Armed Forces of the Red Banner Transcaucasian Military District Comrade V. Ya. Turchin.

A greater connection with life and more concrete and real facts--this is what is now required in propaganda and in all of our ideological work.

A discussion will soon begin in the primary party organizations of the Letter of the CC of the Communist Party of Georgia on the necessity for lifting the struggle against harmful survivals of the past and antipodal phenomena to a new qualitative level. This is a serious question. And that which has been done recently to introduce new socialist holidays and to restore good folk traditions, rites, and rituals is still clearly insufficient. Frequently these measures are of a formal character. We expect and we hope that the primary party organizations will wage the most resolute struggle against all phenomena which are alien to our time. New and more difficult and more important in ideological work are arising for the primary party organizations in connection with the shift by industrial enterprises to the new conditions of economic management, with the formation of the food program, and with the creation of the agroindustrial complex. The essence of the processes which are taking place has to be explained in a profound and accessible way, a clear and accurate understanding of the social and political importance of all of the work being done has to be developed in everybody, and, then, communists and all of the workers have to be drawn into the active management of all of production.

We have gathered not long before Press Day, but I want not only to congratulate the journalists on their forthcoming holiday, but also to criticize our republic newspapers and periodicals a little bit, especially our local press.

It has to be noted that a general shortcoming of the materials which are published is that they contain a lot of water. Water in and of itself, as we know, is very good and very useful. Water is a source of everything living on earth, the source of life itself. An abundance of water--of course, not a flood,--but water, so to speak, in normal amounts is a genuine riches. But when an excessive amount of water appears in newspaper publications, then as a result of this they become, to put it mildly, liquid. It would be desireable, in the first place, for the primiary party organizations to call attention to this, and we hope that communists journalists will take account of our criticism and comradely wishes.

More depth, more principle, concreteness, more interesting, problematic material which provides food for the mind and for the heart--this is what we expect from you, dear comrade journalists!

Without reducing the demands upon the primary party organizations, and while seeking to obtain absolute obligatoriness regarding the decisions of higher agencies for lower ones and periodic reporting by the primary organizations to superior agencies, that is, while ensuring compliance with the by-law demands of the party and the basic principles of democratic centralism, we have to do everything possible so that the lower echelons and the superior agencies work, if one can put it thus, as equals, on the basis of trust and mutual respect.

Not an atmosphere of naked administrative rule, but one of open dialogue and mutual assistance and support has to characterize the relationships between the primary party organization and the superior party agency.

Thus, we are speaking about a continuation of the chief and basic line which has been taken by us in all of our work. This is the line of the party, and this course is a course aimed at complete democratization and a deepening of intra-party work, a course aimed at the strengthening of the democratic principles of our entire social and political life, and a course aimed at granting the pirmary party organizations broader rights and more space for the development of their initiative.

At the same time, this is a line aimed at a thorough strengthening of discipline, since democracy and discipline are two sides of the same process of increasing the role and the importance of the primary party organizations, and of increasing their capabilities.

Life Itself is Dictating the Necessity for Resolutely Turning in the Direction of the Primary Party Organizations!

First of all, we have to do this in our own quarter, in the Central Committee of the party. Comrades, it has to be said directly, and it has to be candidly admitted: The preparations for the All-Union Practical Scientific Conference, and then for today's republic meeting of primary party organization secretaries has shown that we are still doing insufficiently profound and insufficiently consistent work with the primary party organizations.

Basically, this applies to the branch sections of the CC in which, unfortunately, some people believe that the primary party organizations are the concern only of the party organization section or the Secretariat and Bureau of the CC. This is an incorrect opinion, and the comrades from all of the CC sections became convinced of this themselves when they took active part in the work to prepare and carry out this important measure of ours.

For this reason, we believe that all of the work to strengthen the capabilities of the primary party orgnaizations and to increase their role and importance has to be begun by us with the Central Committee of the Communist Party of Georgia, with its apparatus, with its workers, adn with the CC Secretariat.

And this requires that the CC members, ministers, and leading party, government, and economic workers of the city and rayon levels frequent the primary party organizations more often, become better acquainted with their life, and delve more deeply into the problems which agitate them. Moreover, it is not necessary to visit, as frequently happens, only the large party organizations where things basically are going quite well, but also the small organizations which are in especial need of help and of advice and recommendations. And we have many more such organizations, and they should not be under the care only of a party committee instructor who himself does not visit the locals too often.

One should speak right here about the necessity for equallizing the work levels of the primary party organizations. There must not be the kind of situation in which along with strong party organizations, where work is well organized, where organizational and political work is set up skillfully and militantly, there are almost next door weak organizations in which things are going extremely badly.

This indicates that more attention is devoted to some organizations by the gorkoms and raykoms, and less to others. There must not be the kind of situation in which the smaller an organization and the weaker it is in party work, the less the attention that is devoted to it.

Here, as in every matter, an overall approach is needed. In order to improve the leadership of the primary party organizations and to provide them with more effective aid, it is necessary to have an overall approach by many people, the advice and recommendations of specialists from various spheres of the economy, from experts in their fields.

It is this way that work must be organized. There are several thousand people in the CC, the obkoms, gorkoms, and raykoms, and in the auditing commissions. And every one of them is, in the first place, a communist in his own primary party organization. Who the, if not a communist who is invested with such high trust in the party, should show concern that things go well above all where he himself is registered? Is that not so?

The system of the leadership of the primary party organizations has to ensure a sharp rise in the general level of all of their activities, strengthen their influence in all of the areas of the republic's life, consolidate the advanced experience and organizational and political work of those primary party organizations which during the days of our republic meeting became base organizations, and turn them into our permanent support points, make them standard primary party organizations.

Today we are speaking about the necessity of increasing the authority of the primary party organization. And we are proceeding here from the fact that the greater its authority, an authority which is ensured by the firm and durable support of the broadest masses, the more successfully and effectively will the primary party organization be able to accomplish its tasks--to mobilize people, and to lead them to the attainment of planned goals, that is, to always be a genuine leader of the labor collective.

Now we have to do everything necessary so that the authority of the primary party organization is raised to the necessary height.

The authority of the primary party organization is its constant readiness always, in any situation, in every concrete case, and in all concrete circumstances to be the genuinely fighting leader of the collective, its heart and soul, and to always be in its vanguard.

However, one must today talk with regret about the fact that the primary party organization's vanguard role manifests itself by no means everywhere and by no means always. Frequently, it is somewhat depreciated because, as was correctly noted here, we ourselves sometimes raise the responsibility of the primary party organizations and their secretaries and communists insufficiently high, and do not make the same high demands upon them as, for example, upon enterprise leaders, although, in essence, the responsibility of the party organization to a party agency should not be lower than the responsibility of an administration.

It is this conclusion which we have to draw from the results of the sociological study which was discussed before. They indicate that only one-third of the communists believe that the most important and most fundamental questions of the life of the labor collective are decided at meetings of the party bureau and at party meetings, while 58 percent of the respondents are of the point of view that decisions on these questions are made in the director's office. You will agree that this situation is somewhat alarming.

The accomplishment of all of the tasks facing us demands a serious improvement of the forms and methods of our work. And we see its chief direction in a further increase in the authority of the primary party organizations and in a strengthening of their role and importance.

The authority of the primary party organization is achieved on the basis of close, businesslike contact with the administration and with the leaders of the labor collective. This was correctly talked about today by the Secretary of the Party Committee of the "Inzhstroy" Trust Comrade G. A. Akhalaya. Indeed, the party organization is able to do a great deal so that the work style of economic leaders will be increasingly improved and so that they become more actively enlisted in the tasks of the communist education of the workers. There are great possibilities for this and many-sided forms, and maximum use has to be made of them.

Granting the party organizations the right of control over the administration does not at all mean that work has to be organized on so-called conflict situations. On the contrary, it should be based on healthy and purely party relationships. These relationships have to be controlled by party forms and party methods.

Incidentally, rights also have to be used with knowledge, as they say, skillfully! A right is power, and a person, especially a communist, has to adhere to the ethics and culture of handling the rights which have been granted to him.

However, the right of control over the activities of the administration which is granted by the CPSU By-Laws is still being used very unsatisfactorily by our party organizations. The data of the sociological survey also indicate this. Twenty percent of the respondents believe that the primary party organizations in which they are enrolled make poor or no use at all of the right of control of the administration. Moreover, every fourth stated that their party organization is held on a lead by the administration even in cases when clearly incorrect decisions are made. Thirty-six percent explained this by the fact that the party bureau secretary seeks advice only from the administration, while 30 percent believe that the administration is in fact not accountable to the party organization.

All of this speaks of an extreme necessity to take concrete practical measures to carry out the recent decree of the CC CPSU "On the Primary Party Organization Commissions for Exercising Control Over Administration Activities and Apparatus Work," and for fully implementing the demands of the special regulation which has been developed in connection with this and which clearly defines the character of the relationships between the party organization and the administration.

To increase the authority of the primary party organizations means to better concentrate their efforts, and the efforts of trade union and Komsomol organizations, people's control agencies, and the administration on the accomplishment of the basic tasks of party organization. This was well discussed in the address by the Secretary of the Party Committee of Tbilisi Knitted Underwear Production Association Comrade M. N. Tevdorashvili. It is correct that we have to thoroughly increase the authority of all public organizations--trade union and Komsomol--and that this can only be achieved with a well-conceived system of the party leadership of these organizations. This kind of system has to be created.

To improve the party leadership of the trade unions and the Komsomol means to increase the concrete contribution of every public organization to the accomplishment of the concrete socio-economic tasks of every labor collective. It is this that was discussed at the recent 17th Congress of USSR Trade Unions, in Comrade L. I. Brezhnev's speech at the congress, and also at the congresses of Georgia's trade unions and Komsomol.

In order for the primary party organization to always be the ideological and spiritual leader of the labor collective, the kind of situation has to be achieved in which the tasks of the formation of the spiritual world of people are not in the background, as is frequently the case, but always at the center of the activities of the primary party organization whose chief functions are educational. For the more conscious people are in their attitude toward their work, the more successful will the work go!

At the same time, the authority of the primary party organization depends to a large extent upon the primary party organization secretary, upon his personal authority, and upon the authority of the party bureau members and the members of the party committee. And our comrades have correctly spoken about this.

We have a large number, a very large number of highly educated, highly learned, and highly competent, and, this means, highly authoritative primary party organization secretaries who possess good organizational and practical qualities, who are ideologically convinced, and who are politically solid. They are here, in this hall. These are people with an interesting fate who have gone through a large and good school of life.

And this, as it were, confirms the fact that the vast majority of the communists who were questioned place a high value on the political, practical, and moral qualities and the authority of the primary party secretaries, taking note of their accessibility, democratic spirit, ability to create a working, practical atmosphere in a collective, and their merits in establishing a healthy psychological morale climate. This is what the party organization secretary, a member of the party bureau, must be.

We attribute especial importance to a further increase in the role and responsibility of the family, of parents in the political and moral formation of the younger generation. As was already said here, a study of these questions using the party organizations of Leninskiy Rayon in the city of Tbilisi and Zestafonskiy Rayon has shown what an enormous political educational and ideological moral potential there is in family education. We have to do everything in order to exercise the necessary influence on the ideological formation of the younger generation, on the cultivation in it of rational needs and interests and the ability to correctly orient itself in sociopolitical processes and phenomena.

We are far from indifferent about how a communist behaves himself at home, in his family. And I am in complete agreement with the comrades who were saying that it is still possible to encounter cases when certain party members have, in a certain sense, a dual personality: At work, in their collective, in society a person is one thing, but at home he is something completely different. At a meeting he says one thing, while among his friends, at the dinner table--the complete reverse. A communist must always and everywhere be himself--loyal to the ideas of the party and devoted to the cause of communism!

It seems to me that the time has come to pose the question in its full sharpness regarding the necessity for a closer, more organic combination of organizational and political work--the unshakable Leninist principle of all of our intra-party life.

The very closest connection is needed, a genuine alloy of party organizational and party political work is needed. This is the key to the accomplishment of many tasks and the solution of many problems.

This discussion, comrades, is not an easy one. We are talking about the extent to which every communist corresponds to his lofty title and to his vocation in life. In other words, we are talking about the partiynost' of a communist, about how honestly and conscientiously he performs his duties which are defined by the party's By-Laws, and how he makes use of the rights granted him by the same By-Laws.

It is scarcely possible to calculate how seriously the authority of an entire primary party organization is undermined by every unworthy act of each individual communist. This, probably, will not yield to any kind of calculation, to any kind of statistics, or to any sociological studies. It has to be said directly: Unworthy behavior by even one party member devalues the lofty title of communist. We have already spoken about this above. The time has come to pose the question in all of its sharpness: Not only the communist himself is responsible for his unworthy behavior, but also the one who recommended him for the party. He must also be held to the strictest account. But we do not do this. Accountability must also be demanded from those communists who work side by side, at the next machine tool or at the next table, with a wrong-doer and who see their party comrade taking a dishonest path, and sometimes even a criminal one. They see it and ignore it. This is incorrect; this is not the party way; this is not the Leninist way. This kind of lack of principle undermines the authority of the party organization in the eyes of certain people, and, if you wish, the authority of the entire party. And there must be accountability for this. A communist is responsible not only for himself, but also for those who are members of his party organization.

I recall an episode which occurred at the Ninth Congress of the Communist Party of Portugal in whose work I had occasion to take part.

A congress delegate, I remember, he was a worker, got up onto the rostrum only in order to very briefly, literally in two words, tell about how he was preparing one of his comrades to enter the party, how he conversed with him, brought him political books, met with him at work and at home, and during leisure hours, and how, finally, this comrade was admitted into the party. This was his entire contribution to the discussion. He said it, and he left the rostrum.

It would be difficult for you to imagine, comrades, what happened in the hall then. The entire congress stood up. The delegates, standing, applauded the speaker for a long time and enthusiastically.

And in this way they expressed their attitude to what he had said: The party's ranks had been added to by still another self-sacrificing, convinced fighter for the cause of communism. And the congress welcomed this. The congress gave its due to the one who had prepared the fighter for this struggle. This was a real recommendor. He was ready, as they say, to answer with his head for the person whom he had recommended for the communist party.

(Comrade E. A. Shevardnadze's speech was heard with great attention and repeatedly interrupted by applause).

SHEVARDNADZE SPEAKS AT CONFERENCE OF MICRORAYON COUNCILS

Tbilisi ZARYA VOSTOKA in Russian 17 Apr 82 pp 1, 2

/Article: "Develop Public Self-Administration"/

/Text/ Twenty-seven microrayon councils are now operating in the cities of Tbilisi, Kutaisi,Sukhumi, Batumi, Rustavi, and Gori. They facilitate the strengthening of ties between the urban and rayon Councils of People's Deputies and the population, render aid to the ispolkoms of the Councils and their departments and administrations in work which affects the daily needs and requirements of persons, satisfying the basic, social needs of the population at its place of residence, and they concern themselves with activating the participation of citizens in administering public affairs by means of attracting them into the solution of problems affecting life on the local level.

During the time of their existence, and the first microrayon councils were created in 1974, they have accumulated considerable experience in organizing mass-cultural, physical-education and sports, ideological-educational work, observing the norms and regulations of socialist communal living, new traditions and customs, the struggle against the vestiges of the past in the people's consciousness and conduct.

The microrayon councils have also accounted for quite a few praiseworthy deeds with respect to developing social activism and initiative among the working people, guiding and coordinating the work of the public's do-it-yourself social organizations, carrying out public monitoring over the work of trade and daily-Service enterprises, protecting public order, satisfying the public's legitimate requests and claims, attracting the means and potentials of the enterprises situated on a microrayon's territory into solving the various problems of economic and socio-cultural development.

The conference which was held in the CP of Georgia CC by the chairmen of the microrayon councils with the participation of the leading officials of the Presidium of the Georgian SSR Supreme Soviet and Council of Ministers, the first secretaries of the party gorkoms and raykoms, and the chairmen of the ispolkoms of the Councils of People's Deputies, discussed the operational experience of the microrayon councils, the problems of further developing public self-administration by the place of the population's residence.

The conference was opened by candidate member of the CPSU CC Politburo and first secretary of the CP of Georgia CC, E. A. Shevardnadze.

Information concerning the activities of the microrayon councils was conveyed by the chief of the department of organizational-party work of the CP of Georgia CC, S. E. Khabeishvili.

Those who spoke at the conference noted that the microrayon councils, this new form of public self-administration, enjoys an authority among the population. They turn here with regard to the most diverse problems and, as a rule, find aid in an effective and skilled solution to the problems which have arisen.

However, the conference participants emphasized that not all the spheres of the microrayon councils' activities have yet been precisely defined. Instances have taken place of underestimation of the importance of the microrayon councils by certain party gorkoms and raykoms and by ispolkoms of the Councils of People's Deputies. A number of microrayon councils are underutilizing the rights which have been granted to them; they are distracted by administrative methods and underestimate the importance of using the levers of public influence. At times the microrayon councils have performed the functions of poorly operating state institutions.

Chairman of the Presidium of the Georgian SSR Supreme Soviet P. G. Gilashvili also spoke at the conference.

In summing up the results of the conference, Comrade E. A. Shevardnadze noted that life has presented party, Soviet, economic, and public organizations with new tasks, requiring highly-qualified and operational solutions. The microrayon councils have gained a certain amount of authority among the population and various urban and rayon organs, and they have functioned in recent times as the initiators of many useful causes. It is necessary to increase their influence on the work of the service field in order to achieve a serious turning-point in this area. The task of the microrayon councils is to concern themselves with seeing to it that the working people can without red tape solve for themselves such vital problems as, let's say, apartment repair, a steady supply of water to the population, as well as electric power, gas, and heat. Only by establishing everyday services in a model manner can a normal microclimate be created within a microrayon. The microrayon councils have been called upon to effectively influence the formation of public opinion.

Perhaps, Comrade E. A. Shevardnadze noted, it makes sense as an experiment to grant to certain microrayon councils more extensive rights and duties in solving housing-operational problems on the spot.

Comrade E. A. Shevardnadze posed the problem of attentively studying, generalizing, and disseminating the positive operational experience of the microrayon councils. And in all cases we must, above all, proceed only from the interests of the microrayon, the interests of the common cause, he emphasized.

In conclusion, Comrade E. A. Shevardnadze wished the conference participants successes in their important activities regarding the development and further improvement of public self-administration.

SHEVARDNADZE AT YOUTH AKTIV ON REPUBLIC FOOD PROGRAM

Tbilisi ZARYA VOSTOKA in Russian 18 Apr 82 pp 1-2

/Speech by Comrade E. A. Shevardnadze, candidate member of the Politburo of the CPSU CC and first secretary of the CP of Georgia CC: "Let's Support the Initiative of the Dushetskiy Rayon Youth; Let's Make Soviet Georgia Even More Beautiful and Even Richer!"/

/Excerpts/ Dear Comrades!

We in the party's Central Committee have learned that the Dushetskiy Rayon youth have decided to take upon themselves the task of mass plantings of walnut trees--one of Nature's most splendid creations. I have been told that during the current five-year plan alone you intend to plant from 40,000 to 50,000 walnut trees and, what is most important, to grow them. Furthermore, you have conducted a great deal of work on selecting and cultivating plantings of this crop, which is suitable for the purposes of roadsides, river bottomlands, the so-called segments, and forest areas. You have outlined interesting measures for cultivating seedlings,caring for them, etc.

Your initiative also has another, no less important, aspect: at the present stage in the republic, as is also true throughout the country as a whole, a nation-wide campaign has been announced for implementing the foodstuff program. A characteristic trait of the latter is the fact that a contribution to carrying out the program must be made by every working person in the city and the village--everyone from the littlest to the biggest; we must unleash a search for reserves, for unutilized potentials to increase the production of foodstuff products.

The Central Committee of the CP of Georgia, the government of the republic, together with the local party, Soviet, trade-union, and Komsomol organizations are implementing a number of measures to utilize existing reserves for producing foodstuff products and for discovering new resources.

Good initiatives have emerged in many rayons of the republic. For example, in the Gurgzhanskiy Rayon a mass planting of mulberry trees is being carried out along the roadsides and alongside of suitable agricultural lands. This means beauty, richness, and a feed base for such an important sector as sericulture. Instead of useless undergrowth of bushes and scrub, the Signakhtsy have planted and cultivated pomegranate groves amounting in area to hundreds of hectares on the mountain slopes and along the roadsides. The Sagaredzhoytsy have planted and grown useful vegetation on hectares of land formerly occupied by rocks and gravel. There are likewise interesting initiatives in Lagodekhi and Mtskheta.

The foresters have presented a plan for multiplying the useful vegetation in the forests of Georgia. This plan is a component part of the foresters' foodstuff program, and, it must be said, our foresters have been working with a great deal of intitiative in this area during recent years.

In Western Georgia in many villages, on abandoned lands, poorly contoured sections, low-intensity plots, and along roadsides they are planting tkemali /?/ and other stone-fruit plants. This is a very important matter--you know how great the demand is for preserves made from tkemali and in general from stone-type fruits, both within the republic and beyond its borders.

And our country has many such reserves. Today, however, I want to focus your attention on the walnut crop, its planting and cultivation, which is of great national and national-economic importance.

The walnut has always occupied a large and honored place in our people's nutritional diet. It is used both raw and as a condiment for preparing dishes which are tasty and healthy for human beings. For a lengthy period of time the walnut served our forefathers in Western as well as Eastern Georgia as one of the basic substitutes for animal fats--lard, cream, and rendered fats and oils. It can be boldly stated that nowhere was the walnut used in such quantity and diversity as it was in Georgia.

Many centuries of using walnuts have brought about the fact that in the famous Georgian national cuisine you will rarely encounter a dish in whose preparation they are not utilized.

When we speak about the walnut crop, we must also take into account the circumstance that nowadays a scientifically grounded balance between the production and consumption of food products in the republic is characteristic by certain definite traits.

For example, in the future we will be able to provide a guaranteed supply of milk to the population of this republic from our own sources of production.

However, the present-day level and prospects for the development of livestock raising do not make it possible that we can quit receiving subsidiary amounts of cream and butter for the next 5--10 years. Perhaps many persons are not aware that 98 percent of the cream and butter which we consume is brought in from the fraternal republics, which have their own complexities and difficulties. Supplying the population with fats and oils within the framework of the physiological norm will remain a serious problem in the future as well. We should know about this. It must be recognized that, beginning in the 1940's and 1950's, we lessened our attention somewhat to the production of vegetable oils. We began to exhibit less concern for sunflowers, walnuts, hazelnuts, and other crops containing vegetable oils.

There used to be many walnut trees in Georgia, but during the second half of the 19th century they began to be cut down in a predatory manner and shipped abroad.

This was also facilitated by the fact that the Caucasian walnut received world-wide recognition, and the wood of the walnut which was widespread in the Kakhetinskiy zone won the first prize among those who had awarded it for many centuries to the wood of the Italian walnut.

During the 19th century the industrialists of America, Britain, Italy, and France shipped out of the Black Sea ports both the wood and the nuts of the walnut tree in large quantities. At the end of the last century and the beginning of the present one more than a million beams of orchard-type walnut alone was exported from Georgia. The barbaric wood-cutting reached a culmination point during the period of Menshevik domination. The American automobile magnate Ford advertised his cars as having their interiors finished in the wood of the Caucasian walnut. During the time of the Menshevik domination in Georgia more than a million cubic meters of walnut wood were cut down and shipped abroad. Because of the predatory cutting down the amount of walnut trees in Georgia dropped catastrophically, and in certain regions the walnut almost completely disappeared.

During the years of the Soviet regime certain measures have been outlined for disseminating the walnut crop, and the areas planted with it have been expanded. The best species of walnut have been discovered and approved; the goal of this was to create a master stock of plants having high-grade hereditary characteristics. Gradually the agro-technology of walnut breeding has been improved.

It will probably be impossible to satisfy the demand of the food industry and the population solely by means of the walnut and the hazelnut as a consequence of the limited amount of suitable land areas in the republic. The experience of scholars and progressive practical workers prompts us to believe that we should introduce on a wide scale in our country such a valuable nut tree as the pecan, which has already been acclimatized and approved under the conditions of this republic. In our homeland and in North America this tree often reaches a height of 50--60 meters and as much as two and one-half meters in thickness. It lives as long as 500 years. With regard to harvest yield, oil content in the nuts, and taste, the pecan is in no way inferior to the walnut. Its nuts contain 70 percent oils, 12 percent proteins, 8 percent carbohydrates, etc.

Unsatisfactory progress is being made in the scientific research on studying the bio-ecological properties of the pecan, as well as developing rational, scientifically well-grounded agro-technical measures for planting and caring for them. It is necessary to radically change our attitude toward this valuable crop and subsequently to pay particular attention to expanding pecan plantings.

The cultivation of walnuts on the necessary scientific level is also hindered by the fact that in the republic to this day large, specialized farms and zonal scientific-research experiemental stations have not been created; they will engage directly in studying the bio-ecological properties of the species of walnut crops, problems of their breeding, planting, care, districting, work out the urgent problems of selection and seed production both for the needs of science and for those of production.

We need to create an appropriate scientific base and administrative structure for this sector.

In order to ensure an integrated leadership and concentration of all efforts, it would be feasible to create within the coordinating council of the agro-industrial complex under the Council of Ministers a republican center for solving such problems; its staff should include party, soviet, and economic officials, as well as our scientists, including scientific staff members of the appropriate departments of the agricultural institute.

We must carefully think through all these problems and solve them as soon and as completely as possible.

/We must hope that the patriotic initiative of the Dushetskiy people will be taken up by the youth of all rayons, cities, and villages of Georgia. I repeat: this is a big and noble task!/ /in italics/.

REGIONAL

DEMIRCHYAN SPEECH CRITICIZES QUALITY OF LABOR

Yerevan KOMMUNIST in Russian 22 Apr 82 pp 2-3

[Speech by First Secretary of the CC of the Communist Party of Armenia K. S. Demirchyan at the 20 April 1982 Plenum of the CC CP of Armenia: "All Organizational and Political Work For the Conquest of the Distant Frontiers of the Five-Year Plan"]

[Text] Comrades!

In implementing the decisions of the 26th Party Congress, the workers of Soviet Armenia, like all Soviet people, are struggling actively, with all of their strength and energy, for the realization of our tremendous program of communist construction. They are working with a feeling of great responsibility on the accomplishment of the great tasks of the further all-round progress of our republic, and are making a worthy contribution to strengthening the economic and defense might of our great homeland.

Today, at the Plenum of the CC, I would like to especially emphasize the exceptionally important and in many respects decisive role of Yerevan and the residents of Yerevan in this, the gratifying fact that the workers of our capital, under the leadership of their party organization, are in the vanguard of the national struggle for the realization of the party's plans, and are the leading, shock force of the progress of Soviet Armenia.

All of us, of course, are proud of Yerevan's splendid mission in the new historical destiny of Armenia, in its rapid flourishing, and in its contribution to the steady growth of the material and spiritual riches of our people. We are especially gladdened by the stability of the successes of Yerevan's workers, by the fact that for seven years in a row now they have been achieving remarkable results in the All-Union Socialist Competition and the city has been awarded the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol.

The successes which have been achieved and Yerevan's confident gait are, without question, not accidental, but have a solid foundation. They are the outcome of the labor and constructive creativity of all of the workers of the capitol, an elegant testimony to their patriotism, high level of consciousness, responsible attitude toward their duty, and their labor selflessness and valor. They are the result of the large amount of organizational and political work by the capital's party organization, its gorkom, the party raykoms, and the primary party organizations to mobilize labor collectives for the accomplishment of the tasks of economic and cultural construction and to improve the efficiency of social production and the quality of work.

All of this, metaphorically speaking, has been materialized in that substantial development and progress of industry, transportation, communications, the service sphere, the city economy, and the well-being of the capital's population which was thoroughly described in the report of the First Secretary of the Yerevan gorkom Comrade L. Nersesyan and in the speeches of other comrades. For this reason, without stopping in detail on achievements, let us emphasize: The production and scientific and technical potential of the capital's economy has grown even more, a solid base has been created, and there has been an expansion of the political and economic possibilities for the accomplishment of large-scale tasks of economic development and cultural construction and for a further increase in public well-being.

Laboring Yerevan has also made a rather good start on the 11th Five-Year Plan. The collectives of the city's industrial enterprises have fulfilled the plan of the first year of the five-year plan for production volume and for the production of the most important types of products ahead of schedule, on 24 December.

Party, trade union, and Komsomol organizations are paying greater attention to output quality. In 1981 more than 700 products were awarded the State Token of Quality, while the proportion of highest quality category output in the total amount of certified output reached around 40 percent. Definite successes have been achieved in the development and mastery of new types of products whose technical level is in keeping with contemporary requirements.

Yerevan's workers have also taken a large stride forward in the development of the production of consumer goods. The labor collectives of railroad, motor vehicle and air transport, and communications have achieved definite successes.

High praise is merited by the large amount of organizational and political work which is being conducted by the Yerevan City Committee to ensure the commissioning of the subway, a qualitatively new element in the city's infrastructure. The new, unique "Evartnocs" Air Station Complex has been put into operation, and it is not only a convenient air harbor, but also a unique Yerevan visiting card.

A large amount of construction work has been carried out. A large number of production facilities, housing units, schools, preschool and medical institutions, and service facilities has been put into operation.

There have also been definite progressive changes in the development of the city economy.

Measures have been carried out to improve work and raise standards in the service sphere, and to equip sales enterprises, public catering, and domestic services with modern production equipment.

Guiding itself by the decisions of the 26th Party Congress, the Yerevan party organization has done quite a bit to improve the forms and methods and increase the scientific level and efficiency of ideological work, to carry out an overall approach to the entire matter of education, and to ensure a close unity of ideological and organizational work. A large army of propagandists, lecturers and reporters, political information officers, agitators, and journalists are actively bringing all of the riches and depth of Marxist-Leninist ideas to every communist and Komsomol member and to all of the workers of the city, arming them with knowledge of the laws of social development and of the theory and policies of the party. In many labor collectives, Marxist-Leninist studies are closely coordinated with actual public and production problems, with the tasks facing them, and with their practical affairs, which fosters a healthy moral and political climate in them, an atmosphere of creative labor, and the achievement of high final results.

The participation by people in literature and the arts in communist education has become more active. Their direct contacts with labor collectives, joint discussions of new works, exhibitions, plays, and musical works, and their meetings with soldiers and border guards are acquiring an increasingly practical and concrete character. The union of art and labor is a real practice in our life.

In a word, a great deal has been done. But in front of us are the responsible tasks of the full realization of the decisions of the 26th Party Congress, and the distant frontiers of economic and social development which we have to conquer in the 11th Five-Year Plan.

It is completely obvious that these serious tasks can only be successfully accomplished if the still existing shortcomings in all of the elements of the economy, in cultural construction, and in party work are eliminated.

And, unfortunately, there are quite a few serious shortcomings in the work of Yerevan's citizens.

In his speech in Tashkent Comrade L. I. Brezhnev called especial attention to the necessity for ensuring the efficient operation of the country's single economic complex, and the punctual and high quality fulfillment of inter-republic deliveries. This can only be achieved if the party's demands are met regarding a thorough strengthening of state and planning discipline, and an increase in the responsibility of leading economic, government, and party cadres and of party organizations and labor collectives for the complete fulfillment of output production and sales plans, and of the entire development of the economy which has been mapped out by the state plan.

But last year alone in Yerevan seven industrial enterprises and associations did not fulfill their planning assignments for output producation and sales, 13 of the city's industrial enterprises and associations did not fulfill their labor productivity plans, and 38 did not show any growth over last year. The situation is no better with regard to the results of the first quarter--17 enterprises did not fulfill their commodity output production and sales plans. The industrial output sales plan connected with the fulfillment of delivery commitments was not fulfilled both in the city as a whole and in every rayon.

During the 10th Five-Year Plan Yerevan's workers worked for three years without lagging enterprises. It is impermissible that they have given up the positions they had won. Sharp criticism here has to be directed against the republic ministries and departments, since more than 70 percent of the enterprises not fulfilling their plans are members of their systems. The Spandaryanskiy Rayon Committee (Comrade G. Asatryan) where most of the state institutions are concentrated has to increase the responsibility of the party organization apparatuses in this matter.

The gorkom, raykoms, and primary party organizations have to be even stricter in controlling plan fulfillment. They have to make every violation of planning discipline and every failure to fulfill contract commitments a subject of detailed study and serious discussion, and take concrete, effective measures in attempting to correct the situation.

The production of consumer goods is not entirely satisfactory at many enterprises. Despite the criticism of enterprises of union subordination at the 27th Congress of the Communist Party of Armenia, today also very few consumer goods are still being produced by them. A number of enterprises of the republic's ministries of light, local, and food industries are still producing goods which do not correspond to the population's demand, and permit gross deviations from the standards and technical specifications, which leads to the overstocking of trade and to an increase in above-norm remainders.

This does not do honor to Yerevan's industry. The city's party and government agencies are obliged to obtain the complete fulfillment of the established assignments for the production of prime necessity and mass demand goods in their full assortment and in high quality by all enterprises, and to increase the responsibility of economic leaders and party organizations in this matter.

Unfortunately, in many party committees there still exists an incorrect practice of evaluating the work of enterprises. If the plan for the production and sale of commodity output has been fulfilled, the enterprise is an advanced one. But the 26th Party Congress placed at the head of the list in evaluating the operations of enterprises the fulfillment of assignments by assortment and complete output deliveries in accordance with contracts.

The economic leaders and party organizations of the silk, butter and fat, and worsted combines, of the champagne plant, the tobacco factory, and other enterprises should be seriously disturbed by the fact that while there was an overall fulfillment of the commodity output plan, the output delivery plans were not fulfilled in the amount of more than 25 million rubles. Here, the appropriate party raykoms and their leaders also deserve just criticism.

The leaders of the ministries of light, food, and local industries, domestic services, trade, and Aykoop [consumer cooperative] Comrades A. Gevorkyan, A. Danelyan, M. Zurabyan, S. Tumanyan, S. Safaryan, and E. Sarkisyan have to make stricter demands upon enterprise leaders for the fulfillment of plans, for the punctual introduction into production and production of new, modern, and high quality consumer goods, and for an increase in contract discipline.

The importance of the introduction of the new forms of the team organization and stimulation of labor was emphasized at the 26th CPSU Congress and in the speech by Comrade L. I. Brezhnev at the 17th Congress of Trade Unions.

The economic leaders and the party organizations of the city's enterprises and associations have done quite a bit in this direction. But alongside the positive results, it has to be noted that not everywhere is the necessary attention being devoted to the development of the team form of labor organization and stimulation, while in some places this work has practically not yet been begun. Studies at a number of enterprises and associations have shown that, striving to report success as quickly as possible, the leaders of certain enterprises have surrendered to an enthusiasm for "teamization" and indicators of the number of workers who are in teams, but not everywhere are the newly created teams teams of the new type. I do not know whether it is known to the First Secretary of the Shaumyan Rayon Committee Comrade R. Vardanyan that at the decorative fabrics factory of the 19 teams with the 223 workers in them, in not a single one are earnings distributed with regard to the labor participation coefficient.

There is also a formal attitude toward the brigade form of labor organization at a number of enterprises of the machine tool building and tool industry. Among these enterprises are the Yerevan Milling Machine Plant, the "Armkhimmash," the imeni Dzerzhinskiy, and many others. Permit me to ask whether the secretaries of the corresponding raykoms know about this, and whether they have not forgotten that the party congress defined the team form of labor organization as the basic one in the 11th Five-Year Plan.

The task of improving the quality and technical and economic parameters of output is a most important one.

The capitol's industry must not, does not have the right to produce low quality output which lags behind modern requirements in its parameters and operational characteristics, output which is materials intensive, especially, metal intensive, energy intensive, expensive, and with a high cost. But, unfortunately, we have many cases of the production of such output.

The Ordzhonikidzevskiy, Shaumyanskiy, imeni the 26 Commissars, and Leninskiy raykoms deserve just sharp criticism for the fact that a number of enterprises in these rayons are not giving the necessary attention to improving the quality and renewing the assortment of their output. Are we not right in demanding a strict account from the leaders and party organizations of the machine tool plant imeni Dzerzhinskiy, the Yerevan Milling Machine Tool Plant, the "Armkhimmash" Production Association, and others whose output still contains products with low technical and economic parameters, 15-30 percent heavier than its contemporary analogs?

This should seriously disturb the secretaries of the corresponding raykoms.

It was said at the 27th Congress of the Communist Party of Armenia, and today one wishes to repeat it once again: Under present-day conditions the production of modern, high quality, reliable, and durable output with high technical and economic parameters is becoming mandatory. No one will take old output, and, moreover, no one will plan the production of such output. Therefore, if the people of Yerevan want their industry to develop in a stable and dynamic manner, the party organization has to do serious work on the punctual renewal and production of important and needed output.

Speaking at the 17th Congress of USSR Trade Unions, the General Secretary of the CC CPSU Comrade L. I. Brezhnev especially emphasized the necessity for reducing manual labor to a minimum, for the efficient organization of work in every concrete sector, and for the use of the achievements of scientific and technological progress not in general, but concretely, in application to a given workplace. If we examine the state of our industry, construction, and also other branches of the economy from these positions, we will see that the situation is far from good. The proportion of manual labor, especially at auxiliary and loading and unloading operations, continues to be very high and in certain branches of industry comes to 30-40 percent.

Meanwhile, many leaders frequently wait complacently until something new and perfected will be built and introduced, and do not take measures to improve existing production and working conditions. The consistent provision of labor with machinery and energy has to always be at the center of the attention of party committees and organizations.

And one more matter: on increasing the qualifications of industrial workers. Strictly speaking, this concerns all of the spheres of our activities.

I would like to give especial emphasis to the necessity for a thorough activization and improvement of the work of managerial cadres and production specialists. If the party organizations bring it about that every specialist works more efficiently and with better quality, many of the problems of production would be solved much better. But, unfortunately, at many enterprises and organizations attention is not directed to this circumstance, and the appropriate conditions are not created for fruitful and creative work by specialists, and sufficient demands are not made upon them. There are also quite a few enterprises in which positions which require a special education are occupied by people who have no relationship to the given specialty, and, in individual cases, even to the direction of the work. It is necessary to put an end to this phenomenon.

The solution of this problem must not be reduced to the performance of individual measures. It is necessary to achieve an overall improvement of work with production specialists and managerial cadres. And this has to become an organic part of the overall activities of the CC, the republic's government, the party committees, government, planning, and economic agencies, and party organizations, a constant process which involves the analysis and planning of cadre resources, their training and retraining, an increase in their qualifications, an overall improvement of production equipment and technology, of its organization and management, the use of new equipment and management methods, and an improvement of its organizational structure.

The formation and development of our managerial cadre potential has to be carried out with regard to the development prospects of the economy and of the republic's culture, the requirements of the scientific and technological revolution, and so forth. It is necessary to have a clear program of action here. The republic's Gosplan has to thoroughly improve forecasting and planning and the development of our cadre potential.

Speaking about work with cadres in production, I would like to especially emphasize the necessity for improving work with foremen. Attention was also called to this by the 27th Congress of the Communist Party of Armenia.

Comrades! The Yerevan City Committee will have to do serious work in the direction of improving the party leadership of the transportation process in the capitol. The capitol's city and rayon committees are not making full use of the existing possibilities for strengthening the influence of the primary party organizations on the state of affairs at transportation enterprises, and for a fuller provision for the needs of the economy and the city's population for transportation.

Certain primary party organizations are not fully carrying out effective control of an administration's work to fulfill the established freight and passenger transportation plans, make effective use of railroad cars, locomotives, airplanes, and motor vehicles, and improve the qualtiy of work, and are not conducting a consistent struggle to ensure the safekeeping of socialist property and against violations of labor discipline.

A number of industrial enterprises, and also quite a few construction, trade, and supply organizations which have their own sidings permit large amounts of above-norm idle time by railroad cars during loading operations. Among the enterprises which have excessive idle time by railroad cars are the Kanakerskiy Aluminum Plant, the butter and oil combine, the "Armtabakprom" Production Association, the "Armkhimmash," trade bases, and others.

It is also necessary to note that only 10 percent of the city's enterprises perform the loading and unloading of railroad cars at night. The level of night work does not exceed 20 percent compared to the planned 40 percent; loading and unloading work decreases sharply on Saturdays and Sundays.

The mechanization level of loading operations is still low, and poor work is being done on the reconstruction and construction of railroad sidings.

One of our bottlenecks is capital construction. Let us say it candidly--the measures being taken by city and republic agencies to improve matters in construction are not effective and are far from satisfying us. The allocated capital investment ceiling for the city of Yerevan in 1981 was not fully utilized. Of the 389.7 million rubles allocated in keeping with the plan, 370.9 million rubles, or 95.2 percent, were utilized. Almost 19 million rubles remained unutilized. This amount is approximately equal to the capital investments being allocated to the capitol for the construction of schools for the entire five-year plan.

The plan for the commissioning of fixed capital has been fulfilled by only 80.5 percent.

The program for the commissioning of housing on the basis of all financing sources has been underfulfilled by 2.7 percent. In addition, more than 30,000 square meters of housing has not been put into operation through the line of the Main Administration for Capital Construction of the Yerevan City Soviet.

The republic's largest "Yerevanstroy" Construction and Installation Production Association underfulfilled its contracting work plan by 12.5 percent.

Of course, such a state of capital construction speaks of serious shortcomings in the organizational and political work of the primary party organizations, raykoms, and gorkom among the collectives of the construction, installation, and other organizations of the city which are engaged in capital construction.

It must be said with absolute definiteness that the raykoms do not work with the party organizations of construction projects as they do with industrial party organizations; there is not the necessary consistency and close contacts in the former. The raykoms do not perform concrete work to mobilize the collectives of construction and installation organizations to discover and eliminate shortcomings, and do not show sufficient exactingness toward leaders for the state of affairs at the sectors entrusted to them.

The measures being taken to improve the quality of construction and installation work are very insufficient and ineffective, particularly in the construction of civil housing objects. As a result of extremely low production discipline and a lack of the necessary control over operations at construction projects, sometimes the grossest violations of planning requirements and construction norms and rules are committed.

Knowing about all of this, the leaders of construction and installation organizations, of the "Yerevanstroy" Association (Comrade E. Akopyan), of the Ministry of Industrial Construction (Comrade E. Avakyan), and of Gosstroy (Comrade K. Marutyan) are not taking resolute measures to correct the situation.

The state acceptance commissions which are headed by the chairmen or other responsible workers of the ispolkoms of the rayon soviets continue to accept houses for operations which have significant defects and work incompletions. And the gorkom and city soviet, as well as the corresponding raykoms, do not bring the persons who violate procedures to the strictest account.

The work of city services also requires a fundamental improvement. Party and government agencies continue to receive a large number of letters with workers' complaints about irregular drinking water supplies, interruptions in heating and gas supplies, inoperable elevators, and so forth.

These defects are the result of causes of a dual kind. One part is a consequence of objective conditions, the long lagging of the development rates of city services behind the growth rates of the city and its population which has grown by more than 40 times during the years of Soviet power. The lagging, for example, in the development of water supplies which is expressed in an insufficient zoning of the system, a shortage of daily regulation capacities, the limited carrying capacity of individual sectors of the system, disturbances of the hydraulic regimen by pumping units, large losses, and other technical causes haveresulted in the fact that while the daily per capita supply to the system is around 500 liters of water, which substantially exceeds the analogous indicator for a number of the country's large cities, in various rayons of the city there is a shortage of water and the residents receive it on a schedule.

In order to eliminate shortcomings of this kind the Yerevan City Committee and the city soviet are carrying out a praiseworthy large and planned operation to build new key installations, main lines, and networks and to reconstruct and expand the water supply, sewage, and heat supply systems and other city services facilities.

The second group of defects is a consequence of subjective causes, above all, of an unconscientious attitude on the part of the workers of these services toward the fulfillment of their duties, of the incompetence of many of them and, as a result of this, of a low level of production and performance discipline in a number of elements of city services. If we were to cite an example from the same water supplies, most often the workers complain not so much about interruptions in water supply resulting from the schedules, but, chiefly, about violations of these schedules.

Many residents complain that when they turn to the subdivisions of the administrations of water supply, sewage, and heating systems they encounter an indifferent attitude from the line personnel and from officials, and that in reply to repeated requests for help they receive bureaucratic formal answers, or are left altogether without an answer even from the ispolkoms of the rayon and city soviets.

The Yerevan gorkom and raykoms have to increase their demands upon the ispolkoms of the Soviets of People's Deputies regarding the establishment of the proper order in city services, the ensuring of accurate reactions to signals about shortcomings and the adoption of measures on them, and the strengthening of the leadership of the elements of city services with competent people capable of achieving a decisive change in the situation which has developed.

There are major shortcomings in the operation and maintenance of the housing fund. The city's construction repair organizations are of low capacity and hardly manage to perform repairs on public buildings, and, in fact, do not occupy themselves with repairs on residential houses. There is practically no organization for the repairing of apartments to meet orders from citizens. The organization of the Ministry of Domestic Services which was specially created for this purpose is not performing its functions in the necessary manner.

The time has come for the republic's Council of Ministers to help the ispolkom of the Yerevan City Soviet solve the problem of maintaining and operating residential buildings.

The party gorkom and the Yerevan city soviet are obliged to take effective measures for the further development of city passenger transportation, the optimal functioning of its entire system, and an overall improvement and rise in the standard of transportation services for Yerevan's citizens.

The state of affairs dictates that the ispolkom of the Yerevan City Soviet and the Ministry of Motor Vehicle Transport (Comrade Kh. Drampyan) concentrate their attention on managerial questions and on the solution of the problems of passenger hauls in the republic's capitol.

An analysis of the city's transportation problem shows that the strain and defects in the operation of passenger transport which are continuing to give rise to complaints from the population are a consequence not only and not so much of a shortage of passenger transportation units as of the insufficiently efficient organization of the operation of transportation, the unsatisfactory work of the dispatcher services, and imperfections in the routing of transportation means.

There has to be an essential improvement of the material and technical base of the city's trade which for individual indicaters substantially lags behind many union capitols and established norms.

Thus, at the city's industrial, construction, and transportation enterprises the seating level of dining rooms comes to 75 percent of the stipulated norms, while at individual enterprises the seating level is even lower.

Gosplan and the republic's Ministry of Trade (Comrades G. Sagoyan and S. Safaryan) have to allocate the necessary capital investments for the strengthening of the material and technical base of the service sphere. The ispolkom of the Yerevan City Soviet (Comrade M. Muradyan) has to take practical measures for the utilization of the five-percent allotments from the total amounts of housing construction which are allocated for this purpose, and for the full utilization of these funds every year.

The increased needs of the workers in the sphere of domestic services are still not being fully satisfied, and poor use is being made of the possibilities for the creation of the necessary conditions for providing services for workers in every labor collective. The Ministry of Domestic Services for the Public has simply not been able to organize the operation of laundries in such a way that the residents of the capital would make wider use of their services and that machine washing would become a part of everyday life in the same way as dry cleaning.

Despite the recently intensified struggle against negative phenomena in the service sphere, in the trade and public catering network, and at domestic services facilities, cases of deceptive weighing, extortion, and the poor quality filling and delaying of orders are still continuing to take place. The struggle against thefts of socialist property, bribe-taking, speculation, and various kinds of abuses is being waged in a weak way.

The question of strengthening the struggle against all kinds of abuses in the sphere of services is of paramount importance. An important role is being assigned in this matter to workers' control. It is necessary to thoroughly support and encourage the efforts of worker controllers, to increase their authority, to react sharply and in a practical manner to signals, and to hold officials responsible for public services accountable.

In directing the efforts of the workers toward the fulfillment of the five-year plan, and toward all of these tasks and problems, the city party organization has to see to it that there is not a single lagging enterprise, not a single lagging organization, that the plan is fulfilled and overfulfilled by all collectives for all indicators in every month, quarter, and for the year as a whole, and to direct labor collectives toward increasing the efficiency and quality of labor, and toward the strictest compliance with a regimen of economy and a rational use of raw material, fuel and energy, material, financial, and labor resources; it has to strengthen the connection between science and production, persistently accomplish the tasks of further progress by the city's economy, clearly see its tomorrow, and vividly imagine the paths along which it will have to develop in the future.

Comrades!

In order to ensure the future correct development of Yerevan and its all-round flourishing, and to make our capital more beautiful and comfortable we have to undertake the solution of a large number of general problems in the most serious manner. I would like to call the attention of the plenum's participants to some of them.

The development of Yerevan is taking place at very rapid rates. Thus, while on 1 January 1950 the city's population came to 301,300 people, by 1978 the city of Yerevan had crossed over the 1 million mark, and on 1 January 1982 its population had reached the figure of 1, 092, 400 people. Moreover, the population growth took place both on the basis of natural growth and as a result of migration from other cities and rayons of the republic and of the country as a whole.

Today we are faced by the full problem of a scientifically substantiated management and regulation of the city's development process and of the growth of its population, and by a possible minimization of mechanical growth by means of a sharp restriction on migration into Yerevan, the performance of work for a certain relief from the capital's overpopulation, and an accelerated improvement of its infrastructure.

On a charge from the CC CP of Armenia, the republic's government has, through a special decree, bound Gosplan and Gosstroy of the Armenian SSR, the ispolkom of the Yerevan City Soviet, and their scientific research and planning organizations to develop a program for the accomplishment of this task. This program has to be closely coordinated with the long-term policy and program of settlement in our republic.

In this connection, already today the workers and party organizations of industry, and of other branches of the economy also are faced with the task of ensuring a further growth in the production of output without increasing the number of workers. Moreover, this has to be achieved while reducing the number of workers.

In recent years it has been frequently emphasized by us that the republic's industry will have to develop primarily in the direction of low materials intensive, low energy intensive, and also low labor intensive branches. This formula is applicable for the development of industry in regions which have a surplus of free labor resources both today and for the long term.

And the industry of Yerevan, Leninakan, Kirovakan, and other large cities and centers of the republic has to develop in the direction of materials saving, energy saving, and labor saving productions. The future long-term development of these cities has to be provided for on the basis of the principle of their supplying themselves with their own labor resources through natural population growth, and excluding an influx from outside; and even, on the contrary, with a view toward the possible use of their labor resources in agglomerations.

New jobs have to be created when and where there are free labor resources.

In long-term planning these circumstances have to be kept in mind so as to develop the republic's economy in the correct direction. For Yerevan, the labor-saving factor is of importance today, since there continues to be a migration of labor resources into the city, increasing the size of the populations. And we are able to bring about labor savings exclusively by means of an acceleration of scientific and technological progress, an improvement of the organization of production, an improvement of technology, and, on this basis, a sharp increase in labor productivity. On the other hand, we have to achieve an increase in labor productivity with the help of a more efficient use of equipment, and by means of the employment of attachments, automatic manipulators, robots, and so forth.

However, the urgent necessity of labor savings--not increasing the number of workers--is not sufficiently in the awareness of many of the capital's leading cadres; it does not fit into their psychology.

And today the leading workers of Leninskiy Rayon--the flagship of our industry--speak as of something positive about the fact that 70 percent of the increase in production has been obtained by us through an increase in labor productivity. In other rayons, there is no talk of this only because this indicator is much lower with them. For example, in Shaumyanskiy Rayon in 1981 it was 25 percent. Of course, 70 percent looks very very good compared to this.

But let us ask the question of Comrade Kh. Mandalyan: Will this indicator and the increase in the number of industrial personnel by 2.2 percent during the first quarter of the current year correspond to the plan of measures of the Leninskiy Rayon Committee to increase production efficiency and work qualtiy during the 11th Five-Year Plan?

To obtain the entire 100 percent of output growth on the basis of an increase in labor productivity and, moreover, with a decrease in the number of workers--this is real efficient work to increase production efficiency. That is the task.

It would be correct if the Yerevan gorkom were to perform work in the direction of having enterprises and organizations not hire workers in excess of the established number, but provide for their additional needs on the basis of a redistribution of their own workers, those who have been released from one or another sector as a result of an increase in labor productivity, the introduction of new equipment and technology, or a better organization of labor. This will compel economic and technical leaders to deal with these very important questions a bit more seriously.

With the purpose of labor savings we have to actively introduce automated systems not only in the sphere of material production, but also in the most diverse service spheres.

The question of improving the branch structure of industry both of the republic and of its capital is an important one. Comrade Nersesyan put the question of the necessity of removing a number of enterprises from the capital correctly in his report. In fact, there are enterprises in Yerevan which, in the first place, do not correspond to the structure of its industry, and, secondly, a number of enterprises are such in their function and others in the level of their technology that they can be placed outside of the city.

At one time the creation of such productions in the capital was explainable, since labor power with the necessary qualifications was concentrated only in Yerevan, and the degree of economic development of other regions did not provide any other possibility. But, unfortunately, the further development of Yerevan's industry was carried out with insufficient care, which led to its ill-assorted and excessively multi-branch character, not to mention the disregard of ecological demands. I think that the time has come to correct the situation, and to seriously take up the work of developing a long-term plan for improving the structure of Yerevan's industry with a view toward carrying it out until the year 2000.

The transformation of the structure of Yerevan's industry has to be carried out thoughtfully, on a scientific basis, and with strict regard to state interests and to the developmental prospects of industry and of the republic's economy as a whole. It has to be oriented toward low material and energy intensiveness, toward labor savings, and toward the employment of ecologically clean equipment and technology and the production of science intensive output.

The Yerevan gorkom and the raykoms have not yet brought about the necessary acceleration of scientific and technological progress and the active introduction into production of automated management systems, automated technological process management systems, and others which are the chief factors in increasing the productivity and quality of labor and improving management.

Just criticism is deserved by the leaders and party organizations of both academic and branch scientific research institutes and organizations for their weak connections with production and for the still low effectiveness of their research.

As early as 1973, at a conference of the party organization of the Rayon imeni the 26 Commissars, sharp criticism was made of the fact that scientific forces were being poorly used for the accomplishment of the concrete tasks of accelerating technological progress at the rayon's enterprises, and that, with the existence in the rayon of an institute of mathematical machines and other scientific research institutes and scientific organizations, at not a single enterprise of the rayon had an automated management system been introduced. What was being discussed was the overall introduction of a system, and not its partial use.

What is the situation today? I think that Comrade A. Melkopyan will agree if we say that it is almost the same. True, at certain enterprises such as, for example, "Armelektrosvet" work has been done in the direction of introducing computers and an automated management system; however, their number is negligible, and connections between the rayon's scientists and production enterprises have not been strengthened, and the necessary and desirable practical cooperation between them does not exist.

Or, how many times have there been discussions of the necessity for activating the efforts of VUZ science and for enlisting students for the accomplishment of various economic tasks and for providing scientific and technical aid to production collectives. The Myasninyanskiy raykom (Comrade G. Muradyan) is not working on this matter concretely and seriously, and is not showing any practical initiative in this respect while the majority of VUZ's are located in this rayon.

I would like to sharpen the attention of my city comrades, especially from the city soviet, toward the substantial shortcomings in the management and coordination of environmental protection measures in Yerevan.

Its heavy population density, the disposition of the city's basic area in a hollow, the concentration of industry and motor vehicle transportation, and the existence of a large number of small boiler rooms, and specifically climatic and topographical conditions which hinder the processes of the self-cleaning of waters and the atmosphere foster an increase in Yerevan's environmental pollution.

In order to improve Yerevan's environment, measures are being carried out which are stipulated by the environmental protection plans and by assignments established by the decrees of directive agencies. The Yerevan Aeration Station which purifies 190 million cubic meters of water a year has been put into operation, and local treatment plants have been created at a number of enterprises of the light and local industry and of motor vehicle transportation.

A circulating water supply system is in operation at certain chemcial enterprises, the ventilation system has been reconstructed, electrolysis tubs have been hermeticized, a gas purification installation has been put into operation at Kanaz, the calcium carbide production has been closed, a gas purification installation is being built at the "Polivinilatsetat" Production Association, 57 control and regulation points or sectors have been created for testing and reducng the toxicity of motor vehicle exhaust gases, and others.

Nevertheless, there has been no palpable improvement of Yerevan's environment.

As clients, the ispolkom of the Yerevan City Soviet, the Ministry of Motor Vehicle Transportation, the Ministry of Housing and Municipal Services, Armtsvetmet, the Ministry of Construction Materials Industry, and others, in the same way as contracting construction organizations--the Ministry of the Construction Industry, Armmontazhspetsstroy, Tsvetmetstroy, and others--are not showing the necessary responsibility in utilizing the funds which are being allocated for the construction of environmental protection facilities. A direct consequence of the insufficiently responsible attitude of the above ministries and departments is the fact that not a single environmental protection facility has been put into operation without essential items of work left undone. The purification of the industrial sewage of a group of chemical industry enterprises is not being performed on account of delays in the construction of a united neutralization station.

Control over compliance with the motor vehicle transport exhaust gas norms is being exercised unsatisfactorily, and checks on exhaust gases by the State Motor Vehicle Inspectorate and by service stations have a formal character.

Is it possible that all of this is not seen by such specialized organizations as the Administration for Hydrometeorology and Environmental Control, the Armenian Regional Gas Purification Inspectorate, the Armenian Republic Administration of the State Committee for Standards, the State Committee for Hygienic Supervision, and the State Motor Vehicle Inspectorate? Why, then, are they not properly realizing their control functions with regard to measures to improve Yerevan's environment?

All of these matters have to be at the center of increased attention by the Yerevan gorkom of the CP of Armenia and the ispolkom of the Yerevan City Soviet.

Comrades! We know what great attention is devoted by the party and government to housing construction. However, there are serious shortcomings and omissions in housing construction in our capitol, and we are obliged, while speaking about the major achievements in this field, to also fix the attention of the city's party organization, of the appropriate ministries and departments, and, finally, of the republic's Council of Ministers on this important question.

Today all of our attention must be directed toward ensuring the commissioning of the housing which has been stipulated by the annual plans. Yet, what is the picture in reality? Through all the five years of the 10th Five-Year Plan the housing plan was not fulfilled, and during the five years a substantial amount of housing space was not commissioned.

The fault here is, in the first place, with our construction workers who, year after year, as has already been said, fail to meet the housing commissioning plans.

However, at the same time, the amount of commissioning that is planned is insufficient. Here there is both insufficient amounts from state capital investments, and little enlistment of funds from union organizations.

The unhappy state of housing construction is also explained by the unsatisfactory coordination of construction plans with the timely preparation of overall planning estimates, with the capacities of contracting organizations and of the construction industry, and with the possibilities of material and technical supply.

The insufficient activeness and shortcomings in the work of the single client--the Main Administration for Capital Construction of the ispolkom of the Yerevan City Soviet,--in developing overall long-term and current plans for housing construction create obstacles to the introduction of a continuous planning system and of flow-line construction.

The elimination of these shortcomings requires a systematic improvement of planning, and the control and management of housing construction. It is necessary to strictly regulate the entire matter of inventorying, planning, and distributing housing, settling people in it, and so forth, and to organize the management and strict control of the correct performance of all of this.

Meanwhile, neither the republic's Gosplan, nor Gosstroy, nor the Yerevan City Soviet, nor the chief contractor--the Ministry of Industrial Construction--have worked out a concrete program for improving the situation in the city's capital construction, and the Deputy Chairman of the republic's Council of Ministers Comrade G. A. Ayrapetyan is not making the demands from them that he should be making.

The Yerevan gorkom is also not showing the necessary consistency in posing and resolving these questions, but is limiting itself to palliative organizational measures which are basically oriented toward construction workers and planners.

The republic's government has to make a special examination of this question and solve it in a complex.

While posing and resolving the questions of increasing the amounts of construction in Yerevan and improving the whole of it, we, at the same time, are obliged to give more serious thought to the city's architectural aspect, to the quality of construction, to having everything built on a level befitting our capital, and to having our Yerevan give everybody happiness with its beauty, care, uniqueness, colorfulness, and parks and squares.

Yerevan is a rapidly growing city. There is not a year that goes by without noticeable signs of growth and renewal and of intensive construction appearing in it. But despite all of this, it has to be acknowledged that its general plan which was approved more than 10 years ago is being realized quite slowly, and, moreover, strange as it may seem, it is being realized in the absence of concrete perspectives connected with the architectural-layout and spacial formation of the central rayon of the city.

Around eight years have passed since the All-Union Competition for a detailed plan of Yerevan, and yet to date the necessary complete, finally reviewed, and approved town building document on the basis of which the construction of the city center could be performed has not been created. Is it necessary to say that this is having a direct effect upon the architectural expressiveness of Yerevan, and on the solution of many everyday social, transportation, ecological, and other problems which arise in a large modern city.

The formation of the city environment, especially of residential blocks, is being negatively effected by the not always deeply thought out selective construction in accordance with whose principles construction in the center is now basically being carried out. The concept of the architectural ensemble and of the subordination of the interests of the individual to the general is frequently forgotten in our town building for the sake of immediate advantages. It has to be said that an excessive enthusiasm for one or another method of erecting buildings and structures and excessiveness in the employment of various plan series results in individual cases in the violation of an already developed architectural ensemble, in changing the dimensions and accent of entire existing streets and squares, and in levelling the rich landscape on which the city is being built.

The indifferent and bureaucratic attitude of the leaders of Gosstroy and the Ministry of Industrial Construction to ensuring architectural expressiveness and their lack of genuine interest in this is deserving of strict censure.

The solution of such important questions for Yerevan as the construction of the Severnyy and Glavnyy prospects is being dragged out. There is no final decision on the fate of Konda. And we also are moving slowly from word to deed in the overall construction and improvement of new residential areas and microareas. The necessary attention is not being devoted to the qualitative side of architecture and to the solution of the problem of modern Armenian architecture which, given the industrialization of construction, expanding information relations, and the internationalization of many building models, has become one of the most important ones.

In solving these problems, two important circumstances have to be considered: First, it has to be seen to it that architecture vividly expresses the essence of our society, and the profound socio-political changes which are occurring in its life; and, secondly, the centuries-old traditions of our architecture must not be forgotten, and they should be perceived above all as the principles and forms of thinking in space, and not merely as external manifestations of these traditions or style. The development of modern Armenian architecture requires the unification of the creative forces of architects, artists, engineers, and construction workers who have the task of reflecting in memorable images of our cities and villages the greatness of the socialist epoch.

On the other hand, I would also like to call attention to the fact that there are many incompleted objects in Yerevan, corners which leave a sad impression of neglect. And how many buildings and structures are there which have been put into operation with an incomplete realization of architectural designs and planning solutions. Take a walk through the city and you will see quite a few splendid, unique structures in which something has been left undone or which are located next to an incompleted sidewalk, a small form, and so forth, which ruins the appearance, reduces the architectural effect, and ruins a person's mood.

All of this is the result of a lack of follow-through and of the irresponsibility of both construction workers and clients. Unfortunately, certain responsible workers close their eyes to so-called "trifles," unfinished work which, in their opinion, can be corrected afterwards, with the main thing being to somehow commission the object and get it off one's hands. Unfortunately, this fallacious psychology and practice resulted in the fact that the elimination of such "trifles" in Yerevan demands large amounts of money and a great deal of time, not to mention the moral damage which we have suffered and are suffering, and the anti-educational side of the matter.

There has to be a single conclusion: In Yerevan, and in our republic battle has to be given to poor quality construction. Not a single object should be accepted with unfinished work, even the most negligible incompletions. There must be no discounts here ever and to anybody.

Yerevan is the heart of Soviet Armenia and one of the major industrial, scientific, and cultural centers of our great country. This places great obligations upon the residents of Yerevan, and increases, if you wish, our responsibility for everything that is connected with Yerevan, and for the fact that it be a genuinely capital city in everything: in its appearance, in its everyday culture, and in the care which is taken of it. Our love for Yerevan has to always be active and has to find an expression in a daily concern for it.

Look at the city with the eyes of an owner, and you will see many defects. How many relapses there still are into bad manners, and how many signs of indifference and of a consumer attitude toward the city.

As we were saying, Yerevan has grown rapidly both economically and demographically. The specific nature of the city's growth in the demographic respect consists in the fact that in a brief period of time population from every region of the republic poured into it. This resulted in a great diversity of mores, customs, and personalities. It requires a great deal of time and effort to create an integrated Yerevan personality, a capital way of behavior, of mores, and so forth. All of this is placing before the capital party organization specific tasks of an educational character, and is demanding by means of consistent and persistent educational work, a correctly conceived policy, and the introduction of clearly worked out capital behavior norms and rules, the establishment of a Yerevan personality and of Yerevan socialist traditions which absorb everything that is valuable, good, and loftily moral that is contained in our old progressive folk traditions, and the introduction of a capital culture of behavior which is free of philistinism. It has to be remembered that no architecture can substitute for the beauty of everyday life, of a city's traditions, and the beauty of the behavior and moral makeup of its inhabitants.

A resolute battle has to be declared against the self-satisfaction, provincialism, and self-admiration of some of our citizens. A resident of Yerevan has to possess a high feeling of dignity, and be a highly cultured, highly moral, and well-mannered citizen. This is a difficult task. This process has to be conducted and managed on the basis of the clear criteria of a Soviet way of life and of our moral code.

This is why it is so important that the gorkom and raykoms and the city soviet and rayon soviets work more actively on these questions and constantly improve communist education.

And another thing. The Yerevan gorkom, the raykoms, and the city and rayon ispolkoms have to perform well-conceived and consistent work to create the possibilities in the capital for the workers' leisure and for reasonable entertainments. I am speaking about the necessity for the creation of a leisure and entertainment industry. Parks, gardens, appropriate buildings, and so forth have to be used for this purpose. Attention should be called to the unpardonable attitude toward the Razdan gorge as a rest and entertainment zone. This gift of nature to Yerevan is hardly used. And that is a mistake. The gorkom and the city soviet have to show initiative here--to create a large-capacity rest zone which includes the Razdan gorge, the Tsitsernakaberd, and the fields of the Ararat massif with an exit onto the Yerevan Sea.

I am confident that the CC CP of Armenia and the republic's government will support this initiative and provide for its realization.

The difficult historical fate of our people has been expressed in the fact that it built more than one capital. Yerevan is the largest and most beautiful capital of our people which was resurrected by Great October, the eternal capital of the Armenian socialist state. And it should in its constant and harmonious development and in its appearance vividly personify the powerful flourishing and beautiful socialist spirit and content of the life of the Armenian people.

Comrades!

Yerevan's leading role in the socio-political, economic, and cultural life of our republic determines the exceptional importance of the organizational and political work being carried out by the city party organization and by all of its elements.

Basing itself on the rich experience which has been built up, the task of the Yerevan gorkom is to raise the level of the leadership of the economy, all of the educational work with the workers, and all of the organizational and political work being done to a higher point in order, as rapidly as possible, to eliminate shortcomings, solve the problems which have been discussed at the plenum, and achieve the successful fulfillment of the decisions of the 26th Party Congress and of the large and responsible tasks of economic and cultural constructions facing the city.

First of all, it is essential to thoroughly improve cadre work which is, as is known, the basic element of party and state leadership. The party has repeatedly emphasized that its cadre policy is a powerful lever by means of which it influences the course of social development. It is that sector of work which demands the daily intense attention of all party elements--beginning with the primary party organization and ending with the CC.

If we are to speak in general, then the Yerevan city party organization has achieved a definite improvement of matters. Many sectors have been strengthened with experienced comrades who make deep analyses of the economy, and are capable of leading labor collectives, solving the more difficult economic and political problems, and achieving stable high final results.

At the same time, there are still quite a few shortcomings in work with cadres. It sometimes happens with us that after promoting a comrade to leading work, often no work is done to provide him with an education corresponding to his new level and new position, no demands are made upon him, and he is not corrected in time. As a result, the omissions, shortcomings, and errors which are committed in work sometimes become aggravated, which leads to undesirable consequences.

In 1979, Comrade M. Nazaryan was appointed the general director of the "Plastik" Production Association. After becoming director, he ignored the rule which demands a deep study of the specific nature of the production and of the recommendations of workers, especially financially responsible people. Regarding him as an experienced leader, the Leninskiy raykom and the city committee did not work with him, and left him out of their field of vision. And as a consequence--the director's incorrect actions which were not corrected in time created the conditions for the theft of socialist property at the enterprise.

Comrade Nazaryan and the Association's Cadre Department Chief Comrade G. Khudagyan (he is also the secretary of the party organization) showed irresponsibility and a lack of principle in the selection of cadres. The CPSU member M. Gevorkyan was appointed shop chief of the polyethylene film production. Before this he had worked as shop chief at the "Nairit" Scientific Production Association and had committed abuses of his official position for selfish purposes, for which in July 1979 he was released from his job, and a strict party reprimand was announced against him with its entry in his record card. A certain Avalyan was hired as chief of the finished output warehouse (incidentally, without being sent by the rayispolkom's job placement department); from December 1979 through May 1981 he had, in general, not worked anywhere. It is he who laid hands on the people's property.

Naturally, criminal proceedings have been begun against both of them, and the Leninskiy raykom has announced a reprimand to Comrade Nazaryan with its entry in his record card.

Not a single leading worker must remain outside of party control, influence, and education. The task of party committees and organizations is to constantly improve, in the light of the demands of the 26th Party Congress, the selection and placing of cadres and their education.

We need leaders who possess organizational abilities, competent people with strong wills who know how to work with people and effectively direct their efforts and creative energy toward the fulfillment of the difficult and responsible tasks facing labor collectives. The contemporary leader has to organically combine within himself partiynost', a sense of principle, competence and a strong will, efficiency and responsibility, a democratic spirit, simplicity and modesty, and a sensitive attitude toward the concerns of people.

Cadres in all elements and on all levels have to be deeply conscious of the fact that all of the shortcomings which still occur in various areas of our life have to eliminated by consistent improvements, and by perfecting the style and methods of work.

In speaking about work with cadres, the attention of the gorkoms and raykoms should be fixed on still another important issue: the necessity for creating everywhere an effective and reliable cadre reserve. It is necessary for the comrades who are promoted to leading work, as Comrade L. I. Brezhnev stated at the congress, to stew a bit in the thick of the working masses so that they know not from documents, but from personal experience, what is important for the workers, peasants, and intelligentsia of our country, know their life, their needs, and their interests. It has to be seen to it that, as a rule, all communists whom we regard as a promotion reserve should go through precisely this kind of school, a school of life, a school of practical work among the masses.

In recent years, definite work has been done with the cadre reserve in the republic party organization. A certain positive experience has been built up by the Yerevan gorkom and by the city raykoms. However, we have to improve the work with the promotion reserve. It is not at all a matter of every gorkom and raykom and ministry and department having a list of people with specifications of the positions to which it is proposed to promote them. It is a matter of training and educating them.

If the Shaumyanskiy raykom had taken a responsible and serious approach to the training of a cadre reserve, would it have agreed with the proposal by the Ministry of Light Industry for the appointment of G. Adamyan as director of the decorative fabrics factory? He not only did not possess the necessary practical and political qualities, but was also undisciplined, did not carry out the orders of the ministry, committed gross violations in the selection and placement of cadres, and neglected the safekeeping of socialist property; and there were large shortages of physical assets at the factory, and so forth. The Yerevan City Committee has expelled G. Adamyan from the ranks of the party, removed him from his post, and has imposed strict party penalties on other leading workers.

This example once again proves the necessity for party committees and ministries and departments to actively train and thoroughly study people who are to be promoted, and to have a complete idea of the level of their practical and political training, their abilities, and their moral qualities.

V. I. Lenin demanded: ". . . as cautiously and patiently as possible to test and identify genuine organizers, people with sober minds and practical wit, people who unite a devotion to socialism with an ability to organize tight and harmonious joint work by a large number of people in a Soviet organization without noise (and in spite of bustle and noise). Only such people, after being tested ten times over, have to be, after moving them from the simplest tasks to the most difficult ones, promoted to responsible posts. . . ."

This statement by Lenin is today also an immutable guide to action. And we have people of this kind. It is only necessary to look around more extensively and attentively. They have to be noticed and found. They have to be patiently educated, taught the art of leadership, and promoted to responsible posts.

This is not an easy task. It demands a systematic overall approach, persistence, direction, consistency, and, finally, a deep understanding of the high responsibility of all of our party, government, and economic agencies and of all leaders for the state of work with cadres and the cadre reserve.

We are obliged to improve performance verification and control. The party has always attributed and continues to attribute enormous importance to this. However, the demands of the congress, and the recently adopted decree of the CC CPSU "On a Further Improvement of Performance Control and Verification in the Light of the Decisions of the 26th CPSU Congress" are not being fully carried out.

The ensuring of the safekeeping of socialist property, and an intensification of an effective struggle against encroachments on the people's property, bribe-taking, speculation, and other crimes of greed must constantly be in the field of vision of party committees and organizations.

While consistently continuing the line of an uncompromising struggle against the antipodes of our morality, against deviations from the norms of the law, and against all kinds of abuses, and while involving the broad masses in this matter, the gorkoms and raykoms should at the same time take additional measures to raise the level of the work of our law protection agencies and their party organizations.

I would especially like to emphasize the necessity for a fundamental improvement of the work of the Struggle Against Thefts of Socialist Property and Speculation Service and for increased party control over its activities. Recently the CC CP of Armenia examined the question of the work of the apparatuses of the Struggle Against Thefts of Socialist Property and Speculation and the Ministry of Internal Affairs of the Armenian SSR in strengthening the struggle against thefts and other economic and official crimes.

There continue to be serious shortcomings, miscalculations, and omissions in the work of the Struggle Against Thefts Service which is appreciably decreasing the effectiveness of the struggle against encroachments on state and public property and other crimes of greed.

One is struck by the fact that a considerable part of these serious shortcomings and omissions is accounted for by the subdivisions of the Struggle Against Thefts, the Yerevan Administration of Internal Affairs, and all seven of its rayon internal affairs departments.

For serious miscalculations in the work of the apparatuses of the Struggle Against Thefts and for a low level of exactingness toward the workers of this service, the Bureau of the CC has announced a reprimand with its entry in his record card against the Chief of the Administration of the Struggle Against Thefts of the Ministry of Internal Affairs Comrade L. Maksudyan. Cognizance has been taken of the statement by the Minister of Internal Affairs that the ministry's leadership and board will take effective measures for a decisive improvement of the work of these apparatuses.

The leadership of the Administration of Internal Affairs of the City of Yerevan and, above all, the Administration Chief Comrade V. Charkhifalakyan and his Deputy Comrade G. Daniyelyan must not remain outside of responsibility.

Serious conclusions have to be drawn from this example by party committees which are obliged to actively exercise control over the work of law protection agencies and to increase the responsibility of their leaders and party organizations. It is essential to consistently obtain an improvement of accounting and reporting at every enterprise and organization, and to close the channels which contribute to the theft of the people's property. Personal responsibility has to be borne here by the leaders of ministries and departments and enterprises and organizations.

Now for the most important issue of party organizational work--an improvement of the leadership by party committees of the primary party organizations which, as was pointed out at the 26th CPSU Congress, have a paramount role in accomplishing the large and diverse tasks of communist construction.

The primary organizations are the foundation on which--as V. I. Lenin said--the entire edifice of our party is built. At the plenum the speakers spoke in detail about the work of the city's gorkom and raykoms to increase the efficiency of the primary party organizations and to improve the leadership of these highly important elements of the party.

The lack of consistency in the work by the gorkoms and raykoms to increase the efficiency of all primary party organizations is a general and most characteristic shortcoming. Almost at every step it can be seen that a limited group of organizations is in the field of vision of one or another raykom. The others, especially small ones, are worked with extremely rarely. This is especially characteristic for the Spandaryanskiy and Myasnikyanskiy raykoms. To see to it that all of the primary organizations are on the level of the demands of the party and that they always and in everything show more initiative and more principle--this is the paramount task of the raykoms and gorkoms, and our common task.

To make the demands of the party's economic policy close to every working person, and to convincingly demonstrate that it is this policy that accords with his vital interests and that, therefore, it is the duty of everyone to assist its complete success with his initiative and creative searches--here is an important task.

These points have to be at the basis of the work of our party committees and organizations. Our Soviets of People's Deputies and trade unions must also direct their work toward this end.

The ensuring of the fulfillment of these tasks is also the duty of the workers of the ideological front.

The effectiveness of ideological work is to a large extent determined by the wealth of the ideas contained in the materials of the 26th CPSU Congress. Well-organized propaganda, and a deep study of the documents of the congress and of the November (1981) Plenum of the CC of the Party--are very important factors in the fruitfulness of educational efforts. At the same time, the effectiveness of ideological influence is determined not only by the content of propaganda, but also by the art of conducting it. The 26th Party Congress posed the question sharply of having all ideological educational work conducted in a lively and interesting way, without cliches and the standard selection of ready formulas. It is from here that one of the directions of reorganization proceeds--an improvement of the forms of work, and the replacement of obsolete and petrified ones by new ones which accord with contemporary conditions. It is necessary to resolutely reject everything that is obsolete and eliminate a cliched approach to work. New forms and means have to be directed directly to the person, and an active life position has to be cultivated in him.

To establish a spirit of Bolshevik principle and of creative activeness in the life of every collective, to cultivate in people an intolerance toward shortcomings and an intolerance toward any deviations from our way of life and our morality--this is the real contribution of ideological workers to the solution of the economic, social, and other issues which have been posed by the 26th Party Congress.

Comrades!

This year is a special year, the year of the 60th anniversary of the formation of the Union of Soviet Socialist Republics. Soviet people are preparing to celebrate the glorious anniversary of our multi-national fatherland as a big and bright holiday of the indestructible friendship and fraternity of the Soviet peoples, and as the triumph of the party's Leninist nationalities policy and of internationalism. All of the preparatory work for the celebration which is now being carried out in the republic must be directed above all toward an even wider development of socialist competition for the achievement of new successes in labor and in economic development, toward a thorough improvement of the noble work of educating the workers in the spirit of Soviet patriotism and socialist internationalism, and toward a further strengthening of the friendship and fraternity of the peoples of our great Country of Soviets.

Closely united around their native party, the workers of Yerevan and of the republic, like all Soviet people, are actively struggling for the realization of the decisions of the 26th CPSU Congress and for the fulfillment and overfulfillment of the plans for the current year and for the five-year plan as a whole, and are striving to make their own important contribution to the further flourishing of our Soviet fatherland.

We are confident that under the leadership of the republic party organization laboring Yerevan and all of the republic's workers will cope with honor with all of the tasks facing them, and will celebrate the glorious anniversary of the Country of Soviets--the 60th anniversary of the Union of Soviet Socialist Republics--with new achievements. (Stormy applause).

LITHUANIAN PLENUM VIEWS POLITICAL, MORAL EDUCATION OF YOUTH

Information Report on Plenum

Vilnius SOVETSKAYA LITVA in Russian 17 Apr 82 p 1

/Text/ The Fifth Plenum of the CP of Lithuania CC was held on 16 April. The plenum discussed the following question: "On the Tasks of the Republic's Party Organization with Respect to Further Intensifying Ideological-Political, Internationalist, and Atheist Education of Young Pupils in the Light of the Decisions of the 26th CPSU Congress, the Directives of Comrade L. I. Brezhnev, as set forth in his Speech at the 17th Congress of the USSR Trade Unions and in Speeches at ceremonies in Uzbekistan." The report was delivered by the secretary of the CP of Lithuania CC, L. Shepetis.

Taking part in the discussions were the following: first secretary of the Klaypeda Gorkom of the CP of Lithuania, I. Guretskas, second secretary of the Vilnius Gorkom of the CP of Lithuania, V. Klikunene, second secretary of the Kaunas Gorkom of the CP of Lithuania, Yu. Yarushyavichyus, minister of education of the LiSSR, A. Rimkus, crane operator of the Western Construction Administration, I. Abramov, first secretary of the Varenskiy Raykom of the CP of Lithuania, Yu. Bazis, secretary of the Komsomol of Lithuania CC, S. Vashkyavichene, chairman of the Kolkhoz imeni Tsvirka, Moletskiy Rayon, B. Zhemaytis, chairman of the State Committee of the LiSSR for Vocational-Technical Education, V. Morkunas, rector of the Vilnius State Pedagogical Institute, I. Anichas, farm chief of the Za Rodinu Kolkhoz, Shal'chininkskiy Rayon, Z. Rimpo.

A speech was delivered at the plenum by first secretary of the CP of Lithuania CC, P. Grishkyavichus.

The plenum adopted an appropriate decree on the question which was discussed.

Organizational questions were also discussed. The plenum relieved A. Yakaytis from his duties as chief of the Department of Science and Educational Institutions of the CP of Lithuania CC in connection with a transfer to other work. The plenum approved V. Baltrunas as chief of the Department of Science and Education Institutions of the CP of Lithuania.

The plenum relieved V. Baltrunas from his duties as candidate member of the Bureau of the CP of Lithuania CC in connection with his being transferred to this other work.

The plenum promoted P. Ignotas from candidate to member of the CP of Lithuania CC.

The plenum elected first secretary of the Komsomol of Lithuania CC, P. Ignotas, as a candidate member of the Bureau of the CP of Lithuania CC.

Participating in the plenum's work was the sector chief of the Department of Organizational-Party Work of the CPSU CC, V. Konovalov.

With this the plenum the CP of Lithuania CC concluded its work.

Shepetis Speech at Plenum

Vilnius SOVETSKAYA LITVA in Russian 17 Apr 82 p 2

/Report of the secretary of the CP of Lithuania CC, L. Shepetis, at the Plenum of the CP of Lithuania CC: "The School's Lofty Duty Is to Form in Pupils the Best Qualities of a Builder of Communism"/

/Excerpts/ The Communist Party, constantly manifesting a special concern for the ideological-political education of young people--our eventual replacements--, always bears in mind the Soviet school, which plays a decisive role in developing in a young person the lofty qualities of a builder of communism. Today we have assembled at a regular plenum of the CP of Lithuania CC in order to discuss how, based on the successes which have been achieved in this matter by the school, to further improve the ideological-political, internationalist, and atheist education of pupils in the light of the decisions of the 26th CPSU Congress, the directives of Comrade L. I. Brezhnev, as set forth in the speeches at the 17th Congress of the USSR Trade Unions and at ceremonial sessions in Tashkent.

As is known, for achieving high results in the All-Union socialist competition, successfully carrying out the State Plan for the Economic and Social Development of the USSR for 1981 in industry Soviet Lithuania has been awarded the Challenge Red Banner of the CPSU CC, the USSR Council of Ministers, the AUCCTU, and the Komsomol CC. Our memory retains the lively impressions caused by the letter of the General Secretary of the CPSU CC and chairman of the Presisium of the USSR Supreme Soviet, Comrade L. I. Brezhnev to the laborers of a Lithuanian village who last year successfully carried out the plan for selling vegetable produce to the state. This high evaluation has aroused the republic's laborers to work even better and to achieve new successes.

Within the republic there has been a significant rise in the level of party influence on the activities of the school; the Communists have also become interested in and with a feeling of lofty responsibility have solved problems of improving the educational-training process. In the schools there is a better exchange of experience in party work, and there has been a notable increase in the authority and role of their party organizations. They are now operating in all educational institutions of the middle level. This is a great force!

Skillful leadership of public education is being provided by the Vilnius, Klaypeda, and Shyaulay party gorkoms, as well as the Panevezhskiy, Birzhayskiy, Moletskiy, Skuodasskiy, Shilal'skiy, and Vil'nyusskiy party raykoms. Therefore, the results of the work of the achools in these cities and rayons are better than in others.

However, the work has not been set in such good order everywhere. For example, in Alitus and the Kapsukskiy, Lazdiyskiy, and Shakayskiy Rayons, where the party committees have rendered little aid to the pedagogical groups, matters in the schools are far from brilliant.

And so the party committees here should without delay come to the aid of the school party organizations and their leaders, to render them cooperation in assimilating the positive experience which has been accumulated by schools throughout the country and the republic.

There is closer cooperation among secondary educational units of all types, and the tasks of implementing universal education are being resolved more successfully. It has now been the case for several years already that most pupils graduating from the eighth grade have been continuing their education at secondary educational institutions.

It is also noteworthy that at present 67 percent of the first-graders have been through children's pre-school institutions. Consequently, every year more and more children enter the first grade already prepared to be educated. In rural areas, however, there are still not too many such children. The task of party, Soviet, and economic organs consists in fully carrying out the assigned amount of construction of children's pre-school institutions in rural areas as established by the appropriate decree of the republic's Council of Ministers--to build during the period of the 11th Five-Year Plan 543 kindergarten-nurseries with 23,765 places for children.

The working youth have begun to study more successfully. During the 10th Five-Year Plan more than 100,000 young production workers obtained a secondary education.

The republic's vocational-technical schools are also developing rapidly and in a well-coordinated manner. In the 10th Five-Year Plan they trained 11,100 skilled workers for the national economy--this is more than was planned. Staffs of teaching engineers have grown up within the system The results of their work have received high marks--for the third time in a row the State Committee for Vocational-Technical Education has been awarded the All-Union Challenge Red Banner.

During the years of the 10th Five-Year Plan there was a considerable strengthening of the educational-materials base. At present more than 82 percent of the pupils study in well-equipped secondary schools, supplied with qualified staffs.

Nevertheless, in the field of public education there are also some unsolved problems. Many of the pupils at the general-education schools are studying only at the satisfactory level. The drop-out rate in technical schools because of a lack of ability to achieve shows no decline year after year. Although a growing number of graduates of the vocational-technical schools are coming onto the production lines with a higher grade-category, they are mastering the general-educational disciplines only at the satisfactory level.

Hence it follows that the Ministry of Education, the Ministry of Higher and Secondary Special Education, the Ministry of Agriculture, and the State Committee on Vocational-Technical Education must significantly improve the quality of the educational process and strengthen the ties between instruction and production.

The working people of Lithuania highly value their membership in the family of Soviet peoples. They are profoundly aware of the fact that everything which we have and are proud of has been achieved by the joint efforts of all the peoples of our multi-national Motherland thanks to the unselfish aid of our fraternal republics and, in the first place, that of the great Russian people. In the common struggle of Soviet people of all nations and nationalities to build communism the working people of our republic are actively participating as members with equal rights, making their own contribution to the development of a unified national-economic complex, science, and culture.

The school groups of this republic have accomplished a great deal for the internationalist and patriotic education of pupils, and they have accumulated abundant experience in this field. This has been facilitated by a noticeable improvement in education in the glorious revolutionary and military traditions of the party, meticulous study of the works of V. I. Lenin, the materials of the 26th CPSU Congress, the directives of L. I. Brezhnev, the decisions of the 18th Congress of the CP of Lithuania, and other party documents, as well as by a discussion of the books written by the leader of our party and state, inculcating in the pupils a devotion to the ideals of communism, and the lofty concept of the common historical destinies of the Soviet peoples.

There is much that is instructive in Klaypeda's schools. This port city's schools are conducting this noble work not only based on inter-republic ties but are also utilizing the multi-national composition of the city and its labor groups. Their achievements are reflected in the activities of the schools and in visual-aids agitation. Operating in all the schools are international-friendship clubs, which have assembled abundant materials devoted to the 60th Anniversary of the formation of the USSR and to the fraternal republics. Many schools have equipped rooms or corners devoted to Vladimir Il'ich Lenin, while some have museums and rooms of labor and military glory. There is a particularly large amount of materials on military-patriotic themes. The schools have organized expeditions and tourist trips over the military routes taken by the Soviet Army; they study the history of the Great Patriotic War, are interested in the exploits of the Soviet Union's heroes who liberated Klaypeda, and they conduct competitions of political songs.

Recently there was a sharing of the experience in internationalist and patriotic education as accumulated at Klaypeda's Middle School No 15. The latter cooperated closely with the neighboring Middle School No 13, where instruction is conducted in Russian. These schools conduct joint evenings, Pioneer and Komsomol measures at which a warm, cordial atmosphere reigns.

Positive experience in organizing this work has been accumulated by the Vilnius, Shal'chininkskiy, and other rayons. We consider that their experience should be applied extensively by all cities and rayons where there are genuine possibilities for this.

Now, during the period of preparations for the 60th Anniversary of the formation of the USSR, the experience and themes of internationalism and patriotism should permeate all the cells of the school organism. Every worker in education, every pedagogue, every organizer of school life should seek out ways and means to show as clearly as possible the principles of development of the socialist nations, to utilize visual local examples which testify to the flourishing, mutual enrichment, and drawing together of the nations which are building communism.

Questions of patriotic and internationalist education in the schools have become particularly urgent under the conditions of exacerbation of the ideological struggle, when nationalism for bourgeois propaganda has become one of the most important weapons of subversive activity against socialism and communism. Under its influence nationalist attacks and other anti-social manifestations can arise there where there is no assurance of a close unity of an ideological-political, labor and moral education, where individual work has not been conducted, and where such an important area in the formation of a young person's personality as internationalist education has been dropped out of the field of vision.

Under the conditions of ideological struggle it is very urgent that the youth be politically aware and vigilant, that they be able to decisively expose the class enemy's attempts, the reactionary essence of imperialism, its policy and ideology. And not only this. Young persons must possess the capability and determination to go on the offensive ideologically.

Life has convincingly demonstrated that, despite the ravings of our adversaries, socialism has not only not levelled out the unique personality of peoples, the originality of their traditions but has raised these characteristics to new heights and made them accessible to many other peoples. And the pledge of this new flowering is not composed of national isolation, limitations, nor various prejudices of the past. On the contrary, it is precisely as a result of overcoming them that the national culture of all the republics has been enriched and has prospered.

The duty of the party and Komsomol organizations, as well as pedagogical groups, is to convincingly explain and demonstrate all this to the youth, to decisively struggle against such phenomena as nationalism or chauvinism, which are alien to the nature of socialism, against any nationalistic dislocations, isolation, or conceit.

Great possibilities for internationalist and patriotic education are provided by all disciplines, especially history, the social sciences, and literature. In the teaching of these disciplines the historical and new social communality of the peoples of our vast country is revealed, and the successes of the CPSU's nationality policy are disclosed. Such beneficial material should be utilized as a model by many teachers.

However, there are individual instances where, on the contrary, in lessons in these disciplines attempts are made to evaluate the phenomena and figures from the past from a non-class, non-historical point of view, to emphasize the remote, feudal past and avoid the more recent heroic past of revolutionary struggle, and to ignore revolutionary writers.

Therefore, it is good that the Ministry of Education, in conjunction with the Institute of Philosophy, Sociology, and Law of the LiSSR Academy of Sciences organized a scholarly conference, at which there was a discussion of the role of the humanities in the internationalist and patriotic education of pupils.

The Ministry of Education, the Ministry of Higher and Secondary Special Education, and the State Committee for Vocational-Technical Education ought to regularly discuss the teaching of these disciplines from an ideological-educational point of view and to be more concerned with raising the qualifications of teachers and lecturers in history, literature, languages, and other social disciplines.

The Russian language is a means of communication among the socialist nations. It makes it possible for them to share in the treasure-house of culture and art of the Russian and other Soviet peoples, and it makes it possible to know better the spiritual riches of the peoples throughout the entire world. Hence, those party committees and primary party organizations act correctly which are constantly concerned that the pupils master Russian as well as their own native language. This should also be done in the technical colleges and vocational-technical schools.

The patriotic and internationalist education of young persons is linked in the closest possible way with their training to defend the Motherland.

Within the republic's schools, thanks to the strengthening of ties between the schools and military units, as well as more active participation by schoolchildren in excursions around the sites of their forefathers' military glory, and fine results achieved in mass sports games--the graduates of our schools serve in an exemplary fashion in the Soviet Army. We need to keep on operating this way in the future.

We have sufficient ways and means with the aid of which educational workers can effectively influence the internationalist and patriotic feelings of young persons. Here too there is participation by the young people in public measures, voluntary work on Saturdays and Sundays, and in the life of their own communities /?/. Here too are holidays celebrating the handing out of Komsomol cards, passports, diplomas; these ceremonies are attended by parents, old Communists, and leading workers, and they are conducted in places which are connected with the revolutionary movement, with the struggle for liberty.

In the school, as V. Sukhomlinskiy said, even the walls should take part in the educational process. And so the symbols of the CPSU, the Soviet state, and visual agitation should be used to appeal to the young people with a highly ideological and artistic message throughout. We have already achieved a certain amount of progress, although there is still evidence of neglect in some places--visual agitation in schools, especially in general-educational schools, is not always artistically and ideologically expressive. In this respect, to achieve expressivity means to show in specific examples the hardly recognizable changed life in the country and the republic, the parents of the pupils, and the basic causeof these changes--the friendship among the Soviet peoples, their cooperation and mutual aid. Visual agitation on this topic should be in every school.

Educating young persons in the spirit of patriotism and internationalism is inseparable from atheistic education.

As a result of the persistent work of the CP of Lithuania, all party organizations on asserting the ideas of Marxism-Leninism among the popular masses, the influence of the Soviet way of life, a sharp rise in the level of science and culture, as well as resulting from ideological work, among most of the population and the student youth a firm, materialistic world view has developed; it is free of religious prejudices and ideas. Religious rituals are declining year after year.

And, nevertheless, life has shown that the formation of a materialistic world view and an atheistic education for young persons remains extremely urgent even under present-day conditions.

The Catholic Church, seeing how the laboring masses and the youth are departing from it, have activated religious communities by all possible ways. This is used by fanatically minded priests and monastic elements, stirring up the believers to oppose the laws concerning religious cults.

The republican party organization adopted additional measures for improving the scientific quality and militancy as one of the most important component parts of ideological activity.

In recent years the urgent questions of atheistic education have been systematically discussed at plenums and bureau sessions of many party gorkoms and raykoms; they were considered in the primary party organizations.

In expanding this work, we need in the future to be more effective in forming a materialistic world view: to improve atheistic education and to intensify the struggle against any religious extremism.

The most important characteristic of this work in the schools and a pledge of its effectiveness is composed of solid, scientific knowledge and a profound mastery of the world-view disciplines. Moreover, there are still quite a few pupils who are mastering only the factual, informational aspects of the foundations of these subjects. A schoolteacher's sacred duty consists in attaining a unity of the curricular and educational processes, to inculcate civic-mindedness and to teach the good.

As entrance exams to the higher educational institutions have shown, one encounters students from the graduating classes, especially from the Shilal'skiy, Parkuoyskiy, Kretingskiy, and several other rayons, who have a theoretical knowledge of the laws of dialectical and historical materialism and who set forth their formulations precisely; however, when interviewed on questions of social development, they rely with insufficient creativity on the knowledge which they have obtained. All pedagogues in their lessons should systematically inculcate the schoolchildren with the ability to make the correct, world-view conclusions.

Furthermore, political clergymen are striving at present, on the one hand, to discredit and slander the party's policy with regard to believers and the church, and, on the other hand, they are trying to exaggerate and falsify religion's role in the history of the Lithuanian people and its culture. Hence, the task of the school leaders and those of the party organizations is to aim the teachers at a scientific evaluation of the historical facts.

The Ministry of Education, the Ministry of Higher and Secondary Special Education, and the Committee on Vocational-Technical Education must study better the status of atheistic work in the educational institutions of their own systems, discuss these problems in a business-like manner at collegium sessions, and see to it that the measures which have been worked out are implemented.

A great reserve for expanding internationalist and atheist education is the dedicated, coordinated work of internationalist, atheist, and literary circles. Those schools which have actively functioning circles of Lithuanian and Russian literature are proceeding correctly. In them the pupils are more deeply permeated with the ideas of positive heroes, and they are studying how to defend them.

The spiritual liberation from the vestiges of the past and the formation of a scientific materialistic world view constitute a noble task but complex and delicate. It is not enough merely to destroy the views of a believer--one must demonstrate the advantages of the scientific world view. And this is uniquely original work.

And so we must see to it that all our young people, all pupils, are ideologically tempered, protected from the influence of alien ideology, and liberated from religion. It is only with such a yardstick that we should approach the curricular and educational process in every school.

The joint work of farms, enterprises, and schools regarding the vocational orientation of the senior class members, the inculcation in them of a love for labor on the land or at the workbench has become today an important factor in the development of agriculture and industry.

Nevertheless, we must provide better guidance for the pupils in selecting working and agricultural vocations and see to it that there is a maximum reduction in the gap between the needs of the national economy for working personnel and the inclinations of the schoolchildren. For example, why cannot the schools now in the springtime be the initiators in rendering aid in improving the environment, their village or city, as well as other useful deeds?

Likewise the republican inter-departmental commission on the vocational orientation of schoolchildren and youth must become much active with regard to the job placement of the graduates of general-education schools.

During the last five-year period minors committed fewer crimes, including serious crimes. As before, however, we are disturbed by the crime rate and the unworthy behavior of pupils. Here too public opinion must come to the aid of the school; its potentials are truly inexhaustible. With the aid of party, state, and trade-union organizations we could better resolve the problems of the minors' rest and recreation, how they spend their time, all of which is closely inter-connected with their violations of law and order. But we will render the greatest help to the school if we refuse to allow anyone to foul up our moral climate, if we proclaim a decisive struggle against Philistinism, money-grubbing, drunkeness, abuse of service positions, a bureaucratic approach, and lack of attention to people.

We will continue an implacable fight against the antipodes of communist morality and thereby help the school in discussing this year in the CC the question of strengthening the family.

The Communist Party and the Soviet state are very interested in the firm strength of the Soviet family. The country has enormous and constantly growing funds for the protection of maternity and childhood, for aiding mothers and families with many children. And, nevertheless, families do fall apart. Most of all divorces occur in the Ionavskiy, Mazheyskiy Rayons, as well as in the cities of Klaypeda, Shyaulay, Kaunas, and Panevezhis. Most painful of all is the fact that quite a few of the families which are breaking up have minor children, whose education after the divorce becomes very complicated.

Most divorces occur because of ordinary moral dissoluteness, drunkeness, or infidelity among the spouses. The party organizations must utter a decisive "No!" to such conduct, which leads to divorces.

On the other hand, the leaders of artistic culture must constantly think about the role of their own creative work in the emergence of a human personality. What kind of role can be played by a novel which is obviously not in tune with the dialectics of historical and artistic truth, as a result of which the dark colors become too thick, a novel which does not rise to socially meaningful, positive, artistic generalizations? There is an alarming tendency to distort the essence of the class struggle in the post-war period, to cast a shadow on the people's defenders.

And in poetry, music, and the pictorial arts, under the cover of artistic diversity, there appears at times an ideological vagueness, attracting the youth to an incorrect attitude toward artistic creative work, which, in turn, facilitates an opening up of their trusting hearts to low-grade, bourgeois culture. These are symptoms which give grounds for concern.

The extremely acute ideological struggle in the contemporary world requires from the masters of culture political vigilance, a profound knowledge of Marxist-Leninist theory, and a great deal of responsibility.

I want to touch upon yet another problem, although at first glance it is not directly connected with the education of pupils. It is the matter of the pupils' health. Many children suffer from various illnesses. Nevertheless, certain gorispolkoms and rayispolkoms, as well as organs of public education have been slow in resolving the problems of lighting classrooms, selecting school furniture, and diet nutrition,nor have they paid the necessary attention to the pupils' physical education. Health-care workers have not been demanding enough in this respect. It is also necessary to significantly improve the polyclinical service to pupils, to strengthen without postponement the center for the polyclinics which provide services to the youth.

Grishkyavichus Speech at Plenum

Vilnius SOVETSKAYA LITVA in Russian 18 Apr 82 pp 1-2

/Speech by first secretary of the CP of Lithuania CC, P. Grishkyavichus, at the Fifth Plenum of the CP of Lithuania CC: "Stricter Standards and Responsibility in Educational and Organizational Work"/

[Excerpts] The republic's party organization has always devoted the most constant attention to the urgent problems of teaching and educating the rising generation. In carrying out the decisions of the 26th CPSU Congress and the 18th CP of Lithuania Congress, many party gorkoms and raykoms, as well as primary party organizations, accomplished significant work with respect to the formation of communist convictions among the student youth. There has been a noticeable increase in the party's influence on solving the most important questions of the work of pedagogical groups.

In solving specific problems in this extremely important sector of party activity, we should always proceed from the fact that the determining unit here is composed of the teaching staffs.

The teacher was and remains the decisive figure in the school. Moreover, on the level of his skills, political and moral maturity, and pedagogical mastery the status of the instruction and communist education of the student youth will also depend in the future.

In the republic we have many splendid pedagogues, masters of their craft. Most of them now have a higher education, have successfully studied at schools of scientific communism, of which there are now about 1500 in the republic, and actively broaden their political horizons in various departments of the university of Marxism-Leninism. The best of these--some 400--500 persons--swell the party ranks every year.

Recently, particularly during the course of carrying out the decree of the 7th Plenum of the CP of Lithuania CC (1977) on the questions of further strengthening party guidance of public education, there has been a substantial strengthening of many party organizations, and their responsibility for the state of affairs in the schools has been increased. Operating now in general-education schools, tekhnikums, and vocational-technical schools are more than 970 primary party organizations, which combine over 12,000 Communists. In the general-education schools alone more than 10,000 party members are working. At present practically one out of every four pedagogues is a Communist, and most of them are toiling self-sacrificingly, without sparing any efforts. Of course, we must continue to strengthen the party organizations in the future also, both qualitatively and quantitatively.

The teacher can never stand aside from questions of politics, from the complex process of forming communist convictions among the student youth. He, and I want to emphasize this particularly, is always called upon to be the ideological educator of the rising generation, by means of his entire conduct, in all his acts and actions to serve as an example for the pupils, to be a model of communist convictions and principles, and of high moral culture.

Unfortunately, there are certain teachers who have a reconciled attitude toward the bourgeois ideology and who conduct themselves amorally. Such persons should have no place in a school. The party and the people entrust the teacher with carrying out a very responsible task--forming the spiritual world of the rising generation, and this great trust must always be justified.

The most important task in the work of all the pedagogical groups, party and public organizations of the republic's schools is the formation of a high political culture among the pupils. With this goal in mind better use is now being made in many schools of the teaching of humanities and other disciplines, along with various forms of extra-curricular work. As was remarked at the 20th Komsomol of Lithuania Congress, quite a few school Komsomol organizations have noticeably stepped up their activities. At a number of schools fine results have been achieved by conducting Leninist registered credits, class sessions in political clubs, trips through places of military and labor glory, and other measures. This future trend for work should be actively supported everywhere.

At the same time we are profoundly disturbed by the fact that there still takes place often a completely unjustified division of labor, when a portion of the teachers are basically engaged solely in instructing the pupils, while their training is actually shifted onto the shoulders of the party, Komsomol, and Pioneer organizations. This is an incorrect approach to the matter at hand.

The distinguishing trait of our school's work has always been the indivisable unity of instruction and training, and nobody must violate this very important principle. All groups at educational institutions should constantly engage not in separating the cognitive and educational functions but rather in ensuring their maximum unity.

It is very important that all pupils, particularly those in the senior grades, not only be made profoundly aware of the principles of our party's social development and policies, but also be capable of argumentatively defending their own communist convictions and actively combat any manifestations of an apolitical or non-ideological approach. And, this, as is well-known can only be achieved by the joint efforts of all the teachers and the activist pupils.

The report subjected to sharp criticism the major shortcomings in the atheistic education of pupils which are occurring in the Vilkavishkskiy, Tel'shyayskiy, Mazheykskiy, Raseynskiy, Shilal'skiy, and several other rayons. Of course, it is not only the pedagogical groups of individual schools who are to blame in this but also the party raykoms, which underestimated the political importance of atheistic work.

By implementing the Leninist principles in its attitude toward religion, the CP of Lithuania throughout the entire extent of building the new society, always persistently and consistently basing its efforts on the methods of persuasion, waged a fight against religious prejudices so that in the consciousness of all strata of the population, particularly the youth, there should be affirmed the scientific-materialistic world view, so that all working people should actively participate in building communism. Now this experience must be creatively utilized and enriched, always maintaining herein and in the future a careful distinction between the rank-and-file believers and the political clergymen, between satisfying the religious needs of believers and the anti-popular actions of the representatives of reactionary clericalism.

The plenum has correctly posed the question of the need to systematically apply strict measures with regard to any violations of the constitutional requirements and laws on religious cults. At the same time no one should ever forget about the decisive role played by intensifying political-educational activity and methods of persuading erring, honorable persons, particularly the youth.

In this connection I want to emphasize again the importance of the school in forming a scientific world view. Every educational institution must create and consistently carry out a precise system of atheistic work, encompassing the educational process, extra-curricular activity, and individual influence on the consciousness and behavior of the pupils. Such a system must be created by all the educational institutions before the beginning of the new school year. This work should be headed up by the organs of public education and the Komsomol of Lithuania CC under the direction of the CP of Lithuania CC.

While manifesting a constant concern for firming up the scientific-materialistic world view of the student youth, we must, at the same time, clearly show on a broader basis and with specific examples the reactionary essence of political clericalism, all the vileness and pointlessness of the attacks by the present-day clerical extremists, who are attempting to utilize religion in order to achieve reactionary political goals--subversion of the friendship among peoples and revival of bourgeois-nationalist attitudes. It is especially important that people, above all, young people, should understand well that the clerical extremists are pursuing not religious goals but reactionary political ones.

Atheistic education is a top-priority duty of all teachers--those in the humanities, the natural sciences and mathematics, the party and Komsomol organizations of the educational institutions. But the school must also provide more aid. As was noted at a congress of the "Znaniye" /Knowledge/ Society, many lecturers, especially those working in the social sciences, still owe the school quite a bit in this matter. Their words still resound too rarely in the school classrooms and auditoriums.

In recent times many representatives of the social sciences, including those who are working directly in the field of scientific atheism, have noticeably stepped up their activities. They have created projects which actively assist in the formation of a scientific-materialist world view and class consciousness among the youth. Some of them are appearing more and more often in print, as well as on television and radio broadcasts.

However, far from everything is well here.

There must be a more decisive achievement in raising the ideological-theoretical and methodological level of publications called upon to assist in solving urgent problems of communistic education, intensifying the struggle against present-day anti-communism, and more actively summing up the positive experience of party and Komsomol organizations in this sphere. For example, we do not have a single scholarly work which would summarize the best experience of the party and Komsomol organizations with regard to ensuring the organic unity between the atheistic and materialistic education of youth. Nevertheless, this is a very important question. Only by ensuring such unity everywhere can we achieve a significant improvement in the effectiveness of work on the formation of communist convictions, the most important qualities of the rising generation. We are publishing too few of our country's literary classics. The Vaga Publishing House must outline and execute specific measures with regard to improving the state of affairs in this field.

While implementing the decree of the CPSU CC entitled "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics," the directives of Comrade L. I. Brezhnev, the party gorkoms and raykoms, pedagogical groups, the school party and public organizations should significantly increase the internationalist and patriotic education of pupils. We must disclose in a lively, accessible manner, using clear examples, the historical advantages of socialism, the heroic role of the working class, of our party in the international consolidation of all working people, in the creation and development of a unified, national economic complex --the material base of the friendship of our nations.

While elucidating the great achievements of socialism and the life-giving force of the party's Leninist nationality policy, we must at the same time, always objectively and without excess coloration, evaluate the socio-cultural heritage of the past, to demonstrate with good arguments, based on concrete examples, how difficult life was for this republic's working people during the years of bourgeois rule and the anti-popular nature of the bourgeois system as a whole. Because, of course, many people, especially young people, do not have any idea about the bourgeois system.

At the plenum a great deal was said about positive experience and serious shortcomings in political-educational work. We must eliminate these shortcomings. In order to improve this work, it is particularly necessary that we make good use of the preparations for the country's jubilee.

While moving forward to celebrate the 60th anniversary of the Soviet Union, we should convincingly show what the Soviet regime has given to the Lithuanian people. Radio and television, all the newspapers and journals ought to transmit and publish materials about those great achievements which the working people of Lithuania attained with the help of the other peoples of our country and, above all, that of the great Russian people. We must conduct a cycle of lectures which would skillfully compare the past and the present. In all the republic schools from the beginning of the new school year we need to organize optional classes for studying these questions thoroughly.

Taking into consideration the fact that nationalism is one of the most important means of subversive activity on the part of bourgeois ideology and propaganda against real socialism, it is always necessary to wage an offensive struggle against any attempts by our ideological-political adversaries to revive nationalistic attitudes; we must provide a timely and principled rebuff to any manifestation of views which are alien to us and to anti-social behavior.

On the whole, the republic's industrial groups have worked quite well during the second year of the five-year plan. The plan for the first quarter with regard to sales of output has been fulfilled by 101.2 percent, while the growth rate of industrial production last year as well as in the first quarter of the current year corresponds to that established in the five-year plan. And now it is important not to allow this to decrease.

To put the economy onto the track of intensive growth, to make it genuinely economical, as Comrade L. I. Brezhnev emphasized at the trade-union congress,--such is now the common goal of the state organs, the economic apparatus, and the trade unions. And if we evaluate the results of our work precisely from this viewpoint, then we will see even more unutilized reserves and serious shortcomings.

In the first place, we must see to it that the plan tasks are fulfilled by all groups without exception. Unfortunately, some 23 of the industrial enterprises have again failed to cope with the state plans for the first quarter with respect to volume of production output, while 27 groups have not attained the planned increase in labor productivity. Sufficient attention is not being paid everywhere to a fuller utilization of existing possibilities. The following have remained for a lengthy period of time in the ranks of the laggards: the Lithuanian Vtorchermet Association, the Kaunas Railroad-Tie-Impregnation Plant, the Kaunas Promsvyaz' Experimental Plant, and several others. Above all, it is necessary to increase the responsibility of such economic managers and specialists for observing state discipline.

The course proclaimed by the party for intensifying production, as Comrade L. I. Brezhnev stated in his speech at ceremonies in Tashkent, requires us to put into circulation all economic reserves, to be capable of arranging those capacities which we already have. But is it really possible to reconcile ourselves to the fact that, say, last year in the republic only every second facility for which an account of capacity assmilation is being conducted was operating at the plan level? Moreover, a frequent cause of this is poor production operation. This is particularly pertinent to the Inkaras Rubber-Products Plant, the Ignalinskiy Building-Materials Combine, the Kapsukskaya Bulk-Yarn Factory, and a number of other enterprises.

We also have a right to anticipate that the republic's Gossnab organizations will adopt more energetic measures with respect to improving guaranteed supplies of material and technical resources to the production line.

Labor outlays, expenditures of raw and other materials, and losses of worker time are being reduced too slowly. Only by the losses which are accounted for we are losing the labor of many hundreds of workers daily. It is necessary to intensify our struggle against absentees and slackers, as well as to eliminate other causes which bring about losses in worker time.

One of the key tasks proceeding from the directives of Comrade L. I. Brezhnev is to maintain a strict regime of savings and conservation. There are serious shortcomings in setting the norms for the expenditure of raw and other materials as well as fuel and energy resources. In 1981 alone 32 million rubles worth of above-norm and unused material supplies were discovered in the republic's enterprises and organizations. We must establish everywhere a strict and thorough control of raw and other materials and energy, their careful storage, and fully exclude the possibility of their being squandered.

Within the republic work is being conducted on implementing the decisions of the party and the government in the area of improving the economic mechanism. This year a large number of enterprises have newly switched to new planning indicators and work estimates. And now it is very important that the party and economic organs profoundly analyze the work of groups under the new conditions, summarize the experience, and operationally render the necessary aid in order that the improvement of the economic mechanism may have a business-like impact on increasing the production efficiency and the quality of all the work of the groups.

In speaking at the congress of Soviet trade unions and at ceremonies in Tashkent, Comrade L. I. Brezhnev again emphasized the importance of the foodstuff question. The party and the government, knowing the existing difficulties full well, is doing everything possible to overcome them.

In speaking about the problems in the field of livestock raising, Comrade L. I. Brezhnev in Tashkent underscored the fact that the development of this sector still lags behind the rapidly growing demands of the population. We are also obliged to direct this criticism wholly and fully at our republic.

The situation in livestock raising is causing more and more concern. And the results of the first quarter do not give much cause for hope. Milk production of public-sector farms decreased by two percent as compared with the first quarter of last year. Moreover, if we compare individual rayons, then a large difference in their results immediately becomes obvious. On the farms of 17 rayons a limited growth in milk production has been achieved, while in such rayons as Radvilishskiy, Ionavskiy, Akmyanskiy, Pakruoyskiy there was significant growth--ranging from 5--10 percent. But in the Shaklyskiy, Vilkavishkskiy, and Anikshchyayskiy rayons the gross yield, as compared to last year, decreased by 10--11 percent. And the Utenskiy Rayon began to yield its positions, which had been quite good in the past. Here the head of the milk-cow herd was cut back, there was a reduction in productivity, and, in the final analysis, milk production, as compared to last year, was curtailed by seven percent.

There is also an analogous picture in meat production, which in comparison with the same period of last year, declined by three percent. As a result, if the Ionavskiy, Shal'chininkskiy, Ionishkskiy, Shyalyayskiy, Akmyanskiy, and Shirvintskiy rayons over-fulfilled the plan for the first quarter with regard to requisitions of livestock and poultry, then in the Shakyayskiy, Tauragskiy, and Moletskiy rayons it has been fulfilled by only 64--74 percent.

At the plenum of the CP of Lithuania CC last year we discussed the problem of reinforcing the fodder base and subsequently intensifying the production of livestock produce. And today we must once again turn our attention to the need for an active and persistent implementation of the measures which have been outlined. In the first place, we need to radically strengthen our attention to livestock raising for the purpose of milk production. A great deal is being done to reinforce the material-technical base of this sector. But here is what strikes the eye: the farm managers and specialists, complaining at the drop of a hat about the shortage of feeds, are obviously omitting from view other no less important aspects of the given question. For example, can it really be only the fault of the feeds that every year as much as a third of the milk herd turns out to be defective? Some of the milkmaids have been poorly trained in working with the milking machinery; they sometimes do not observe the elementary rules of operation with this equipment, and this leads to serious illnesses and troubles with the cows. As a result, cows are sent to be slaughtered which have not even reached their most productive age. At the same time many farms, as before, supplement their milk herd with cows or heifers obtained from the population. Is this really a struggle to improve breeding work and to increase the productivity of the cows? But, of course, we have fine breeding farms; moreover, all the other kolkhozes and sovkhozes ought to improve the raising of breed calves. This is not the first time that we have talked about this, but no concrete deeds are, let's speak frankly, in sight. In the first place, the initiative must be manifested by the leading officials of the Ministry of Agriculture and its institute of animal husbandry. The people who are directly responsible for this extremely important sector of work must sense their own responsibility. We must correct matters here by means of decisive measures.

In a word, along with certain achievements, we also have a sufficient number of unsolved problems. Most of them, however, are, if it can be so expressed, problems of growth, problems engendered by the aggressive development of our socialist society. "And if we are to be true to the Leninist style," indicates Comrade L. I. Brezhnev, "and if we are not to get puffed up, but rather to be self-critical, to concentrate the attention of all the party organizations from top to bottom on unsolved problems, to raise the activities and the initiative of the broadest masses of working people, then these problems also will certainly be solved."

Our duty, the obligation of every Communist is to unceasingly support and develop in people the spirit of patriotism, creative striving, a lofty labor and political activity. At present it is very important to adopt all measures so that the initiative of the progressive enterprises of Moscow and Leningrad, which have inaugerated a competition for a worthy celebration of the 60th Anniversary of the USSR, for the successful fulfillment and over-fulfillment of the tasks of the five-year plan, may become a vital cause for all the labor groups and for every one of their workers.

The 60th Anniversary of the Soviet Union will be a glorious, nation-wide holiday. Allow me to assure the Leninist Central Committee of the CPSU of the fact that the Communists, all working people, pedagogical groups, and student youth in this republic will greet it with a great upsurge and with new successes in building communism.

USUBALIYEV SPEAKS AT KIRGHIZ RADIO BROADCASTING COMPANY

[Editorial Report] Frunze SOVETSKAYA KIRGIZIYA in Russian on 9 June, pages 1 and 3, reports on an 8 June meeting celebrating 50 years of radio broadcasting in Kirghiziya. Present at the ceremony were the republic's first secretary, T.U. Usubaliyev; S.G. Lapin, chairman of the USSR State Committee for Television and Radio Broadcasting; and V.A. Shamshin, USSR Minister of Communications. In an address to worker representatives, radio and television journalists, rural correspondents, party and government leaders, Usubaliyev noted that the development of radio and television broadcasting "is one of the bright examples of that progress which the workers of Soviet Kirghizstan have achieved in the fraternal family of the Land of Soviets". Usubaliyev commented on radio's role in "collectivization, industrialization, the liquidation of illiteracy and carrying out the decisive struggle against fuedal-bey remnants". He noted that 95 percent of the republic's population now receives television broadcasts. Usubaliyev also commented on the need to improve propaganda because of a critically sharpened international situation in which the United States and NATO are trying "to weaken the moral and political unity of Soviet society".

S.G. Lapin, chairman of the USSR State Committee for Television and Radio Broadcasting, also spoke at the meeting, noting that "millions of people, rejecting deliberately distorted bourgeois information, learn the truth about Soviet foreign and domestic policy and about Soviet peaceful intentions on Soviet radio and television channels." However, Lapin said, "one must admit that over the years radio and television have somehow gotten into the habit of praising some things in broadcasts and avoiding others in silence. The opinion has arisent that some themes are advantageous and some are uncomfortable. The latter are shoved aside, although these and others reflect life, the demands of the people, the needs of society. Such an approach, of course, leads to thematic monotony and, what is worse, the predominance of an elevated bombastic style. The tasks of improving ideological and political education work have been laid out in the well-known CPSU Central Committee decrees on ideological questions. They demand that the content of ideological work be more up-to-date and that the forms should answer the needs and demands of the Soviet people, so that propaganda does not avoid sharp, difficult questions. The 26th party congress spoke of the necessity of overcoming the force of inertia, tradition and habit which developed in that period when not so much the qualitative as the quantitative side was emphasized. This inertia is considered to be the primary reason for the difficulties, inadequacies and narrow places in the economy. Sometimes they appear on television and on the radio. The growth of editorial mail testifies to a definite shift in the work of republic and oblast committees in the country. Such a growth has been noted in the State Committee of the Kirghiz SSR. In light of the high demands of the 26th party congress, the work with the letters of the television and radio audience must be further improved."

V.A. Shamshin, candidate member of the CPSU Central Committee and USSR minister of communications also spoke briefly, offering his regards to the republic's first secretary and to the many millions of communications workers, workers in radio and television, etc.

BRIEFS

LIEPA GIVEN NEW LATVIAN POST--Albert Liepa, who was cited for spying on refugees [from Latvia residing in Sweden] and was forced to leave Sweden a short time ago, has been appointed to a cultural affairs post in Riga. According to the Soviet Latvian newspaper [published in Swedish] HEMLANDETS ROST of 13 May 1982, Albert Liepa, former vice consul in Stockholm, has been named as chairman in the presidium for the Committee for Cultural Relations With Countrymen Abroad. The appointment took place on 10 May at the annual meeting of the Committee in Riga. In the article appears a picture of a smiling Albert Liepa. The story reports on all of his services, including the fact that for the last four years he was stationed in Stockholm as a diplomat. On the other hand, nothing is mentioned about his being urged by SAPO [Swedish security police] and the Foreign Ministry to leave Sweden on grounds of having conducted espionage against his countrymen in exile. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

AZERBAIJAN SSR

ILLEGAL ISLAM UNEARTHED IN AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azerbaijani 23 March 1982 p 1 carries a 1,100-word lead editorial on ideological work, emphasizing the importance of scientific atheism. It is noted that "it cannot be said that everywhere in our republic is the work of the struggle against religious remnants correctly organized. In some areas, implemented measures lack a concrete character, and new socialist customs and traditions are weakly applied. Some party, soviet, profsoyuz and Komsomol organizations do not guarantee the implementation of Lenin's principles with regard to church, mosque and religion. One comes across communists and Komsomols holding a conciliatory position vis-a-vis religious customs, rites and rituals--even participating in them themselves." Attacking various ministries and the Academy of Sciences for not being consequent about this question, especially in writing about it, the editorial continues: "Although most of the youth have a secondary education, an atheistic belief is not being formed in some of them." On illegal Islam: "The fact that 8 Muslim and 38 sectarian groups and organizations, 366 molla and 25 'holy places' are active in our republic has not escaped notice." The rayons most affected by religion or poor atheistic education are: Absheron, Astara, Vartashen, Hadrut, Jabrayyl, Julfa, Devechi, Guba, Masally, Pushkin, Yardymly "and others." Noting the role of external developments on the internal situation, the editorial points out: "The sharpening of the conflict of ideas and polities in the international sector, the utilization of religious slogans by aggressive forces with regard to events in Poland, Afghanistan and Iran at the present time all add to the great importance of these measures."

NEW ADMINISTRATION FOR MONUMENT RESTORATION PROPOSED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 6 March 1982 p 3 carries a 1,200-word article by Kamil Memmedzade, Doctor of Art, on the "creation of a Main Administration for City Planning and the Preservation, Restoration and Utilization of Archeological and Architectural Monuments under the AzSSR Council of Ministers." Despite the "important measures implemented in the restoration of monuments in recent years," he notes that "much work remains to be done." Many unrestored monuments are enumerated along with the problems connected with them. Because the training of specialists in this field remains a problem, it is suggested that "it would be useful to study the experience of our colleagues in Bukhara and Samarkand because, in terms of form and content, the Central Asian architectural monuments are close to ours." Also, mentioning that "the study of the beautiful works of Azerbaijani architecture is a great creative school for our modern architects," he adds: "One must say openly that there is no national form in the buildings we have constructed."

SOCIAL SCIENCE INSTRUCTION TO BE MORE CREATIVE

[Editorial Report] Baku KOMMUNIST in Azerbaijani 6 March 1982 p 2 carries a 1,900-word article by H. Shiraliyev, director of the Department of Scientific Communism of Azerbaijan State University, and F. Vahidov, docent and candidate of philosophical sciences, on improvements to be made in the teaching of social sciences in the higher schools. "The 30th Azerbaijan CP Congress found serious flaws in teaching social sciences in higher schools and in the work of social scientists and social science departments, and demanded that the contemporaneity and effectiveness of scientific research be raised and the sophistication of studies being conducted in the social sciences sector be assured." Further, "the unity of teaching and scientific research must be the basic position in the creativity of these departments." The basic problem in the past has been pedagogical "formalism."

BLACK MARKET HINDERS SUPPLY OF DEFICIT GOODS

[Editorial Report] Baku KOMMUNIST in Azerbaijani 4 March 1982 p 1 carries a 1,100-word lead editorial on the growing demand for trade services. It is noted that "the population's demands are constantly increasing. The level of trade development is not responding." Further, that "serious shortcomings persist in the organization of work in trade and in questions of service." To rectify this problem a decree was recently issued by the Azerbaijan CP Central Committee. "As noted in the decree, factors of illegal trade exchanges have done great damage in supplying the population with goods in great demand." It is pointed out that the "plan of all organizations and institutions under the Republic Ministry of Trade and Azerittifag has been unsuccessful in making the quota." Goods in short supply include matches, detergents, lightbulbs and electrical equipment.

'NOVRUZ' NOT A MUSLIM HOLIDAY

[Editorial Report] Baku ADABIYYAT VA INJASANAT in Azerbaijani 26 March 1982 p 7 carries a 1,700-word article by H. Gulyev, director of the Soviet Ethnography Section of the Institute of History, in which the roots of Novruz [New Year's Day] are traced back into the pre-Islamic period. A number of sources for this are cited, an example being Nariman Narimanov's 1913 statement: "I would say that this day of Novruz and holiday is a national holiday left over from pre-Islamic fire worship."

AMERICAN TO WRITE ABOUT AZERBAIJAN

[Editorial Report] Baku KOMMUNIST in Azerbaijani 28 March 1982 p 2 carries a 600-word dispatch on the intentions of an American author, Elton Clay Feks (sic) to write a book in which "the past and present of Soviet Azerbaijan would be reflected." The author published a book under the aegis of PROGRESS Press in Moscow on Central Asia. It appeared in the series "The Truth About the USSR."

FIFTH VOLUME OF AZERBAIJAN SOVIET ENCYCLOPEDIA APPEARS

[Editorial Report] Baku KOMMUNIST in Azerbaijani 4 March 1982 p 3 carries a 950-word announcement on the publication of Volume 5 of the Azerbaijan Soviet Encyclopedia. It covers the letters "Italiya-Kuba" and contains some 400 articles.

UZBEK EMIGRE SCHOLAR ATTACKED IN ISTANBUL

[Editorial Report] Baku KOMMUNIST in Azerbaijani 12 March 1982 p 4 carries a 2,800-word article by M. Sofiyev, docent in the History Department for Asian and African Countries, on his participation in the November 1981 Istanbul Conference on the 100th anniversary of Ataturk's birth. In fact, it is a prolonged article on Baymirza Hayit, an Uzbek emigre scholar who "is occupied with spreading slander against the country of the Soviets and the socialist system through the radio station Radio Free Europe in Munich."

KAZAKH SSR

ATHEISM AGITATION WELL ORGANIZED BY RAYON PARTY COMMITTEES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 March 1982 carries on p 2 a 1,100-word article by B. Ghizatov, secretary of the Lenin Rayon (Aktyubinskaya Oblast) Party Committee reviewing well-organized atheism agitation carried out by his committee. Atheism propaganda is an important area of ideological work and for this reason the Lenin Rayon Party Committee has placed emphasis on carrying out atheism agitation broadly and effectively. Ghizatov describes the work in detail with particular reference to the organization and careful advance planning that has made the work systematic and successful. Work with individual believers is noted as a special focus of current effort.

COURTS OF ARBITRATION HELP MOBILIZE FULFILLMENT OF ECONOMIC TASKS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 March 1982 carries on page 1 an 800-word boldface editorial on Courts of Arbitration and their importance for ensuring fulfillment of economic tasks. The November 1981 plenum of the CC CPSU advanced major new goals in terms of carrying out the resolutions of the 26th Congress of the CPSU. Achieving these goals will depend upon the initiative, strict adherence to labor discipline and respect for socialist property of workers. The 1979 CC CPSU resolution "On Improvement of Work To Protect the Legal System and Intensification of the Struggle Against Violation of Law" assigned courts of arbitration major responsibilities in this area in terms of educating workers to preserve and honor socialist legality. There are now more than 15,000 courts of arbitration in republic labor collectives and others in cities and settlements. The editorial provides examples of successfully functioning courts and shows how violation of labor discipline and other problems are directly associated with the absence or poor operation of such courts.

GOODS, MONEY VANISH INTO THIN AIR AT CHEMKENTSKAYA OBLAST STORES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 March 1982 carries on page 4 a 1,200-word article by N. Muftakhov on generalized corruption and criminality in stores in Chimkentskaya Oblast. Public property has been vanishing into thin air in Chimkentskaya Oblast. The problem is robbery and larceny in various trade outlets. Muftakhov provides numerous examples that make it clear that the phenomenon is widespread and tolerated. One difficulty is an endemic collusion in high places. As a result resolute action is often not taken against those guilty even when they are caught in the act. One defense often encountered is that "everyone is doing it."

RESOLUTION WILL SPEED CONSTRUCTION OF GREAT ALMA-ATA CANAL

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 March 1982 carries on page 1 the 1,200-word text of the Kazakhstan CP and KaSSR Council of Ministers resolution "On Additional Measures To Speed Up Construction of the Great Alma-Ata Canal To Increase the Supply of Water to Irrigated Lands." The purpose of the change is to increase agricultural output to carry out the food production program and improve the supply of meat, milk, vegetables and other food products to Alma-Ata City and Alma-Atinskaya Oblast based upon the enhanced productivity of irrigated lands. The canal will increase supply of irrigation water for 115,000 hectares in the rayon of Shelek, Engbekshi Qazaq, Talghar and Ile and is now to be completed in 1984. The resolution specifies the tasks of the various agencies, ministries and other units involved in canal construction in terms of the revised completion date.

PLANS FOR NEW, GREAT ALMA-ATA CANAL REVIEWED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 10 March 1982 carries on page 3 a 700-word article by D. Danilova on plans for the new, great Alma-Ata Canal and current construction progress. The problem of supplying water to local kholkhoz and sovkhoz served by the Turgen, Esik and Talghar Rivers, which run from the slopes of the Altay and vary in the amount of water they carry due to climatic fluctuations, has long been of concern to scientists and specialists. There is also a considerable amount of useful land in the area that is untilled due to water shortage. Putting this land into cultivation would be a major advance.

The problem, however, has now been solved and the "Kazgiprovodkhoz" Institute has drawn up plans for a Bartoghay dam along the upper Shelek and for a great Alma-Ata canal to deliver water from it. Construction of dam and canal has now been going on for 2 years at a rapid pace and section one of the dam was completed this year. The dam will be 60 meters deep and hold 10 cubic kilometers of water. It will collect glacial waters for distribution through the canal. The canal itself will pass through Alma-Ata and have a profound impact upon the urban environment of the Kazakh capital.

POOR YIELDS FROM PEAS GROWN UNDER UNSUITABLE CONDITIONS IN KZYLKUM

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 March 1982 carries on page 2 a 1,900-word article by E. Zhamalbekov, chief of the laboratory of the Soil Research Institute of the KaSSR Academy of Sciences, discussing reasons for poor pea yields in Chimkentskaya Oblast. The article is published under the regular rubric "Problems, Proposals, Suggestions."

According to figures published by the KaSSR Central Statistical Administration, yields for peas in Chimkentskaya Oblast were substantially below yields in other parts of Kazakhstan. To explain this discrepancy. Zhamalbekov looks at the history of pea cultivation in the Soviet Union, the Central Asian Republics in particular and in Chimkentskaya Oblast.

Peas, he begins, are a crop with a high food value with industrial applications as well. They are also important in that as legumes peas provide nitrogen to the soil.

In spite of their potential usefulness, however, peas are little grown in the Soviet Union with only about a million hectares cultivated. Most are grown in the Near Eastern portions of the Soviet Union and, more recently, in Central Asia. Peas have been grown in Kazakhstan since 1975. Experience has shown that peas grow and are most productive in cool mountainous areas.

In Chimkentskaya Oblast, however, they are grown in irrigated lands in the Kzylkum with some 2,180 hectares cultivated in 1981 and 5,000 hectares in 1982. Production is supposed to reach 34,000 tons by the end of the current 5-year plan.

This goal, however, will not be met since peas are totally unsuited as a crop to conditions in Chimkentskaya Oblast desert regions. Asked why the attempt was ever made to grow peas in the desert, local officials informed Zhamalbekov that more suitable land was simply unavailable due to competition with vegetables and other food crops and cotton. The problem in Chimkentskaya Oblast, moreover, is compounded by general problems with the local irrigation system, incompetent cultivation and labor shortage. Zhamalbekov sees development of new varieties of peas as the only hope for desert pea cultivation in Chimkentskaya Oblast.

MINISTRY OF AGRICULTURE REPLIES ON POOR PASTURE MANAGEMENT CHARGE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 12 March 1982 carries on page 3 a 500-word letter by Sh. Bakirov, KaSSR deputy minister of land reclamation and water resources, replying to a 20 November 1981 article by hydrotechnician Duysenbek Saryqulov and Musa Rakhmanberdiev entitled "Some Questions About Water." Saryqulov and Rakhmanberdiev charge in their article, which dealt with misuse of water resources and irrigated lands in the KaSSR, that much more could be done than is being done with existing resources to supply water to pastures. Bakirov acknowledges the correctness of the information presented and Saryqulov and Rakhmanberdiev's criticism. He emphasizes, however, that a coordinated approach by all agencies and economic units involved will be necessary to solve the problem and calls for active efforts to this end. Measures, he goes on, are being carried out to improve pasture irrigation. There are now 140 million hectares of irrigated pastures in the republic, 78 percent of total pasture resources. Associated with them are 36.000 shaft wells and 28,000 pipe wells. Work to maintain these systems is going on on a regular basis.

ALMA-ATA PAPER URGES HALT TO NEW CONSTRUCTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 March 1982 carries on page 1 a 900-word boldface editorial entitled "The Brisk Pace of Construction." Complex construction is advancing at a brisk pace in the KaSSR. The many major successes of recent years alone in this area are proof. Republic constructors are making major contributions towards resolving development problems in terms of increasing industrial potential, strengthening the material and technical base of agriculture and enhancing residential, cultural and living conditions of urban and rural workers. Some 109 projects are now under construction with housing, schools and child care facilities an area of special interest.

Everyone is working to achieve goals advanced but organizational and political work must be intensified to ensure that the amount of uncompleted work is not increased. Among construction organizations singled out for criticism in this regard is the "Ekibastuzshakhtastroy" Combine, with construction materials production is suggested as a key bottleneck. The editorial notes that speeding construction work was a topic of discussion at the November 1981 Plenum of the CC CPSU.

LOOMING PAPER SHORTAGE FORCES KAZAKH CONSERVATION

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 5 March 1982 carries on page 12 a 2,400-word article by Didakhmet Ashimkhanov on a looming paper shortage in Kazakhstan and conservation measures now being undertaken to head it off. The article is published under the regular rubric "Problems To Look Into."

Paper is the "bread of culture" and is required for nearly every intellectual activity and for many other purposes besides. Although not always so, paper is now cheap and plentiful. The inexpensive book is one of the achievements of the Soviet Regime.

Today some 8,000 newspapers are printed in the Soviet Union with a total circulation of 170 million. In addition, 3.5 billion magazines are printed each year and many books, not to mention documents, forms etc. Some 26,600 tons of newsprint paper, 9,800 tons of polygraphic paper, 11,300 tons of writing paper and tons of papers for other purposes are produced each year in the KaSSR. Additional paper is imported.

Average annual consumption of paper per capita in the KaSSR is 38 kilograms but only about 6 kilograms is recycled. This is unfortunate because 45 million cubic meters of wood are cut each year in the Soviet Union to produce paper. Every 60 kilograms of recycled waste paper saves 4.5 cubic meters of wood, 1,000 kilowatt hours of electrical energy and 200 cubic meters of water. A ton of paper in fact costs 2-1/2 to 3 times as much as a ton of steel.

Ashimkhanov discusses the history of paper conservation efforts in the Soviet Union and in the KaSSR where 55,000 tons of paper were recycled last year. Among reasons cited for enhanced paper conservation efforts is a loss of production in factories sited near the then shoreline of the Aral Sea to exploit the reed fields there. The retreat of the Aral has resulted in the dstruction of many of the fields and the factories are located too far from forested areas to use wood cheaply. In the case of these factories paper recycling is the most feasible way to compensate for the loss of Aral reed fields. Spot shortages of paper for some purposes are also discussed in the article and suggestions advanced on an incentives system for paper recycling.

ENCYCLOPAEDIA EDITORS WARNED AGAINST NATIONALISM, SUBJECTIVE VIEWS

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 1, January 1982 carries on pages 167-72 a 3,500-word article by Manash Qozybaev, chief editor of the Qazaq Sovet Entsiklopediyasy and corresponding member of the KaSSR Academy of Sciences, on past achievements and future plans of his editorial office. The article is published under the regular rubric "Art and Science."

Issuing encyclopaedias in the national languages of union republics began in the lae 1950's. Recently the 12th and final volume of the Qazaq Sovet Entsiklopediyasy has appeared in the KaSSR. This achievement was highly praised at the 15th Congress of the Kazakhstan Communist Party and is a shining proof of the spiritual growth of Soviet society. The 12 volumes sum up the past development and present status of USSR and KaSSR societies.

Substantial new progress will be made in the future with the publication of other major works by the Qazaq Sovet Entsiklopediyasy editorial office. Publication plans for the years 1981-1990 call for the appearance, among other titles, of a two-volume bilingual (Russian and Kazakh) monograph on the KaSSR, an Alma-Ata guidebook, a four volume shorter encyclopaedia, an encyclopaedia of home economics, an Abay concordance in Kazakh and Russian, a three-volume children's encyclopaedia and works on the Great October Socialist Revolution and the Great Patriotic War.

Especially important among these projects is the four volume shorter encyclopaedia which will emphasize terms of local interest and Kazakhstan as compared to all-union, world emphasis of the 12-volume encyclopaedia. Qozybaev also singles out the Alma-Ata guidebook, which will be along the lines of other, similar volumes describing other major Soviet cities, for special discussion.

In the remainder of the article Qozybaev responds to various criticisms on the work of his office in the past, in regard to the 12-volume encyclopaedia in particular. He shows how this and other volumes produced by the Qazaq Sovet Entsiklopediyasy Editorial Office have responded or will respond to the major themes of ideological interest including the broad topic of the "250th Anniversary of the Voluntary Submission of the Kazakhs to Russia" and the related theme of Kazakh-Russian solidarity.

Among criticisms advanced is that the 12-volume encyclopaedia was overly concerned with various khans and sultans of no real historical importance, "subjectivisim," incompetence and a lack of adequate preparation on the part of article writers, self-serving authors who build up their own work in articles intended to provide general overviews, too many articles taken over unchanged from the Russian Great Soviet Encyclopaedia, improper use of technical terms, poor illustrations and typographical problems. Among "correct" treatments singled out, is the encyclopaedia's account of the Pan-Islamic, Pan-Turkic Alash-Ordo Party and Movement.

VOLUME PUBLISHED ON KAZAKH LANGUAGE TO NOTE REPUBLIC ANNIVERSARY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 5 March 1982 carries on page 10 a 1,600-word review by Professor T. Qordabaev of the collection "Qazaq Sovet Til Bilimining Damuy" (The Development of Kazakh Soviet Linguistics), Gylym Press, 1981. No scientific history of Kazakh linguistics has yet been published but the new collection "Qazaq Sovet Til Bilimining Damuy" issued by the KaSSR Academy of Sciences to note the 60th Anniversary of the KaSSR and the Kazakhstan CP goes far towards filling the gap. Qordabaev provides an article by article review of the collection which emphasizes the importance of Kazakh linguistics in a larger Turkological context.

COMMENTATOR CALLS FOR STUDY OF TURKIC ANTECEDENTS OF KAZAKH LITERATURE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 12 March 1982 carries on pages 6-7 a 2,000-word article by Hemet Kelimbetov on the need to study older Turkic literature at Kazakh universities as part of the study of the Kazakh literary heritage of the past.

Kelimbekov says that the older Kazakh literature is linguistically and culturally difficult for modern readers and very little has been done to make it more accessible. This is in strict contrast to Russian literature where the earliest documents are studied regularly in higher education institutions from a Marxist-Leninist standpoint. The situation is also different in neighboring Turkic republics, Uzbekistan for example, where ancient Turkic literature is studied regularly beginning with the Orkhom inscriptions.

Kelimbekovprovides examples to show the importance of the study of early and medieval Turkic literature for understanding older Kazakh writers and makes suggestions on proper approaches to be employed to make it accessible to modern readers. A context must be established for understanding the Turkic culture of the past.

EAST TURKESTAN EMIGRE CHIDES CHINESE OPPRESS, MAOIST HYPOCRISY

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 1, January 1982 carries on pages 203-205 a 2,700-word review by Eleubek Baytoqov of East Turkestan emigre writer Qabdesh Zhumadilov's novel "Songghy Kosh" (The Last Migration), Zhazushy Press. Two volumes, 1974 and 1981. The review is published under the regular rubric "New Books."

One major focus of an increasingly sophisticated Kazakh literature is the developing world, its peoples and events. Among the works concerned with these areas is Qabdesh Zhumadilov's novel "Songghy Kosh" which describes the life of Kazakhs in Chinese Turkestan over a period of some 25 years, from the 1940's until the early 1960's. The novel looks at one group of Kazakhs in particular, from the area south of the Tarbagatay Mountains, and depicts, through them, the traditional life of East Turkestan Kazakhs, the changes taking place in that life during the period covered by the novel and the major political events of the time. There were 870,000 Kazakhs living in 28 administrative units in East Turkestan during the early 1960's.

In the course of the novel the struggle for national freedom of the Kazakhs, at first against the Kuo-Min Tang, later against the "Maoist" regime, is detailed. According to the reviewer, Zhumadilov is highly successful in describing the oppression, colonialism and chauvinism of the Chinese exploiters for whom communism is no more than a veil for their real purposes. The heroes of the novel discover real freedom in Kazakhstan and the Soviet Union.

However, the reviewer concludes, in connection with a discussion of one "progressive" Chinese character, the message of the novel applies to the masses of the Chinese workers as well as to the Kazakhs of East Turkistan. The Chinese working people are also fighting for freedom and national liberation.

MANGYSHLAKSKAYA FOOD DISTRIBUTION SYSTEM IN POOR SHAPE

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 March 1982 carries on page 4 a 1,500-word article by S. Khaydarov on problems with trade, distribution of food and food products in particular, in Mangyshlakskaya Oblast. The article is published under the rubric "Honorable Service for the People."

Why, Khaydarov asks, are goods in oversupply in one place and in short supply in another? Why is it often necessary for shoppers to travel to other rayons to find what they need? The problem, moreover, he goes on, is particularly severe in Mangyshlakskaya Oblast.

The need for improvement in trade and trade services was pointed out in the CC CPSU and USSR Council of Ministers Resolution "On Measures for the Further Development of Trade and Improvement of Trade Services for the People During the 11th Five-Year Plan." Trade organizations under the Mangyshlakskaya Oblast Consumer's Union have many deficiencies and inefficiencies to eliminate if goals advanced by the resolution are to be met.

Khaydarov looks at food distribution as a key area of trade and trade services and provides specific examples of the kind of problems encountered. They include frequent error in estimating demand, poor marketing research, poor product quality, spoilage in transit and deterioration in storage and overpricing. He notices, for example, an almost complete lack of modern refrigeration equipment and major transport inadequacies. More is needed here than simple plan fulfillment and significant qualitative changes must be brought about generally. Throughout his article Khaydarov castigates the poor response of trade and other organizations to problems uncovered.

KAZAKH TRADE UNITS MOBILIZE TO INCREASE MEAT SUPPLIES

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 1, January 1982 carries on pages 54-60 a 3,000-word article by S. Tanekeyev, chairman of the Board of the KaSSR Union of Consumers' Societies, on the role of his union in increasing supplies of meat and other food stuffs to consumers.

The great plan for the economic and social development of our nation during the 11th Five-Year Plan and in the period up until 1990 outlined by the 26th Congress of the CPSU assigns important duties to consumers' societies. They are called upon to strengthen the material and technical base of trade, bring trade as close as possible to the consumer, create a net of specialized stores and manage them with enhanced standardization.

Consumers' societies are also assigned important roles in the procurement of agricultural products, particularly surplus products offered by kolkhoz workers, and in the development of private enterprises supplying consumer goods and of subkolkhoz production units. These latter functions received special emphasis at the November Plenum of the CC CPSU in terms of the current food procurement program of the party.

Goals set for the current 5-year plan call for a 1.7 fold increase, to 27,300 tons a year, of meat procurement by the last year of the current plan period. To meet these goals consumers' societies will not only establish active contact with the people to draw upon surplus resources but will also drastically expand the organizational structure for procuring, processing and retailing meat and other food products purchased from the people. Some 900 standard receiving and procurement points will be built and 350 seasonal stores. New meat and other food processing plants will have to be taken in hand as well if available resources are to be exploited fully.

Among problem areas hindering plan fulfillments are construction lags, lack of initiative on the part of some organizations, a still weakly developed receiving and procurement net, equipment, particularly motor vehicle, shortage, deficient fodder resources, a lack of adequate pasture and shortage of certain key cadres including veterinarians and zoo-technicians. Tanekeyev underscores, however, that efforts by Kazakh consumer societies to increase food production are, by and large, proving successful and help is being found in unexpected quarters. Hay is being grown in city dumps and garbage and byproducts of the beer and other industries are being used as fodder, reducing production costs. These successes, in turn, are the result of careful management, hard work and rapid growth in auxiliary enterprises.

PAPER URGES TIMELY COMPLETION OF ALMA-ATA CANAL

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 28 March 1982 carries on page 4 a 1,700-word article by B. Abdullin on the new, great Alma-Ata Canal.

Construction of the Bartoghay Dam and water reservoir on the upper Shelek has been going on for only 2 years. Trees have been removed and stumps burned and water has begun to collect in the unfinished reservoir. When completed, the Bartoghay Reservoir will have an average depth of 60 meters, will cover an area of 14 square kilometers and will hold 350 million cubic meters of water. Its tunnels (three in all, including one for reservoir water circulation) will deliver 70 cubic meters of water a second into the great Alma-Ata Canal. Some 19 million rubles will be spent on the dam and the first section will be completed by July. It will eventually be 68 meters high and 300 meters wide. Abdullin stresses the enormity of the task of constructing what will be the most complex water project in the KaSSR and the special difficulties that must be overcome. These difficulties severely tax the limits of equipment performance. He notes, however, the rapid and heroic pace with which the work is advancing and regular overfulfillment of plan goals.

When completed, the new canal will permit the full utilization of many marginal fields in Alma-Atinskaya Oblast. In particular, construction of the canal will increase water supply to 115,000 hectares of irrigated lands in the rayon of Shelek, Engbekshiqazaq, Talghar and Ile. The water will enhance productivity, aid in the development of agricultural specialization and make possible the establishment of new enterprises. These will primarily be animal husbandry enterprises producing milk and meat but specialized enterprises producing just milk and vegetables will be created as well. Such measures will greatly improve food supply to the population of the republic's capital.

The first section of the canal will be 141 kilometers long and areas situated along the canal in Alma-Ata City will fill recreational needs. Abdullin calls for all stops to be pulled out to complete this new canal, the object of special party and government attention.

NEW OIL FIELDS UNDER DEVELOPMENT IN AKTYUBINSKAYA OBLAST

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 19 March 1982 carries on page 2 a 900-word article by T. Ysqaqov on new oil fields being developed at Zhangazhol in Aktyubinskaya Oblast.

Zhangazhol was an utterly desolate area until the middle 1970's when oil exploration began. Now, as a result of major efforts in this direction, a major oil field is under development there, part of a larger Aktyubinskaya Oblast oil production complex.

The "Basic Directions for the Development of the People's Economy and Culture During the Years 1981-85 and in the Period Until 1990" call for enhanced emphasis on oil and gas exploration. In accordance with this goal the CC of the Kazakhstan CP has called for exploitation of the reserves at Zhangazhol, Tengis and Qarashyghanaq in order to create a new Aktyubinskaya oil production region in Western Kazakhstan. The Zhangazhol field is the richest of them with perhaps 10-20 million tons of reserves. Deliveries will begin during the second half of the current year with major exploration efforts to determine the total size of the field still continuing.

CAMPAIGN PROMOTION TO CONSERVE RAW MATERIAL, FUEL, ENERGY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 March 1982 carries on page 1 a 1,000-word boldface editorial on the current campaign to encourage the efficient use and conservation of raw materials, fuels, energy and other resources. The CC CPSU and USSR Council of Ministers resolution "On Intensification of Efforts To Use Efficiently and Conserve Raw Materials, Fuel, Energy and Other Material Resources" set forth specific measures for the broad development of a mass movement to achieve this goal. The editorial describes what is being done in the KaSSR as part of this movement, both in terms of propaganda and on the production lines and in the factories, plants and mines. The editorial seems particularly concerned with conservation of fuel and energy.

PRESS, MEDIA MUST ACTIVELY PROPAGANDIZE FIVE-YEAR PLAN GOALS

[Editorial Report] Alma-Ata PARTINAYA ZHIZN' KAZAKHSTANA in Russian No 1, January 1982 carries on pages 84-90 a 3,100-word article by S. Bayzhanov, chief of the administration of the Kazakhstan Journalists' Union, on the role of the press and media in promoting fulfillment of 5-year plan goals.

As is well known, special attention was devoted at the 26th Congress of the CPSU to the development of the territorial-production complexes. Among them is the Mangyshlak Territorial-Production Complex where output of primary petroleum refinate is to increase more than two-fold as a result of exploration and production efforts concentrated on the Buzachi Peninsula.

Part of the press/media propaganda effort with regard to the Mangyshlak Territorial Production Complex was a special meeting of press and media workers held to help them focus their efforts and to impart information. Meetings of this sort have been going on for several years and are a [illegible]dition that should be continued. They have also been held in connec[illegible]uction at Karatav and Dzhambul, associated with the meetings, [illegible]escents" by groups of journalists and media workers at the actual [illegible] of production, last October at Mangyshlak for example.

Such meetings and their associated on-the-spot inspections inform journalists and bring them into face-to-face contact with production workers. One result has been an outpouring of articles on the complexes. Such propaganda campaigns make the territorial-production complexes into centers of popular attention and ease worker recruitment problems. They also encourage active cooperation [illegible] interested agencies and organizations and a coordinated effort. Propaganda campaigns also aid in problem solving.

Bayzhanov reviews some of the major propaganda themes for the current 5-year plan and the role of the press and media in promoting them. He stresses the importance of the press and media in advancing innovations and suggestions, in exposing deficiencies, encouraging official responses to problems uncovered and in promoting socialist competition. He ends by calling for warm, enthusiastic and humanistic writing that will encourage readers.

NEW BOOK RECONSTRUCTS EURASIAN PAST OF KAZAKHS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 19 March 1982 carries on page 11 a 1,300-word review by Myzabek Duysenov of A. Seydimbekov's new book "Kunggir-Kunggir Kumbezder" (The Dim Outlines of the Past), Zhalyn Press, 1981. The review is published as part of a regular series on new books.

Like those of the other national republics, the economy science, culture and literature of the Kazakh nationality have entered a brilliant period of development. Today we can contemplate what the future will bring but we can also deeply know and understand the past. A. Saydimbekov's book "Kunggir-Kunggir Kumbezder" is one evidence of the latter capacity.

To understand where Kazakh culture is headed we must look at its roots, at the past. This past is the focus of Saydimbekov's book which seeks to evaluate the rich source material documenting the Kazakh past and the past of their ancestors, not only written sources in a variety of Eastern and Western languages, but also archaeological data, Kazakh toponyms, legends, art, music and other sources to understand the origins and character of Kazakh culture.

Saydimbekov begins his account in the second to first millenium B.C. with the origins of nomadic culture which he characterizes as one of the many distinct varieties of human experience. He castigates those, moreover, who ignore the ancient nomads to write history strictly from the standpoint of the sedentary cultures.

Saydimbekov shows how nomadic culture quickly assumed common Eurasian characteristics indicative of remarkable cultural interactions over tremendous distances.

He evaluates the dominance of these common Eurasian elements in Kazakh life down to the present and the many survivals of them, the Kazakh bard tradition, for example, in the Kazakh culture of the present day.

ANCIENT KAZAKH MOUNDS SUFFER SERIOUS DAMAGE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 26 March 1982 carries on page 11 a 1,100-word article by Tangirberger Mamiev on various ancient mounds located along the Syr-Darya and the need to prevent damage to them. The article is published under the regular rubric "A Journey Into the Past."

The rayon located along the Syr-Darya are dotted with large and small mounds called "Asar." Ignorant of the historical importance, local people often assault them with earth moving equipment, thus destroying a valuable cultural heritage.

Mamiev reveals the true nature of these mounds, which date from approximately the third century B.C. to the third century A.D., and shows, in a discussion with kazakh archaeologists, their importance for studying the past. Most seem to be ruins of the fortifications of the ancient se-entary societies of the region and contain a variety of archaeological artifacts and ruined buildings. He calls for efforts to make local people fully aware of their value.

RENAISSANCE OF TRADITIONAL INSTRUMENTS IN NEW SOCIALIST CULTURE PRAISED

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 26 March 1982 carries on page 13 a 1,200-word article by Bolat Sarybaev entitled "Once Again on Traditional Instruments."

During 1979 Sarybaev published a critical article in QAZAQ ADEBIETI on the then growing interest in Uazakh traditional musical instruments. His criticisms were later answered in the same journal by Shamghon Qazhyghaliev, chief director of the Qurmanghazy imeni Academic Orchestra of People's Instruments.

In a new article Sarybaev admits his errors and notes the great success that has attended the creation of orchestras and ensembles of Kazakh traditional instruments in recent years. He admits that many of the problems he foresaw in 1979 have turned out not to be problems at all.

He seems to warn, however, from going too far and calls for attention to the special characteristics of Kazakh instruments which are not, after all, Western instruments, and cannot be used in modern orchestras in quite the same manner. Sarybaev concludes, however, that use of such instruments in modern orchestras is by no means an anachronism and can make a contribution to the development of Kazakh socialist culture.

COMMENTATOR LAMENTS DESTRUCTION OF ESIL RIVER

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 20 March 1982 carries on page 3 a 1,200-word article by M. Bizharov and A. Bayzhanov on destruction of the Esil River and its natural environment due to pollution and lack of control over water use.

The Esil River runs for some 350 kilometers in Turbayskaya Oblast and supplies water to enterprises in four rayon including several large industrial establishments. The waters of the Esil thus have great economic importance. There has been considerable change in the character of river waters and river flow in recent years.

Bizhanov and Bayrhonov examine in detail the growing pollution of Esil River waters and problems due to unrestricted water use as reflected by numerous, often purposeless dams. Most of the pollution is from livestock pastured too close to the river or its tributaries but industrial discharges are a problem area as well. In some localities river ice is caked with animal excrement that kills fish and makes the water unfit to drink. Industrial pollutants have resulted in the destruction of plant and animal life along broad stretches of river.

Throughout their article Bizhanov and Bayrhanov emphasize lack of systematic planning and misuse of water resources as the key to the problem. One major tributary of the Esil, for example, has been dammed thus reducing flow to the Esil but the water thus accumulated is utilized only to wash machinery, some local units, they admit, do reap benefits from their unsystematic use of river water, but the overall harm to the total river system environment far outweighs these individual benefits and it is this that is resulting in the destruction of the river ecosystem.

NEED TO IMPROVE IDEOLOGICAL WORK IN KIRGHIZ PARTY CITED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 3, March 1982 pages 3 to 9 carries an unsigned lead article of 2,900 words on the need to increase the effectiveness of the ideological and educational efforts of KiCP members and nonparty activists. While most of the article is not specific in its criticisms or recommendations, certain party organizations in Talasskaya Oblast, Tokmak city, and the rayons of Alamedinskiy, Sokulukskiy, Issyk-Atinskiy, Keminskiy, and Kara-Suyskiy are singled out for displaying a too formal approach to ideological work. According to the article, it would be possible to list many examples of indiscipline in realizing the state plans, including instances in which leaders have tried to introduce emendations into plans in order to cover up the true situation. In fact, at the end of last year the KiCP Central Committee was forced to call to party accountability the Minister of Construction Materials Industry Bezmertnyy and the First Deputy of Local Industry Balbakova for obstructing the fulfillment of the plans in their respective areas. It was also stated that in carrying out tasks "it is necessary to keep in mind a number of objective factors complicating the economic development of the country in the eighties. This demands heightening the degree of organization and being able to overcome the difficulties that appear."

KIRGHIZ PARTY STRUCTURE DETAILED

[Editorial Report] Frunze KOMMUNIST in Kirghiz No 3, March 1982 carries a 1,500-word article on pages 29 to 42 containing 32 tables of statistical information on the structure and composition of the Communist Party of Kirghizia. Compiled by the Organizational Party Work Department of the KiCP Central Committee, the tables include a breakdown of Kirghiz SSR communists according to geographical location, occupation type, gender, Komsomol membership, educational background, nationality, age-group, length of service and place of work. There are also tables on the structure of the primary and elected party organizations, as well as some characteristics of the cadres of the leading organizations. According to the table on nationality structure, of the 126,402 party members and candidate members as of 1 January 1981, ethnic Kirghiz number 55,928 or 44.2 percent of the total, Russians 41,268 or 32.9 percent, Ukrainians 8,560 or 6.8 percent, Uzbeks 8,346 or 6.6 percent, and so on. Only nationalities of Union Republic status are listed separately. The percentage of women in the party organization as a whole is 26.7 percent, while women on the Central Committee, the obkoms, and the auditing commission constitute 25.2 percent of the total. But in the last 5-year period, women made up 41.2 percent of those accepted into candidacy, as compared to 22.5 percent in 1961-1965.

PARTY ASKS VILLAGE ELDERS TO HANDLE SOCIAL PROBLEMS

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 11 March 1982 p 2 carries a 1,250-word article by N. Korbaeva, secretary of Yoloten Rayon, on recent ideological achievements. "Along with taking pride in earned achievements and propagandizing love of fatherland, fraternal friendship and the idea of mutual help, the Council of Elders forbade useless habits like parasitism, greed, family disorders, drunkenness and hooliganism as well as harmful remnants of the past; they helped also in implementing new traditions." Nevertheless, "sometimes, there are Komsomol weddings in which bride-price payments are made surreptitiously, and thus the way is open to antisocial manifestations." In this context, the Council of Elders is very important, especially when "forbidding harmful remnants of the past and participating in new traditions."

ATHEISM LECTURES INCREASE IN TAGTABAZAR RAYON

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 20 March 1982 p 2 carries a 1,000-word article by Ya. Bayramov, secretary of the Tagtabazar Rayon, on the increase in ideological work directed at "the unremitting struggle against harmful remnants of the past, the implanting of new traditions and giving the workers an atheistic education." To this end, rural intelligentsia, agitators and political informers "are holding effective talks with the religious believers among the population." In fact, "whereas roughly 27 lectures were given on atheistic education in the rayon in 1979, in the course of the last year this number reached 359."

SERIOUS SHORTCOMINGS AMONG RURAL PEOPLES' CONTROL COMMITTEES

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 11 March 1982 p 1 carries a 1,000-word lead editorial on "basic shortcomings in the work of a group of peoples' control committees in the countryside." The problem is that "they have no influence in increasing planting preparations, raising herd productivity and effectively resolving economic and social questions." Rayons affected are: Garabekavul, Tejen, Sakarchaga, Garrygala and Lenin.

ZOOLOGY INSTITUTE MARKS QUARTER CENTURY

[Editorial Report] Ashkabad SOVET TURKMENISTANY in Turkmen 18 March 1982 p 4 carries a 1,000-word article by T. Tokgaev, deputy director for Scientific Research at the TuSSR Academy of Science Institute of Zoology, noting the institute's achievements over the last 25 years. One of the problems it is now engaged in combating is: "on the steppes and hills harmful rodents--marmots,

LITERARY CRITICISM TOO PASSIVE

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 5 March 1982 pp 6-7 carries a 3,300-word discussion on ways to improve the process of literary criticism. The primary shortcoming is perceived to be the "passivity" of many critics.

'KARAKUMGIDSTROY' RECEIVES 1981 'CHALLENGE RED BANNER'

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 14 March 1982 p 1 carries a 100-word Turkmeninform dispatch announcing that the 'Karakumgidstroy' Trust has received the 1981 "Challenge Red Banner" of the CC CPSU, the USSR Council of Ministers, the Komsomol and the Council of Trade Unions. Present at the celebration which took place in Mary was USSR minister for irrigation and water resources, I.F. Boyko.

MODERN AFGHANI WRITERS TRANSLATED INTO TURKMEN

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 26 March 1982 pp 10-11 carries an Afghan short story by Asadulla Khabyp and poetry by Ubayt Makhak, Abdurrauf Binava and Dyzari. In the introduction to these works it is noted that "our books and daily press are read with enthusiasm in Afghanistan. Thus, our literary cooperation has been constantly strengthened in the recent period.

KHOREZM OBKOM SECRETARY APPROVES NEW, REPROVES OLD TRADITIONS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 16 March 1982 carries on page 2 a 1,300-word article by S. Kurbanov, secretary of the Khorezm Obkom, titled "First Fruits of Maturity." This article deals with the promotion of new Soviet traditions in Khorezm Oblast. Khurbanov cites the recent marking of Revolutionary Traditions Day on 2 February to commemorate the initiation of the Khorezm People's Revolution in 1920. Similarly, discussions and meetings are held to commemorate Victory Day and to mark Soviet Army and Navy Day which express the people's patriotism, friendship and loyalty to military traditions. New traditions such as friendship meetings and socialist competition are also taking root. Party, soviet and other organizations must encourage and support these new traditions, but must at the same time not be indifferent toward harmful vestiges of the past, and must wage an unrelenting struggle against negative traditions and religious customs. They cannot be sympathetic or liberal towards those who amass personal wealth, and must strike a blow against sicknesses like parasitism, theft of the people's property, disrespect toward family, waste and extravagance at weddings, and discrimination towards women. Kurbanov concludes that the force of educational work and atheistic propaganda must be directed toward eradicating customs that are alien to Soviet society.

UZBEK KOMSOMOL CHIEF REVIEWS ACTIVITIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 30 March 1982 carries on page 2 a 1,500-word article by B. Allamuradov, first secretary of the Central Committee of the Uzbek Komsomol, entitled "Constructive Youth." The article appears in conjunction with the 22d Congress of the Uzbekistan LKSM that began on 30 March. Allamuradov notes that Uzbek Komsomol youths are making great contributions to the economic development of the country, particularly in the Nonchernozem Zone, but also on seven All-Union, 34 republic, and 246 oblast, city and rayon construction projects. Altogether, some 54,000 Uzbek Komsomol volunteers were sent to work on important economic projects during the period between congresses. Brezhnev praised their contribution in his recent speech in Tashkent. Uzbek Komsomols are also making a great contribution to implementing the party's agrarian program in Uzbekistan. Their role was especially great in the attainment of a record crop of 1.6 million tons of corn in 1981. Moreover, one of every two livestock raising complexes being built or reconstructed is a Komsomol project. During the last 4 years, some 37,000 youths were sent to work on livestock raising farms and complexes on Komsomol passes. The work of educating youths in a military-patriotic spirit, raising their technical and vocational skills, and expanding their propaganda activities is also being improved. Allamuradov concludes with the statistic that the present number of republic Komsomols is 3 million, having grown by 1.85 million in the last 4 years.

UZBEK SSR PROSECUTOR'S OFFICE INVESTIGATES CONSUMER, HEALTH MINISTRIES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 March 1982 carries on page 3 a 400-word report titled "At the Uzbek SSR Prosecutor's Office." The report states that the Prosecutor's Office has conducted an investigation of how the UzSSR Ministry of Consumer Services has been observing regulations aimed at reducing ineconomy and theft of state property. The investigation revealed that some of the ministry's unions, trusts, administrations, enterprises and organizations have not fully complied with measures adopted by the USSR Council of Ministers to deal with these problems. Before making its results public, the Prosecutor's Office made a presentation to the ministry which was reviewed at an enlarged assembly of the collegium attended by leaders, chief accountants, directors and legal consultants of oblast administrations, industrial unions and trusts. As a result, a number of individuals were penalized by ministry order. The report further states that the Prosecutor's Office conducted an investigation of the UzSSR Ministry of Health and subordinate organs to determine how they are carrying out the 12 April 1968 decree of the USSR Supreme Soviet "On reviewing citizens' proposals, appeals, and complaints." The Prosecutor's Office presented its findings of substandard compliance with the decree to the ministry, and recommended measures and penalties. An enlarged assembly of the collegium reviewed the case and took appropriate steps against A. Akbarov, director of the Kashkadarya Oblast Health, M. Usmonkhojayev, chief of the Main Administration of Epidemiology of the Ministry of Health, R. Yagudin, head of the Department of Control and Revision of Bukhara Oblast, and others.

KASHKADARYA OBLAST CONSTRUCTION BOSS CONVICTED OF EMBEZZLEMENT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 March 1982 carries on page 3 a 900-word article by Il Mamadaliyev, UzSSR assistant prosecutor and senior legal consultant, titled "Sharing." The article deals with the criminal activities of Bozor Normurodov, head of the Repair and Construction Administration No 127 in Kashkadarya Oblast since 1977, and of a group of people he assembled under him. Normurodov's method was to claim that his administration had completed work that remained unfinished and then to appropriate funds for work above plan assignments. Each month, he would enter the names of members of his group on payroll registers and the latter would be paid for ostensibly having fulfilled the increased plans. Actually, this money went into their pockets. As of October 1979, nearly 155,000 rubles of state money had been dispensed to those on these phony registers, and another 145,000 rubles went to Normurodov for construction of a dacha for the Obispolkom and a children's hospital, although these were never completed. The Oblast court sentenced Normurodov to 15 years in prison, and two members of his group got 10 year sentences. During the trial, Normurodov claimed he had never misappropriated state funds, but was only guilty of bad judgment in selection of personnel. He claimed to learn of their crimes only at the time of his interrogation. Other members of the group also pleaded ignorance of the crimes, and one testified that the payments made to her were only incentive payments. However, the article concludes, the evidence against them was overwhelming, and their convictions were upheld by the UzSSR Supreme Court.

UZBEK OFFICIAL AMASSES A QUARTER MILLION RUBLES IN REGIONAL SCANDAL

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 March 1982 carries on page 4 a 1,300-word article by newspaper correspondent N. Mirzayev titled "The Poverty of Riches." The article deals with the sumptuous lifestyle of Boboqul Umurzoqov, chairman of the Consumer Society in Zaamin Rayon of Dzhizak Oblast. Umurzoqov had built a 19-room home on a 2,902 square meter plot for his family of 6 and 2 other homes for his sons-in-law. His own home was furnished with some 35 rugs, complete sets of furniture manufactured abroad, sets of crystal glasses and services, and other expensive furnishings. He bought two cars for himself and a third for his son. Over the last 4 years, he has spent 233,000 rubles on these personal items. The correspondent claims that Umurzoqov accumulated this money through fraud and violations of state discipline and trade laws, that many in the region cooperated with him and many said nothing, and that even the local raykom remained silent about his dealings. Mirzayev reports that the Dzhizak Obkom Bureau recently reviewed the results of an investigation of Umurzoqov and decided to expel him from the party and remove him from his post. In addition, they severely disciplined the raykom first and second secretaries and the rayon consumer society party organization secretary. Finally, they assigned investigative organs to take appropriate steps against Umurzoqov.

KOLKHOZ CHAIRMEN WARNED AGAINST RIGIDITY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 March 1982 carries on page 1 a 1,200-word double-column lead editorial titled "Village Father." This editorial is addressed to the 846 economic leaders of collective farms in Uzbekistan. Just as the party shows its concern for their production, cultural, and psychological problems, kolkhoz chairmen must also care about the housing and living needs and growing cultural demands of farm workers. At a time when cultivation of crops is increasingly being put on an industrial footing and the growing consumer demand for food is requiring higher productivity and quality, kolkhoz chairmen must keep current on technical advances and innovations that promote these goals. They must also be able to work closely with cadres, whose level of talent and professional training is increasingly higher. Only those economic leaders who can work as one with members of their collective and with party organizations and government administrations will be successful. However, the editorial points out, there are a number of Uzbek kolkhoz chairmen who think only of themselves, who suppose that they know everything, and delude themselves into thinking they grasp all the secrets of economic management. As a consequence, they usually take action without considering the opinions of others, and thereby stifle initiative, diminish responsibility, and foster disconnectedness. The editorial stresses that no leadership position, including the position of kolkhoz chairman, is an appointment for life nor a patrimony. "Any leader who falls behind the demand of the times will--if not today, then tomorrow--be forced to vacate his seat." The editorial concludes with a few examples of kolkhoz chairmen who have been removed for one or more of the cited reasons.

BLEAK OUTLOOK FOR MAJOR RECLAMATION PROJECT IN KARAKALPAKISTAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 March 1982 carries on page 2 a 1,900-word article by newspaper special correspondents B. Yuspov, R. Yeshimbetov, and J. Sadullayev, titled "Achievements and Problems." This article deals with successes and problems encountered in the course of a major program undertaken since 1974 to reclaim steppe lands in Ellikkala, Beruniy and Turtkul Rayons of the southern regions of the Karakalpak ASSR. Since its inception under the administration of the UzSSR Ministry of Land Reclamation and Water Resources, some 240 million rubles have been invested in the project, resulting in the reclamation of 27,000 hectares of land for cotton cultivation and 106,300 square meters of housing for steppe workers. Over the course of this "assault on the steppe," a number of problems have arisen in reclamation of the land and diversion of sufficient water from the Amudarya River. For example, the Pakhtaarna Canal carries so little water to farms in Ellikkala Rayon that cotton grown there does not develop at the optimal time and people are moving out because they do not have enough water for gardens and trees. The construction trust working in this rayon is slated to reclaim 1,500-2,000 ha per year during the 11th Five-Year Plan, but because its equipment was purchased 7 to 8 years ago it is able to reclaim only 500-600 ha per year. Canals must be widened and deepened and the capability of pumping stations must be increased. In Turtkul Rayon, waterwork construction problems are especially serious. Because the project plan is not being rigorously observed, irrigation and drainage ditches are not being built in accordance with standards and are not being properly used. Fields are getting swamped and resalinated, with the result that thousands of hectares of newly reclaimed lands here and elsewhere are useless. Water problems will become ever more acute as more land is reclaimed. The major cause of construction lags is that organizations involved in the project suffer from a shortage of workers. The article deals with all these questions in considerable detail, and then turns to a final problem, namely, the lack of transport, highway, trade, telephone and housing services in many of the newly created farms.

GISSARAK RESERVOIR CONSTRUCTION DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 28 March 1982 carries on page 2 a 900-word article by V. Sergeyev, correspondent of the Press Center of the UzSSR Ministry of Land Reclamation and Water Resources, titled "Complying With an Obligation." This article reports on the progress of construction of the Gissarak Reservoir near Miraki Settlement in Shakhrisabz Rayon of Kashkadarma Oblast. The reservoir is being built to hold 170 million cubic meters of water with the goal of irrigating 12,000 ha and improving the water supply to another 43,000 ha of land in Shakhrisabz and Kitab Rayons. These lands will yield 50,000 tons of cotton a year. Workers on the project have pledged to complete the dam during 1982. Presently, it has reached 49 of its designed 140 meters heighth and backs up 20 million cubic meters of water that is already being used in the fields.

REVIEW OF ARAL SEA BOOK REFERS TO SIBERIAN RIVER DIVERSION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 4 March 1982 carries on page 3 a 400-word review of Drs of Economics E. Akramov and P. Ibatullin's booklet "The Aral Sea Must Survive" (Tashkent: "Znaniye," 1981, in Uzbek) by A. Abdurahmonov titled "The Eternally Billowing Aral Sea." The review begins with the observation that until the 1960's, the Amudarya River brought 80 kilometers of water and the Syrdarya River 40 kilometers of water into the Aral Sea. Recently, however, due to the rapid development of agriculture and the building of reservoirs, the Aral Sea's share of water from these rivers has declined, with the result that its level dropped 6 meters during 1961-1977. With this has arisen the problem of the survival of the Aral Sea, to which a large literature, including the present book, has been devoted. The review goes on to cite some interesting facts about the Aral Sea's behavior, including the fact that its level is linked with that of the Caspian Sea: when it rises, the Caspian Sea falls, and vice-versa. This phenomenon so impressed one scholar that he published a book in Kiev in 1900 which proposed changing the course of Siberian rivers and creating a huge water basin comprising the Caspian and Aral Seas. The review concludes that the book also deals with republic scholars who are helping draft the plan for the diversion of waters from Siberian rivers to the Aral Sea, a plan which expresses the concern of the party for its preservation.

TURNOVER OF YOUNG UZBEK WORKERS ASCRIBED TO INDIFFERENCE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 March 1982 carries on page 4 a 1,100-word article by Prof Dr of History R. Jamaniyozov, rector of the Khorezm State Pedinstitute imeni Lenin, titled "Teacher, Pupil, Debt." The article focuses on the obligations which senior or established workers have in regard to accepting, guiding, and integrating young workers in the labor collective. The author acknowledges the existence of shortages of lathe operators, metal workers, and welders in industry, and of the great need for builders in the construction industry. In seeking to explain why young people coming out of vocational schools and entering production leave their jobs after a while, Jamaniyozov traces the cause to neglect and indifference on the part of senior workers toward these novitiates. Moreover, arrogance, rudeness, pettiness, and irresponsibility do nothing to instill respect toward the working class. And a senior worker who cannot control his drinking has no chance of turning a young worker away from this path. The author concludes that young workers need the fatherly and practical help of senior workers. Tashkent SOVET OZBEKISTONI in Uzbek 16 March 1982 carries on page 1 a 400-word editorial column titled "The Collective and the Individual." The editorial stresses that labor collectives must respect the achievements of individuals, and points out that recent letters complian about labor collectives that are indifferent to the fate of young specialists fresh out of college and teckhnikums. It calls on party organizations to show more sensitivity and principled behavior in training the young generation of the working class.

NAVOI GRES TERMED FULLY OPERATIONAL

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 March 1982 carries on page 1 a 600-word article by G. Gayvoronskiy, director of the Navoi GRES, and P. Bichikhin, chief engineer, titled "Navoi Sun." The article begins with the statement that the Navoi GRES, which supplies the population and industry of Navoi City with energy, is now fully operational. The GRES, whose foundation on the bank of the Zarafshan River was begun in January 1960, is outfitted with the most modern equipment and operated by natural gas. It produces 6

6 billion kilowatt hours of power. The bulk of the article is devoted to singling out brigades and workers that overachieved during its construction.

SOLAR ENERGY HEATS BUILDING IN NAMANGAN CITY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 March 1982 carries on page 4 a brief bit of information that a two-storied children's combine for 320 children has begun operation in Sovet Rayon of Namangan City. Solar batteries [batareya] on top of the structure will store the heat. It is the first such combine in Fergana Valley.

TASHKENT TELETOWER SAID READY TO BEGIN TRANSMITTING

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 March 1982 carries on page 4 a 700-word article by Sh. Mirhabibov titled "Red Banner on the Tower." The article carries the announcement that workers installed the last block with the flagstaff on the Tashkent television tower on 28 February. The 375 meter high tower can be seen from 100 kilometers around the capital. It is built on a half hectare foundation with more than 10,000 cubic meters concrete and reinforced concrete. Its 6,000 tons of steel construction is supported on three legs and is designed to be elastic to protect it against the strongest earthquakes and winds: its tip can withstand a bend of 10 meters and return to its original position. Five television channels and four ultra short wave antennas have been installed on the tower, which will soon transmit its first signals.

UZBEK TEACHER USES LENIN'S 'MATERIALISM' TO SLAM IDEALISM, RELIGION

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 March 1982 carries on page 2 a 1,200-word article by Z. Isamhamedov, docent and teacher at Tashkent Agricultural Institute, titled "A Work of Militant Philosophy." The article develops several themes of Lenin's "On the Importance of Militant Materialism," in conjunction with the 60th anniversary of its publication. Lenin's work was written on the eve of the 11th congress as a criticism of bourgeois ideology and an appeal to Marxists to go on the offensive in support of historical materialism. Isamhamedov cites in boldface passages from the work concerning idealism and religion. Lenin called for heightening scientific atheism work among the masses, one based on historical materialism. He argued that religion is merely an unmasked manifestation of idealism, and that both were powerful weapons in the hands of exploitative classes. They could be exposed only through scientific and materialistic arguments. Isamhamedov states that today, as in Lenin's time, reactionary bourgeois philosophers continue to defend capitalist slavery and to reach reactionary antiscientific conclusions from scientific and technological advances. Such idealistic and metaphysical dogmas were already exposed by Lenin, who showed that the attempt to reconcile science and religion and to draw false scientific conclusions from scientific achievements is peculiar to the philosophy of imperialism. Today, imperialist ideologs are trying to spread religious ignorance, egotism, nationalism, and racism among peoples, and to whitewash the political terrorism and aggressiveness of imperialism. Isamhamedov ends the article with a call for even more intensive development of scientific research and furthering of the influence of socialist ideology.

UZBEK DEPUTY MINISTER DISCUSSES CONSUMER SERVICES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 21 March 1982 carries on page 3 a 600-word article by N. Dzhumayeva, UzSSR deputy minister for Consumer Services, titled "On the Path of Prosperity." This article is published in conjunction with Housing, Community, and Consumer Services Workers Day. Ozhumayeva notes that 1981 was a year which the ministry devoted to raising the quality of services and developing the field's administrative structure. New tasks have been placed before the ministry for 1982 in the areas of increasing productivity and improving service quality. The plan calls for 17.4 million rubles capital construction to strengthen the material and technical base of services, including construction and reconstruction of 46 enterprises. This will result in 306.3 million rubles in service volume, including 145.9 million in rural areas. Specialization, centralization and strengthening of enterprises will continue. Dzhumayeva states that improving services to rural workers will demand a wider use of the internal cooperative system. In 1982, the volume of services rendered through the cooperative system is slated to reach 18.4 million rubles. Finally, she refers to efforts being made to improve the professional skills of cadres. During 1982, some 1,250 workers will obtain a related skill and 650 employees will receive advanced training.

UZBEK MINISTER DISCUSSES EDUCATIONAL RESULTS, TASKS IN SOCIAL SCIENCES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 March 1982 carries on page 2 an 1,800-word article by S. Pulatov, UzSSR minister of higher and secondary specialized education, titled "Lifegiving Spring." The article is devoted to the development of the social sciences and the training of sociologists in Uzbekistan. Pulatov describes recent developments in these areas, including the opening of a department of philosophy and economics at Tashkent State University and expansion of studies on the history of the CPSU within history departments of universities and institutes. Further, cooperation between scholars of the Academy of Sciences and sociologists is increasing, and scientific research on important problems of Marxist-Leninist theory is expanding. Bulatov then turns to the question of atheistic education in social science studies, and states that more work must be done in area of "rebuilding atheistic work." Some social science departments are slack in this respect and do little to eliminate abstraction, dogmatism, and formalism from their courses. They also devote scant attention to the quality of lectures, and too frequently assign them to young and inexperienced assistants. As a result, lessons are often superficial and incomprehensible, and modern bourgeois theory, reformism, and revisionism, are not convincingly criticized. Finally, Pulatov states that improving the training of social science teachers remains one of the most urgent problems in this field.

UZBEK TEACHER CALLS RUSSIAN LANGUAGE OF UNIFICATION

[Editorial report] Tashkent SOVET OZBEKISTONI in Uzbek 22 March 1982 carries on page 2 a 200-word statement by N. Shodiyeva, Russian language teacher in secondary school No 17 in Bukhara City, under the "We Are the Soviet People" rubric titled "Fusing Heart to Heart." In response to the question of what qualities she considers are the basis of the greatness of the Soviet people, Shodiyeva responds that one of these qualities is the mutual cooperation between all nationalities and subnationalities, which is made possible by knowledge of Lenin's language. She expresses her pride in having taught the "great and powerful language" for the last 25 years, and states: "The Russian language does not take the place of other national languages, but enriches them...I would not be in error if I called it the language of unification."

UZBEK PHILOLOGIST RAPS NEW ORTHOGRAPHY PROPOSALS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 5 and 12 March 1982 carries on pages 3 and 5 a 3,700-word two-part article by Prof Dr of Philology Shavkat Rahmatullayev titled "Recreation or Correction?" The article deals with the recently proposed orthographical changes that are claimed by their creators to be a "clarified variant" of the 1956 orthographical rules for the Uzbek literary language. Rahmatullayev rejects this claim, and through an extremely detailed criticism of the inconsistencies, contradictions, unclarities, and disorganization of the new proposal, reaches the conclusion that it has little to do with and is not really an improvement over the original. He points out that the compilers of the new proposal unnecessarily created the muddle by providing too much detail, and states that orthographical principles should not be written in textbook style, but in a correct, clear and concise style.

PUBLICATION OF UZBEK RUSSIAN LITERATURE DEPICTED AS LISTLESS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 5 March 1982 carries on page 7 a 400-word report by Yo. Khoajayev titled "Let's Create Artistically Sound Works." The report states that the Council for Russian Literature of the Uzbekistan Union of Writers recently held its regular annual meeting. The main speaker was S. Kulish, who reviewed Russian language works published in 1981. While the number and tirazh of these works increased, the fact remains that publishing houses printed the works of only eight Russian authors in 1981. Some 80 manuscripts are lying in the file cabinets of editorial offices awaiting review and editing. Kulish expressed his trust that Russian editors of publishing houses, especially of Gafur Gulyam Publishers, would eliminate these shortcomings.

UZBEK THEATER SOCIETY AIRS PROBLEMS AT 6TH CONGRESS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 5 March 1982 carries on pages 1 and 6 a 2,800-word report titled "Theatrical Art [Must Be Raised] to the Level the Age Demands." The report excerpts the speech made by Sora Ishanturayeva, chairman of the Uzbekistan Theater Society, at the 6th Congress of the Society which opened on 30 March. After reviewing some of the successes of the Uzbek theater, and noting that society membership has reached 2,065, Ishanturayeva turns to recurrent problems of dramatic themes and repertoire. She asks why no plays have reached the stage with industrial workers or land reclamation experts as their main characters, or that deal with the struggle for peace, the life of eastern peoples abroad, or with solidarity with peoples of the world. Further, in the between-congress period of 1977-1981, some 700 plays were staged, including 130-140 new works. Of this number, only 49 were written by Uzbek playwrights. Most experienced playwrights are treating historical and revolutionary themes instead of the great production and social problems of today. She complains that Russian theaters in the republic stage few plays by Uzbek authors; for example, the Gorkiy Theater put on only two plays by Uzbek playwrights in the last 5 years. Conversely, Uzbek theaters, especially those in Syrdarya and Surkhandarya Oblasts, provide little support for staging Russian language plays. Ishanturayeva touches on other problems, including the lack of adequate and qualitative coverage of theatrical productions in the press. Tashkent SOVET OZBEKISTONI in Uzbek 3 March 1982 carries on page 4 a 1,100-word article by Muhsin Qodirov, a member of the Presidium of the Uzbekistan Theater Society, titled "Repertoire and the Demand of the Age." Qodirov previews in this article all of the complaints and problems dealt with by Ishanturayeva at the 6th Congress.

RADIO LIBERTY UZBEK BROADCASTS MUST BE COUNTERACTED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 26 March 1982 carries on page 2 a 1,100-word article by Docent N. Qodirov titled "Sharp Weapon of the Party." This article appears in connection with the 80th anniversary of Lenin's "What Is To Be Done?", which argued against the "opportunism," or reluctance to accept party discipline, of the bourgeois intelligentsia. Qodirov points out that what Lenin had to say about bourgeois influence is relevant to the present day. He says that the aggressiveness of American imperialism requires a widescale struggle against such class enemies, and cites Radio Liberty, which broadcasts "the lies of our ideological opponents" in Uzbek, Kazakh, Kirghiz and other languages: "The goal of these broadcasts is to distract the minds of the Soviet people and to disrupt the ideology and practice of socialism and of the Leninist nationality policy of the CPSU." Qodirov cites the Decree of the CC CPSU "On further improving ideological, political, and indoctrinational work," with its provisions for countering Western propaganda. He warns that while developed socialism has been constructed and the socialist ideology reigns supreme, "there are still vestiges of bourgeois ideology impeding the acceleration of our movement toward communism." Every effort must be made in the fight against vestiges of the past, and against parasitism, bribery, speculation, and theft of socialist property. He concludes by confirming Lenin's concepts that the ideological center of the party must be the Central Committee and that party discipline must be strong as iron.

UZBEK WRITER DENIES EXISTENCE OF SEGREGATION IN USSR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 March 1982 carries on page 2 a 1,100-word article by the Uzbek writer Ibrahim Rahim titled "I Am a Citizen of Russia." Rahim states that he is an honorary citizen of the village of Troitskoye in Zhukov Rayon of Ivanovo Oblast of the RSFSR. This came about as a result of his participation of Troitskoye and its environs during the Great Patriotic War. However, Rahim had first gone to this area in the early 1920's as part of a group of Central Asians sent to learn trades in Ivanovo. He recalls that wherever the train stopped, people would crowd around when they saw Central Asians aboard and exchange gifts and friendship. Rahim remarks that this was one of many demonstrations that "there is no national or racial segregation in our country. Asians and Russians are of one body, one citizenship."

UZBEK HISTORIAN SAYS FORMERLY BACKWARD NATIONALITIES NOW EQUALS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 March 1982 carries on pages 2 and 3 a 2,200-word article by Prof Dr of History R. Nurullin titled "The Great Cooperation of Socialist Nationalities." This article is published in connection with the 60th anniversary of the formation of the USSR. Nurullin recalls that the 12th Congress of the RCP (b) was devoted to the nationality question. There, it was stressed that the elimination of inequality among peoples was possible only with the help of the Russian proletariat. Indeed, the 10th, 12th and subsequent congresses took every step to pull national republics, including Uzbekistan, out of their economic backwardness. A basic method of accomplishing this is that of gathering in the hands of the All-Union government the material resources of all republics and allocating them such that republics experience equal levels of economic development. Thanks to this principle and to the selfless help of the Russian people, Uzbekistan became an industrially advanced republic during the prewar 5-year plans. During collectivization, Russians made a great contribution because so many Russian workers were elected kolkhoz chairmen and party secretaries, and center regions consistently and paternally sent brigades of Russian workers to provide technical assistance to the machine tractor stations. The "formerly backward Uzbek people" bypassed capitalism and reached socialism in a very short time. Whereas in the beginning developed nationalities helped backward nationalities like the Uzbeks, today, in the period of mature socialism, there is mutual help and cooperation among all Soviet nationalities. Nurullin cites as an example the Uzbek working in the Nonchernozem Zone. In the course of the article, Nurullin cites figures relating to the economic and elite development of modern Uzbekistan.

CONCEPT OF BACKWARE REGIONS CONSIDERED OUTDATED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 7 March 1982 carries on page 1 a 1,000-word lead editorial titled "The One-Family Feeling." The editorial appears in connection with the 60th anniversary of the formation of the USSR. In its review of the many accomplishments of the USSR within the last 60 years, the editorial contrasted the strides Uzbekistan has made in economic development, passing "from primitive workshops to modern industries." It recalls that the nationalities and subnationalities of Uzbekistan were tempered in the struggle to build socialism, and states that the names of [Turkestani Bolsheviks] M.V. Frunze, V.V. Kuybyshev, G.K. Orzhonikidze, Ya.E. Rudzutak, and I.M. Vareykis, are also spoken with pride and respect in the republic. Thanks to the rapid development of industry and agriculture and to the flourishing of science and culture, the concept of backward border regions is a thing of the past, and today Soviet Uzbekistan is an equal among equals.

CB WARFARE PREPARATIONS IN U.S. DETAILED IN UZBEK COMMENTARY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 12 March 1982 carries on page 7 a 600-word commentary by F. Rahimov under the "Commentator's Pulpit" rubric titled "They Are Preparing for Chemical Warfare." Rahimov claims that the United States and NATO countries are preparing to wage chemical warfare. Stating that the U.S. Congress authorized $20 million to be used for construction of a plant to produce poisonous chemical gases in Pine Bluff, Arkansas, Rahimov also cites Pentagon plans to spend $1 billion to produce artillery shells loaded with chemicals during 1982-1983, and proposed spending of $1.5 billion for production of chemical and biological weapons in 1984. Further, the NEW YORK TIMES is cited to the effect that the Reagan administration has approved a plan for producing a new $6 billion chemical weapon. Rahimov claims that such weapons are clearly intended for use in Europe and other areas outside America. Quoting J. Wade in the ARMED FORCES JOURNAL about the destructive bent of the present American generation, Rahimov spurns Wade's claim that no chemical weapons have been produced in America since 1969, and cites the use of "Agent Orange" in Vietnam, and more recent cases: "Wade is also silent about the chemical bombs marked M-112 used by Afghani counter-revolutionaries that have fallen into the hands of ADR security organ workers. These bombs have the 'U.S.' initials on their backs. And of course it slips his memory that the United States is providing the Salvadoran junta with chemical weapons, with the result that thousands of peaceful inhabitants are dying."

UZBEK COMMENTATOR CLAIMS CHEMICAL WEAPONS USED IN SALVADOR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 March 1982 carries on page 3 an 800-word commentary by Candidate of History Yu. Yusuvaliyev titled "An Illogical Policy Ends Poorly." Yusuvaliyev devotes much of his commentary to the evolution of the present situation in Salvador. Nothing that the military junta which came to power in 1979 has pushed all leftwing National Patriotic Party members out of the government apparatus, he states that this and other repressive developments have taken place with the full support of the U.S. Government. Furthermore the United States continues to supply the junta with military aid economic aid, even though the junta uses nearly half this aid to buy military weapons, "including poisonous chemical arms." With this support, the junta launched a counteroffensive against liberation forces in 1981. When it failed, the army turned on the civilian population, murdering more than 30,000 people in the last 2 years. Nonetheless, Washington continues its support, and in November 1981, President Reagan authorized clandestine CIA operations in Cuba and Nicaragua. Yusuvaliyev concludes by saying that no matter what the U.S. imperialist circles try to do, they will be unable to squelch the struggle of the Salvadoran people for freedom, any more than they were successful in stamping out this movement in Cuba and Nicaragua.

UZBEK COMMENTATOR SUPPORTS DETENTE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 2 March 1982 carries on page 3 a 900-word commentary by T. Soliyev under the "Commentator's Pulpit" rubric in the world news section titled "The White House's Risky Steps." Soliyev begins his commentary with the statement that the policies of the Reagan administration have raised serious alarm among peaceloving peoples. During his first year in office, President Reagan implemented policies that increased tensions and crises in Asia, Africa, the Pacific and Indian Oceans, the Near and Middle East, Central America, the Caribbean, and the Persian Gulf. The American leader continues to support arms spending, as though there were no serious problems such as inflation and unemployment on which to spend this

Union of Writers. The group included the art scholar Sharif Salim, the poet Kanaan Ali, and the prose writer Khuluki Ali. Oktam Usmonov, a secretary of the board of the Uzbekistan Writers Union, spoke to the guests about recent activities and creative works. The Uzbek poet Erkin Vohidov spoke of his impressions gained on a trip to Syria in November 1981, as well as about the activities of the newly created journal YOSHLIK, of which he is the editor. The Syrian guests expressed their satisfaction with their visit, and later set off for a tour of the cultural and historical monuments in Samarkand.

GROWING UP AROUND ALCOHOL

[Editorial Report] Tashkent YASH LENINCHI in Uzbek 6 March 1982, p 4, 900 words. E. Losoto "Something To Think About: It's All a Matter of Will." Article about the problem of alcoholism and its roots in childhood. Author notes that even in nursery schools children play "host and guest" and pretend to offer each other drinks from empty wine or vodka bottles. Children observe parents who come home drunk and who offer toasts with beautiful words and then follow the toasts with drinks. Research indicates that in 22 percent of families with the father having an alcohol problem the children follow the example; in families with both parents with an alcohol problem, the figure rises to 45 percent. Teenagers sometimes also become accustomed to drinking at parties.

BUKHARA OBLAST SEMINAR ON ATHEISTIC TRAINING

[Editorial Report] Tashkent YASH LENINCHI in Uzbek 19 March 1982, p 1, 150 words. "Let's Increase the Effectiveness of Atheistic Training." A seminar-conference was recently held in Bukhara on improving atheistic propaganda. Participating in it were propaganda workers of oblast Komsomol organizations' Komsomol political study and economic education schools as well as secretaries of rayon and city Komsomol committees and directors of young atheist schools. The meeting was opened by the secretary of the Bukhara Oblast Komsomol Committee R. Roziev. Reports were given on work being conducted in the area of scientific atheistic propaganda by the director of the Bukhara Oblast Party Committee's House of Political Education and Komsomol Political Studies Consultant M. Ishaqov.

TV FILM ABOUT UZBEKS IN NECHERNOZEM REGION

[Editorial Report] Tashkent YASH LENINCHI in Uzbek 19 March 1982 p 2 carries a 600-word article by Anvar Karimov titled "Horizons of the Nechernozem Region reporting on a two-part television film "Horizons of the Nechernozem." The imaginative and interesting film featuring representatives of the UzSSR was a success on Uzbekistan TV. The film featured pictures of individuals doing various kinds of work which were accompanied by simultaneous interviews. One of the men featured in the film is a native central Asian named Talibjan Qasimov who has been working in the Nechernozem region for 4 years. Last year he married a local woman named Lidia. The same day as the couple moved into a new apartment Lidia gave birth to their first child, whom they named Vahabjan. Thousands of students from Uzbekistan have spent summers working the Nechernozem region. "The Nechernozem zone has become as great and sacred for the respected representatives of our homeland as the soil of Uzbekistan."

in Shibirgan, Maimana, Saripul, and Andhui, should be taken as the basis of the literary language in the future. Subsequent questions of the interview deal with Vohidiy's activities and evoke the information that he had been an aspirant in a Tashkent university in 1968 and received a candidate degree in 1974.

BOOK BY UZBEK HISTORIAN ON 1885 PANDJEH CRISIS REVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 26 March 1982 carries on page 8 a 1,000-word review of Gogo Abrarovich Khodoyatov's BRITANSKAYA EKSPANSIYA V SREDNEY AZII ["British Expansion in Central Asia"] (Tashkent: "Fan," 1981) by Candidates of History G. Kholliyev and M. Shopsanov titled "Appropriate Answer to Anticommunism." The reviewers note that in recent years, the opinions of a number of bourgeois historians about Soviet Uzbekistan have appeared abroad that promote falsity and slander about the present level of progress of Central Asian peoples. It is the responsibility of Soviet scholars and historians to expose the "studies" of these anticommunists. The Uzbek historian Khidoyatov has made an important contribution to this task with his books "Africa on the Road to Freedom," "English and Russian Relations in Central Asia at the End of the 19th Century," "Truth Against Lies," "The Construction of Socialism in Central Asia and Modern Anticommunism," and the present book which focuses on the 1885 Pandjeh Crisis. [The crisis occurred when Russian troops defeated British-backed Afghani troops at Pandjeh in southern Turkmenistan in March 1885. The victory was an important factor in Russian-British talks on the delimitation of the northwest border of Afghanistan.] The book consists of three sections, the first on Russian-British relations and the situation in the area of northwest Afghanistan during the second half of the 19th century; the second on delimintation talks between Russia and Great Britain during 1884-1885; and the third on the Pandjeh Crisis itself. The reviewers note that the work is extremely relevant to the present situation in the Middle East, because the Pandjeh Crisis exerted a powerful influence on the later evolution of Afghanistan.

TERMEZ, GATEWAY TO AFGHANISTAN, UNDERGOES IMPROVEMENTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 March 1982 carries on page 4 a 100-word report by newspaper correspondent A. Khalilov titled "Center Being Updated." The report states that in the last 5 years the appearance of Termez has changed beyond recognition. A broad square with a statue of Lenin has been built in Microrayon imeni Karpov, dozens of streets have been widened, and several new streets have been constructed. Surkhandarya Oblast workers recently completed construction of buildings for a sewing factory and a three-storied drugstore. The city's territory will be expanded, multistoried hotels, recreation areas, cafes and restaurants will be built, and a new park of culture and recreation will soon be finished.

SYRIAN WRITERS VISIT UZBEKISTAN

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 12 March 1982 carries on page 7 a 200-word report by H. Sadullayev titled "Syrian Guests." The report states that a group of Syrian writers arrived in Tashkent on 11 March for the first leg of a tour of the Soviet Union as guests of the USSR money. Soliyev quotes a recent statement by George Kennan about the Reagan administration's return to the policies of the cold war period, and briefly reviews how this period came into being. He states that thanks to the efforts of the Soviet Union and socialist countries, the cold war was checked in the 1970's, with the result that international tensions eased, East-West relations improved, and steps to normalize Soviet-American relations were taken. A number of agreements were signed during those years which considerably improved relations between the two countries. Unfortunately, Soliyev continues, the new U.S. leadership has completely aboutfaced on this policy. He recounts a series of recent developments that prove the United States is attempting to solve international problems through military force, and says that the United States has only itself to blame for its deepening economic crisis. Soliyev concludes that the fate of peace in the world depends on the improvement of Soviet-American relations.

CULTURAL, LINGUISTIC PROGRESS OF AFGHANI UZBEKS DESCRIBED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 12 March 1982 carries on page 4 a 1,500-word interview with Dr Muhammad Yoqub Vohidiy, a worker in the Afghanistan Academy of Sciences, by Candidate of Philosophy Hasan Qudratullayev titled "Spring of Friendship." Quadratullayev asks Vohidiy about the new cultural developments brought about by the April Revolution in Afghanistan. Vohidiy replies that now the various nationalities in Afghanistan have equal cultural rights and can speak, study and publish in their native languages. Schools are opening, textbooks are being written, and newspapers have begun appearing in Uzbek, Turkmen and Beluchi. Furthermore, radio broadcasts have begun in these languages, and "for the first time in the history of Afghanistan, we have begun broadcasts in the Nuristani and Pashai languages." Asked about changes in the life and culture of Afghani Uzbeks, Vohidiy replies that whereas prior to the Revolution Uzbeks were not permitted to write and publish in their language, today they have their own newspaper YULDUZ, regular radio broadcasts and television concerts, and textbooks for the first three grades of school. Vohidiy briefly discusses some recent publications on classical and modern Uzbek literature, and touches on the 10-year study program of Navai, currently being implemented by the Afghanistan Academy of Sciences. Quadratullayev asks Vohidiy about the recently formed Department of Fraternal Languages and Literatures within the academy. Vohidiy replies that it was formed through the initiative of academy president Sulayman Lqia, who has shown special concern for languages other than Pashtu and Dari. This department, in which Vohidiy himself works, is engaged in the study of the creative heritage of Uzbek and other peoples of Afghanistan. Current work includes preparation of a grammar of Afghani Uzbek, a history of Uzbek literature, compilation of an Uzbek-Persian-Pashtu dictionary, and collection of materials on folklore, art and customs. Vohidiy acknowledges that such work is especially difficult because of the ongoing struggle against the "external reaction." Asked whether a literary standard of Afghani Uzbek has yet evolved, Vohidiy answers that it has not. He says that numerous linguistic and other problems are encountered in every issue of YULDUZ and that editors rely on the assistance of Soviet Uzbek scholars to resolve them. Vohidiy states that the basic difference between Soviet and Afghani Uzbek is lexical, because the latter has numerous dialects in Afghanistan and select words that are common to all of them. On the basis of his research, Vohidiy feels that the dialects of Uzbeks living

'YOUTH AND LAW' UNIVERSITY IN KOKAND

[Editorial Report] Tashkent YASH LENINCHI in Uzbek 26 March 1982 carries on page 3, a 200-word article by Sh. Kalanova (Ferghana Oblast) titled "'Youth and Law' University." A "Youth and Law" university has been established at Kokand's (No 10) Secondary School named for the 26th Baku Commissars. The tasks of the university are to teach the upper level students about Soviet legality, to acquaint students with the law and their obligations, to propagate the Soviet lifestyle, to unmask bourgeois morals, and to struggle to prevent crime among young people. Lectures and discussions are held by experienced teachers. The university has attracted 120 students. The first lecture and discussion was entitled "Two Worlds--Two [Kinds of] Youth." The discussion was led by the chairman of the city Department of Culture Anvar Dadabaev, who told about his trips abroad to Bulgaria, Italy, India and Egypt, and about the lifestyle and studies of children abroad. The "Youth and Law" university holds monthly meetings.

MILITARY PREPAREDNESS, PATRIOTIC EDUCATION IN UZSSR SCHOOLS

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 3 March 1982 carries on page 2, a 700-word article by T. Niyazmetov (inspector of the Primary Military Preparedness Division of the UzSSR Ministry of Education) titled "Becoming Patriots." The article reports on some aspects of primary military education in the republic's schools, especially activity connected with a competition held to pick the best schools and educational organs in the fields of primary military preparedness and military patriotism. This competition is sponsored by the UzSSR Ministry of Education in cooperation with the Central Committee of the UzSSR DOSAAF. Already 4,380 schools and over a million students have begun to participate in the competition. Organizational committees are to be formed under oblast, city and rayon people's education departments to organize, supervise and sum up the results of the competition. It is planned to have the results of the competition by 1 December 1982.

UZBEK PAPER LOOKS AT EDUCATION IN AFGHANISTAN

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 3 March 1982 carries on page 3, a 1,000-word article by Abduzuhur Abduazimov (doctor of philological sciences, professor) titled "Letter From Afghanistan: On the Way to Enlightenment." Abduazimov reports on the improvement of the situation in the field of education in Afghanistan since the April Revolution. Now there are over 5,000 schools in Afghanistan with nearly 2 million students in them. Whereas prior to the revolution education was in Pushtu and Dari, now schools in Turkmen and Uzbek are also being organized. Article reports improvements since the April Revolution at Kabul University as well as at other Afghan higher educational institutions. Special attention is given in the article to improve educational opportunities enjoyed by women. The contribution of Uzbeks from the UzSSR is also described: "The Soviet Government is giving great help in developing secondary and higher education in Afghanistan. Last year the Uzbekistan SSR Ministry of Education made a great contribution to providing Uzbek schools and educational institutions with various educational materials, literature and technical means. This year a delegation led by the rector of Tashkent State Pedagogical Institute and corresponding member of the UzSSR Academy of Sciences, academician S. Tursunmuhamedov, went to Kabul and in accordance with the Soviet-Afghan Agreement on Cultural and Economic Cooperation, presented various visual educational materials and technical teaching means for secondary and higher schools of Afghanistan." Article also reports on activity of Soviet-Afghan friendship clubs.

KABUL PEDAGOGICAL ACADEMY STUDENTS COMPLETE 2-MONTH STAY IN TASHKENT

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 6 March 1982 carries on page 3 a 400-word article titled "Meeting With Visiting Students" reporting a 2-month stay and farewell for students from Kabul Pedagogical Academy who were visiting students at Tashkent's Nizamiy Pedagogical Institute. The Afghan students, specializing in seven different fields, attended lectures on pedagogy, psychology, ideology and political propaganda. The students visited general education schools in Tashkent and became acquainted with methodology of conducting lessons. Among other activities, the guests also participated in the work of the Nizamiy Institute's social studies faculty, and met with scholars, educators and administrators.

CONFERENCE IN KHIVA ON IMPROVING NATIVE LANGUAGE INSTRUCTION

[Editorial Report] Tashkent OQITUVCHILAR GAZETASI in Uzbek 13 March 1982 carries on page 1 a 200-word article by S. Yaqubov titled "Lesson Quality--Demand of the Times" on a scientific-methodological conference recently held at Khiva's Lenin (No. 10) School under the rubric "Lesson Quality--Demand of the Times." It was sponsored by the Uzbek Linguistics and Uzbek Literature Departments of Khorezm State Pedagogical Institute, and the oblast institute for improvement of teacher qualifications; Office of Uzbek Language and Literature. Among reports given at the conference were the following: "Formation of the USSR and National Languages," "Learning Bilingualism in Native Language Lessons," "Ways To Provide Quality and Results in Native Language and Literature Lessons" and "Utilizing Local Materials in Literature Lessons."

PROGRAMS FOR UzSSR SCHOOL COURSES IN ARABIC, PERSIAN DEVELOPED

Tashkent OQITUVCHILAR GAZETASI in Uzbek 10 Mar 82 p 1

[Article by T.S. Niyazov, methodologist, UzSST Ministry of Education, Republic Educational Methods Consulting Office: "Innovation in Education"]

[Excerpts] Our economic-political and cultural links in recent years with such countries as Afghanistan, Iran, India and Arabia [Arabistan] have been increasing our demand for teaching oriental languages.

Oriental languages have been taught in our republic's schools for several years. Yet the absence up until the present of study programs and textbooks has caused considerable difficulties in teaching oriental languages. The Uzbekistan Ministry of Education's Educational Methods Consulting Office has seriously worked on this problem and managed to create special programs for the first time for Persian and Arabic in 1981.

An experienced collective of authors was drawn together to prepare programs for the 2d through 10th grades with studies in Persian and Arabic. The programs were authored by M. Sh. Abdusamatov, A. Kh. Muhamedova and Sh. S. Shaniyazov for the Persian language, and by M. Yu. Hakimjanov, M.M. Bikmetova and B.R. Hasanov for the Arabic language.

It is certain that the special programs for teaching the Arabic and Persian languages will eliminate shortcomings and lack of uniformity of teaching occurring in the work of teachers of these subjects.

The creation of programs of Persian and Arabic for teachers is an important event and is the first step forward in improving the instruction of these subjects in the republic's schools. Creation of textbooks on the basis of the above programs is considered one of the fundamental tasks for the future.

ALIYEV GREETS VISITING DIPLOMATS

Baku BAKINSKIY RABOCHIY in Russian 9 Jun 82 p 1

[Information Item: "Reception in the CC of the Communist Party of Azerbaijan"]

[Excerpts] On 7 June the Candidate Member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Azerbaijan G. A. Aliyev received the heads of diplomatic legations accredited to the Soviet Union who were making a tourist trip in our republic.

Warmly greeting the guests on behalf of the CC of the Communist Party of Azerbaijan and the Presidium of the Supreme Soviet and Council of Ministers of the republic, G. A. Aliyev wished them a pleasant stay on Azerbaijani soil and expressed his pleasure at the arrival of the foreign diplomats. We look upon this visit, he said, as a display of the great interest of the states represented by you in the life of the peoples of our country, including Soviet Azerbaijan, we sincerely welcome this interest, and we are prepared to do everything so that you will come to know our region and its rich history better and acquaint yourselves with the republic's achievements in socialist and communist construction.

The formation of the USSR, G. A. Aliyev emphasized, was a truly enormous achievement. For the first time in the history of civilized mankind a multinational socialist state was created which united on the basis of equal rights all of the peoples inhabiting the country, and granted them, including the Azerbaijani people, complete sovereignty.

G. A. Aliyev continued that Soviet people were very concerned about the preservation of peace. Workers and kolkhoz workers, and everybody with whom you have occasion to come into contact asks that the Central Committee of the CPSU, and Comrade L. I. Brezhnev personally, be told to protect peace even more strongly and to ensure peaceful conditions for life. Everyone of us is aware of the fact that everything that has been achieved since the war has been achieved under peaceful conditions. Our party, the Soviet state, and L. I. Brezhnev are conducting a consistent peace-loving foreign policy aimed at the establishment of the principles of the peaceful coexistence of states with different social systems, mutually advantageous cooperation, and a strengthening of the security of all countries. The peace program for the 1980's which was advanced by L. I. Brezhnev at the 26th Party Congress, and our country's subsequent peace initiatives have been met with complete understanding and full approval by all progressive forces. However, they are being opposed by reactionary circles which are aggravating international tensions, striving to heat up the arms race and unleash a new war, and pushing the world toward a nuclear catastrophe. But a feeling of optimism gets the upper hand with us; we believe that the forces which are standing guard over peace and security and which comprises the majority will be victorious, and that every people and every state will be able to carry out its plans in peace. This is indicated by the powerful anti-war movement which has developed in Europe and in the western hemisphere.

In Azerbaijan, as in our entire country, there is not a single person who is a supporter of war. Our party's foreign policy which was proclaimed by the Peace Decree and founded by the founder of the Soviet state V. I. Lenin remains unchanged. The principles of peaceful coexistence, mutually advantageous cooperation, and non-intervention in internal affairs are, as in the past, basic in our country's foreign policy. We want mutual understanding and friendship with all states, and we are making maximum efforts to live in peace.

Every union republic takes active part in the foreign political and economic actions of the state, G. A. Aliyev said. Speaking about the republic's multilateral relations with other countries in economic, scientific and technical, and cultural cooperation, he noted that it is a most important task to make use of these relations for the successful realization of our state's peace-loving policy and for strengthening the friendship and mutual understanding of peoples. For this reason, we place a high value upon your stay in Azerbaijan and upon our meeting and would like people in your countries to have more and a better knowledge of real socialism. We, adherents of our ideology and of our state system, of socialist society, know about the advantages of our way of life, but it is necessary for the truth to be known abroad about our country and its achievements. Unfortunately, the anti-Soviet and anti-communist campaign which has been begun in a number of capitalist countries distorts our reality. But the democracy about which they so much like to talk in the West requires objectivity and an informed public. Only truthful and objective information can foster the growth of mutual understanding and cooperation and the strengthening of the peace and security of the peoples. And this is also one of the important tasks of diplomatic missions.

In conclusion Comrade Aliyev expressed his confidence that the stay by the foreign diplomats in Soviet Azerbaijan and their personal acquaintance with the life and achievements of the Azerbaijani people would add to their ideas about the Soviet Union and real socialism, and would help to strengthen the cooperation and friendship of the USSR and the peoples of their countries. He wished the guests health, happiness, and success in carrying out their important, honorable, and difficult mission in the interests of peace and security of all of the peoples of the planet.

G. A. Aliyev replied to the questions of the foreign diplomats.

On behalf of the heads of the diplomatic missions their senior member, the Extraordinary and Plenipotentiary Ambassador of the Democratic Republic of Madagascar in the Soviet Union Frederick Randriamamundzi expressed his gratitude for the warm reception, and noted that such an impressive visit by foreign diplomats proved their great interest in Soviet Azerbaijan. The question of peace is one of the most acute problems troubling mankind, and we share your optimistic feelings and mood and hope that peace will be preserved and strengthened. We value the Soviet Union's policy aimed at the defense of peace, welcome the peace initiatives of the Soviet leadership, and we shall inform our governments of your peace-loving efforts. Our meetings and impressions in Azerbaijan will help us to better know and understand the Soviet people, and to perform our mission better. We are grateful to the Soviet leadership, to President Leonid Brezhnev, and to the leaders of your republic for this visit which has given us the opportunity of becoming better acquainted with you.

The discussion was participated in by the Chairman of the Presidium of the Supreme Soviet of the Azerbaijan SSR K. A. Khalilov, the Chairman of the Council of Ministers of the Azerbaijan SSR G. N. Seidov, the Secretary of the CC of the Communist Party of Azerbaijan G. A. Gasanov, the Deputy Chairman of the Council of Ministers of the Azerbaijan SSR F. G. Akhmedov, the Minister of Foreign Affairs of the Azerbaijan SSR T. A. Tairova, and a Member of the Board and Chief of the Protocol Section of the USSR Ministry of Internal Affairs D. S. Nikiforov.

PARTICIPANTS IN TIKHONOV-FILIPOV TALKS IN MOSCOW LISTED

PM280929 Moscow PRAVDA in Russian 22 Jun 82 p 1

[TASS report: "On Official Visit"]

[Text] On 21 June talks began in the Kremlin between N.A. Tikhonov, member of the CPSU Central Committee Politburo and chairman of the USSR Council of Ministers, and G. Filipov, member of the BCP Central Committee and chairman of the Bulgarian Council of Ministers, who is in the USSR on an official friendly visit.

The heads of government of the two countries exchanged information on progress in fulfilling the decisions of the 26th CPSU Congress and the 12th BCP Congress.

A central place at the talks was occupied by questions of further expanding and intensifying all-around cooperation between the USSR and Bulgaria. Profound satisfaction was unanimously expressed at the dynamic development of fraternal Soviet-Bulgarian relations on the basis of the principles of Marxism-Leninism and socialist internationalism in full accordance with the treaty on friendship, cooperation and mutual aid. The exceptionally important significance was stressed of the regular meetings between L.I. Brezhnev and T. Zhivkov, which determine the fundamental avenues and specific tasks of the development and improvement of relations between the two countries, including for the long term.

N.A. Tikhonov and G. Filipov noted that the expansion of economic ties and the constant buildup of trade turnover, the extensive development of production cooperation, including within the context of the general scheme for specialization and sharing in the material production sphere between the USSR and Bulgaria through 1990, promote the solution in both countries of important economic tasks and the improvement of the prosperity of the Soviet and Bulgarian peoples.

In discussing international problems the sides noted that the Soviet Union and the People's Republic of Bulgaria firmly and consistently advocate the curbing of the arms race, disarmament and the elimination of the threat of nuclear war. G. Filipov said that the Bulgarian leadership and all Bulgarian people warmly support the Soviet peace initiatives. The proposals put forward by L.I. Brezhnev in his message to the UN General Assembly Second Special Session on Disarmament are of historic significance.

The talks were held in a cordial atmosphere and a spirit of full mutual understanding.

Taking part in the talks were:

On the Soviet side: N.V. Talyzin, deputy chairman of the USSR Council of Ministers; S.A. Skachkov, chairman of the State Committee for Foreign Economic Relations; N.I. Ryzhkov, first deputy chairman of the USSR Gosplan; V.F. Maltsev, USSR first deputy foreign minister; N.D. Komarov, first deputy minister of foreign trade; and V.F. Grubaykov, USSR Foreign Ministry section chief.

On the Bulgarian side: A. Lukanov, candidate member of the BCP Central Committee Politburo and deputy chairman of the Bulgarian Council of Ministers; K. Zarev, secretary of the BCP Central Committee, deputy chairman of the Bulgarian Council of Ministers and chairman of the State Planning Committee; V. Tsanov, member of the Council of Ministers Bureau and minister of transport; G. Pankov, minister of the chemical industry; T. Chakurov, minister of machine building and electronics; K. Khristov, minister of foreign trade; D. Zhulev, Bulgarian ambassador to the USSR; and M. Ivanov, first deputy foreign minister.

The talks will be continued.

REPORTAGE ON 12TH YUGOSLAV PARTY CONGRESS

Problems Facing Congress

PM051215 Moscow PRAVDA in Russian 26 Jun 82 p 4

[Article by V. Sharov, correspondent: "The Driving Force. 12th LCY Congress Opens in Belgrade"]

[Text] The 12th LCY Congress starts work 26 June. Delegates and visitors--party and revolution veterans, combatants in the war of national liberation, production leaders and envoys from social organizations--have traveled from all over the country to Belgrade, which is decked with the state tricolor and the Red Party flag, to take part in Communists' Supreme Forum. Representatives are here from numerous communist, workers, socialist and social democratic parties and progressive movements.

The CPSU delegation headed by V.V. Kuznetsov, candidate member of the CPSU Central Committee Politburo and first deputy chairman of the USSR Supreme Soviet Presidium, was warmly welcomed to Belgrade yesterday.

Thanks to the LCY's activities and the working people's efforts, Yugoslavia has achieved appreciable results in social and economic development in the 4 years since the 11th congress. The country's national economic potential has been strengthened, the annual increase in the global social product and industrial production averaged 4.5 percent and 6.2 percent respectively, dozens of major projects were commissioned, particularly in metallurgy, power engineering and the aluminum industry.

The work of wiping out the foreign trade balance of payments deficit made steady progress. In trade with the developed capitalist states it fell from $3.4 billion to $1.4 billion. It is rightly regarded as a major social achievement here that around 1.3 million working people were given jobs in 1978-1981. In the period between the congresses health care and the people's education have been improved and the social security system has been developed.

At the same time, however, the present forum of Yugoslav communists is being convened at a time when, as was pointed out during the report-and-election campaign--especially at republic congresses and provincial party conferences--the country is running into serious difficulties.

The press is citing figures indicating a falloff in the rate of economic development and the increase in labor productivity, and a reduction in the population's real income. There is a lack of coordination between republics and autonomous provinces, as a result of which a number of areas are becoming economically isolated and the role of the unified Yugoslav market is being weakened. The repayment of foreign debts is a heavy burden on the economy. Among the main reasons given here for Yugoslavia's economic difficulties are the unfavorable situation on the world market and internal factors such as disproportions in the national economy and the failure to take sufficient account of and make use of the country's existing resources and material and technical potential. A specific program of measures to stabilize the economy is expected from the 12th LCY Congress.

In their preparations for the congress, communists noted with satisfaction the fruitfulness of Soviet-Yugoslav relations. They are firmly based on complete mutual respect for the principles contained in the 1955 Belgrade declaration and subsequent documents adopted at the highest level. Economic, scientific and technical cooperation between our countries is now broad in scope. It continues to gather momentum, helped no doubt by its equal and mutually advantageous nature. In the last 5 years Soviet-Yugoslav trade has increased by 150 percent compared with the preceding 5-year-plan period to reach $18 billion. It topped $6.6 billion last year.

Questions relating to consolidating the LCY's leading role in society and improving its performance are also sure to be the focus of attention of the Yugoslav Communists' Supreme Forum. By virtue of its glorious revolutionary past and its active search for ways of solving urgent problems the LCY has won high prestige among the masses. This is reflected in the growth of its membership, which now stands at more than 2.1 million.

Since the last congress steps have been taken to consolidate and intensify the work of LCY primary organizations and increase their role in the life of the party and the country. There are now more than 65,600 primary organizations. They operate in every main labor collective, maintaining the LCY's links with the working masses.

The LCY has performed its role as the vanguard and driving force of Yugoslav society in the drive against negative tendencies which contravene the party's program and rules. Republic congresses and provincial party conferences called for a determined and uncompromising drive against any attempt to undermine the LCY's unity. "Ideological, political and organizational unity of action by the LCY in accordance with the principles of democratic centralism is the main prerequisite for the exercise of the LCY's leading role in society," states the 12th party congress draft resolution entitled "The Role and Tasks of the LCY in the Struggle To Develop Socialist Self-Management and Ensure the Country's Material and Technical Progress."

The complexity of the tasks which the LCY has been working to solve since the 11th congress made it necessary for it to improve its ideological work, above all party members' entire ideological and political training. In the last 4 years more than 128,000 students have received training in 1,838 political schools. Almost a quarter of a million people have graduated from youth, trade union and other political schools. Around 500,000 party members attended various seminars. Courses have been run for communists in the armed forces.

Cases of tolerance of and indulgence toward ideological enemies and of formalism in the organization of communists' studies were criticized during the report-and-election campaign. Confidence was expressed that the 12th LCY Congress decisions will serve as a stimulus to the improvement of the party's political education work.

The Yugoslav Communists' Supreme Forum will discuss topical problems relating to the country's development and determine the LCY's next tasks in the building of socialism.

Dragosavac Report

PM051251 Moscow PRAVDA in Russian 27 Jun 82 p 4

[Unnamed PRAVDA and TASS correspondents report: "In the Vanguard of the Working People"]

[Text] Belgrade, 26 Jun--Today the 12th LCY Congress began work here. Over 1,500 delegates representing the party organizations of Serbia, Croatia, Slovenia, Bosnia and Hercegovina, Macedonia and Montenegro and also the Yugoslav People's Army gathered in the festively arrayed hall of the Sava Palace of Congresses. They are veterans of the party and revolution, heroes of the people's liberation struggle, leading workers, figures of culture and science and servicemen of the Yugoslav People's Army. They will analyze the results of the country's socioeconomic development and the party's activity since the previous congress and outline the tasks of socialist building for the forthcoming period.

The congress was opened by D. Dragosavac, president of the LCY Central Committee Presidium. The delegates and guests welcomed with applause the CPSU delegation headed by V.V. Kuznetsov, candidate member of the CPSU Central Committee Politburo and first deputy chairman of the USSR Supreme Soviet Presidium, and the delegations from the other communist and workers parties, socialist and social democratic parties and national liberation and other progressive movements.

The congress working organs were elected and the agenda was approved.

D. Dragosavac delivered a report at the congress entitled "The LCY's Struggle for the All-Round Progress of a Socialist, Self-Managing and Nonaligned Yugoslavia."

Comrade D. Dragosavac's Report

Our forum, the speaker said, will comprehensively analyze the entire path traveled between the two congresses and will note the undoubted successes we have achieved in material and social development. At the same time the congress will reveal our shortcomings and errors and indicate the means, forms, paths and prospects for the solution of the problems now facing our society and on this basis will determine the communists' tasks and duties.

The position of the workers, of each working person, has altered radically, the report says. Their role has increased in the solution of questions of society's life. The equal rights, fraternity, and unity of Yugoslavia's peoples and ethnic groups have been assured. This gain of our people's liberation war is constantly strengthening and growing.

The SFRY's independent, equal position in the world and its nonaligned policy are strengthening. The LCY is developing its relations with other communist and workers parties and liberation and democratic movements in the world on the basis of equal cooperation. Yugoslavia's economy is becoming increasingly involved in international economic processes. Together with other countries, Yugoslavia is in the front ranks of the struggle for a new international economic order.

In just a few decades of struggle and strenuous efforts on the part of the working class and all working people, socialist Yugoslavia has achieved great qualitative changes in the development of the country's production forces and its system of socialist self-management. Further socioeconomic development is linked with the need to eliminate the causes of the difficulties facing us. That requires organized activity by all social forces.

Speaking of the development of the country's national economy, the speaker said that the average annual growth of the social product was 4.5 percent, and 4.7 percent in the public sector. Industry had developed most dynamically. Today Yugoslav industry is producing an increasingly varied and high-quality range of output which satisfies the requirements of not only the domestic but also the world market.

At the same time agricultural growth rates are still low. If we take 1976 and 1977 as a reference point, the average annual agricultural production growth rates over the past 4 years have been only 0.6 percent. Here growth in the public sector was 3.1 percent and in the private sector 0.3 percent.

The public sector of the economy, which is the motive force of material development and production relations, now represents 86 percent of the country's global social product.

From 1978 through 1981 the rate at which employment increased among the country's population was 3.6 percent. The results in this field are impressive, although the problem of unemployment in Yugoslavia remains acute.

Major progress has been achieved in the postwar period in the social policy sphere and in improving citizens' living standards. This trend has been continued in the period between congresses, but the rates at which living standards have improved have slowed substantially, particularly in the past 2 years.

Socioeconomic development in the period between congresses, D. Dragosavac continued, has been accompanied by very grave difficulties. During the precongress preparations the situation in the economy was subjected to a keen critical analysis. The Commission of Federal Social Councils on Problems of Economic Stabilization prepared the "Basic Avenues of the Long-Term Program of Economic Stabilization." To resolve specific questions of economic stabilization it is essential to elaborate the necessary steps and implement them as soon as possible and to undertake resolute actions in all spheres of reproduction. This is a single process requiring persistent activity by the working people, the LCY and all socialist forces of Yugoslav society.

[PM051253] We have great untapped internal reserves and potential. From 1978 through 1981, labor productivity in the public sector of the economy rose by an average of 1.2 percent a year while the average annual increase in the social product in the public sector was 4.7 percent. This shows that the proportion of the increase in output secured by raising labor productivity is less than 25 percent. In terms of labor productivity growth we lag considerably behind the industrially developed Western countries. That is why trade relations with them have always been structured to our country's detriment.

Capital investments in agriculture have failed to accord with the declared principle of the priority of this sector's development. The proportion of capital investments in this sphere has been cut back considerably.

One substantial and long-term component of stable economic and social development is the Yugoslav's all-around inclusion in the international division of labor. However, problems in the foreign trade sphere have been aggravated almost to the limit. For a long time our exports' share in overall world trade volume has been falling. On the other hand, imports of energy, raw materials, semifinished goods, equipment and technology have been constantly increasing. As a result, there has been an increase in the deficit in the country's balance of payments and balance of trade, and with it an increase in foreign debts. All this is powerfully restricting the country's economic development. In 1981 foreign debts totaled $20.1 billion.

In this period between congresses, the development of socialist self-management relations encountered great problems and difficulties. A grave disruption of equilibrium has occurred in the sphere of economic and commodity-money relationships. Current and long-term economic policy has been slow to adapt to changes in the international division of labor requiring an increase in the level of intensive economic management.

The LCY and the other forces of society, the speaker continued, have not been resolute enough in implementing the key tasks of the development of socioeconomic relations on the basis of socialist self-management and in overcoming major socioeconomic problems and contradictions. This has given rise to a serious slowing down of the process of the implementation of the provisions of the Constitution and law on pooled labor. The LCY has not been able everywhere to rise above individual local interests to see the long-term class interests of the working class and all working people in the sphere of pooled forces on this basis. The LCY must be persistent and consistent in the struggle for the full assertion of the working class' leading role.

The joint economic policy and social plans of the federation, republics, provinces and communes must be aimed at strengthening the unified Yugoslav market. It is essential to organize and resolutely develop social planning on the foundations of self-management.

The political activity of the LCY as the leading ideological and political for force of society is expressed in practice in the work of its members in political and public organizations, primarily in the Socialist Alliance and trade unions, the League of Socialist Youth of Yugoslavia, and others. Without all-round, organized work by all these organizations there can be no developed democracy.

Ideological trends alien to self-management and socialism, particularly nationalism, D. Dragosavac continued, have recently been markedly disseminated. They have even penetrated the LCY and the milieu of some leaders, as was the case in Kosovo. These ideological trends can exist in our country only as a result of the weakness of the socialist ideological front. Here it should be stressed that the bearers of alien ideological theories--from clerics of various stripes to nationalists--direct their main assault on the equality, fraternity and unity of our nations and ethnic groups.

Substantial importance for the struggle on the ideological front attaches to the situation in the LCY and its ability to resolve ideological problems and to be the main protagonist in public criticism and the organized ideological struggle. Our revolution has not been an easy one and is not easy now. Many of its elements have not been resolved in the best way. However, particular major or minor errors have not been decisive for the course of the revolution and its outcome.

Recently the mass media and journalism have been displaying trends which oppose themselves to the LCY's policy and cast doubt on our revolution's gains. This attests to the weakening of the LCY's ideological struggle. The communists in the mass media bear special responsibility for the implementation of the LCY's policy.

We emphasize with full justification that we have basically resolved the nationalities question. However, nationalism, particularly recently, has been manifested in various spheres of life. Hostile activity in the period between the two congresses has been manifested particularly in the course of the well-known counterrevolutionary events in Kosovo in March-April last year. Acting in an organized, clandestine manner, the enemy was able for a long time to carry out the ideological indoctrination of part of the intelligentsia and students and school children and to introduce ferment and uncertainties into their consciousness.

[PM051255] Speaking of the situation in Kosovo, the speaker noted that certain results have been achieved in stabilizing the situation in this province. It is mainly political means which are being used for the stabilization process.

He noted that definite results have been achieved in enhancing the LCY's role in the Yugoslav system and in specific actions to resolve urgent social tasks. The unity of the LCY and the equality, fraternity and unity of our nations and ethnic groups remain the most important condition and guarantee of the consolidation of Yugoslavia as a sovereign and independent and nonaligned country equal in its relations with other states and with influence in the world today. I want to stress our unanimous view that relations within the LCY and its ideological-political and organizational unity and unity of action in the future should develop on the basis of the principles of democratic centralism.

In the period between the 11th and 12th congresses, the LCY admitted over 600,000 new members. In late 1981 the LCY numbered over 2 million members. The largest intake to the LCY has been from the ranks of young people.

The working class is the main force of socialist revolution and therefore, as J. Broz Tito frequently said, it is essential that the ranks of its vanguard--the LCY--consist largely of the direct producers of material values. The number of peasants in the LCY at present is insignificant: just 3.9 percent. It is falling constantly. The speaker stressed the need to improve work among the rural population.

D. Dragosavac then dwelt on questions of international relations and described Yugoslavia's foreign policy course.

In recent years, he said, we have witnessed an increasingly serious deterioration of the international situation. The LCY, the working class and the communists express serious concern in connection with the danger which again threatens mankind. The arms race is being intensified. The policy of many states is being influenced increasingly strongly by military and military-industrial factors. New hotbeds of international crises and clashes are emerging. The policy of the relaxation of international tension should be based on the interests of peace, freedom and the independence of all states, on noninterference and equal international cooperation, and on the principles of active peaceful coexistence.

At the same time the speaker asserted that "the reasons for the negative development of international relations lie above all in the desire of the great powers and blocs to expand the sphere of their influence and rule."

The speaker expressed himself in favor of a radical change in the existing international economic order and the creation of a new one. The struggle for new economic relations in the world, he said, is one of the main factors of the struggle to democratize international relations as a whole and secure lasting and stable peace throughout the world.

The struggle for peace and against the threat of man's destruction in a thermonuclear war is gaining the dimensions of a mass movement for peace. We support any realistic initiative which could lead to the halting or limitation of the arms race and the initiation of the disarmament process. In that sense we attach special significance to the UN General Assembly Second Special Session on Disarmament.

We advocate the integral and just solution of the Near East crisis on the basis of well-known principles. This crisis hinges on the Palestinian question. We vigorously denounce the present Israeli aggression against Lebanon. Flouting the principles of the UN Charter and the entire international community, Israel has undertaken a flagrant attack on a peace-loving country belonging to the United Nations and has violated its independence and territorial integrity. The aggression against lebanon is at the same time an act of genocide against the Palestinian people.

The speaker further noted the great significance of the nonaligned movement in the struggle for peace and progressive changes to the existing international system of economic and political relations. It is struggling for peace and active peaceful coexistence and rejects all forms of political and economic domination in international relations. The speaker stated that it is essential to continue to strengthen the unity of the nonaligned countries. Disputes and conflicts between them not only harm the movement's unity and effectiveness. They are also aimed against the true interests of the nonaligned countries themselves.

The most recent period of history is in many ways important for world socialism. New heights have been scaled, new opportunities have been created and important experience and knowledge have been acquired. The ideas of socialism have met with even broader support. The influence of the organized socialist forces has discernibly expanded and intensified. The social practice of socialism has been enriched with varied content. This merges into a single common epoch-making trend which characterizes the development of socialism as a world process at the present stage.

[PM051257] On the basis of equal rights and the principles of international solidarity, the speaker said, the LCY is developing diverse and fruitful cooperation with the communist, socialist, and social democratic parties and with the liberation and other progressive and democratic movements in the world. The LCY must continue to build up its efforts to enrich and intensify this cooperation.

Since the 11th LCY Congress, Yugoslavia has pursued an active foreign policy. It has been aimed at the struggle for peace, the consolidation of the peoples' independence, mutual understanding and all-around equal cooperation with all countries irrespective of their social systems.

The SFRY and the LCY in the period under review paid great attention to bilateral cooperation and relations with the socialist countries. The further consolidation of cooperation in many fields was achieved. Progress was also noted in Yugoslavia's cooperation with the industrially developed Western countries.

Socialist nonaligned Yugoslavia occupied an important place in international relations. In the period since the death of J. Broz Tito the long-term nature of the foreign policy orientation of the LCY and the SFRY has been confirmed.

In conclusion D. Dragosavac said: The working class and all working people of Yugoslavia expect from the 12th congress clear answers to the reasons for the present difficulties. They expect the congress to confirm unwaveringly the readiness, ability and determination of the LCY--the leading and guiding force of society--to give all its efforts and energy to the solution of the problems which have lain on our shoulders today and to the solution of all problems for the sake of the historic goals of our socialist revolution.

TENSION, OPPOSITION PERSIST IN POLAND DESPITE NORMALIZATION

Journalist Describes Tour of Poland

PM021031 Moscow SOVETSKAYA ROSSIYA in Russian 13 Jun 82 p 5

[Part one of article by Valentin Chikin: "Spring Bridges. What We Discussed With Polish Comrades in Party Committees, at Plants and in the Countryside"]

[Text] Warsaw-Moscow--I recently returned from Poland. A group of lecturers--a party executive, a renowned steel smelter, a well-known literary critic, a specialist in international affairs and your correspondent--dear comrades, had received the opportunity to communicate directly with Polish workers and peasants, party activists and representatives of the intelligentsia and to convey the postcongress atmosphere in our country, the event-rich atmosphere of our jubilee year, and to share our successes and concerns. And, of course, to feel for ourselves the tense pulse of Polish life.

We toured up to 10 voivodships between the Narew and the Oder--reckon 1,000 km each--and had many meetings with a representative, interested and, I want to stress this, well-disposed audience; from morning to evening, an untold number of exhaustively frank talks in party offices, plant shops and rural cafes. Frequently the conversation began with the question: What do Soviet people think about our situation, about the Polish events, and ended with the request: Please impart your impressions of what you have seen and heard here.... I know from the editorial office's mail that our readers take a lively interest in these firsthand accounts. I shall try in these notes to sum up my impressions. First of all of vital work, national economic activity.

I have frequently crossed borders, very remote ones even, but I have never caught myself feeling such strained attention, as though you wanted to discern something in the calm gait of the people you meet in the semislumber of the railways halts flashing by, in the mundane bustle of the station, in the streets of Warsaw awash with greenery. That "something" is martial law--you want to look it in the face: What does it look like? Whom does it affect, and how? But it simply cannot be captured. It was imprinted in the image of three young men in uniform carrying submachineguns, butt uppermost, looking, unconcerned, at neckties in a store window on Marszalkowska Street. And on our route of a thousand kilometers we encountered only three or four checkpoints and on these occasions our car--a sleek "Polonez"--merely slowed down and the guard at the barrier waved us on with monotonous gesture. I remember the streets still emptying by midnight, the handsome officers. On the television screen announcing the latest news, the courteous commissars saluting at the plants....

On my very first day I set off with Grigoriy Yakovlevich Gorban, a steelworker from Azovstal, to the Warszawa Foundry to talk to the workers (the introduction of a twice-over hero sounded very fine in Polish: "Dwukrotny Bohater"--Grigoriy has indeed, like Hercules, risen to keep his word). With a reporter's eagerness I pounced on the commissar who was nearby--were not open-hearth furnaces unfamiliar to an officer? What were his functions? What were his powers?

We walked through the plant courtyard and Colonel Lukaszczuk took me by the elbow in a friendly fashion and explained with a smile. He is well acquainted with everything here. After the decree on martial law he had to work in earnest--"Solidarity" was running riot here, now it merely shouts from the walls occasionally. He is pleased with the way things have taken shape with the steel workers and with the plan and everything else. He does not have to intervene in the management of the facility although he has the right to oversee the enlistment of specialists. He takes part in all very important acts whereby the production facility's destiny is determined and maintains businesslike collaboration with the party committee. "I have never divided myself into a party member and an officer," Lukaszczuk notes. He is optimistic about the completion of his functions as commissar. Will it be soon? The colonel laughs and stops me: "My son did his set period of military service, but as you know his release has been delayed: He is always trying to find out: 'Pop, when will I finish?' 'You'll serve as long as the motherland needs you,' I say...It is still too early to talk of release."

Surely it is not too early?--Commissar Lukaszczuk came to mind somewhere in blue-eyed avgustow [significance of epithet uncertain]. You go to the window in the morning and are so sundrenched you have to screw up your eyes, the gardeners are digging peacefully in their front gardens, tall blondes with colorful handbags tap out a victorious march as they walk, a family automobile swished by with the smoke from a morning cigarette, and schoolboys' low-slung bicycles flash by--the advance of a peaceful day is inexorable. What need for martial law here, you think?

But during the day you open a newspaper: A titled provocateur has been caught redhanded; you take a look at the telex--a home-made bomb has been discovered, an underground printing works has been detected; you visit a committee--a propaganda worker friend has disconcerting news for you: You see--a leaflet, like the thousand they have just thrown on the fire, urging people "not to believe the authorities' sweet promises" and not to go to the May demonstration. The convulsions of the underground.... You are puzzled: Where is the therapeutic surgery of martial law? "We must not let ourselves be provoked"--that is the objective of the restraint displayed by the public order services.

In the days preceding May Day there was a feeling of particular tension. The church called people to prayer instead of the pre-May Day demonstration. Ladies in a state of exaltation rehearsed hysterical shows with adolescents. Stepping up their [radio] "voices," the conductors from the West stoked the hysteria. The party activists expected "excesses" on the proletarian holiday. But the artificially swollen abscess erupted later--on the 3d and the 13th. It erupted in antisocial escapades--the rowdy hooliganism of young men on the Warsaw streets, the arson of a hotel in Szczecin, an attack on a militia commandant's office in Gdansk, aggressive escapades elsewhere. On behalf of "Solidarity" some remnants were calling for a general strike....

Back in Moscow, in the editorial office, looking through urgent telegrams from Poland, I tried to find out how things were going there at the Warszawa Foundry. Here was a report. In the steel smelting shop unknown people had turned on the siren, but the incident had been disposed of within minutes. About 30 people wearing "Solidarity" badges had gathered at the entrance and were waiting for disturbances but, realizing that the plant was working as usual, they scattered.

It was pleasant to hear the real meaning of the words on the workers' mouths: "No one will succeed in misleading us now. We will not follow anyone anywhere."

I imagine the cohesiveness and vigor needed from the party aktiv: And how many hairs this mundane victory cost the plant's veteran director and party committee secretary and the experienced fighter and commissar.

My meetings in the labor collectives definitely convinced me that martial law has been a decisive factor in the stabilization of all aspects of the life of Polish society. Above all in production. Without restoring calm and social discipline and resolutely nipping anarchy in the bud it would be impossible to set about introducing order in the national economy--that thought, that assessment was a key one in all our talks.

Economists are now summing up the sorry result of the crisis situation caused by the errors of the 70's and the destructive tornady caused by Solidarity. The national income last year dropped by something over 13 percent, foreign trade turnover fell by one-fifth, capital investments decreased by one-fourth, and labor productivity fell by 16 percent while average wages leaped 25 percent with a considerable reduction in goods and services available. It has been calculated that the miners' strikes, for instance, accounted for a loss of $0.5 billion.

We were sometimes asked in auditoriums: Are Soviet people feeling the effect of the "Reagan sanctions?" Having then ascertained the essence of the principles and Soviet practice of foreign economic ties, people imparted their pained thoughts on the lessons taught by their Western partners. The channels for raw-material and technical replacements are closed--whole sectors are backsliding, a number of enterprises are threatened with shutdown and it is difficult for the economy to take breath. And if "positive symptoms" have emerged in the first quarter then it is thanks to some supreme efforts and the fraternal aid of the USSR and the socialist countries. We frequently heard the most ardent expressions of thanks everywhere--from the Central Committee offices to the [party study] corners in shops.

The most popular term in Polish economists' vocabulary today is perhaps "reorientation." This term or, if you like, thesis or slogan, is used to define the way of overcoming the crisis. The reorientation process is resolutely emphasizing the consolidation of economic cooperation within CEMA, the widespread emergence of Polish output onto the markets of the fraternal countries and the minimization of the influence of the capitalist economy's market upheavals. All this makes it possible to make active use of spare industrial capacities, to tackle vigorously the completion of construction projects already under way and to expand cooperation ties.

Of course, our interlocutors said, all this is not taking place automatically, and is not being achieved simply by turning the wheel; far more complex efforts are required and it is not only a case of the precision of calculations but also of psychology. As yet even the very concept of "reorientation" is being discussed and disputed. ZYCIE WARSAWY, for instance, has recently voiced "a few comments on the subject of reorientation" consisting entirely of doubts and reservations and it reduced them to the cautious conclusion: "Reorientation must be limited in time and scale" and must not be elevated "to the rank of a main factor." S. Dlugosz, one of the leaders of the State Planning Commission, also disputes "reorientation" but it is the actual term which displeases him. We should not be speaking of reorientation but of the restoration of Poland's partnership status and equal ties with the CEMA countries. As if entering into polemics with those "advocates of limits" from ZYCIE WARSAWY, S. Dlugosz convincingly proves that "the Polish economy's integration with the CEMA countries' economies is to a considerably greater degree than before not only a political choice but something dictated by economic interests."

Jozef Makara, the director of a plant in Bialystok, a unique bridge-building yard, put it to me in even more specific terms when he showed me the new structures gleaming against a background of fresh greenery: "With our partners from the Soviet Union we are constantly building bridges in both the literal and figurative sense of the words: We are displaying good-quality work with excellent design solutions and reliable guarantees. Everyone is convinced that our bridges will stand forever. With every passing year we are receiving increasingly interesting and even unique orders. And we are developing a good reputation on the European market...."

All of us who constituted the group of lecturers were in various cities far from Warsaw when the PZPR Central Committee plenum, which discussed questions of introducing economic reform and strengthening the principles of social justice, opened. We had the opportunity to experience people's freshest, most direct reaction. They were all interested. But there were also many "blind spots" in their ideas.

I remember meticulous questioning at the chip board plant in Suwalki. People were scrutinizing the basic principles of the reform from every angle. What was "self-financing" and "self-management?" They asked questions: Had legislative and economic mechanisms been developed capable of safeguarding the enterprise against a rash step or selfish decision? How would the reform influence labor productivity growth, production quality and wages formation?...

The principle of the fuller utilization of reserves of initiative was approved, but they wanted to know how the structure of self-management would take shape, whether it would always be constructive or whether it would not end up opposed to the authorities and the administration.

In setting out this succession of questions our interlocutors were in solidarity with the party plenum's position: Reform is a serious test for all of us. We must prepare people better for an understanding of its essence.

In directing reform toward the constructive reorganization of the economy, the party is emphasizing particularly clearly its duty to defend society's material living conditions. Next in line is the implementation of wages reform, the adoption of a program of housing construction through the end of the decade, and the elaboration of a comprehensive food program. It also defends the principles of social policy and control measures preventing the excessive enrichment of individuals and a great discrepancy between the upper and lower limits of the population's monetary incomes, ensuring a compensatory increase in the living wage and the sensible formation of family budgets and teaching everyone to live in accordance with their labor. Incidentally, it is obvious even to a casual observer that here and there villas costing millions are being erected--and that is so even with the present prices and with the rationing system.

In a situation between long-term prosperity and today's acute need, when good principles need to be tended and nurtured daily, the social commissions at enterprises play a particularly important role, as indeed the plenum noted. Half of the time that I spent with Gorban among the Warszaw Foundry's steel smelters was taken up with talk about the social commission. Grigoriy Yakovlevich [Gorban] even expressed gratification: "If you are beginning to work out how to organize prosperity that means that your affairs are well in hand."

Indeed, the plan has been overfulfilled and the collective is concerned to form social backup services. Safety measures are being provided. The expensive process of clearing dust from the electric furnaces is being undertaken. The provision of public amendities and housing affairs are developing. Summer leisure is being considered.... In brief, an extensive social program has taken shape. I could not refrain from asking: "Have 'Solidarity's' demands been included in the program?" "You see," it was explained to me, "the working conditions, housing, leisure centers and children's camps have always been the concern of the trade unions. We have always considered that this must be done, built and procured. But 'Solidarity' considers that you only have to make a demand and hold the knife of strikes at people's throats: 'Give us it, or the plant will go out on strike.' But who is to do the giving? It is we who must do everything for ourselves."

In Bialystok, visiting the bridge builders, I saw a social program already at the stage of successful implementation. First the welders, who had looked in on a lecture, showed me the list of the next workers to be rehoused posted up for general discussion and then engineer Henryk Baniszewski, party committee Secretary Ryszard Laskowski and Director Jozef Makara showed me two beautifully constructed microrayons: One recently occupied, the other awaiting occupation. The appearance of the plant's housing development [sotsgorodok] was marred, it seemed to me, only by a newly constructed, ungainly church. "Is that your work too?" I said jestingly to the director who was glowing with pride. Makara grew gloomy and muttered: "They are keeping pace with us everywhere. Their construction and installation administration workers are ahead of ours...." Today the bridge builders have no more families waiting for kindergarten places. Soon there will be none in need of apartments. That means that prosperity depends on successful labor, on collective organization and on the ability to mobilize one's forces.

In the days preceding May Day I saw peasants zealously sowing this year's harvest on their allotments. Will it be abundant and a means of salvation? Minister J. Wojtecki, who is in charge of agriculture and the food industry, believes that the necessary purchases of 6 million tons of grain in the countryside would be perfectly feasible were it not for the hard choice: Grain or meat. The minister is worried by the reduction in the number of breeding animals, and the fall in the demand for young animals. What about the peasants? What worries them most? From what I heard of their talk it may be concluded: The land must be given what it has grown tired of waiting for and only then can rich fruit be expected from it.

To the surprise of their enemies, the state farms have displayed their vitality, playing a salutary role during the painful overstretching of the market and during other adverse symptoms to be observed in the individual farmer.

The Suwalki voivodship parish of (Vydpiny) which I visited is probably not typical--there are nine state farms here on which half the peasants are employed. The state farms determine the entire production picture in the district. Now, under the impact of the reform, they have been united into a single firm with clear-cut specialization in stockraising. And, I was told by Stanislaw Sawicki, the parish party committee secretary, the individual sector would have felt very unsure of itself without the firm's assistance.

Yet the demagogues from "Solidarity" tried to turn the truth inside out. Last year, when their attacks on the renowned Glubczyce state farm in Opole voivodship lead by Zbigniew Michalek, now a secretary of the PZPR Central Committee, reached extremes, the state farm activists set out the facts countering the myths. An individual farmer in Glubczyce produces 127 kg of meat per hectare while the state farm produces 247 kg; the corresponding figures for milk are 430 kg and 674 kg respectively. An individual farmer works 23.7 hectares of land with one tractor while the state farm works 32.5 hectares. There are 40 people employed for every 100 hectares in the individual sector while on the state farm the figure is nine....

"Where is a peasant better off?" I asked Stanislaw Sawicki, "on the state farm or a private farm?" "The truth is," he replied, "that there are individual farmers who live very well if they have fertile land, large areas and grownup children; but many of them do not have enough. The life of state farm workers is smoother. Their incomes are not so impressive but they are stable and their work is easier--there are many mechanical devices and a convenient shift system. The question of housing and child care is resolved more simply for them. If they want to cultivate land they can have a private plot.... In short, almost no one leaves our state farms to become an individual farmer."

In an attempt to grope for the main thread of meaning linking all my impressions of my meetings in plants and villages and to single out the leitmotif of our talks, I inevitably arrive at one particular point--the vitality of the socialist core in the Polish economy, the irreversibility and primise of the really meaningful changes which have taken place in the national economy in a little over three decades. The pseudodemocratic ideals of the right-wing "Solidarity" forces turn out to have been built on sand. They have left only the marks of destruction and a severe political hangover in people's hearts. And that which was strong by virtue of its socialist nature is now becoming the bulwark of the entire normalization process.

But cannot everything be resolved more rapidly? The inspired expression "festina lente"--make haste slowly--is now current among the Poles. "That is our working slogan," our Polish comrades explained to us. "Perhaps we would like to resolve everything more rapidly. There are people who are pressing us and urging us on. But we must not hurry. We must not make even more mistakes in our haste. We must resolve things as well as possible, not as rapidly as possible."

Conclusion of Article

PM021223 Moscow SOVETSKAYA ROSSIYA in Russian 15 Jun 82 p 3

[Part two of article by Valentin Chikin: "Spring Bridges. What We Discussed With Polish Comrades in Party Committees, at Plants and in the Countryside"]

[Text] Warsaw-Moscow--In the previous article we discussed daily bread, as the saying goes--labor and management organization. Just as constantly and, probably, with greater acuteness the conversation at our meetings turned to spiritual bread--ideals and principles, views and standpoints. Some practical people argue as follows: We in Poland suffer not from a shortage of theories but from a shortage of commodities, and that is what you should start with.... Life confirms the correctness of the standpoint: There is no dilemma between bread and principles, and you must not pose the question "either or," for both are necessary.

After 13 December the enemy, to use military language, regrouped his forces and thoroughly rearmed. Ideological saboteurs now no longer have to count on street bawlers and openly operating seats of counterrevolution; they must penetrate crevices of public consciousness, envelop in a poisonous cloud people who have in any [way] been traumatized by the turn of events, and sow their black seeds in their minds and souls, provoking various "leaflet campaigns" and forming a "rejection front" and everything else.

Comrade Majka, leader of the PZPR Central Committee's newly formed information section, outlined for us the deeply echeloned system of sabotage centers from Scandinavia through West Europe to the United States. The old lie factories of the Radio Free Europe type are urgently modernizing their "Polish sections" and putting inveterate professionals of anticommunism like (Nayder) in charge of them; new specialist creations like "Polish News" or "Solidarity With 'Solidarity'" straightway spring up.

"Anti-Polish centers," our interlocutor remarked, "are not growing faster than toadstools, seeking to find their medium of influence, striving for qualitative reasoning, avoiding primitive anticommunism and elaborating in greater depth their topics designed for the intelligentsia and youth. Attempts are being made to re-create a new opposition."

It is precisely among the intelligentsia, the enemy reckons, that the ideological soil is softest. History has left many different traces here. The tenacity of the pro-Western orientation, the influence of extensive and sometimes chaotic culture-mongering contacts with the bourgeois world, and the more flexible world-outlook impact of the Church are making themselves felt. And the somber trace of "KOR people," "confederates" and other zealous advocates of anticommunism is quite fresh.

The (Nayders) also know the sensitive strings in the soul of the Polish intellectual on which they can now play their tune. Inspire, for example, a complex of wounded pride, of limited personal potential and free self-expression. Foist awareness of a special historical mission and, counting on vulnerability, bring about conflict with the rigorous circumstances of martial law and issue the provocative taunt: Will you really be a "servant of the regime" and do your creative work "beneath an umbrella of bayonets"? Some people do not hold out, isolate themselves from their own work and go into "internal emigration." And some people, you see, will announce in a proclamation the "struggle of the oppressed" and proclaim the absurd thesis that "the academic milieu must be the vanguard of all society...."

The young and compact Central Committee section makes a useful analysis of all subversive output and promptly informs the party aktiv through its own channels and makes practical recommendations. I asked the chief: Can we obtain a forecast of the enemy's ideological actions for the duration of our stay in Poland? With his shy, roundish smile Comrade Majka handed me two small pages of typewritten text like the radio saboteur-broadcasters' "creative request" [zayavka]. On our tour we saw for ourselves that the request was realized. Evaluating the section's useful assistance highly, incidentally, party activists locally confirmed that the forecasts were accurate and the deviations no more than 10 percent.

During our tour I did not have a chance to observe closely the milieu of the artistic intelligentsia. In our group this opportunity fell to Feliks Kuznetsov, the Moscow writer's leader. He shared his impressions and intends to tell of this in the press. I had thorough contacts with my Polish journalist colleagues and saw them at work, at home and in discussions. At the crucial time this detachment of the intelligentsia found itself under heavy crossfire, everyon'e ideological tempering was tested for special heat resistance, and far from everyone passed the test.

The position among journalists is a complex one. Before 13 December entire editorial boards cooperated with "Solidarity" and sided with the ideological enemy. The Polish Journalists Association also deviated from its tasks and principled positions. This was aided by the antiparty activity of its leader Bratkowski, who has now been expelled from the party....

I recall a long debate in Bialystok and the emotional face of Anna Markowa, who has devoted many years to work as a journalist. "I was an activist in the old Journalists Association," she said, "and a member of the main board. I participated in the work of the ill-starred congress, when the tone was set by people like Bratkowski. The picture of the congress struck me. Colleagues whom I had known for many years seemed to degenerate in 3 days. They became somehow possessed and rained down curses on the recent past, their own work and their own comrades. Behind this frenzy you could sense some artificiality and insincerity. It was as though people were seeking a new role for themselves and were in a hurry to join in a 'historic situation.' But perhaps they are new-style opportunists, I wondered.... I despise people who change their spots so easily...."

What of those who did not deviate from their party duty? They had to shoulder a desperately heavy burden.

One evening in Suwalki we gathered at the home of Marek Starozewski, who edits the local weekly KRAJOBRAZY. From the atmosphere of comradely ease and the independence and unanimity of the people gathered in the house it was clear that here, beside the chief editor, were not just colleagues and assistants but companions such as will remain, two or three of them together, on some anonymous height in the prosaic battle for the honor of the party and the motherland. Marek produced a sheet of paper--half the size of our page--with three columns of wide-set type and old-fashioned vignettes separating one article from another. "The prototype of our KRAJOBRAZY," the editor warmly punned [a play on words in Polish and Russian]. "The first printed organ in Suwalki after the closure of all editorial boards." The sheet had the air of a museum exhibit from the beginning of the century, but next to the masthead stood the date "8 January 1982." I was reminded of the situation in the first weeks of martial law, when 30 men were doing the work of 10,000 in television, for example.

"But is it easier to produce this fat weekly of yours?" I inquired. "It is not easy either, although the editorial board has been assembled. But the number of staff, as you yourself understand," Starczewski smiled, "certainly does not guarantee publicistic quality. And as for making things easier, you sometimes think it would be better if we weren't obstructed" [luchshe ne meshali by].

I was later to hear this phrase repeatedly.

The opposition is operating energetically among journalists, carrying out "explanatory" work. Editorial boards are being sent special "instructions" advising them "not to suffer pangs of conscience" and to write and act as though 13 December had not happened. The demands of the "instructions" are sweetened with flattering overtures and peppered with unambiguous threats. "Don't show in your materials that all is well in the country"--then "there will be no complaints" against you. And if you "glorify martial law" and want to "extend the circle of its supporters and admirers," you can be sure that you will "lose your good name." And don't be surprised that "at some time you will have to bear responsibility for this." The "instructors" have specific commissions: If you know that some teachers, writers, artistes or artists "refuse to cooperate," "don't do anything to change their standpoint," protest yourself, swear your refusal in the presence of witnesses, observe your colleagues and "document all instances of violations" of these instructions. If you earn well, get ready--help will be demanded of you....

Such blackmail unsettles some people--they turn in upon themselves, avoid social problems and start, as one of my interlocutors quipped, to "write about birds." "Psychological pressure" is employed against others.

The Polish publicist and writer Dionizy Sidorski, whose acquaintance I made in Bialystok, described how epigones of counterrevolution began badgering him when he "dared" in a frank reportage to put his fingers in the sores, as the saying goes. It began with them deciding to "do some work" with him.... One day in spring Dionizy received a letter from...an "internment center." Two acquaintances from half-forgotten meetings--Alina G. and Janina I.--recalled "wonderful moments," sent "cordial greetings" and regretted that they could not see each other--"how much time we have now for professional discussions and evening songs." Dionizy Sidorski and his editor Mieczyslaw Chaz had both long been attracted to that terra incognita--the places of internment cloaked in the myths of Western voices and the most fantastic conjectures of men-in-the-street. What is the condition of the internees? What do they do, think, want..." Gazeta Wspolczesna organized a business trip for Dionizy to Goldap, from where Alina and Janina had written. And then the barrier was raised for him.

He was struck by what he saw. This "center" was a rest home for cultural workers with the comforts of hotel rooms and crammed, incidentally, with gifts from abroad; and with the comfort of lunges and a library, a television room and a billiard room. With his very first steps he was deafened by a hysterical divine service which reminded him rather of a political prayer meeting with the participation of a Warsaw priest; the Leitmotif was being shouted out in heart-rending voices: "Solidarity's" leaders will dance on the ruins of the commune, and Kuron will administer the new order....

He was also perplexed by the fact that vehement overthrowers of the people's system--the wives of Kuron and Gwiazda, Mikolajska and Kowalska--attempted even here to organize their own counterrevolutionary university and to publish a bulletin of "Free Europe" news obtained with the help of transistors secreted in boudoirs.

The only thing that was not unexpected was the "talk" with old acquaintances. Alina had already managed to go home. And Janina attacked with a suspicious question: "On what grounds did they let you in here"? "As a journalist...." "I have nothing to say to a journalist; I would chat with a friend." Remembering this scene, Dionizy smiled through his bushy black moustache: "I'm not accustomed to having a split personality, and I had to take my leave."

Dionizy Sidorski described everything that he had seen and learned without any embellishment or omission. And he paid dearly for it. (Well, people are right to say that honest conduct is costly!). For several weeks certain people literally bombarded him with letters and phone calls to the editorial office, graffiti in his doorway and shouts at his back. Even Radio Free Europe drew attention to him--it suggested how to persecute a journalist who has overturned dramatic legends about the fate of internees.

Looking through the responses to his reportage which the author handed me, I formed a separate pile of letters beginning with the abusive epithets "horrible," "monstrous," "provocative"...and ending sometimes with "death sentences." I piled them up and thought: Dionizy is a great guy, though. He did not give in to outraged feelings and wisely saw an admission of defeat in the epigones' impotent spite. Alongside was a pile of letters from people thanking him for the honest lesson.

One of the distinctive features of martial law in Poland today is the individual and general, local and wide-ranging discussions. About economic reform, ideological principles, the fate of "Solidarity," ways to develop the youth movement.... Someone remarked that now even the values of a meeting is determined with regard to whether a debate got underway there. And yet a debate is valuable, the comrades try to convince each other, not in itself but for the practical result--concrete conclusions and actions. Although, of course, for the accuracy of a decision it is important to compare all shades of opinions. We participated in discussions of many complex questions of the socialist perspective, but a discussion about modern Polish youth struck me as all but the hardest.

Adults--politicians, educators, organizers--are now looking round anxiously: When did it happen, when did they "neglect" the young? Did it not start in rosy childhood, when the Church shared with the school the role of confidant and coach under the protection of parental unconcern? Did it not come with the revival of mercantilism and consumerism, when irresponsible promises of blessings gave rise to particular dependence: Give me a diploma, give me an easy job and a good wage, give me an apartment, give me comfort....? Was not everything exacerbated to the utmost at the moment when both multibillion debts and petit bourgeois ideals suddenly fell into the pan of the scales--was it not at that moment that disappointed youth fell prey to counterrevolutionary provocateurs who incited them: You must make demands! Take the streets!....

"I have two grownup sons, and I see what is happening to young people," Anna Markowa said at the meeting in Bialystok. "They are infected with plague and are prey to the demagoguery of werewolves. What is needed is new arguments, strong feelings and new heroes. The young generations must always be ennobled by high ideals and thoughts."

Incidentally, the experience of our komsomol and of various public education institutions particularly interested the audience which we addressed. I noted down many questions and requests for contacts. I remember a guy who stood up at a lecture in Suwalki, introduced himself as "Pliszka, activist of the Union of Socialist Youth," and asked: "How could the Lenin Komsomol help my union to reeducate the young?"

We had a long discussion about youth problems with Czeslawa Romanowska. She is a member of the PZPR Central Committee, a practical educator and "scout commander" in Augustow. She has an optimistic view of her charges--"certain forms of social life, self-management and self-service are well developed." There were no out-and-out extremists in the opposition in Augustow, and there is no disintegration like the nationalistic effervescence of students in Cracow and the blasphemous sallies of fascistic snivelers in Gdansk. "But not even our youth was isolated from all the events of the past 2 years. Many problems of an ideological and spiritual nature arose. We are now awaiting party decisions on problems of the youth movement and awaiting a plenum. As a member of the Central Committee I participate in preparatory work."

We were told that the upcoming plenum will determine its attitude both to the party's previous decisions on youth questions and to the main standpoints of the youth organizations themselves and will consider a whole range of specific social problems. But this will be only the beginning of the very hard job of molding the new generations of builders of socialism.

...Festina lente--"make haste slowly" some people say, rightly cautious of chance decisions and wrong steps. Periculum in mora--"danger in delay," others recall, equally rightly concerned at the desperate determination of socialism's enemies to seize the initiative somewhere and to prevent somehow the speediest rebirth of people's Poland.

DEMICHEV ADDRESSES CULTURE INSTITUTE GRADUATES

PM071339 Moscow PRAVDA in Russian 3 Jul 82 p 3

[TASS report: "With Specialists' Diplomas"]

[Text] It is the lofty duty of Soviet youth to be the party's loyal helpers in fulfilling the USSR food program adopted by the CPSU Central Committee May (1982) plenum. This was spoken of by the participants in a ceremonial meeting of graduates of the Moscow State Institute of Culture and the Moskovskaya Oblast Cultural Enlightenment School who have expressed a desire to work in the countryside.

Parting words were addressed to the young specialists by hero of socialist labor V. Isayev, chairman of Moskovskaya Oblast's Gorkiy Kolkhoz; twice hero of the Soviet Union pilot cosmonaut of the USSR V. Gorbatko; the poet R. Rozhdestvenskiy, and others.

P.N. Demichev, candidate member of the CPSU Central Committee Politburo and USSR minister of culture, spoke at the meeting. He described the important tasks which must be resolved by rural cultural institutions in the struggle to further improve the sociocultural conditions of life in the countryside today. Young specialists in cultural enlightenment work are called upon to make an important contribution to the fulfillment of the CPSU Central Committee May plenum decisions and the tasks set in Comrade L.I. Brezhnev's report at the plenum. The speaker wished the graduates great successes in their future activity.

The participants in the meeting adopted an appeal to all graduates of cultural vuzes and schools to participate in the most active way in the food program's implementation. In response to our hearts' desire and the call of our komsomol conscience, responding in deeds to the concern of the party and state, the document says, we have decided to work in rural cultural institutions and we promise to prove that we have made this choice for a lifetime.

V.F. Shauro, chief of the CPSU Central Committee cultural section, took part in the meeting.

BRIEFS

SHEVARONADZE MEETS POLISH EDITOR--S. Wronski, member of the Polish State Council, chief editor of the journal NOWE DROGI and chairman of the Polish-Soviet Friendship Society main board, has been visiting the Soviet Union at the invitation of the journal KOMMUNIST. The visitor has had meetings at the offices of the journal KOMMUNIST and of the Union of Soviet Friendship Societies. During a visit to the Georgian SSR he was received by E.A. Shevardnadze, candidate member of the CPSU Central Committee Politburo and first secretary of the Georgian CP Central Committee. [Text] [PM060857 Moscow PRAVDA in Russian 26 Jun 82 p 4]

SCIENCE COOPERATION TALKS WITH BULGARIA--On 22 June G.I. Marchuk, deputy chairman of the USSR Council of Ministers and chairman of the State Committee for Science and Technology, received D. Davidov, deputy chairman of the Bulgarian State Committee for Science and Technical Progress. They discussed questions of the further development and deepening of scientific and technical cooperation between the USSR and Bulgaria and also within the CEMA framework. DOLGIKH, USUBALIYEV AT KIRGHIZ CP PLENUM

PM121409 Frunze SOVETSKAYA KIRGIZIYA in Russian 26 Jun 82 p 1

[Unattributed "Information Report on Kirgiz CP Central Committee Plenum"]

[Text] A routine Kirgiz CP Central Committee Plenum was held 25 June 1982.

The plenum discussed the question "The results of the CPSU Central Committee May (1982) Plenum and the republic party organization's tasks arising from Comrade L.I. Brezhnev's report "On the USSR Food Program for the Period Through 1990 and Measures To Implement It.'"

A report was delivered by Comrade T.U. Usubaliyev, first secretary of the Kirgiz CP Central Committee.

Taking part in the discussion of the report were: Comrades R.S. Kulmatov, first secretary of Oshskiy Party Obkom; I. Orozaliyev, senior herdsman on No 113 stud farm in Talasskiy Rayon; K.M. Moldobayev, first secretary of Frunze Party Gorkom; A.M. Masaliyev, first secretary of Issyk-Kulskiy Party Obkom; K. Abdrayev, first secretary of Talasskiy Party Obkom; M. Sydykov, first secretary of Narynskiy Party Obkom; B. Kulov, first secretary of Keminskiy Party Raykom; Ya. Ya. Vakker, chairman of Trude Kolkhoz in Kantskiy Rayon; A. Savitakhunov, Kirgiz SSR minister of agriculture; B. Esenalyeva, machine operator on Tort-kul Kolkhoz in Tonskiy Rayon; N.F. Petenev, director of the M.V. Frunze agricultural machine-building plant; M. Imanaliyev, president of the Kirgiz SSR Academy of Sciences' A.N. Boyko, chairman of the Kirgiz SSR State Committee for the Supply of Production Equipment for Agriculture; K. Tynaliyev, Kirgiz SSR minister of fruit and vegetable farming; A. Kozhomkulov, chief of the Kirgiz Main Administration of Water Resources Construction; and T.S. Aytbayev, first secretary of the Kirgiz Komsomol Central Committee.

A speech was delivered at the plenum by Comrade V.I. Dolgikh, candidate member of the Politburo and secretary of the CPSU Central Committee, who was greeted warmly by those present.

A concluding address was delivered at the plenum by Comrade T.U. Usubaliyev, first secretary of the Kirgiz CP Central Committee.

The Kirgiz CP Central Committee Plenum adopted an appropriate resolution on the question discussed.

Kirgiz CP Central Committee and Kirgiz SSR Council of Ministers resolutions on fulfilling CPSU Central Committee and USSR Council of Ministers decisions on questions of developing the agroindustrial complex were also approved.

The plenum unanimously approved the decisions of the CPSU Central Committee May (1982) Plenum and the provisions and conclusions contained in Comrade L.I. Brezhnev's report at the plenum, and adopted them for unswerving guidance and execution.

The Kirgiz CP Central Committee Plenum assured the Leninist CPSU Central Committee, the Central Committee Politburo and Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee, personally that the party, soviet, trade union and Komsomol organizations, communists and all working people of the republic will apply the greatest possible efforts and energy and devote all their experience and knowledge to fulfilling the decisions of the CPSU Central Committee May (1982) Plenum, will launch still more widely the socialist competition in honor of the glorious jubilee--the 60th anniversary of the USSR's formation--and will make a worthy contribution to the implementation of the USSR's Food Program.

The plenum examined an organizational question.

The plenum relieved Comrade V.V. Rumyantsev of his duties as chief of the Kirgiz CP Central Committee Administrative Organs Section in connection with his reassignment.

The plenum appointed Comrade Z. Koshoyev chief of the Kirgiz CP Central Committee Administrative Organs Section.

The Kirgiz CP Central Committee Plenum finished work.

CSO: 1830/411

DOLGIKH ADDRESSES KIRGIZ CP CENCOM PLENUM

PM120921 Frunze SOVETSKAYA KIRGIZIYA in Russian 26 Jun 82 pp 1-2

[Unattributed account of speech delivered by V.I. Dolgikh, candidate member of the CPSU Central Committee Politburo and secretary of the CPSU Central Committee, at 25 June Kirgiz CP Central Committee Plenum]

[Text] In his speech Comrade V.I. Dolgikh noted that the Kirgiz CP Central Committee Plenum is discussing a question of tremendous political and social significance. It is a question of how to mobilize more fully the efforts of the party organization and all working people in the republic to successfully fulfill the decisions of the CPSU Central Committee May (1982) Plenum, increase food production, improve the efficiency of agriculture and ensure a worthy contribution by Kirgizia to this nationwide cause.

It is with great satisfaction, V.I. Dolgikh said, that I convey to the plenum participants and all Kirgizia's communists and working people cordial greetings and best wishes from Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium.

Leonid Il'ich, brilliantly exercising leadership of the party and state and constantly engaged in resolving the most important questions of domestic policy and of preserving and strengthening peace, devotes constant attention to the economic and social development of all the union republics, inlcuding Kirgizia, which has achieved tremendous progress in the fraternal family of Soviet peoples. Leonid Il'ich's visit to your republic in 1970 left a deep impression on its development.

The CPSU Central Committee May Plenum was a major, truly historic event in the life of the party and country. A central place was occupied in its work by Comrade L.I. Brezhnev's pathbreaking report. The provisions and conclusions it contains are a further development of the party's agrarian policy at the present stage of communist building. They are aimed at the practical implementation of the 26th party congress's course of steadily increasing Soviet people's well-being.

The Food Program, elaborated on Comrade L.I. Brezhnev's initiative and approved by the CPSU Central Committee May Plenum, takes account of the present internal and external conditions of our state's development. It is aimed at achieving important, interconnected goals--a reliable food supply for the country on the basis of its own resources and progress along the path of narrowing the gap between material, cultural and consumer conditions in the city and the countryside, which, as is known, is our program principle.

The party is concentrating attention on the main aspects of agrarian policy in the eighties. This means, above all, the implementation of broad system of measures to further develop the agroindustrial sector of the economy and strengthen its material and technical base. It also means concentrating forces and resources on a fundamental increase in the efficiency of agricultural production and on ensuring the comprehensive development of agriculture and associated sectors. And lastly it means improving the economic machinery, the management structure and the style and method of leadership.

Comrade L.I. Brezhnev's report and the decisions of the CPSU Central Committee May Plenum have been received by the entire party and the Soviet people with tremendous enthusiasm and approval. At present a businesslike discussion of the plenum's results is taking place throughout the country in party organizations and labor collectives, and practical measures are being outlined for implementing the decisions adopted. The Central Committee plenum materials have met with a wide response throughout the world and, first and foremost, in the socialist community countries.

The resolution of the food problem is an important integral part of the party's economic strategy. Its significance can hardly be overestimated.

In the period since the CPSU Central Committee March (1965) Plenum the party and people have done tremendous creative work. What are its main results? The main thing is that the country has begun to produce considerably more arable and livestock products. Average annual gross output of agricultural products increased from R82.8 billion in the 5-year plan period preceding the March plenum to R123.9 billion in the 10th Five-Year Plan. The average annual grain harvest, despite 3 unfavorable years, was 75 million tons higher, exceeding 205 million tons, while meat production increased 60 percent.

The increase in agricultural production has been achieved above all as a result of the strengthening of its material and technical base. Agricultural fixed production capital has been substantially renewed over these years, and reached R243 billion by the end of 1981, an increase of 270 percent compared with the 1965 level. Labor productivity on kolkhozes and sovkhozes increased 80 percent. The chemicalization of agricultural production and land reclamation have taken place at an accelerated rate.

Alongside the major transformations in agriculture, associated sectors have also been further developed. A number of new tractor and agricultural machine building plants have been built and more than half the enterprises in these sectors have been modernized. The production of machines and equipment for livestock raising and fodder production has been virtually reorganized, new capacities for the production of mineral fertilizers and other chemical agents have been commissioned and a mixed feed and microbiological industry and rural construction industry have been created. More than R380 billion was invested in the development of agricultural production over the whole range of operations in 15 years (1966-1980), which is 250 percent more than in all the previous years of socialist building.

The results of this party policy can be clearly seen in your republic. Comrade T.U. Usubaliev's report gave an all-round analysis of the work done and set out in detail the results of agricultural development. It must be noted that Kirgizia has achieved substantial successes. The republic party organization has begun to devote more attention to the specialization and concentration of agricultural production, the strengthening of its material and technical base, the improvement of working and living conditions for rural workers and the improvement of organizational and political work in labor collectives. In the years since the CPSU Central Committee March (1965) Plenum average annual grain production in the republic has doubled, cotton production has increased one-third, vegetables and grape production 200-300 percent, milk and meat production 49-54 percent, and wool production 70 percent. These are good results. The yield of agricultural crops and livestock raising productivity have increased considerably.

The implementation of the decisions of the CPSU Central Committee March (1965) Plenum made it possible to increase per capita consumption of food products in the country.

At the same time the party assesses what has been achieved realistically and sees certain difficulties in supplying the population with food. These difficulties are caused by a number of factors. One is the significant increase in the population's financial income. Whereas in 1965 only 4 percent of the population had a monthly income of more than R1,000 per family member, now more than half are at this level. As a result of the increase in Soviet people's purchasing power while prices for the main food products remain stable, there has been a sharp increase in demand for the most valuable food products. It is also necessary to take into account the increase in the country's total population and the simultaneous reduction in the number of rural dwellers, as well as the well-known changes in the development of subsidiary and personal plots.

Another factor is the insufficiently efficient utilization of reserves and of the opportunities offered by the mighty production potential which has been created in the countryside. Capital investment and material and technical resources channeled into agriculture are still not yielding the return which could be expected, and the productivity of the fields and livestock units is increasing only slowly. Agricultural production has not yet acquired the necessary stability and its degree of dependence on weather conditions is still high.

The decisions of the CPSU Central Committee May Plenum take these factors into account. The decisions are aimed at the further development of the agroindustrial complex with a view to ensuring, in the shortest possible space of time, the reliable supply of all types of food to the population and a substantial improvement in the structure of Soviet people's diet. It is planned in the 12th Five-Year Plan to increase average annual grain production to 250-255 million tons, meat production to 20-20.5 million tons and milk production to 104-106 million tons, and to significantly increase production of other agricultural products. Great intensive work lies ahead to achieve the targets set.

The elaboration of the correct program is important, but the decisive role in the attainment of the goals set belongs to practical work. This is a colossal task, and difficult work lies ahead. But it is not the first time the party has resolved such tasks.

The food question affects everyone, it is a nationwide cause. It was no accident that it was noted at the CPSU Central Committee Plenum that every republic, oblast and rayon, every sector of the national economy and all labor collectives are called upon to make the greatest possible contribution to resolving the food problem.

An important place in the implementation of the Food Program belongs to the Kirgiz SSR. Crucial, major tasks are set for the republic in the eighties and a significant increase in the production of agricultural output is envisaged.

The average annual output of products must increase as follows in the 12th Five-Year Plan as compared with the 10th; meat--31-38 percent, milk--19-20 percent, grain--11-17 percent, vegetables and fruit--50-60 percent, and grapes--80 percent.

At the CPSU Central Committee Plenum Comrade L.I. Brezhnev stressed particularly that the tasks set for increases in production of agricultural products in the eighties must be regarded as the minimum that must be achieved. This certainly applies to your republic party organization too.

The Food Program, while being long-term in nature, also includes urgent tasks. And its fulfillment must begin with these tasks, in order to secure the first results in increasing the production of agricultural products this year. This is a question of fundamental importance. We will resolve this task in the current year--we will create a base for the subsequent period and create confidence among the people in the successful fulfillment of the plenum decisions.

The main attention of party obkoms and raykoms, agricultural organs and workers on kolkhozes and sovkhozes in the republic must therefore be concentrated on the exemplary execution of all operations in arable farming and livestock raising and the elimination of existing shortcomings and bottlenecks. The weather has not been particularly kind to you this year. But this can only be confronted with energetic measures, more and more efforts and a creative approach to the task.

It is necessary to overcome laggardness in relation to last year's level in the production and procurement of--first and foremost--a number of livestock products. In the current year the average weight of cattle sold to the state has fallen. A considerable quantity of sheep have been sold at a low level of fatness.

A crucial, tense period has arrived in arable farming and in fruit growing and viticulture. The timely, high quality implementation of agrotechnical measures to tend the sowings and perennial plantations, the gathering of the harvest, fodder procurement and the storage and processing agricultural products now require daily attention and the full mobilization of the forces of party and soviet organizations and all workers in the agroindustrial complex. The Kirgiz party organization has considerable experience and many skilled cadres and will undoubtedly do everything possible to ensure the successful completion of the current agricultural year.

The efficiency of the entire agroindustrial complex depends largely on resolutely stepping up the struggle against losses of agricultural products and improving their storage, processing and sale. This is a major reserve, and a weighty return can be secured rapidly by utilizing it. Some work is being done in the republic in this direction, but the standard is still not up the requirements of the CPSU Central Committee May Plenum. Considerable losses occur in livestock raising, and also in the harvesting, transportation and storage of agricultural products. Fodder stores are being constructed only slowly. Only some 40 percent of cured hay is laid down in lined installations, as a result of which a significant proportion of it proves low in nutritional value.

The successful implementation of the CPSU Central Committee May Plenum decisions will be determined to a significant degree by the concentration of attention and resources on the main salients characterizing a particular region. What are these questions for Kirgizia? Considerable work is being done in this direction in the republic. The average annual yield in the 10th Five-Year Plan compared with the previous 5-year plan increased for nearly all agricultural crops, including an increase in the yield of grain crops from 18.7 quintals to 23.6 quintals--a 26 percent increase.

At the same time the potential for increasing yield is far from exhausted. This is indicated by the experience of the republic's leading kolkhozes and sovkhozes, which obtain 130-140 quintals of grapes per hectare, 200-300 quintals of potatoes and vegetables and 80-90 quintals of hay from perennial grasses, while on the laggard farms the yield is 65-75 percent lower. Of course, conditions may be different. This does happen. And it must be reckoned with. But the republic's party organization faces a question of extreme importance--what must be done to ensure that the leading farms' experience becomes everyone's property. This applies to the standard of economic management, discipline, techniques and the work of cadres.

The application of industrial techniques for corn cultivation has made it possible to increase its yield to 100-150 quintals of grain in the best teams and units, and in the republic as a whole the yield has increased substantially recently and was more than 57 quintals in 1981. However, this progressive method has not yet become the property of most kolkhozes and sovkhozes.

Irrigated land is not used efficiently enough in the republic. This is largely explained by the lack of scientifically substantiated crop rotations on a number of farms and the low standard of arable farming. As well as increasing yield, it is necessary to further extend the area of irrigated land in the republic.

Questions of the intensification of livestock raising are equally important. It must be noted that there have been positive shifts in this field in the republic. There has been an increase in the numbers of cattle, pigs, sheep and goats and in meat production, and the sector's productivity has improved.

But it should be acknowledged that on the whole the level of livestock raising efficiency is still inadequate. Productivity per head of livestock and poultry is increasing only slowly, and potential exists for improving these indicators. In 1981 2,662 kg of milk per cow was obtained in the republic on average, while many farms obtain more than 3,500 and some--like, for instance, the Strelnikova and Dzhergetalskiy state breeding farms--obtain 4,000-5,000 kg.

The republic's party, soviet and economic organs must direct particular attention to increasing the efficiency of the leading sector--sheep raising. It cannot but cause concern that unit expenditure here has increased considerably. This is because manual labor predominates in sheep raising and there is a shortage of fodder, particularly in the winter period. The yield of fodder from pastures has fallen sharply because work to improve the herbage is still inadequate.

In view of the great national economic significance of this sector, the CPSU Central Committee and USSR Council of Ministers adopted a special resolution on 14 January 1981 "On Measures To Further Develop Sheep Raising in the Kirgiz SSR." It is planned to increase wool production to 35,500 tons in 1985 and sheep meat production to 150,000 tons. The republic has been given substantial assistance. Considerable capital investments are allocated for these purposes in the current 5-year plan. Some work is being done to fulfill this resolution. But in a number of rayons, kolkhozes and sovkhozes the measures outlined for developing sheep raising are still being implemented only poorly. And concern must be displayed for strengthening organizational work in this respect.

In order to ensure the planned increase in food production and reduce losses, it is necessary to speed up the development of processing enterprises. This question has been raised correctly here.

Comrade V.I. Dolgikh went on to note that a huge quantity of machinery is allocated to agriculture in the country as a whole--more than 350,000 tractors and 100,000 grain harvesting combines and other machines annually. Think about these figures. We must continue to move forward in quantitative and qualitative terms.

An important task for your republic party organization is to further strengthen the material and technical base of agriculture. The M.V. Frunze agricultural machinery plant makes a substantial contribution to providing the countryside with highly productive machinery. Great significance is now attached to the question of improving the utilization of available machinery, fertilizers and other resources. Kirgizia has a large pool of agricultural machines. It should be noted that in recent years there has been a significant increase in proportionate output per tractor or cotton harvesting machine and the level of mechanization of labor has increased in arable farming and livestock raising.

However, great reserves exist in the republic for improving the utilization of agricultural machinery. This applies particularly to grain harvesting combines, whose output has fallen substantially compared with the 1970 level. The shift coefficient of work by the machine and tractor pool remains low.

Agriculture organs and kolkhoz and sovkhoz leaders must elaborate and implement measures aimed at ensuring the more productive utilization of machinery, improvements in its operation and repair, the improvement of machine operator cadres' skills and the wide dissemination of leading experience.

As is known, large capital investments are allocated for the implementation of the USSR Food Program, amounting to R233 billion in the 11th Five-Year Plan alone, or approximately one-third of the total volume for the country's national economy. There is a significant increase in investments in agriculture for your repoublic too. That is why it is the prime duty of all workers in the agroindustrial complex to ensure the rational utilization of capital investments and a high return.

Great, very responsible work lies ahead in this direction, the more so as the effectiveness of capital investments in the republic is as yet inadequate. In order to improve the utilization of the resources allocated it is necessary to direct particular attention toward making projects more economical, ensuring a comprehensive approach to the erection of agroindustrial projects, making construction work less costly and reducing the time it takes. Industrial methods of construction should be introduced more widely and more extensive use should be made of local construction materials. Measures must be adopted to eliminate laggardness in fulfilling plans for the assimilation of capital investments and the commissioning of fixed capital.

As Comrade L.I. Brezhnev stressed at the May plenum, measures for the social restructuring of the countryside are an integral part of the Food Program. The party and government have always devoted great attention to these questions. In recent years there have been profound changes in living conditions for rural workers, their income has increased and their educational level has improved. Labor in the countryside is increasingly becoming a variety of industrial labor.

This can be seen clearly from Kirgizia's example. In the 10th Five-Year Plan alone nearly 2.7 million square meters of housing and a significant quantity of cultural and consumer institutions were constructed in rural localities. Average per capita income for kolkhoz members increased 47 percent compared with 1975. Some 18,000 specialists with higher and secondary specialized education work on kolkhozes and sovkhozes. One in seven agricultural workers is now a machine operator.

Much has been done. But there are still substantial shortcomings in the resolution of social questions. The development of consumer services for the rural population is lagging behind. All this means that party, soviet and economic organs must keep questions of a social nature at the center of their attention.

In elaborating the Food Program, Comrade V.I. Dolgikh said, the party's Central Committee proceeded on the basis that the introduction of progressive forms of management of the agroindustrial complex is a necessary condition of its successful implementation. To this end agroindustrial commissions and associations are being set up centrally and locally. The CPSU Central Committee believes this will make it possible to combine territorial and sector planning more effectively, to ensure more flexible, effective leadership and to increase interest in and responsibility for end results.

In implementing measures to improve the economic machinery, great attention must be devoted to the introduction of autonomous financing in all components of the agroindustrial complex. This is a powerful level for increasing production efficiency. There is a wide field of activity for kolkhozes and sovkhozes here. First and foremost, it is necessary to fight to achieve high profitability on farms. The republic has achieved some results here. All the kolkhozes are profitable. On sovkhozes the situation is rather worse, with one in five of them running at a loss. The prime cost of a number of types of agricultural products has increased in recent years. Now that it has been decided, in order to improve the financial situation of kolkhozes and sovkhozes, to write off their debts to the state and increase purchase prices, it is necessary to adopt all possible measures to ensure steady, profitable work in response to this great concern.

Kolkhozes and sovkhozes form the organizational basis of agriculture and the entire agroindustrial complex. The strengthening and all-round improvement of their work is the guarantee of the successful resolution of the tasks ahead. That is why it is necessary to increase the organizational and economic independence of kolkhozes and sovkhozes and resolutely eliminate bureaucracy toward them. It is necessary to strengthen democratic principles of management on kolkhozes and sovkhozes and increase their initiative.

The interests of developing agriculture persistently demand a tireless improvement in work with leadership cadres on kolkhozes and sovkhozes. It is above all a question of consistently implementing a line of reinforcing farms with highly qualified specialists. Much is being done in the republic in this respect. A large detachment of good production organizers who know and love their job works in agriculture. But this is still an urgent task.

Serious concern was expressed at the CPSU Central Committee Plenum that in a number o places kolkhoz and sovkhoz leaders are replaced unjustifiably frequently. This applies to certain oblasts and rayons in Kirgizia.

Special attention must be devoted to strengthening middle-level cadres. Party and soviet organs must be more concerned with questions of establishing them in the countryside and to this end must make fuller use of the measures and privileges envisaged in the relevant CPSU Central Committee and USSR Council of Ministers resolution. It is important for farms to have a really sensitive, solicitous attitude toward specialists and toward satisfying their needs and requirements.

I would particularly like to stress the need to step up work to improve cadres' skills and promote mastery of the methods of efficient economic management and leadership in the light of new conditions and requirements. The system of economic education must be raised to a higher standard in accordance with the recently adopted CPSU Central Committee decision on this question.

The Central Committee May Plenum demanded a constant improvement in work with agricultural cadres. Here it is necessary to observe and promote capable, promising workers in good time, help them to master the art of leadership, economic management and education, display trust in leaders, encourage initiative and, at the same time, increase personal responsibility for the task entrusted to them.

The successful implementation of the tasks set by the CPSU Central Committee Plenum requires an improvement in organizational, political and ideological education work among rural workers. We have considerable potential for this. More than 37,000 communists, or one-third of the republic's party organization, actually work in agriculture. It is necessary to do everything to increase the vanguard role of rural communists and ensure that each of them is really in forefront of the struggle to increase the efficiency of agricultural production.

It should be noted that the Kirgiz CP Central Committee and local party committees, fulfilling the instructions of CPSU congresses, CPSU Central Committee resolutions and Comrade L.I. Brezhnev's instructions, have recently done much to step up the militancy of primary party organizations and increase their role in economic and cultural building.

At the same time the shortcomings in organizational and political work and in party leadership of production noted at the CPSU Central Committee Plenum apply fully to Kirgizia's rural party organizations. There must be substantial improvements in party work on laggard kolkhozes and sovkhozes which fail to ensure the fulfillment of state plans and socialist pledges.

In present-day conditions the role of rural party raykoms is further increasing. They are called upon to ensure political leadership over the development of agricultural production and efficient, harmonious collaboration between all units in the agroindustrial complex at rayon level. In view of this, on Comrade L.I. Brezhnev's initiative, the Central Commitee Politburo has adopted a resolution on certain measures to further strengthen rural party raykoms and the primary party organizations of kolkhozes, sovkhozes and interfarm enterprises. It is a question of creating agriculture departments in raykoms and gorkoms concerned with the countryside. They will now be formed in virtually all such party committees. It is important to select for this work skilled, enterprising comrades with a good knowledge of agricultural production.

Party obkoms must tirelessly improve the forms and methods of organizational and political work, studying the activity of party raykoms and primary party organizations in greater depth, attentively study and generalize their experience and give them more businesslike, practical assistance. Constant concern must be displayed for the correct distribution of forces and effective party influence in the decisive sectors of production, and it is necessary to increase the activeness of soviet, trade union and Komsomol organizations in resolving the tasks set by the CPSU Central Committee May Plenum.

The Food Program is an integral system of measures covering many sectors of the national economy and all levels of production and management. The organization of its fulfillment requires a carefully considered plan ensuring efficient collaboration between all components and overcoming departmental isolation. Breakdowns must not be permitted in any sector, since that could have a negative effect on the whole range of operations.

Here particular significance is attached to exacting, day-to-day monitoring of the execution of the measures planned. This concerns all management organs. And the republic's party organizations must set the tone and mood. The verification of execution must be organically combined with organizational work to eliminate shortcomings, give practical assistance and generalize and disseminate positive experience in resolving the tasks of further developing and increasing the efficiency of agricultural production.

Every party organization and every labor collective must determine its place in the resolution of the whole people's task--the further upsurge of agriculture and associated sectors--and must mobilize all its forces to achieve the targets set. In short, it is necessary to bring all organizational and political levers to bear in order to promote in the best possible way the resolution of the tasks set by the May plenum and the successful implementation of the Food Program.

Work to fulfill the tasks set by the party is developing in an atmosphere of great political and labor enthusiasm arising from the preparations for a noteworthy event--the 60th anniversary of the USSR's formation. The harmonious family of equal republics will mark this glorious anniversary as a triumph of the Leninist nationalities policy, as a result of which all our country's nations and ethnic groups have achieved tremendous successes in communist building. The socialist competition for a fitting greeting for this jubilee is spreading increasingly widely. This patriotic movement must fully reflect the tasks set by the CPSU Central Committee May Plenum.

The discussion of this question shows that the republic party organization is fully determined to implement the decisions of the CPSU Central Committee May Plenum and the fundamental tasks put forward by Comrade L.I. Brezhnev at the plenum for implementing agrarian policy at the present stage.

The report and the speeches of participants in the plenum, Comrade V.I. Dolgikh noted, analyzed the state of affairs in depth, and put forward valuable, constructive proposals and concrete measures to further develop and increase the efficiency of the republic's agroindustrial complex and improve organizational and political work. The Kirgiz CP Central Committee Plenum will undoubtedly give powerful impetus to the stepping up of all activity in this direction.

In conclusion Comrade V.I. Dolgikh expressed confidence that the communists and all working people of the republic will make the greatest possible efforts to successfully fulfill the historic decisions of the 26th party congress and the CPSU Central Committee May Plenum and will make a worthy contribution to the implementation of the Food Program and to increasing our motherland's economic potential. (Comrade V.I. Dolgikh's speech was heard with great attention and was repeatedly interrupted by applause).

RUSAKOV ADDRESSES SOCIAL SCIENCE GRADUATES

PM120901 Moscow PRAVDA in Russian 1 Jul 82 p 2

[TASS report: "Reliable Party Cadres"]

[Text] The CPSU Central Committee Academy of Social Sciences has produced a new detachment of graduates. There was a ceremonial meeting of professors, teachers, students and graduates of the party's supreme academic institution in Moscow 30 June.

On the Presidium were K.V. Rusakov, secretary of the CPSU Central Committee, K.M. Bogolyubov and N.A. Petrovichev, first deputy chiefs of CPSU Central Committee sections, A.M. Poplavskiy, CPSU Central Committee first deputy administrator of affairs, I.S. Gustov, first deputy chairman of the CPSU Central Committee Party Control Committee, Yu. S. Afansyev, P.K. Luchinskiy, G.S. Strizhov and O.A. Chukanov, deputy chiefs of CPSU Central Committee sections, and scientists and representatives of the capital's public.

The meeting was opened by V.A. Medvedev, rector of the academy.

An honorary presidium comprising the CPSU Central Committee Politburo headed by Comrade L.I. Brezhnev was elected with enthusiasm.

The assembly was addressed by K.V. Rusakov.

On behalf of the party Central Committee and L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, personally he cordially congratulated the graduates and the entire academy collective on the portentious event and conveyed greetings and good wishes.

The Soviet people, L.V. Rusakov said, are working energetically to implement the 26th CPSU Congress decisions. Step by step the party's plans are being realized.

The CPSU Central Committee May plenum was a major event in our country's life. The USSR food program adopted by it has now essentially become the pivot of the political and economic work of the whole party and country. To a certain extent each of the academy's graduates will have to be engaged in it literally from the first few days, taking into account the fact that the party Central Committee directs that the May plenum's decisions should begin to give a return as early as this year.

A special enthusiasm is being caused among Soviet people by the approaching glorious date--the 60th anniversary of the USSR's formation. We have long had the good tradition of greeting jubilees with labor achievements. The academy's graduates will make their direct and personal contribution to this tradition.

Our economy is gradually transferring to an intensive development footing. The essence of this transition is clearly expressed in the concise but meaningful phrase put forward by Leonid Ilich Brezhnev at the 26th CPSU Congress that the economy must be economical. And here, of course, there is vast scope for creativity, for brave new decisions and for the application of knowledge.

High goals have also been set, K.V. Rusakov noted, by other fraternal communist and workers party congresses. In virtually every fraternal socialist country much of what is being done in various avenues of work is in keeping with affairs in our country. This applies to the steady improvement of socialist democracy, the intensification of the economy and the communist education of working people.

All we communists of the socialist countries are essentially engaged in a common communist cause, and a better knowledge of one another, a lively exchange of experience and a pooling of our efforts in resolving the key problems facing the socialist world will continue to be a reliable accelerator of the development of each socialist country and of the multiplication of the whole socialist community's potential.

The socialist world's development is now occurring under complex conditions. The arms race, the enflaming of crisis situations, shown by the tragic events in the Near East, and the attempts at crude pressure on the Soviet Union and other socialist countries are all practically the main elements of the present U.S. administration's foreign policy course. The more closely and thoroughly we cooperate in all directions, the more effective our opposition will be.

The Central Committee, the CPSU Central Committee Politburo and Leonid Ilich Brezhnev personally have paid and continue to pay unremitting attention to strengthening friendship and cooperation with the socialist countries. This task is constantly to the fore in Soviet foreign policy and is resolved through our fraternal countries' joint efforts.

Together we are firmly pursuing the line of strengthening the Warsaw Pact Organization--our defensive military-political alliance. Together we are striving to increase our ties in the economic sphere and are working to raise the level of these ties. It is increasing our ties with one another, in the constant strengthening of our cooperation and in unity and cohesion that we see the firm guarantee of the new victories of our great common cause.

K.V. Rusakov wished the graduates ideological vigilance and unshakable loyalty to Marxist-Leninist ideals. Firm convictions and faith in the historic correctness of our common revolutionary cause, he said, are a material force. It is necessary to keep constantly in mind Lenin's behest to strengthen ties with the masses and to be tirelessly concerned for the strict observance of Leninist norms of party life. Learning from people, knowing their moods and taking up all that is new is not only and not so much a duty. It is the obligation of the true party worker, particularly one who occupies a leading post.

The CPSU Central Committee secretary expressed the confidence that the international friendship uniting the academy's graduates will be a further source of good international deeds.

I.A. Osipova, Y. Slovik and Prof Yu. A. Lukin addressed the meeting on behalf of the academy's students, graduates and teachers.

With enthusiasm the participants in the ceremonial meeting adopted a greetings letter to the CPSU Central Committee and Comrade L.I. Brezhnev.

'PRAVDA' REVIEWS NEW ANTHOLOGY OF CPSU WRITINGS

PM080751 Moscow PRAVDA in Russian 23 Jun 82 p 2

[Unattributed book review: "Creative Energy"]

[Text] The decisions adopted by the 26th CPSU Congress gave a powerful impetus to the Soviet people's creative, constructive work. The party's course of further improving people's well-being and culture, strengthening the material and spiritual foundations of the socialist way of life and ensuring peace and favourable foreign policy conditions for communist building increases the working people's energy and promotes the growth of their social activeness, consciousness and organization. The Soviet people's unity and their cohesion around the CPSU are becoming firmer all the time.

The results of the fulfillment of the congress decisions in the 1st year of the 11th Five-Year Plan, the generalization of the experience of the party and people, topical new problems of the domestic and foreign policy of the CPSU and the Soviet state--such is the content of the second issue of the anthology "The 26th CPSU Congress: Unity of Theory and Practice" [26 Syezd KPSS: Yedinstvo Teorii i Praktiki] [Footnote: "The 26th CPSU Congress: Unity of Theory and Practice." Second issue. Moscow, Political Literature Publishing House, 1982, 512 pages], which includes articles, reports, speeches and addresses by Comrade L.I. Brezhnev and other party and government leaders in the second half of 1981.

Many of the works included in the anthology are focused on the present-day world situation, on whose development so much depends in the life of countries and peoples, and on questions of the CPSU's peace-loving, constructive foreign policy. By the late seventies and early eighties the international situation had deteriorated sharply--the most aggressive imperialist circles had gone onto the offensive against detente, launching an arms race on an unprecedented scale and trying to take a historical revenge "from a position of strength." Unusual topicality is today attached to V.I. Lenin's words to the effect that "political reaction in everything is the characteristic of imperialism" (Complete Collected Works, vol 30, p 164).

The Soviet Union has not allowed itself to be intimidated or provoked in persistently, steadily implementing the peace program for the eighties adopted by the 26th CPSU Congress. Almost every one of the speeches by Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, included in the book contains a new peace initiative and points to ways of resolving vital problems of the international situation on a mutually acceptable basis. The CPSU and the Soviet state consistently implement a peace-loving foreign policy line, strengthening the fraternal community of socialist countries, developing cooperation with other states on the planet and seeking to rally all progressive and democratic movements of today in the struggle to avert a world thermonuclear catastrophe. Questions of the indissoluble tie between socialism and peace, the deep historical sources of our love of peace and the humanist essence of the policy of the USSR, which upholds the cause of peace and a happy future for all people on earth, are also revealed in the works of members of the CPSU Central Committee Politburo V.V. Grishin, first secretary of Moscow CPSU Gorkom; A.A. Gromyko, USSR foreign minister; D.F. Ustinov, USSR defense minister; and also B.N. Ponomarev, candidate member of the Politburo and secretary of the CPSU Central Committee.

Problems of the foreign and domestic policy of the Communist Party and our state of the whole people are interlinked and interdependent in the closest possible way: the peace-loving foreign policy ensures favorable conditions for the Soviet people's peaceful labor; in turn, the strengthening of the country's defense capability and the active foreign policy are based on the successes of the socialist economy and the increasingly efficient, highly productive labor of Soviet people. And this relationship is revealed in depth in the pages of the anthology: not only the further growth of the whole people's wealth and the acceleration of the progress of our society's economy and culture, but peace throughout the world depend on the labor contribution of each individual.

At the stage of developed socialism society confronts a wide range of historically new, large-scale and complex problems. It is a vital necessity to decisively increase the efficiency of socialist production and improve the quality of all work, and this requires the transfer of the economy onto a footing of intensification. These problems were central to the work of the CPSU Central Committee November (1981) Plenum and the speech delivered by Comrade L.I. Brezhnev at the plenum. The most resolute indications were given of the need to concentrate the efforts of the party and of economic and soviet cadres on fulfilling decisions on increasing the effectiveness of the economic machinery, on improving the utilization of the achievements of science and technology in all sectors of social production and on improving planning and management. It was noted at the plenum that "the style of economic activity and economic thought, planning methods and the management system are not being restructured sufficiently energetically," and emphasis was laid on the task of increasing cadres' responsibility for resolving urgent tasks. The main guidelines for elaborating a number of comprehensive targeted programs were outlined in the work and decisions of the plenum, including the food program, which was approved in May of this year by the next CPSU Central Committee Plenum.

Problems of further developing the socialist economy, transferring it onto a footing of intensive development, resolving economic tasks in close unity with social and cultural tasks, stepping up science's role in society's life and strengthening ties with the fraternal socialist countries are comprehensively examined in article by members of the CPSU Central Committee Politburo A.P. Kirilenko, secretary of the CPSU Central Committee; D.A. Kunayev, first secretary of the Kazakhstan CP Central Committee; G.V. Romanov, first secretary fo Leningradskiy CPSU Obkom; N.A. Tikhonov, chairman of the USSR Council of Ministers; and V.V. Shcherbitskiy, first secretary of the Ukrainian CP Central Committee; and candidate members of the CPSU Central Committee Politburo G.A. Aliyev, first secretary of the Azerbaijan CP Central Committee; V.I. Dolgikh, secretary of the CPSU Central Committee; and M.S. Solomentsev, chairman of the RSFSR Council of Ministers

The materials in the anthology show convincingly that the economical, rational utilization of all the resources at our country's disposal and the realization of all the tremendous potential of developed socialism are not only associated with improving state and economic management and further improving the standard of party leadership of the economy. They are also associated with the discovery and bringing into play of the really inexhaustible resources of creativity which are to be found among the masses of working people and which are expressed in the scope of socialist competition, the might of free labor enriched by knowledge and culture and the inexhaustible energy and initiative of labor collectives. The purposeful activity of the soviets, the expansion and deepening of socialist democracy and the entire cultural, ideological and educational complex available to our society help to increase the Soviet people's creative energy and to organize better the nationwide cause of communist creation. This is discussed in articles by candidate members of the CPSU Central Committee Politburo P.N. Demichev, USSR minister of culture, and V.V. Kuznetsov, first deputy chairman of the USSR Supreme Soviet Presidium.

For the success of the cause of nationwide creation, the 26th CPSU Congress noted, "decisive significance is attached to energetic, competent party leadership. If every party organization, in its own sector, utilizes all reserves and imposes due order in everything, then the whole country's affairs will advance." It is no accident that a pivotal theme of the anthology is questions of strengthening the party's leading role in communist building, improving the style of work, improving the training, placing and education of cadres and increasing the responsibility of all communists for the success of the common cause--questions illuminated in detail in an article by K.U. Chernenko, member of the Politburo and secretary of the CPSU Central Committee, and in other materials in the book.

The correct tone of the party's tremendous ideological-theoretical, organizational and ideological-political work is set by its Leninist Central Committee and its Politburo. "The spirit of comradeship in the leading party nucleus combined with high principles and businesslike exactingness," Comrade L. I. Brezhnev notes, "helps to maintain a healthy moral and political climate throughout the party and country and helps us to know and take better account of the thoughts, aspirations and initiative of millions of Soviet people. And this means that we can more successfully channel the efforts of the party and all the people into resolving the great, complex tasks of the country's development."

L.I. Brezhnev's outstanding role in establishing such a climate has earned him the people's love and respect, and that is why the celebration of his 75th birthday was a noteworthy ideological and political event. His activity, the now deceased M.A. Suslov, member of the Politburo and secretary of the CPSU Central Committee, said at the jubilee, is marked by its organic "ties with the working people and the desire to serve the vital interests of the working class and all the people and to live by the needs and aspirations of working people. This is one of Leonid Il'ich's most vivid features as a leader of the Leninist type, with the ability to organically combine the implementation of communist ideals with the resolution of current practical tasks, to assess our great achievements soberly, to see difficulties and shortcomings and to find ways of eliminating them" (p 256).

Particular features of the Leninist Party's work in the conditions of the developed socialist society, the new, higher demands on all components of our party, the establishment and improvement of the Leninist style in the activity of all party committees and organizations, the development of monitoring and verification of execution of decisions adopted, the increasingly close ties between organizational work and ideological and political education work--all these questions are examined profoundly and in detail, on the basis of the generalization of the actual experience of party organizations, in articles by A. Ya. Pelshe, member of the CPSU Central Committee Politburo and chairman of the CPSU Central Committee Party Control Committee, and Sh. R. Rashidov, candidate member of the CPSU Central Committee Politburo and first secretary of the Uzbekistan CP Central Committee, and other materials in the anthology. They show that the will of the time and the objective law of our society's development entail the further growth of the Communist Party's leading role, the strengthening of its ties with the masses and the consolidation of the indissoluble unity of party and people--that unity which forms the main source of our strength and the guarantee of new successes in the struggle for communism.

"The lodestar for all the party's activity," it is noted in the book under review, "has been and remains Marxism-Leninism. The new tasks which have arisen and arise in the course of development continue to demand new answers and new solutions from us. And Leninist methodology and Leninist revolutionary teaching help us to find these answers and solutions" (p 62). The materials in the anthology give a good impression of the course and direction of this fruitful quest and the results of the creative development of Marxism-Leninism on the basis of the profoundly scientific interpretation of sociohistorical practice in our time.

'PRAVDA' REPORT ON MAKEYEV ACADEMY SPEECH

PM121411 Moscow PRAVDA in Russian 2 Jul 82 p 2

[TASS report:. "Commanders of the Economy"]

[Text] A ceremonial meeting devoted to the third and latest graduation of students of the USSR Council of Ministers Academy of the National Economy was held on 1 July.

In the presidium were V.N. Makeyev, deputy chairman of the USSR Council of Ministers; Yu. A. Belik, N.I. Bochkov and S.G. Shcherbakov, first deputy chiefs of CPSU Central Committee sections; and ministers and leaders of USSR state committees, prominent scientists and representatives of the capital's public.

An honorary presidium comprising the CPSU Central Committee Politburo headed by Comrade L.I. Brezhnev was elected with enthusiasm.

The assembly was addressed by V.N. Makeyev. On behalf of the CPSU Central Committee, the USSR Supreme Soviet Presidium, the USSR Council of Ministers and Comrade L.I. Brezhnev personally he warmly congratulated the graduates and the entire collective of the Academy of the National Economy on the notable event.

The academy's graduates, the speaker said, are returning to practical work in an atmosphere of social and political enthusiasm created by the historic decisions of the 26th CPSU Congress and its Central Committee November (1981) and May (1982) plenums. These decisions determine the main avenues of development of all our society. The whole country and the entire Soviet people, preparing to celebrate the 60th anniversary of the USSR's formation, are now struggling to implement them.

The party's economic policy at the contemporary stage is geared to decisive progress toward a mainly intensive type of economic growth, to developing the efficiency of social production and improving the quality of all our work.

One of the fundamental tasks of contemporary economic development--meeting the country's demand for food--was examined comprehensively at the CPSU Central Committee May plenum. The plenum's decisions and Comrade L.I. Brezhnev's report are a major contribution to Marxist-Leninist agrarian theory and the practice of communist building.

The plenum's decisions are also a new stage in the development of the theory and practice of socialist planning and economic management. The Academy of the National Economy's collective and its graduates must make their worthy contribution to the great and truly national cause of implementing the food program.

The contemporary stage of economic development makes higher demands on the management of the national economy. The party has demanded that the standard of all planning work be considerably raised and that the planned economic management system be brought into line with the increased scale of social production.

Quite a lot has been done in recent years to improve the forms and methods of management of industry, agriculture, construction and other sectors of our economy. At the same time, as the decisions of the 26th party congress and its Central Committee plenums have noted, the restructuring of the economic mechanism is still not being conducted with the due persistence and purposefulness.

The academy's graduates must work to resolve these questions. Cooperation between the academy and the fraternal socialist countries' scientific and academic centers should be broadened and strengthened and the diverse positive experience accumulated there should be studied and generalized more actively.

Improving the mechanism of planned economic management depends to a decisive degree on cadres and requires that the content and methods of their work be changed. The attention of the Central Committee, its Politburo and Leonid Ilich Brezhnev personally is constantly centered on questions of training and educating leading cadres.

The timeliness and importance of the decisions of the CPSU Central Committee and the USSR Council of Ministers to create the Academy of the National Economy--a new type of academic institution--are now particularly clear, the speaker said.

The academy has done much work and accumulated useful experience in training leading cadres for the national economy. Favorable conditions have been created here for effective study and the inculcation of a Leninist style of leadership in students.

Rector Ye. M. Sergeyev and students N.V. Averyanov and Yu. A. Tulupov addressed the meeting on behalf of the academy's collective.

With enthusiasm the participants in the ceremonial meeting adopted a greetings letter to the CPSU Central Committee, the USSR Supreme Soviet Presididum, the USSR Council of Ministers and Comrade L.I. Brezhnev.

'PRAVDA' REPORTS OPENING OF ZNANIYE SOCIETY CONGRESS

PM121451 Moscow PRAVDA in Russian 6 Jul 82 p 3

[TASS report: "Taking the Party's Word to the Masses: The Eighth All-Union Znaniye Society Congress"]

[Excerpt] The Eighth All-Union Znaniye Society Congress opened in Moscow's great Kremlin Palace on 5 July. The delegates will sum up the results of work in the last 5 years and define ways of fulfilling the tasks posed for workers on the ideological front by the 26th party congress and subsequent CPSU Central Committee plenums.

In the presidium were M.V. Zimyanin, secretary of the CPSU Central Committee; V.N. Makeyev and G.I. Marchuk, deputy chairmen of the USSR Council of Ministers; Ye. M. Tyazhelnikov and V.F. Shauro, chiefs of CPSU Central Committee sections; S.A. Shalayev, chairman of the AUCCTU; B.N. Pastukhov, first secretary of the Komsomol Central Committee; USSR ministers, chairmen of USSR state committees, representatives of party, Soviet, trade union and komsomol organizations, leaders of the Board of the All-Union Znaniye Society and the boards of the Union Republic Znaniye societies, well-known scientists and military leaders. Here too were leaders of societies and organizations for the dissemination of political and scientific knowledge from the fraternal socialist countries.

The congress delegations unanimously elected a presidium of honor consisting of the CPSU Central Committee Politburo headed by Comrade L.I. Brezhnev.

Those present greeted with prolonged applause the message of greetings to the congress from the CPSU Central Committee, which was read out by M.V. Zimyanin.

The report of the All-Union Znaniye Society Board was delivered by its chairman, academician N.G. Basov.

'LENIN'S UNIVERSITY' ON FOOD PROGRAM

[Editorial Report] Moscow Domestic Television Service in Russian at 0745 GMT on 24 June carries its regularly scheduled 30-minute "Lenin's University of the Millions" program entitled "The Food Program--Common Task for all the People" moderated by Pavel Grigoryevich Bunich, corresponding member of the USSR Academy of Sciences. This is the last episode of the "Food Program" series.

Lev Vasilyevich Nikofirov, head of a section of the Institute of Economics of the USSR Academy of Sciences; Vladimir Semenovich Prosin, chief of a main administration of the USSR Ministry of Agriculture; Nikolay Yevgeniyevich Smetanin, deputy chief of a Gosplan Department; and Yevgeniy Ivanovich Borodin, member of the editorial board and editor for industry and construction of IZVESTIYA, take part.

The program is a round table discussion of problems associated with the material and technical base in agriculture. Bunich begins the discussion by talking about the need to increase investment in agriculture because, despite its resources, "it has very little, compared with what is needed."

Smetanin continues by saying that in order to solve the mechanization problems in agriculture it is necessary to supply agriculture with complex machinery, especially in the area of intensive manual labor.

Nikiforov says that the existing technology does not compensate for labor shortages in agriculture. Smetanin adds that by 1990 all the labor intensive work will be mechanized, however, he does not think that the problem with mechanization of the fruit and vegetables industry will be solved by 1990. The emphasis on mechanizing the fodder industry will continue.

Bunich, Prosin and Smetanin make references to the climatic advantages in the United States and its high level of investment in land improvement and note that the Soviet Union will also have to increase the level of investment in land reclamation.

Smetanin notes the shortage of fertilizers in the USSR and compares their use in the USSR with the United States and other European capitalist countries.

Borodin comments on the lack of special machinery needed to develop auxiliary farming and fruit growing cooperatives. Nikiforov talks about overcentralized rural administration and necessity to give more managerial flexibility to local agricultural cadres. Prosin gives some examples of the complex and uncoordinated rural administration system. Smetanin talks at length about improving livestock industry productivity through emphasis on the fodder base. He comments on shortcomings in harvesting equipment and storage of agricultural produce.

Bunich concludes the program by saying that more programs in this series will be broadcast in October and asks for viewers' responses.

REGIONAL

PONOMAREV ADDRESSES NATIONALITIES CONFERENCE

PM081405 Moscow PRAVDA in Russian 29 Jun 82 p 2

[TASS report: "Creative Force of the Friendship of the Peoples"]

[Text] Riga, 28 Jun--The development of national relations under conditions of mature socialism and the experience and problems of patriotic and internationalist education are the themes of an All-Union Scientific and Practical Conference which began today in the capital of Soviet Latvia.

Participating in the conference are CPSU Central Committee executives, secretaries of union republic CP Central Committees, first secretaries of a number of party obkoms, chairmen and deputy chairmen of a number of union republic and autonomous republic Supreme Soviet Presidiums, chiefs of union republic CP Central Committee sections, secretaries and chiefs of party obkom, gorkom and raykom sections, leading Soviet army and navy political workers, executives of the AUCCTU, Komsomol Central Committee and union republic Komsomol Central Committees, mass media workers, prominent scientists, leading workers of ministries' departments and creative unions, production pacemakers and representatives of foreign communist and workers' parties.

The conference was opened by Ye. M. Tyazhelnikov, chief of the CPSU Central Committee propaganda section.

The conference participants received with enthusiasm the greetings from Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium. They were read out by A.E. Voss, first secretary of the Latvian CP Central Committee.

A report entitled "The CPSU's Leninist Nationalities Policy at the Stage of Developed Socialism and Its International Significance" was delivered by B.N. Ponomarev, candidate member of the Politburo and secretary of the CPSU Central Committee. The nationalities question occupies an important place among the fundamental problems of our era, he said. The historical experience of real socialism has shown the only feasible way of resolving it correctly and fully. This was mentioned with great force and clarity in the greetings from Leonid Ilich Brezhnev, general secretary of our party's Central Committee and chairman of the USSR Supreme Soviet Presidium, which you have just heard.

The unprecedented great achievements in the development of our country's peoples provide weighty evidence of socialism's advantages, of the truth of the Marxist-Leninist theory of nations and the correctness of the CPSU nationalities policy.

A CPSU Central Committee resolution stresses that in the glorious year of its 60th anniversary, the USSR stands before the whole world as a harmonious family of republics enjoying equal rights and jointly building communism. The cohesion of the Soviet people around their own dear Communist Party and its Central Committee headed by Comrade L.I. Brezhnev, that true continuer of Lenin's great cause, is indestructible.

Having noted that the multinational soviet land's steady and ongoing development is constantly setting the Communist Party and the people new tasks, B.N. Ponomarev said: The party approaches their solution fully equipped with Marxist-Leninist teaching and its accumulated historical experience and is creatively enriching the Leninist principles of socialist and communist building which have been tried and tested in practice. The Leninist nationalities policy at the stage of developed socialism was formulated and comprehensively substantiated in the 25th and 26th party congress materials and decisions and in L.I. Brezhnev's works.

The CPSU constantly keeps an eye open to see that the new processes and problems in the national relations sphere are carefully taken into account in the activity of party, soviet and public organizations. This aim is also being served by the holding of our conference which was convened by a decision of a CPSU Central Committee.

The speaker dwelt in detail on V.I. Lenin's elaboration of the theory of the nationalities question in the era of imperialism and of the transition from capitalism to socialism. Lenin's works comprehensively substantiate the indissoluble link between the complete resolution of the nationalities question and the socialist revolution. Lenin not only formulated the fundamental principles of socialist multinational statehood but was also present at the creation of the USSR. The speaker illustrated the profound and progressive changes that have occurred in the lives of all our country's nations and ethnic groups during the years of socialist building.

Moving on to questions of the CPSU's nationalities policy at the stage of developed socialism, the speaker noted that the main trend of the development of national relations consists in the further comprehensive rapproachment of the Soviet nations and the consolidation of the USSR. He characterized the main features of national relations under present-day conditions when the entire development of these relations is occurring under conditions of the new social and international community which has now taken shape--the Soviet people--and is closely linked to their future progress. Socialist international ties have already extended beyond our country's borders insofar as the socialist community exists and is growing stronger.

[PM081407] Having dwelt on questions of the interrelation between economic building and the development of national relations, the speaker noted that the country's integrated national economic complex is a reliable material base for the peoples' fraternity and friendship. The Soviet republics are jointly resolving the key problem of further progress--the task of intensifying production.

The central task of the party organizations and working people of all republics in the current and subsequent 5-year plan is to implement the Food Program approved by the CPSU Central Committee May (1982) plenum and to reliably provide the country's population with foodstuffs. And there is no doubt that the international unity and friendship of the USSR's peoples will play an important role in achieving the large-scale goals outlined in the program. At the same time, this work itself will be a factor which promotes the further rapproachement and strengthening of the friendship of our peoples.

The speaker showed that the role of social policy and the consistent deepening of socialist democracy in the development of national relations is increasing at the present stage. The substantial rapprochement between classes and social groups is common to all republics. The 26th CPSU Congress conclusion on the formation, already by and large, of a classless structure within the historical framework of developed socialism, clearly illustrates the prospects for further strengthening the Soviet people's social and international unity.

Cadre policy is also required to be an effective instrument of the internationalist approach to problems of national development. As L.I. Brezhnev stressed when speaking in Tashkent, "We must strive to ensure that each republic's nations and ethnic groups are duly represented in their party and state organs, taking strict account, of course, of each person's professional and ideological-moral qualities."

The Soviet people's unified international culture is growing and strengthening in the rich soil of developed socialism. In short, the golden age of the comprehensive development of our country's peoples, as L.I. Brezhnev said inspiredly, lies not in their past but in their present and future.

Dwelling on party committees' activity in the patriotic and internationalist education of working people, the speaker stressed the need to work purposefully so that proletarian internationalism should take root as the norm of daily conduct and as an integral feature of the active life stance of every person.

Summarizing what has been said on the CPSU's nationalities policy at the stage of developed socialism, B.N. Ponomarev highlighted its main avenues:

--the tireless strengthening of the Leninist friendship of the USSR's peoples and the effective promotion of the process of consolidating and developing the Soviet people as a new historical community;

--the consistent implementation of the course toward the further material and spiritual progress of each republic and at the same time the maximum utilization of their potential for the harmonious development of the whole country;

--the concentration of the efforts of all nations' working people on resolving the key economic problem--that of intensifying production and increasing the efficiency of the whole national economic complex;

--strengthening the USSR and consistently deepening socialist democracy;

--developing the social structure of the Soviet republics' population along the lines of forming a classless society;

--comprehensively promoting the progress of the spiritual culture of each of the country's nations and ethnic groups and the further development of the Soviet people's unified socialist culture;

--concrete and single-minded work on working people's patriotic and internationalist education and a firm rebuff to imperialism's slander campaign;

--the creative development of Leninist teaching on nations and national relations as applicable to the conditions of developed socialism and the gradual transition to communism. The report subsequently illustrated the international significance of the theory and practice of the transformation of national relations in the USSR. They exert a tremendous influence on the peoples' struggle for national independence, freedom and equal rights. Many aspects of the CPSU's experience are being widely used by state, party and public movements throughout the world.

Communist parties are paying tremendous attention to the nationalities question. The struggle for national freedom and independence is an inalienable part of the world's genuine social renewal in our era. The establishment of fair international relations in the world is an important factor in the struggle against the danger of war and the arms race.

[PM081409] The incitement of national discord and chauvinism has usually been a prelude to aggression and predatory wars. In our time, too, chauvinism is a weapon of imperialism, primarily of the United States which is conducting an unrestrained arms race, stepping up tension in international relations, impudently interfering in other countries' internal affairs and aggravating crisis situations in various regions of the world. It is trying to reverse the detente process and revive cold war times. Chauvinist ideology forms the basis of the policy of Israel's ruling circles which have unleashed bloody aggressions in Lebanon and have taken the path of outright genocide against the Palestinians and of the ruthless extermination of Lebanon's inhabitants.

U.S. imperialism's aggressive strategy is not only oriented directly against nations and countries which are unwilling to submit to imperialist diktat and which are defending the right to determine their rate themselves but is also leading to the restrictions of the sovereignty of U.S. allies and the subordination of their policy to U.S. ruling circles' interests.

This course is opposed by the policy of the socialist states and the communist and workers' parties.

The speaker subsequently illustrated how Soviet experience in the sphere of national building is reflected positively in the activity of the socialist community's communist and workers' parties and in the practice of their interstate relations based on socialist internationalism. Great interest is being shown in it by statesmen, public figures and political parties from the developing countries of Asia, Africa and Latin America and by communists and all progressive forces in the developed capitalist countries.

When talking of the international significance of Soviet experience, the speaker highlighted its following aspects above all:

The example set by the world's largest country with a tremendous national diversity irrefutably proves the real possibility of forming interrelations of a qualitatively new type among nations and ethnic groups based on the principle of equality, justice and friendship. It has been convincingly demonstrated that such interrelations are a powerful factor for social progress.

It has been substantiated in theory and proven in practice that since all national oppression and inequality are engendered by the system of man's exploitation by man, the struggle for the genuine resolution of the nationalities question is inextricably linked to the struggle for working people's social emancipation. Capitalism is quite incapable of consistently resolving the nationalities question.

The achievement of real equality among nations presupposes the implementation of the right to self-determination, the creation of one's own state, the right to determine one's socioeconomic system oneself and to form one's relations with other countries and peoples in a sovereign way. Only a completely voluntary alliance of the nations and ethnic groups forming such an alliance can be a reliable political basis of a multinational state.

The political liberation of nations cannot be lasting unless it is combined with the transformation of economic and social relations and the struggle to achieve economic equality. Under present-day conditions when dozens of states are resolving the most complex tasks of overcoming age-old backwardness and of achieving equality in economic relations with the developed capitalist countries, the Soviet republics' experience is a valuable and inspirational example for them. Of special importance here is the proven real possibility for the peoples who have not undergone the capitalist stage of development to reach socialism while bypassing or substantially reducing the capitalist stage.

The establishment of national equality is closely connected with the character of the state's political system. The nearer it comes to genuine people's power, he broader the scale on which it enlists the working masses into active participation in social and state affairs and the greater the scope it opens up for resolving the tasks of the national rebirth of countries which have taken the path of independent development.

The just resolution of national problems requires a conscientious and well-organized political vanguard and a party which expresses the interests of the working class and all working people and is guided by scientific socialism.

The CPSU's many years of practice have shown how important is the party's purposeful work on educating working people of all nationalities in a spirit of internationalism and of establishing the ideas of friendship and the fraternity of the peoples in people's consciousness.

Each people and each country is entitled to derive from our experience that which it considers necessary and useful for itself.

[PM081411] In conclusion, the speaker said: In a few months the Soviet people will be celebrating our multinational state's 60th anniversary. On the eve of this festival we see an impressive demonstration of economic and social achievements and the rapid flowering of the national cultures and arts of all the USSR's republics. It is a genuine parade of the victory of the CPSU's Leninist nationalities policy. As Comrade L.I. Brezhnev has stressed, the USSR's 60th anniversary is "a good reason for summarizing the results and defining and specifying the tasks for the future. In preparing to greet the glorious jubilee we repeatedly measure our action's against the Leninist program of building a new society." The preparation for the USSR's 60th anniversary should be used for the all-round and comprehensive strengthening of the friendship and fraternity of the peoples and for the further development of the masses' political and labor initiative in fulfilling the 26th congress' historic designs and the CPSU Central Committee May (1982) plenum's decisions.

The whole path traveled by the Soviet land since the Great October Revolution, its historic achievements and the society of developed socialism that we have built are a reliable foundation for further improving national relations, strengthening the friendship of the peoples and using its powerful creative potential in the interests of communist building. On this road, too, Soviet people are opening new horizons before all of mankind.

A.E. Voss, first secretary of the Latvian CP Central Committee, in a report entitled "Current Questions of the Further Intensification of Working People's Patriotic and Internationalist Education," stressed that Soviet Latvia's socioeconomic achievements are not just the result of the selfless labor of the republic's working class, kolkhoz peasantry and intelligentsia but also and primarily the result of the great friendship of our country's peoples and the selfless comprehensive help and support of all the Soviet peoples, primarily the Russian people.

The speaker described the system of patriotic and internationalist education which has taken shape in the republic. The republic's party organization attaches paramount significance to education in the process of labor activity. The international character of labor itself under socialism plays an important role in this. Great attention is being paid to improving party organizations' ideological work in multinational collectives.

The speaker analyzed the experience of the republic party organization's activity on increasing the ideological Ideynyy content and emotional influence of ideological (ideologicheskiy) measures, on the creation and development of new socialist customs and traditions--national in form, profoundly international in content--and on improving propaganda in lecture form and educational work among the creative intelligentsia and young people. It was also noted that the processes of internationalizing all spheres of the republic's life require further in-depth study for the prompt and correct solution of the problems emerging here.

Reports were also heard from A.S. Kapto, secretary of the Ukrainian CP Central Committee, S.N. Imashev, chairman of the Kazakh SSR Supreme Soviet Presidium, V.A. Medvedev, rector of the CPSU Central Committee Academy of Social Sciences, and M.S.I. Umakhanov, first secretary of the Dagestanskiy CPSU Obkom.

The conference continues its work.

ROMANOV REPORT TO LENINGRADSKIY OBKOM PLENUM

PM011343 Leningrad LENINGRADSKAYA PRAVDA in Russian 5 Jun 82 pp 1-3

[LENTASS report: "Devote Energy, Knowledge and Experience To Implementing the Nationwide Task"]

[Excerpts] Yesterday a plenum of the Leningradskiy CPSU Obkom was held in the Smolnyy. It discussed the results of the CPSU Central Committee May (1982) plenum and the tasks of the Leningradskaya Oblast party organization arising out of the report of Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee "On the USSR Food Program for the Period Through 1990 and Measures for Its Implementation."

G.V. Romanov, member of the CPSU Central Committee Politburo and first secretary of the Leningradskiy party Obkom, delivered the report.

Comrades:

Consistently implementing a course toward the steady boosting of the people's well-being the 26th party congress--on the initiative of Comrade Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium--set the task of improving food supplies to the country's population and of formulating a Food Program for the period through 1990 for this purpose.

The content of the program and ways of implementing it were examined by the party Central Committee May (1982) plenum whose decisions in their significance and scale, rank alongside the decisions of the historic CPSU Central Committee March (1965) plenum and mark a fundamentally new stage in the resolution of one of the most complex national economic problems.

Leonid Ilich Brezhnev's report at the CPSU Central Committee May plenum which was imbued with a Leninist spirit of party-mindedness and efficiency, is a document of tremendous political significance. After analyzing the party's multifacted work to develop the country's agroindustrial complex and the successes achieved, the CPSU Central Committee general secretary frankly pointed to the existing shortcomings and unresolved questions and clearly defined current and long-term tasks and ways and means of implementing the Food Program in practice.

The party Central Committee plenum wholly approved the propositions and conclusions set out in Comrade L.I. Brezhnev's report, and resolved to make them the basis of the practical activity of party, state and economic organs and of trade union and Komsomol organizations in implementing the CPSU's agrarian policy. After approving the country's Food Program, the CPSU Central Committee plenum ratified CPSU Central Committee and USSR Council of Ministers resolutions submitted to the CPSU Central Committee Politburo on a number of concrete questions backing up the main document, including: "On Improving the Management of Agriculture and Other Sectors of the Agroindustrial Complex," "On Measures To Improve the Economic Machinery and Strengthen the Economy of Kolkhozes and Sovkhozes," "On Measures To Increase Agricultural Workers' Material Interest in Increasing Output and Improving Its Quality," "On Additional Measures To Retain Workers Engaged in Stockraising on Kolkhozes, on Sovkhozes and at Other Agricultural Enterprises," "On Measures To Further Improve the Housing, Municipal and Consumer Service and Sociocultural Living Conditions of the Rural Population," and "On Further Strengthening Kolkhozes and Sovkhozes With Leading Cadres and Specialists and Enhancing Their Role and Responsibility in Developing Agricultural Production."

Thus the Food Program which has the aim of reliably providing the country's population with food products, is being brought to the fore both economically and politically. It not only means a radical turnabout in the development of agricultural and associated sectors but is also designed in its nature and scale to ensure the progress of the entire national economy.

The communists and working people of Leningrad and Leningradskaya Oblast, together with the party and the whole Soviet people, have greeted the materials of the CPSU Central Committee May (1982) plenum as an event of tremendous significance and as convincing new proof that the party is persistently implementing its supreme principle--everything for the sake of and for the good of man.

Wholly approving the decisions of the CPSU Central Committee May plenum and the propositions and guidelines of the CPSU Central Committee general secretary's report, Leningraders note with a feeling of special gratitude and thanks the tremendous personal contribution of Leonid Ilich Brezhnev to the formulation of the Food Program and all his tireless activity imbued with concern for the growth of the people's well-being and for strengthening our motherland's might.

Comrades:

The Food Program, constituting a qualitatively new step in the system of planning and management of the economy, embodies the comprehensive approach, unites the different elements of the agroindustrial complex into a single whole and provides for their industrial complex into a single whole and provides for their dynamic and balanced development. The program is also an aggregate of indicators which have to be achieved: They have been published and obviously there is no need to cite them. It is also an aggregate of planned measures and ways and means of achieving the set aims: These are also clearly reflected in the materials of the party Central Committee plenum.

The acceleration of scientific and technical progress, the highly efficient utilization of production potential and the further strengthening of the material and technical base of both agriculture itself and all the sectors of the agroindustrial complex are defined as a most important condition of the successful implementation of the Food Program.

[PM011345] The party demands that a sharp turnabout be ensured toward intensive farming methods and the better use of land, production capacities, labor, material and financial resources and all existing reserves and potential for increasing food products and that a persistent struggle be mounted to improve labor productivity, reduce output prime cost, ensure economy and thrift and eliminate instances of mismanagement and wastefulness.

Obviously, comrades, the formulation of the major new tasks for the current decade is based on all the preceding activity of the party and people to implement agrarian policy since the CPSU Central Committee March (1965) plenum. During this period the material and technical base of agricultural production has been qualitatively renewed and its efficiency has improved. New sectors serving agriculture have been created.

Throughout these years the party Central Committee has paid unremitting attention to the formation of highly intensive agricultural zones around major industrial centers, including Leningrad.

As you know, as from 1968, the CPSU Central Committee and the Soviet Government adopted three special resolutions providing for large scale measures for the intensification and comprehensive development of our oblast's agriculture.

The implementation of these resolutions and the use of the leading experience accumulated in various regions of the country made it possible to considerably strengthen the material and technical base of farms, to comprehensively mechanize many labor-intensive processes, and to ensure the widespread introduction of industrial techniques and the transfer of leading sectors onto an industrial footing.

I will cite just one generalizing indicator: Gross output on all categories of farms doubled in this period and increased from R500 million to R1 billion, and the total food production in the Leningrad agroindustrial complex now amounts to about R4 billion.

An important reference point for Leningrad communists in implementing agrarian policy was the recommendations that Comrade L.I. Brezhnev expressed in December 1971 at a meeting of the oblast party organization aktiv regarding the need to more fully provide the city and the oblast's industrial centers with locally produced products.

By working persistently to implement these instructions and by carrying out the measures laid down by the CPSU Central Committee to boost agriculture in the RSFSR Non-Chernozem Zone, working people in the public sector ensured an 80-percent increase in agricultural production during the 9th and 10th Five-Year Plans.

The average annual productivity of the dairy herd amounted to 3,300 kg of milk [per cow] in the 10th Five-Year Plan, and yield of grain crops reached 20-22, that of vegetables 280-300 and that of potatoes 135 quintals per hectare. At the present time the oblast produces over 1,000 quintals of milk and 270 quintals of meat per 100 hectares of agricultural land and the annual gross output exceeds R125,000.

The chief and most substantial result of the work which has been done has been the marked increase in the proportion of output from Leningrad fields and livestock units in the food balance. Though the city and oblast population has increased by more than 800,000 during this period, per capita deliveries of locally produced milk, heat and eggs have increased. For the last 3 years the oblast has been fully self-sufficient in the local range of vegetables.

Looking at the map of our oblast, comrades, it can be noted with satisfaction that large specialized zones of vegetable and potato growing, dairy and meat stockraising and industrial poultry raising have been formed on what used to be marshy lands of the Neva lowlands, overgrown areas of the Karelian isthmus and peat bogs in the Ladoga region and the southwest of the oblast. This is a direct result of the fact that party, soviet and economic organs have also carried out considerable work to industrialize rural construction.

Two agricultural and three housing construction combines and four new trusts have been created and the mobile mechanized columns have been strengthened in our oblast.

Over 80 industrial-type agricultural installations have been built in the two 5-year periods. They include the Pashskiy and Volna large beef-production enterprises (for 28,000 and 11,000 head of cattle respectively); the Novyy Svet" "Vostochnyy" and "Sputnik" hog-fattening combines for over 300,000 hogs; the Lomonosovskaya and Russko-Vysotskaya poultry factories for the production of 23 million broilers and the Sinyavinskiy poultry complex for 1.5 million laying hens.

Four mixed feed plants have been commissioned, including plants in Volosovo and Gatchina, each producing 1,000 tons per day.

In the zone around Leningrad and also near the cities of Kirischi, Tikhvin, Vyborg and Kingisepp, industrial units for the production of vegetables under cover have been created with an overall hothouse area of over 200 hectares.

Social tasks have been successfully resolved. Some 2.7 million square meters of housing, schools with 27,000 places, rural vocational and technical schools with 9,[illegible]00 places and clubs and houses of culture with over 22,000 places have been commissioned for agricultural working people. Many farm centers and rural population centers are being consistently transformed, and this building work is being carried out according to a unified general plan.

[PM011347] Leningrad and Leningradskaya Oblast's scientific and technical potential is having a growing influence on the resolution of the agrarian problems of the RSFSR Non-Chernozem Zone and other regions of the country, on retooling agriculture, on increasing the output of compound mineral fertilizers, microbiological industry products and substitutes for food and fodder raw materials and on other topical tasks.

In the year of the 65th anniversary of Great October the collective of the Kirovskiy Zavod association will reach a significant labor frontier--250,000 Kirovets tractors will roll off its production line. The production of new fodder preparation equipment for stockraising units, sprinkler machinery and machines for vegetable growing, plant protection and stone clearing has been started up.

Major capacities for the production of highly concentrated compound mineral fertilizers, protein-vitamin concentrate, fodder yeast and sugar have been created recently. In the last year alone almost 4 million tons of phosphorous and nitrogen fertilizers in standard terms [v uslovnykh tukakh], 84,000 tons of protein, vitamin concentrates and considerable amounts of other fodder additives have been dispatched to agriculture.

The meat, dairy and food industry, the system for the procurement and storage of agricultural output and the food products trade have all been further developed. Leningrad scientists have developed and recommended to production dozens of new machines, techniques, strains of agricultural crops and lines of highly productive animals.

I think, comrades, that there is no need to speak in more detail of these results. There is only one conclusion that can be drawn: The CPSU Obkom, gorkoms and raykoms, the Soviet and economic organs of the city and the oblast and party, trade union and Komsomol organizations have done a great deal to implement the party's agrarian policy and improve the efficiency of the agricultural sector of our economy.

But as we quote these data, these figures showing growth, we are naturally mindful of the great, constant and truly fatherly concern that the Soviet state, the CPSU Central Committee and Comrade L.I. Brezhnev display for the supply of food products to Leningraders.

And our natural feelings of gratitude for this assistance and concern must unfailingly be supplemented by great responsibility for the further increase of locally produced food products. This demand stems from the very nature of the Food Program and is dictated by the scale of the tasks set by the CPSU Central Committee May plenum, each of which must be bolstered by a really state approach and specific and persistent party support.

For the oblast party organization the first important stage in implementing the measures outlined by the country's Food Program is the fulfillment of the party Central Committee and USSR Council of Ministers resolution on the continued comprehensive development of Leningradskaya Oblast's agriculture in 1981-1985. This document covers practically all sectors of our agroindustrial complex with respect to extremely important indicators such as production volume, material and technical resources and capital investments, housing and cultural and consumer service construction and cadre training.

In order to get the maximum output out of the sown area and the livestock numbers now at the disposal of agricultural enterprises, we must, above all, ensure the further intensification of production, the growth of crop yields and animal productivity and a considerable reduction in the expenditure of manpower and funds per unit of output, and we must increase the role of economic factors in production planning and organization.

Our reserves in this direction are very considerable and lie primarily in strengthening the economy of laggard farms and pulling the weak links up to the level of the leaders. Judge for yourselves. Last year the Petrovskiy state pedigree stock plant in Prioszerskiy Rayon obtained 5,720 kg of milk per cow, yet the Komintern Sovkhoz in that same rayon obtained less than half that amount.

The reasons for these contrasts lie primarily in the economic management methods and in attitudes toward work. While people at the Petrovskiy plant have for many years gradually assimilated advanced techniques and improved the organization of stockraisers' labor, all that still remains to be done on the Komintern Sovkhoz.

Or take arable farming: Kingiseppskiy and Lomonosovskiy Rayons are ahead of the others in our oblast in terms of fodder crop yields. But looking beyond the general indicators, you can see that on the Kilos Sovkhoz in that same Kingiseppskiy Rayon the grass yield is around 6 tons per hectare, yet on the Pribrezhnyy Sovkhoz it is 1.5 times less, and the Predportovyy Sovkhoz in Lomonsovskiy Rayon gets 60 tons per hectare of fodder root crops while the Kronshtadtskiy Sovkhoz gets only 35 tons.

There is clearly no need to explain that this patchiness in the indicators is precisely what reveals the true picture of how work is organized on specific farms and how the land, machines, fertilizers, fodder--in short, everything the sovkhozes have--are being utilized.

Going beyond individual rayons, it should be said that, despite the considerable amount of work performed in our oblast to reclaim and chemicalize land, strengthen the seed protection base and mechanize labor-intensive operations, we have not managed to obtain harvests in line with the funds that have been invested or with farms' production and technical potential.

[PM011349] An objective and comprehensive assessment made on the basis of detailed consideration of the potential of the various natural and economic zones, rayons and farms shows that even in the current 5-year plan the oblast's arable farmers can obtain 180 quintals of potatoes, 330 of vegetables and 55 of perennial grass hay per hectare. Overall, translated into fodder units, the productivity of each hectare of plowland must be approximately 35 quintals, as opposed to the 25 obtained last year.

Qualitative indicators must also form the basis for the development of dairy stockraising and the fattening of hogs and cattle. This was discussed in detail at last September's party Obkom plenum during the discussion of party, soviet and economic organs' tasks in further increasing the production of livestock products by strengthening the fodder base.

I would remind you that we must ensure milk herd productivity of at least 3,500 kg of milk [per cow] per year, obtain daily weight gains of at least 600 gm at all hog fattening units and also sell all young bulls (at an age of no more than 15 months) at a weight of over 400 kg.

In naming these indicators, we naturally take into account the peculiarities and varying potential of farms.

But it is a question of mobilizing as swiftly and as vigorously as possible leaders, specialists and all our cadres to achieve higher qualitative indicators.

It is important here to pay special attention to improving selection and breeding work and seed production. We are not starting from scratch in this. For instance, the achievements of the Pedigree Stock Sovkhoz Association are well known; it obtains stable results and even back in the past 5-year plan the average annual yield was 4,500 kg of milk per cow--and its dairy herd is considerable: almost 14,000 head.

The concentration of seed production on specialized associations in Volosovskiy, Lomonosovskiy and Gatchinskiy Rayons, where high-grade seed production increased by 150 percent over the course of the 5-year period, has also entirely proved its worth. However, those farms are not solving--indeed, cannot solve--all the problems. The task today is to bring the "second echelon" into play, so to speak. This means that, in order to make more rational use of our pedigree stock resources, every sovkhcz must use its best animals to set up pedigree liv-stock units and must send the most experienced stockraisers to work there.

Similar measures must be implemented in agricultural crop seed production. The existing system for the production and cultivation of high-grade seeds must be supplemented by the further specialization of teams and links on every farm, the intention being that every field in the oblast soon receive quality sowing material.

Now a few words about fodder production. In conjunction with the All-Union Lenin Academy of Agricultural Sciences RSFSR Non-Chernozem Zone Department, the oblast's agricultural organs have determined a precise line of action. Additional funds are being allocated to the sector. Fodder production must increase by 50 percent. The number of standard storage facilities will increase and as early as within the next 2 years each farm is to have shops for the preparation of full-ration mixtures.

Here too the main emphasis must be on the widespread introduction of progressive techniques, including the use of modern means of preserving fodder. Scientists have calculated that each 1,000 tons of silage prepared using preservatives may have an extra 1,500-2,000 tons of fodder units.

In view of the positive results achieved on the farms of Gatchinskiy, Kingiseppskiy and Vsevolozhskiy Rayons and in the Belogorka science and production association, we must more boldly assimilate this efficient and economical technique and also find the opportunity to make wider use in stockraising of waste from the food, meat and dairy, microbiological, chemical and wood processing industries.

Thrifty, proprietorial use should also be made of other fodder resources. It is a question not only of expanding the scale of fodder yeast production at pulp and paper industry enterprises and at the Kirishskiy biochemical plant (that problem, as is well known, was reflected in the country's Food Program) but also of making more varied use of these purposes of arboreal [lesnoy] mixed feed, vitamin meal and partially hydrolyzed wood waste and meat products, which in our conditions will promote a certain increase in beef and milk production.

Without reducing the pace of the buildup of the production of coarse and succulent fodder, we must display special concern for improving the efficiency of the mixed feed industry, the quality of its output and the reduction of losses in production and transportation. Through the commissioning of new and expansion of existing production facilities, it is intended to increase mixed feed production to 1.5 million tons in the current 5-year plan and to 2 million tons in the 12th Five-Year Plan.

The experience of the construction and startup of the Volosovskiy plant, whose collective has pledged to reach the design productivity ahead of schedule, as early as October this year, must be more widely utilized in the construction of new enterprises in Luzhskiy and Kirovskiy Rayons.

[PM011351] The country's Food Program devotes great attention to the introduction of a scientifically substantiated arable farming and stockraising system in conformity with the conditions of each rayon, association and farm. Leningrad scientists and agricultural organs have already begun elaborating such systems.

A draft new arable farming system is undergoing trials this year. Not only the scientists who elaborated the system but also the agronomists and specialists of the pilot farms are now being rigorously tested. It would be correct for party and soviet organs at local level to assess the work of all participants in this important production experiment on the basis of what is actually grown, harvested and preserved in every association, on every sovkhoz and in every cropfield.

The practice of recent years has shown convincingly that an efficient method of utilizing scientific achievements and of obtaining stable yields and stable animal productivity is their programming--that is, when the cultivation schemes [technologicheskiye karty] of links and teams take the fullest possible account of the soil and climatic conditions, the potential of particular strains of plant and breeds of livestock and material and manpower resources.

These methods are already used in a number of oblasts in the RSFSR, Belorussia and Moldavia and make it possible to obtain a considerable increase in production. Last year in Leningradskaya Oblast the method of programming yields (it was used on an area of 20,000 hectares) made it possible to obtain over R500,000 of additional output with unchanged material and manpower expenditure.

It is a question of strengthening the scientific approach in the implementation of the Food Program and of further improving the organization of the introduction of the achievements of science and leading practice into all sectors of the agroindustrial complex.

The party Central Committee plenum and the program that it adopted for improving the country's supply of food products create the scope for initiative and a creative quest. And any initiative, quest and experiment must be checked and corroborated by the end result: The growth in agricultural output and the attainment of high quantitative and qualitative indicators.

The party Central Committee has set the task of regarding the projected targets as minimum targets. Guided by this instruction, bringing the available reserves into play and resolutely eliminating shortcomings, party gorkoms and raykoms, soviet and economic organs and party organizations must do everything to scale greater heights and to increase the volume of production through the adoption of counterplans and additional pledges.

The scale of the tasks set by the country's Food Program require the more efficient utilization of capital investment and precision and coordination in the work of the entire construction conveyor.

A peculiarity of the current 5-year plan so far as we are concerned is that within the total amount of capital investments, considerable funds are being injected into the sectors of fodder production, arable farming and the processing and storage of agricultural output.

Early commissioning of major enterprises such as the Luzhskiy mixed feed plant, the second phase of the Sputnik hog fattening complex, the Severnaya poultry factory, the Leto firm's greenhouse combines, stockraising units and milk production complexes, new milling capacities and a meat processing plant would make it possible to provide a considerable increase in food products within a short time.

However, this aim will be assured only if the construction organization leaders, clients and planners at each project organize harmonious and coordinated work.

After recently examining the course of work in the construction of the Pargologo machine building plant, the Obkom Bureau was forced to strictly warn K.A. Glukhovskiy, chief of Glavzapstroy [the main administration for construction in western regions of the RSFSR] and Yu. A. Andreyev, general director of the Kompleks association, of their personal responsibility for the lag that has been allowed to occur in the creation of capacities for the production of fodder harvesting equipment.

The obkom draws the attention of party gorkoms and raykoms, soviet ispolkoms and economic leaders to the need to organize precise and effective monitoring and strict compliance with the timetables for the commissioning and startup of all agroindustrial complex projects. As Comrade L.I. Brezhnev stressed in his report at the CPSU Central Committee plenum, the construction of agricultural machine building and chemical industry enterprises, stockraising complexes, greenhouse combines, mixed feed plants and storage facilities for agricultural output, fertilizers, fodder and equipment must be regarded as shock construction projects for the country.

[PM011353] That is how all the participants in the construction conveyor should understand the task. And I do not think our people have had their final say on the Komsomol's shock projects.

The Food Program devotes particular attention to further improving transport services to agriculture and allied sectors, despite the steady increase in shipment volumes. The requirements of the agroindustrial complex are still not fully satisfied.

We have not been able to fully eliminate strain in providing transport facilities for enterprises in the food and chemical industries and for mixed feed plants. As before, there is considerable above-norm idle time for freightcars and trucks in the sidings of enterprises, sovkhozes and railroad stations. There is a low level of mechanization of operations. The technical servicing of trucks is lagging behind. Much agricultural output is lost during transportation.

All this indicates the need for a radical improvement in transport services for agroindustrial sectors.

Here is something else to think about. Every year a large quantity of potatoes, fruit and vegetables is delivered to Leningrad. More than 70 percent of this freight is transported, as a rule by the railroads. Taking account of the rationality and efficiency of each transport artery and the preparedness of dispatchers and port workers, the time has evidently come for thorough consideration of the possibility of delivering part of this freight by river transport, which will make it possible to ease the load on railroad sidings, which are experiencing great strain even today.

Comrades, you know that there are still many unresolved questions in the organization of the storage and processing of agricultural products.

In this sphere we are not, of course, marking time. In the last 5-year plan alone storehouses with a total capacity of 125,000 tons were commissioned. The volume of fruit and vegetable products stored in premises with artificial cold storage facilities has increased. Complexes for the mechanized unloading of potatoes have been introduced at major bases. More than one-third of the potatoes and vegetables produced in the oblast are sold through direct "fields of store" ties.

However, the potential for organizing matters better is far from fully utilized. The creation of processing facilities, particularly for potatoes and vegetables has been subject to delay.

Poor work in mechanizing the manufacture of semifinished products and the packaging of food products is delaying the inroduction of progressive forms of service and leading to losses of output and great labor expenditure. In public catering alone several thousand workers are employed every day in processing fruit, vegetables and potatoes. Trade is obliged to keep about 2,500 people on the packaging of dry products. It is evidently necessary to have production facilities for the processing and preparation of products for sale (sorting, washing, packing) not only at city bases and storehouses, but particularly on storage sites in rayons of the oblast, using the local population for this.

Enterprises in the food, meat and dairy, milling and confectionary industries, wholesale bases and the consumer cooperative system have their own problems. The Leningrad Gorkom, sector departments of the party obkom and the Leningradskiy Obispolkom and the gorispolkom, in formulating annual targets and the plan for the 12th Five-Year Plan period, should place particular emphasis on the modernization and retooling of these enterprises.

Important tasks in implementing the Food Program face workers in virtually all sectors of Leningrad's industry and science.

As before, the Kirovskiy Zavod association will make its contribution to further increasing the power available to the country's agriculture--work is underway there on creating a more powerful Kirovets tractor with an increased engine life.

In accordance with the task set by the CPSU Central Committee plenum of completing the comprehensive mechanization of agriculture by the end of the decade, the Kompleks and Gatchinselmash associations must double the production of agricultural machines and spare parts in the current 5-year plan, creating production lines for fodder preparation units and starting up the production of hydrostatic transmission systems for fodder harvesting combines.

There will be an increase of almost 25 percent in the output of manufacturing equipment for the food industry and mechanized production lines for repackaging vegetables in the Prodmash association and the Torgmash plant. In the next few years the Fosforit association must construct and commission capacities for the production of feed phosphates, which are a valuable supplement to animals' diets.

The participation of Leningrad's scientific research and design organizations in resolving the tasks set is increasing. The areas of application of their forces will be very diverse: the acceleration of the retooling of the countryside, the elaboration of economical techniques for processing and storing arable and livestock products and the creation of progressive materials and designs for modern enterprises and equipment.

The initiative of the collectives of the pigment association and the shale processing plant, for instance, is worthy of support--they have elaborated a technique for obtaining paint and varnish materials on the basis of petroleum polymer resins. This will make it possible, in Leningrad alone, to do without the importation and utilization of several thousand tons of edible oils in the current 5-year plan.

The use of the standardized tractor motor apparatus created by the Central Scientific Research and Design Institute of Fuel Apparatus for Motorized

Tractor and Stationary Engines will make it possible to save tens of thousands of tons of fuel per year.

[PM011355] In a word, comrades, it is not a question of assistance to the countryside in the usual sense. It is a question of arming agriculture with modern scientific and technical ideas and achievements and ensuring the speediest introduction of progressive developments into practice. Of course patronage assistance will remain necessary for the time being, particularly during the busy period of agricultural operations. It is important to organize and utilize this assistance sensibly. We will continue to regard the organization of student detachments and summer camps for senior schoolchildren in the countryside as a reliable means of promoting young people's labor education.

Party gorkoms and raykoms and the party committees of enterprises and organizations in all sectors of Leningrad's economy must work persistently to increase the contribution of every labor collective to the Food Program's implementation and to ensure that the experience and skill of our working class and engineering, technical and scientific cadres are used to the maximum effect and with maximum efficiency to promote the implementation of its goals.

Comrades:

The implementation of the economic strategy for Soviet society's development presupposes active participation by all the components of our political system. You know that the other day the USSR Supreme Soviet Presidium examined the tasks of the Soviets of People's Deputies in implementing the decisions of the CPSU Central Committee May (1982) plenum.

Addressing that session and defining st te organs place in implementing the program outlined by the party, Comrade L.I. Brezhnev stressed that the soviets which are endowed with constitutional powers, unite territorial and sectorial management and are responsible both for production results and for improving soviet people's services and that soviets work must constantly be improved.

In the light of these instructions I should like to particularly highlight two tasks directly connected with soviets' activity. First of all a few words about improving rural working people's social and consumer service conditions.

Continuing the work begun in previous years, there is much to be done in this regard in the Leningrad area, too. In the current 5-year plan at least 1.5 million square meters of housing and new preschool institutions, schools, vocational and technical colleges and clubs will be built. The network of health care institutions and trade and consumer service enterprises will be expanded.

Local soviets must adopt a more active stance in implementing these intensive plans. The comprehensive development [zastroyka] of many large rural population centers must be ensured using both states resources and the pooled money and resources of sovkhozes and other agricultural organizations and industrial, construction and transport enterprises.

The construction of low-rise farmstead-type houses with farm outbuildings must be expanded. The appropriate preconditions for this have been created: Plans have been formulated and capacities exist for producing houses which meet rural inhabitants' needs more fully.

Questions of road building and the reliability of the electricity supply to rural population centers and stockraising facilities deserve unremitting attention. In brief, local soviets should make a sharper turn toward restructuring the countryside.

An equally important task--and it is simultaneously economic and social--is to improve the working conditions of our arable farmers and stockraisers, to introduce more equipment and machinery and to ensure the steady growth of labor productivity.

As you know, the Food Program envisages measures to increase food production on enterprise and organization subsidiary farms, citizens' personal plots and orchard and garden cooperatives. All three forms are being developed in our oblast, too.

Using the experience of the V.I. Lenin optical mechanics association, an increasing number of enterprises are actively beginning to organize their own "agricultural shops" and some of them are already obtaining a real return. The party obkom bureau has adopted a special resolution which envisages measures to further develop these farms. And it is important to comprehensively increase the responsibility of soviets, trade unions and economic leaders for implementing what has been outlined.

Speaking of personal subsidiary plots, it may be noted that last year production of vegetables on them increased by 7 percent and that of meat by 6 percent. State resources received an extra 5,500 tons of meat, 12,000 tons of milk and 35,000 tons of potatoes.

At the same time the potential for increasing food production in this sector is by no means being fully utilized in areas of the Karelian isthmus and the northeast of the oblast. The oblast Potrebsoyuz and its local organizations are not showing sufficient initiative in increasing the production and procurement of output among the population.

In this context I should like to touch on another question. The number of of orchard and truck garden cooperatives was increased here recently. We see in this the creation of further conditions for working people's active leisure, and indeed the growing of greens, potatoes and vegetables for the family is also an important matter.

However, abuses are often allowed to occur in the organization of cooperatives. Some "horticulturalists" begin building two-story residences with bathroom and garage. This causes justified indignation among citizens, Great Patriotic War participants and labor veterans. On the other hand, formalism over the creation of new truck gardens on the part of some soviet and economic organs is also intolerable.

Soviet organs and, above all, the oblispolkom must more strictly and carefully consider the validity of the allocation of parcels of land and must monitor their use.

As has already been noted, comrades, the party Central Committee plenum examined a system of measures aimed at improving production management and the economic mechanism. With the aim of coordinating the activity of ministries and departments, their local organs and subordinate enterprises it is seemed expedient to set up agroindustrial commissions at the center and in the union republics and to authorize soviets to form agroindustrial associations and to create leadership councils for them in krays, oblasts and rayons.

These measures should help to create the conditions for highly productive labor and for achieving high end results.

The establishment of financially autonomous sovkhoz associations was an important step in improving the management of agricultural production in Leningradskaya Oblast. At present there are 28 specialized associations in operation, of which 21 are financially autonomous. They account for practically all the vegetable, egg and poultry meat production, about 70 percent of the milk and potatoes and over 80 percent of the beef and pork.

[PM011357] Taking into account the fact that the agricultural leadership structure which has been formed in the oblast is based on financially autonomous sovkhoz associations and that these fulfill the role of the rayon production level of management, we are faced with implementing measures to further improve this work.

The CPSU Central Committee and USSR Council of Ministers resolution "On Improving the Management of Agriculture and Other Sectors of the Agroindustrial Complex" defined in legislative form the broad rights of association councils as management organs in rayons and oblasts. Thus they have been empowered to examine the draft plans not only of sovkhozes but also of other enterprises and organizations of the rayon agroindustrial complex, to submit proposals on them to the relevant higher organs, to approve rates for services and work performed by associated enterprises and to partially reallocate material and technical resources when necessary.

Thus real potential is being created for the more systematic regulation of both economic and organizational and management relations among all associated enterprises, including construction, transport, procurement and trade organizations. It is important that the system of material incentives for the quantity and quality of output obtained from arable farming and stockraising is also extended now to rural working people's partners.

At the same time all the measures to further stimulate agricultural production cannot be expected to function automatically. They are predicated on efficient and mutually monitored work by all production links and on high executive discipline.

As is well known, we have accumulated definite experience of implementing comprehensive economic and social development plans.

Evidence of this is provided by the work practice of Leningrad city and oblast soviet deputies, work approved recently by the USSR Supreme Soviet Presidium, to improve comprehensive planning, coordinate the development of the production and the nonproduction spheres and ensure the economical, rational use of the material and manpower resources.

Of course, the activity of soviets must be further improved in the new conditions after the approval of the country's Food Program. These questions will be examined in detail at local soviet sessions. And even now, in the course of preparations for the coming elections to the local organs of state power, we must ponder all the organizational aspects of the work ahead.

We are all well aware that the implementation of the Food Program will depend to decisive degree on the maturity of our cadres--leaders, experts and workers in mass trades. In recent years the standard of workers in agriculture and in the sectors servicing it has risen noticeably. As a result, all rural associations and major sections of production are headed by specialists who hold diplomas.

On average there are now over 50 agronomists, livestock experts, economists and engineers working on each sovkhoz. Three-fourths of the team leaders and virtually all stockraising complex chiefs have specialized training.

This is greatly helped by the successful system for the training and retraining of leading cadres. For example, the Leningrad Agricultural Institute was prompt to organize the training of livestock engineers for industrial stockraising. Both arable farming and the sphere of agricultural products procurement and storage now have a great need of such experts.

In view of the increased demands, thought must be given to further improving the system for enhancing leading cadres' skills which has taken shape at the Leningrad higher party school and the corresponding VUZes.

The CPSU Obkom expresses the confidence that in response to the CPSU Central Committee May plenum's decisions, many agricultural experts and agronomists, livestock experts and engineers working at the oblast and rayon levels of management will transfer to the decisive sections of production, which will make it possible to further strengthen these sections with competent and politically mature experts.

As before, we must concern ourselves with the training, education and retention in the countryside of workers in mass trades. During the 9th and 10th Five-Year Plans, rural vocational and technical colleges trained about 35,000 skilled workers.

In his greetings to graduates of Leningrad city and oblast schools who had decided to continue their studies at vocational and technical colleges, Leonid Ilich Brezhnev rated highly our experience and the organization of the mentor movement and noted the successful work of the Michurinskoye Rural Vocational and Technical College.

The future belongs to these colleges. At the same time there is a definite gap at present between the training of experts actually for agriculture and for the sectors which serve it. Thus vocational and technical education has not been sufficiently developed in the system of the procurement, storage and processing of output and the mixed feed industry. Clearly, ways of training workers for these spheres, including possibly via direct contracts with existing rural colleges, should be more rapidly sought.

Work on vocational guidance and on strengthening the links between sovkhozes, rural schools and vocational and technical colleges requires further improvement. More care and attention should be shown here by sovkhoz party organizations, people's education organs and the Komsomol.

Comrades:

The implementation of the Food Program requires powerful organizational and political backup. The CPSU Central Committee plenum stressed in particular the increasing role of rural communists, primary party organizations and party gorkoms and raykoms, which are the direct proponents of agrarian policy.

The party stratum in the countryside here now totals 13 percent: In dairy livestock raising, one person in eight is a communist and among machine operators it is one in six. Shop party organizations and party groups are in operation at most dairy units and complexes. The work of temporary party groups in mechanized detachments and links is yielding good results.

[PM011359] The practice of creating councils of party organization secretaries has proven itself under conditions of financially autonomous sovkhoz associations. New opportunities are opening up now for strengthening party influence on all aspects of the activity not just of sovkhozes but also of associated collectives and for bringing the methods and forms of party work into line with the tasks and requirements of the new stage of agricultural development.

Under these conditions it is important to enhance the role of primary party organizations, to concentrate their attention on the main matter--work with people--and to promote by every means the raising of political and labor activeness. It is in this vein that communists work at the Detskoselskoye, Ruchyi, Vsevolozhskoye, Pobeda, Novvy Svet and Leto sovkhoz production associations and the Ptitseprom trust, where competition has been launched on a wide scale and where scientific and technical achievements and pacemakers' experience are held in high esteem.

Team forms of labor organizations and the stimulation of production growth on the basis of financially autonomous links, sections and shops are being further developed thanks to the persistence of primary party organizations. In all, over 3,000 teams embracing tens of thousands of workers have now been created in the countryside. About one-third of them are working on a single job schedule. The practice of distributing the bonus fund according to the coefficient of labor participation is expanding.

The honorary title "esteemed USSR agriculture worker" instituted by the USSR Supreme Soviet Presidium will be an important new incentive to conscientious selfless labor, and there is no doubt that among those who will be awarded this lofty title we shall meet the names of illustrious Leningrad arable farmers and stockraisers.

Broad work on studying the party Central Committee plenum's decisions, the country's Food Program and Leonid Ilich Brezhnev's report has now been launched in all party organizations, within the political and economic education system and in labor collectives. The CPSU Central Committee plenum's results will be discussed at party gorkom and raykom plenums, at meetings of city and rayon party organization aktivs and within primary party organizations. All of this work should help every communist and working person to profoundly grasp the tasks that have been put forward, help to create an atmosphere of high personal responsibility and help to enhance discipline and organization.

At the same time we must realize that much remains to be done to increase the efficiency of educational work, to instill the necessary order in labor collectives and to raise the level of mass consciousness. In their written and oral appeals to party and soviet organs many working people frequently raise these questions and demand that the struggle against shortcomings in various areas of work, against losses of agricultural output and against abuses in the trade sphere be stepped up. And this is not without justification.

For example, thefts of food products during transportation have increased--and on a large scale--at the Lentorgbyttrans administration's motor vehicle enterprises.

Thefts continue on the railroads. Comrades, it is necessary to guard against all attempts to make profits at the state's expense, to strictly suppress all abuses and to strive persistently to ensure that every collective shows a keen sense of concern for society's interests.

An important place in the Food Program's ideological backup is assigned to the mass information and propaganda media. Their task consists in revealing more broadly the new methods of management of the various components of the agroindustrial complex and cadres' role and responsibility and in generalizing advanced experience and useful initiatives.

It must be shown skillfully that vitally important questions and the creative development of everything that is happening in agriculture are at issue. Thus we expect a businesslike tone, an in-depth analysis of the ways of achieving success and a clear reflection of the new things that will emerge in this great work. Our life provides many themes for discussion in the press and on television and radio, militant, interesting everyday themes, and it is important to take these to the masses.

As you know, there have recently been conferences at the party Central Committee for leaders of mass information and propaganda organs and of the ministries and departments forming the agroindustrial complex. Specific questions directly connected with the fulfillment of the CPSU Central Committee plenum's guidelines were discussed at them. These conferences' recommendations--and they are being widely covered by the press--must be taken into account in our practical work.

In conclusion G.V. Romanov said:

The Food Program is a long-term document but it must yield its first fruits as early as this year.

The sowing campaign is drawing to a close now on the oblast's fields. As always, there were surprises in the weather and certain organizational difficulties. But it was not these factors which ultimately determined the outcome of the sowing campaign. The main point is that vegetable growers, field crop growers, machine operators and agronomists showed a truly proprietorial attitude toward the land and the fulfillment of all work. This approach and attitude must be consolidated.

With the onset of the pasturage period, the oblast's stockraisers are increasing supplies of milk, meat and eggs to the state. But we cannot rest on our laurels here. Everything must be done to ensure that stockraising output increases.

Party gorkoms and raykoms, soviet and economic organs, party, trade union and Komsomol organizations must realize that the successful implementation of this year's targets and pledges by every labor collective will be the first serious test in the implementation of the Food Program and a test on the maturity of cadres of leaders and experts and of labor collectives' activeness.

[PM011401] A few words on the state of affairs in other sectors. Leningraders have coped successfully with the targets and pledges of the first 5 months of the jubilee year, the year of the 60th anniversary of the USSR's formation.

Above-plan industrial output worth over R97 million has been sold. The entire increase in the production volume was obtained by increasing labor productivity. Since the beginning of the year over R.00 million of capital investments have been assimilated.

At the same time, certain areas of work are causing concern. The situation regarding the fulfillment of targets is tense at certain machine building, light and food industry enterprises, many construction organizations, the Oktyabrskaya railroad, the Leningrad Main Administration for Motor Transport and city and oblast trading organizations is lagging behind the plan.

Party gorkoms and raykoms must investigate objectively the state of affairs at the local level and outline and implement measures to ensure the unconditional fulfillment of the set targets. It is necessary everywhere to commission reserves for increasing production and strive persistently to improve efficiency and quality in all national economic spheres.

There is no doubt that the large-scale tasks put forward by the CPSU Central Committee May (1982) plenum will serve as a powerful new stimulus developing political and labor activeness in the struggle to implement our Leninist party's plans to strengthen the country's economic and defense might and increase the people's prosperity.

Allow me, comrades, to assure the CPSU Central Committee, its Politburo and Leonid Ilich Brezhnev personally that the Leningrad party organization and the city oblast working people will spare no efforts to successfully fulfill the 26th party congress decisions and to implement the country's Food Program, which meets the Soviet people's interests.

ROMANOV ADDRESS TO ELECTORAL OKRUG MEETING

PM070855 Leningrad LENINGRADSKAYA PRAVDA in Russian 18 Jun 82 pp 1-2

[LENTASS report: "Toward New Victories in the Name of Communism"]

[Excerpts] The voters of electoral okrug No 554 met their Leningrad city soviet candidate deputy Girgoriy Vasilyevich Romanov, member of the CPSU Central Committee Politburo and first secretary of Leningradskiy party Obkom, at the Leningradskiy CPSU Obkom Political Enlightenment Center yesterday, 17 June. Leningrad city soviet candidate G.V. Romanov, member of the CPSU Central Committee Politburo and first secretary of Leningradskiy CPSU Obkom, addressed the meeting and was warmly greeted by those present. He said:

Dear comrades:

First of all, allow me to express heartfelt gratitude to the S.M. Kirov textile combine's collective and to all participants in today's meeting for their nomination as candidate deputy for Leningrad city soviet for electoral okrug No 554.

Your confidence is a great honor. I should like to assure you that I shall do my utmost to justify it and continue to devote all my efforts to the cause of our Leninist party and the service of the Soviet people.

The Soviet Constitution, the fundamental law of our socialist state, contains these words: "All power in the USSR belongs to the people." Expressing the great essence of the October Revolution's historic gains, this concise phrase acquires special meaning and content now during preparation for the elections to the local organs of state power.

The present election campaign is being held in a situation of nationwide struggle o successfully fulfill the 26th CPSU Congress designs and in an atmosphere of high political and labor enthusiasm brought about by the preparation for the 60th anniversary of the USSR's formation.

All the pre-election rallies and meetings are unanimously approving and supporting the party's Leninist course in the domesti and foreign policy spheres and the multifaceted practical activity of the CPSU Central Committee and its Politburo and paying high tribute to the tremendous personal contribution made to strengthening our motherland's might, increasing national prosperity and strengthening world peace by Comrade Leonid Ilich Brezhnev, general secretary of the party Central Committee and chairman of the USSR Supreme Soviet Presidium.

A little over 2 years has elapsed since the previous local soviet elections. It has been a period of dynamic and fruitful development of soviet society, a period containing many significant events.

The most important of them was the 26th CPSU Congress, which outlined new horizons of communist creation. The whole post congress period has shown that the party is implementing its course creatively, far-sightedly and on a scientific basis.

The party Central Committee May (1982) plenum was an event of tremendous importance. Its decisions, Leonid Ilich Brezhnev's report and the country's Food Program for the period to 1990 have been received everywhere with fervent and unanimous approval.

The party has defined the fulfillment of the USSR Food Program, which represents a qualitatively new step in the system of economic planning and administration, as the central task of the coming decade. In terms of significance and scale it not only marks a radical change in the development of agriculture and related sectors but is also designed to promote the progress of the whole national economy.

G.V. Romanov stressed that crucial tasks are to be resolved this very year in the implementation of the country's Food Program. A major test is now being undergone by the oblast's arable farmers and stockraisers who are taking every step to reduce the adverse consequences of unfavorable weather and to ensure a full crop of vegetables, potatoes and root crops from every hectare as well as to procure sufficient coarse and succulent fodder from each farm for stockraising.

It is now important to formulate thoroughly the whole package of practical actions connected with organizing the procurement, storage, processing and sale of produce from Leningrad's arable farms and livestock units and of the agricultural produce supplied to Leningrad from other regions of the country. With this aim in mind it is necessary to increase the degree of mechanization of work and improve the organization of the storage of agricultural produce at vegetable stores and potato depots and to expand the direct "field to store" links.

The workers of practically all Leningrad's economic sectors and the collectives of many scientific-research and planning organizations face crucial tasks in implementing the USSR Food Program, the speaker stressed further.

It is also incumbent on Smolninskiy Rayon's labor collectives to increase their contribution. Considerable production and scientific forces are concentrated there which even now are participating directly in implementing many important tasks both within and outside Leningradskaya Oblast.

[PM070857] Under the new conditions, the role of patronage assistance is increasing immeasurably, particularly during intensive agricultural campaigns. Your rayon's enterprises and organizations have long had patronage links with rural workers of Priozerskiy and Volosovskiy Rayons. Care must now be taken to step up technical assistance, to introduce progressive developments into practice as quickly as possible and ultimately to increase every labor collective's contribution to the intensification of agriculture and related sectors.

Finally, mention should be made of the kind of reserve for increasing food production that the subsidiary plots of industrial enterprises and organizations should become. In your rayon, unfortunately, by no means all collectives have such plots yet, matters must be rectified and the existing plans for creating new subsidiary plots must be backed up by practical actions.

Fulfilling the 26th CPSU Congress decisions with the rest of the country Leningraders have taken a considerable step forward in the period between local soviet elections. The oblast party organization persistently focuses its efforts on further intensifying production and raising its efficiency and quality.

Several hundred new types of modern, highly productive equipment have been created in the course of implementing all-union, sectorial and territorial comprehensive targeted programs.

For the most part, the collectives of Smolninskiy Rayon's industrial enterprises, scientific and planning organizations are achieving good results. It is important to note that the preferential growth of labor productivity is being ensured in the rayon mainly by measures involving technical progress.

Many areas have been comprehensively mechanized since the beginning of the 5-year plan. Dozens of automated lines, flow lines and progressive production processes have been introduced. The rayon's scientific research and planning and design organizations are now developing the most up-to-date power industry equipment, designing major power stations, gas pipelines, power lines and machinery for the pulp and paper and chemical industries and resolving a number of other important national economic tasks.

The movement to ensure an economic saving of at least R1 billion from the introduction of scientific and technical designs into practice is acquiring a more purposeful character. It is now planned to obtain this saving by implementing plans fulfilled and introduced within the current 5-year plan alone.

In brief, Smolninskiy Rayon's workers have reason to be proud. It is also gratifying to note that the rayon has been awarded the RSFSR Council of Ministers and AUCCTU Challenge Red Banner for its work results in the first year of the 5-year plan. On the whole, the rayon is coping well with this year's targets, too.

Subsequently, G.V. Romanov directed the audience's attention to the need to pay more attention to eliminating the shortcomings still existing in the work of some industrial and transport enterprises.

It is very important to continue to enhance labor collectives' role in the struggle against shortcomings and for achieving high end results in every area of work. And all of this is a great field of action for our party and social organizations. It is they who must create an atmosphere of high exactingness, efficiency and responsibility.

It is well known, comrades, G.V. Romanov said, that the resolution of economic tasks is indissolubly linked with the implementation of major social changes. Leningrad and its oblast are consistently resolving the housing problem in the current 5-year plan as in all recent years. Nearly 150,000 families, or 420,000 Leningraders have improved their housing conditions in the period between local soviet elections alone.

Much is being done in terms of the city's facilities and of improving working people's transport and consumer services. Of the most important projects which are nearing completion one can name the construction of the Kantemirovskiy bridge, the largest bridge across the Neva near Petrokrepost, which will link Vyborskiy and Petrogradskiy Rayons. The construction of a much-needed bypass road near Okhtinskiy bridge has begun. A new subway section between Petrogradskaya and Udelnaya stations will go into operation ahead of schedule this year.

Considerable work has also been done in Smolninskiy Rayon. Tens of thousands of square meters of well-equipped housing have been commissioned following capital repairs to buildings. On the whole the layout of the Ploshshad Diktatury Proletariata, the rayon's main square and one of Leningrad's most important squares, has been completed.

At the same time it must also be pointed out that some questions have still not been resolved in the necessary way. In particular, it is necessary to complete the modernization of the Sinopskaya embankment, the layout of the Robespierre embankment and the restoration of the Aleksandr Nevskiy Monastery. And, of course, it must be the object of the rayon soviet's constant attention to further provide the rayon's many residential districts with facilities and green belts.

[PM070859] The party obkom, soviet organs and newspaper editorial offices are frequently alerted, by Smolninskiy Rayon inhabitants as well as others, about shortcomings in the work of municipal service and passenger transport enterprises and the service and trade sphere. Certain officials have failed to eradicate red tape and bureaucracy.

Despite intensifying the struggle against parasitism, bribery, profiteering and embezzlement of socialist property we have not succeeded in fully eradicating these negative phenomena, and it is not just law enforcement organs which must show greater activeness here. It is the duty of every conscientious citizen to oppose any violation or abuse.

As for honest people's needs and requirements, there is and can be no trifling question where the working man and his interests are concerned.

At the recent USSR Supreme Soviet Presidium session, Leonid Ilich Brezhnev stressed that Soviets must constantly improve their work so as to become stricter and more demanding masters over the territory under their jurisdiction. This places a special responsibility on local organs of state power both for developing production and for improving the quality of people's services.

This is the kind of generalized instruction that electors are giving in the current meetings with candidate deputies, and it is the supreme obligation and supreme duty of all who will be invested with a deputy's authority to carry out this instruction day in, day out, persistently and in a businesslike way.

Having dwelt on some questions of the present-day international situation, G.V. Romanov stressed that the Communist Party has done and is continuing to do its utmost to ensure the necessary foreign policy conditions for our motherland's further prosperity and for consolidating peace for our motherland's further prosperity and for consolidating peace and the peoples' security.

The peace program for the eighties adopted by the 26th CPSU Congress and the subsequent peace initiatives put forward by Leonid Ilich Brezhnev confirm convincingly and show graphically that it is Soviet foreign policy's main avenue and main course to ensure lasting peace.

At present, the entire international public is being tremendously influenced by the exceptionally important message sent by Leonid Ilich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, to the Second UN General Assembly Special Session on Disarmament.

In tha the Soviet Union commits itself unilaterally not to be the first to use nuclear weapons. In a concentrated form our country again expresses its approach to the most burning problem of the present day--how to protect peace and remove the likelihood of the emergence of nuclear war. The ball is now in the other nuclear powers' court.

Thus in a complex international situation the Soviet state, born with Lenin's decree on peace, reaffirms its loyalty to its course of developing relations with all countries without preconditions, without striving for any advantages for itself and without infringing anyone's rights.

But, as Leonid Ilich Brezhnev has repeatedly stressed, we will always stand up for our interests and for the interests of the fraternal socialist community, our friends and allies, and no one should have any doubts on this score.

In conclusion, G.V. Romanov wished the okrug's electors and Smolninskiy Rayon's working people, happiness, prosperity and new successes in work for a worthy greeting to the 60th anniversary of the USSR's formation and in the struggle to successfully implement the 26th CPSU Congress decisions.

(G.V. Romanov's speech was heard with great attention and repeatedly interrupted by applause)

GRISHIN ADDRESSES MOSCOW AWARD CEREMONY

PM091607 Moscow MOSKOVSKAYA PRAVDA in Russian 19 Jun 82 pp 1-2

[Unattributed report: "Plant's Labor Glory. Presentation of Order of Labor Red Banner to Collective of First State Bearings Plant"]

[Excerpt] Yesterday the motherland's high awards were presented to the plant's collective and production frontrunners. A ceremony devoted to this joyful event was held at the enterprise.

The following were in the presidium--V.V. Grishin, first secretary of Moscow CPSU Gorkom; R.F. Dementyeva and L.A. Borisov, secretaries of Moscow CPSU Gorkom; A.S. Kobzev, chief of a CPSU Central Committee sector; representatives of party, Soviet and public organizations.

The meeting was opened by D.P. Yulin, secretary of the plant party committee.

An honorary presidium comprising the CPSU Central Committee Politburo led by Comrade L.I. Brezhnev was elected with great enthusiasm.

V.V. Grishin, who was warmly greeted by the gathering, delivered a speech.

Today, V.V. Grishin said, is a portentous and joyful day in the life of the collective of the First State Bearings Plant. The plant is being presented with the Order of the Labor Red Banner, which it has been awarded for its great contribution to the development of our homeland's machine building. Some 300 plant workers have been awarded orders and medals of the Soviet Union. The motherland's awards are a testimony to the great services of the plant's working people in developing and strengthening the socialist economy and in the practical implementation of the CPSU's economic policy.

First of all permit me to convey to the plant's collective the congratulations and good wishes of Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium.

Allow me on behalf of the CPSU Central Committee, the USSR Supreme Soviet Presidium and the Moscow Party Gorkom to warmly and heartily congratulate you, comrade award winners and all workers, engineering and technical workers and employees of the plant, on the motherland's high award and to wish the collective new successes in labor and new achievements in communist building.

We are living at a time when all Soviet people, in an atmosphere of high political and labor enthusiasm, are working to fulfill the historic decisions of the 26th CPSU Congress. The ideas and decisions of the congress are exerting an increasingly profound influence on the life of our country, the activity of the party and people and on the course of events in the world.

The CPSU Central Committee May plenum was an event of tremendous historic significance, as were the report delivered at it by Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee, and the food program approved by the plenum. The implementation of this program will enable the country's population to be more fully provided with all types of food. The matter now depends on all labor collectives and all working people becoming involved in the active struggle to fulfill the tasks set.

The working people of Moscow, as indeed of the whole country, have good conditions for this. Our economy is developing steadily and systematically. The output of the means of production is increasing. Heavy and light industry are strengthening.

The boosting of the people's material and cultural living standard and the creation of the best conditions for the all-around development of the individual are possible only on the basis of further improving the efficiency of our entire social production and increasing labor productivity and work quality. The CPSU Central Committee and Comrade L.I. Brezhnev have set the task of transferring the entire economy, including agriculture, as rapidly as possible onto the rails of a qualitatively new and intensive path of development and of making it really economical. Our party and the Soviet people are armed with a clear and precise program of communist building at the present stage and are persistently implementing it.

One of the most important laws governing the improvement of the economic and social life of the country is the constant growth of the role of the CPSU as the political leader, organizer and educator of the working class and all working people, and the inspirer of the activity of the masses in the struggle to build communism. Under the leadership of the party our people have transformed their motherland into a mighty power. Here, our party, the CPSU Central Committee and the Soviet Government are tirelessly struggling for a lasting peace and for mutually advantageous cooperation between states with different social systems. It is precisely this policy which meets the aspirations of Soviet people and all peoples on earth.

In the current tense international situation when the aggressiveness and hegemonism of the forces of reaction, primarily U.S. imperialism have increased, the active implementation of the peace program for the 80's advanced by the 26th CPSU Congress is of prime significance for the fate of mankind. In the period since the congress the party has been persistently and consistently resolving the tasks set by it and resolutely seeking new ways and approaches to settling pressing international problems.

Comrade L.I. Brezhnev's speeches at the 17th Trade Unions Congress and the 19th Komsomol Congress, his speech in Tashkent and other speeches are documents of international significance. They formulate the Soviet Union's concrete proposals for curbing the arms race and averting the threat of thermonuclear war. An important contribution to the cause of strengthening peace is Comrade L.I. Brezhnev's message to the current UN General Assembly session, in which, on behalf of the Soviet Union and the 269-million-strong Soviet people, he solemnly stated that the Soviet Union pledges not to be the first to use nuclear weapons. Here the peoples of the world rightly expect the Soviet Union's decision to be followed by corresponding steps by other nuclear powers. Comrade Brezhnev also put forward a proposal for a complete ban on chemical weapons and the elimination of stockpiles.

Muscovites and all Soviet people, unanimously approving and warmly supporting the party's policy, express deep gratitude to the CPSU Central Committee, the Central Committee Politburo and Leonid Ilich Brezhnev for all that is being done for the sake of the Soviet motherland's prosperity and of strengthening world peace.

Thanks to Soviet people's heroic labor and the multifaceted, purposeful activity of the CPSU, the CPSU Central Committee and Comrade L.I. Brezhnev, in the year since the congress a further step has been taken along the path of creating the material and technical base for communism. Moscow's working people have made a considerable contribution to these successes.

On the basis of what has been achieved, the capital's working people are confidently implementing the program for 1982. On the initiative of leading collectives, a struggle for the ahead-of-schedule fulfillment of targets for the current year and the 11th 5-year plan has been launched at many plants, factories, construction sites, scientific institutions and organizations in transport, municipal services and the service sphere.

Socialist competition under the slogan "60 shock labor weeks for the 60th anniversary of the USSR's formation" has taken on great scope at Moscow's enterprises. Responding in deeds to the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation," many workers and collectives of production teams have adopted enhanced pledges to fulfill the annual plan by the 65th anniversary of Great October and the targets for the first 2.5 or 3 years of the 5-year plan by 30 December 1982. A whole series of valuable initiatives has emerged with the aim of further improving the efficiency and quality of work. The party gorkom is confident that every worker, engineer, technician and employee in Moscow will greet the 60th anniversary of the USSR's formation with a personal labor gift.

The results of work in 1981 and the early part of this year indicate that a good labor rhythm has been adopted. Not to slacken off, to go further without fail, to achieve more without fail--that is our common task.

The glorious collective of the First State Bearings Plant has always been in the vanguard of the Moscow workers' labor achievements, V.I. Grishin went on. The First State Bearings Plant, which was declared a priority construction project for the first 5-year plan by a decision of the party and government, was constructed in record time and gave the country the first Soviet bearings in early 1932.

The plant's collective, improving their economic, party and social activity from year to year, have invariably been among the initiators of the movement for leading work methods, the ahead-of-scheduld fulfillment of state plans, the introduction of scientific and technical achievements and the saving of material and energy resources.

During the 9th and 10th 5-year plan years the First State Bearings Plant entered a new period of development--a period of retooling and of the enterprise's transformation into a highly mechanized, model plant. In cooperation with scientific organizations, the most important technical problems in further automating and mechanizing production, introducing low-waste technology and improving working conditions have been successfully resolved.

The introduction of new technology resulted in a saving of about R20 million and made it possible to free more than 6,000 production and industrial personnel from manual operations.

By increasing labor productivity and on the basis of widespread socialist competition, in the 9th and 10th 5-year plans the First State Bearings Plant collective gave the national economy more than 10 million bearings above the plan. At present three comprehensive automated shops and 320 automated and continuous flow lines are in operation at the plant, manufacturing some 45 percent of the total output. The level of use of automated equipment has risen to 72 percent. An automated production control system has been created on the basis of a modern information and computer center.

At your enterprise much has been done to seek out internal reserves and potential, and a number of valuable patriotic initiatives have emerged. More than 2,000 workers at the plant fulfilled the 1981 plan by the 64th anniversary of Great October, and many have adopted pledges to complete 2-year targets by Constitution Day--7 October 1982.

The successes achieved in the collective's production activity are the result of the selfless labor of workers, engineers, technicians and employees at the plant and the purposeful organizational and political work of the party, trade union and komsomol organizations and the economic leadership.

Remarkable skilled cadres have emerged in the course of socialist competition. They include the plant's lathe operator Nikolay Andreyevich Volkhonin; thermal processing specialist Pavel Alekseyevich Vindyukov, who has today been awarded the Order of Lenin and the star of a hero of socialist labor; engineer Aleksandr Ivanovich Sokolov; grinder hero of socialist labor Nina Mikhaylovna Motova; forge hand Aleksandr Yegorovich Afonin: winner of a state prize; senior foreman Oleg Vasilyevich Veryalin; shop chief Vladimir Ivanovich Kostyushin, and hundreds of other masters of bearings prodiction, experts in their field.

V.V. Grishin expressed cordial gratitude to the frontrunners and all the plant's workers, engineers, technicians and employees for their selfless shock labor, their constant striving for new heights and their high creative activeness.

The economic potential created by the people's labor is a reliable basis for our country's further progress along the path of communist building. Efficiency and the all-around improvement in efficiency are the general course which we must follow in order to successfully ensure the fulfillment of the tasks set for the 11th 5-year plan and the longer term.

Your collective's efforts must also be channeled into resolving this important problem. In the current 5-year plan it is planned for your enterprise to increase output by 15 percent. Here the entire increase in the volume of output must take place on the basis of increased labor productivity. It is necessary to start up the production of bearings with enhanced load capacity and precision and to devote particular attention to fulfilling orders for agricultural machine-building enterprises.

Major, crucial and, frankly, complex tasks face the collective. The plant has recently reduced the rate of increase in the volume of production and labor productivity. Downward amendments to plan targets have been tolerated.

The plant's main shops are not working steadily and losses of working time remain considerable. This cannot be tolerated, comrades. Of course, the collective has considerable difficulties. Organization, discipline and the creative quest for solutions to the tasks set are all the more necessary. It is necessary to concentrate the efforts of the party organization and the labor collective in the main salient--the enterprise's modernization and retooling and the commissioning of new production capacities.

In conjunction with construction workers, the plant is setting up a new production area in Lyublino. The plan for assimilating capital investments in 1981 was overfulfilled and operations planned for the current year are also being carried out. Nonetheless a considerable laggardness has been permitted to occur in relation to the time set for commissioning the first phase. The speediest startup of the first phase of the new production facility is a matter of honor for the collective.

It is necessary to strive still more persistently for the comprehensive automation of production, to actively introduce robots and manipulators, particularly to release auxiliary workers, and to eliminate unskilled labor. This largely determines the plant's future development, since the planned increase in production volumes must be ensured while the numbers of workers are reduced.

It is equally important to constantly improve the organization of production and improve the standard of management at the enterprise. Here one of the most effective methods is the wide introduction of the team form of labor organization and incentives, which, as Comrade L.I. Brezhnev has noted, is fully in accordance with the party's economic strategy at the present stage.

The team form of labor organization now covers about 55 percent of the plant's workers. But only some 40 percent of teams are operating on an autonomous financing basis. And wage leveling is tolerated in some teams. In a number of teams the rate of increase in wages outstrips the rate of increase in labor productivity.

The enterprise leadership and the party and trade union organizations must structure their work in such a way as to ensure that the team form of labor organization is the main form at the plant, to increase the teams' labor efficiency and to make full use of the advantages of this progressive form of participation by the collective in production management.

You are well aware of your potential and of existing difficulties and unresolved problems, V.V. Grishin went on. The main thing is to draw the correct conclusions and adopt appropriate measures to ensure further progress. Your plant's future does not lie beyond the present. It is within the present, and by resolving today's tasks it is necessary to reach tomorrow more actively and boldly. This approach has guaranteed the plant's successes in the past and will ensure new achievements in future.

Your collective is known for its labor and social deeds. But more is required today. In the current 5-year plan party, trade union and komsomol organizations, economic leaders and all working people at the enterprise must launch extensive work to turn the plant into a model Moscow enterprise. To this end it is necessary to organize a struggle to transform every sector and subunit of the plant into exemplary ones in terms of production efficiency and work quality, level of technical equipment and technology and degree of mechanization of operations. Much must be done in the collective's further social development.

The high achievements of the First State Bearings Plant in fulfilling state targets and the wide scope of the socialist competition inspire confidence that the collective of the First State Bearings Plant will cope successfully with the tasks facing them and give a fitting reply to the high assessment of their labor by the Communist Party and the Soviet Government.

V.V. Grishin read out the USSR Supreme Soviet Presidium decree on the award of the Order of the Labor Red Banner to the First State Bearings Plant and, to tumultuous applause from those present, pinned the order to the plant's banner.

KAZAKH PEOPLE'S DEPUTIES ELECTIONS PREPARATIONS

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 21 May 82 p 1

[Editorial: "The Polling Stations"]

[Text] The present election campaign is taking place in our republic under the sign of an ever increasing struggle for the successful implementation of the decisions of the 26th CPSU Congress, the socialist competition underway for a worthy greeting of the 60th anniversary of the Soviet Union, and preparations for the 250th anniversary of Kazakhstan's voluntary annexation to Russian. This is also determining the Kazakhs' social and labor activity reigning in the collectives of all sectors of the republic's national economy on the eve of the elections for the local soviets of people's deputies.

The electoral districts and polling stations have been set up within the periods laid down by law and the electoral commissions have been formed from representatives of the different strata of society. The nomination of candidate deputies has been completed, and has been convincing proof of the fact that by exercising the rights afforded them by the USSR Constitution, our people have named the most worthy representatives of the working class, kolkhoz peasantry and intelligentsia capable of successfully carrying out the honorable and responsible duties of a people's deputy.

As CPSU Central Committee general secretary and chairman of the USSR Supreme Soviet Presidium comrade L.I. Brezhnev has stressed, under present conditions "the demands being made of the soviets and of their deputies are growing because implementation of all our plans requires good organization, discipline and activity. And these qualities are not born of themselves. Daily work is necessary to educate and rally the masses. And in this matter it is difficult to overestimate the role of the deputies and their personal example."

Everywhere agitation is being developed for the candidate deputies. And at this important stage of the election campaign the polling station is becoming the center of organizational and mass-political work in party, soviet, trade union and other public organizations participating directly in the preparations for and holding of the elections for the local soviets.

Since the last elections in our republic many changes have taken place. Because of the appearance of new cities and villages and the growth of the older ones, new polling stations have been set up. And it is very important that party and soviet organs give them their special attention and help the commissions and agitation collectives to organize the work correctly. For this, precise planning for the activity of the electoral commissions and the determination of specific duties for each of their members are essential. It is important that the electoral registers be compiled within the established time, 20 days before the elections. It is essential to strengthen agitation work and to explain to the public, particularly young people who will be participating in the elections for the first time, the decree on elections and the rights and obligations of Soviet citizens, and to issue voting cards in good time to those who will be going to other populated points before the elections.

The entire idea of the preparations carried out by the polling stations is to create maximum convenience for people on voting day. As a rule the polling stations are located in premises known to voters from past elections. And now they must equip the spacious and light halls or rooms with their separate entrances and exits, insure free access to the registrars issuing the voting papers, and provide for much else.

The urban and rural party and soviet organs of our republic have shown great responsibility in setting up the polling stations. Thus, for example, the party committee secretary at the "Slovyanskiy" sovkhoz in Pakhtaaralskiy rayon, Chimkentskaya Oblast, Zh. Akilbayev, writes to the editorial offices: "Five polling stations have been set up at the central farmstead and in the sections of our farm. They have all been located in the best buildings on the sovkhoz and have become the center of mass-political work in which about 120 agitators, political information workers, political reporters and members of the 'Znaniye' society primary organization are participating. They all deliver lectures and hold discussions on topical themes, and in the evenings conduct question-and-answer sessions and organize meetings between the present deputies and the electors. The people's elected officials are assessed on their fulfillment of their mandate. [no closing quote marks]. Other, similar letters are arriving at the editorial offices and are being published in the newspaper.

Unfortunately, however, this work is not being carried out everywhere at the necessary level. There are frequent cases where the polling stations are experiencing material difficulties and have not been provided with good communications. Thus, for example, in some sovkhozes of Taldinskiy rayon, Karagandinskaya Oblast, not only are the telephone links with the rayon center at Karagayly poor but it impossible talk on the telephone between the central farmsteads and the sections.

The oblast administrations for communications, culture and trade and their organs at the local level must participate actively in providing backup for the election campaign. The soviets' executive committees are obliged to utilize all material and technical means available to them to hold the elections.

The main feature of our electoral system is that the workers themselves participate in the organization and holding of the elections. The electoral commissions are made up of workers and it is they who propose and discuss the candidate deputies and give them their mandates. The meetings now taking place with the candidate deputies demonstrate the unity and close cohesion of our people around the CPSU and Soviet government.

The elections for the people's judges will also take place on 20 June. The polling stations and their agitation collectives must carry out extensive agitation for candidate people's judges, who after being elected will have to insure the undeviating observance of our laws, reliably insure the rights of citizens and the interests of society and uphold justice in the name of the people.

The mass-political and agitation-and-propaganda work of the party organizations is called upon to promote the success of the election campaign in every possible way. To do this purposefully and effectively and to exert their influence on all categories of workers--this is the main task of the day. Attention must be focused on questions of labor productivity growth, work quality, the strengthening of labor and technological discipline, and the striving of each worker in the republic to make a worthy contribution to the ahead-of-schedule fulfillment of plans and pledges for this year and for the entire five-year plan.

ALIYEV ADDRESSES MILITARY SCHOOL GRADUATION

[Editorial Report] Baku BAKINSKIY RABOCHIY in Russian on 27 June carries on page one an 1100 word report of the graduation ceremony of the Caspian Naval Red Banner College imeni S. M. Kirov. Included its graduates over the years are 19 Heroes of the Soviet Union, 100 admirals and more than 200 scholars. The members and candidate members of the Azerbaijan CP Central Committee and many high-ranking military officers were present at the fortieth graduation of this school held on 26 June.

Candidate Member of the CPSU CC Politburo and First Secretary of the Azerbaijan CP Central Committee, G. A. Aliyev, spoke at the ceremony. He congratulated the new young officers on their excellent work and wished them success in their endeavors and "good fortune in their difficult, yet noble service in the ranks of the Soviet Armed forces" and spoke with certainty that they would "defend with honor the sacred borders of the Soviet Fatherland, our great Homeland and all socialist fellowship."

Several graduates spoke of their dreams and dedication at the conclusion of the ceremony.

KUNAYEV RECEIVES GDR AMBASSADOR

[Editorial Report] Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian on 28 May 1982 page 1 reports that D.A. Kunayev, first secretary of the Kazakh CP Central Committee and member of the USSR politburo received the GDR's ambassador to the USSR, Egon Winkelman. The ambassador and first secretary discussed the republic's activities in response to the May party plenum on the food program and on preparations for celebrating both the 60th anniversary of the USSR's founding and the 250th anniversary of Kazakhstan's voluntary unification with Russia, among other matters. KaCP Central Committee Secretary K.K. Kazybayev and KaCP Central Committee Foreign Relations Department Chief M.G. Kabulbekov attended the talks.

GAPUROV SPEAKS AT ASHAUZ OBKOM PLENUM

[Editorial Report] Ashkhabad TURKMENSKAYA ISKRA in Russian on 26 June carries on page one a 900-word report on the Tashauz Obkom plenum. The obkom first secretary, B. Atayev, delivered a report. Then M.G. Gapurov, Turkmen CP Central Committee first secretary, spoke about the "pressing tasks of communists" in fulfilling the decisions of the CPSU Central Committee May (1982) Plenum, and in particular the new food program.

TURKMEN SUPREME SOVIET SESSION ANNOUNCED

[Editorial Report] Ashkhabad TURKMENSKAYA PRAVDA in Russian on 6 June 1982 on page 1 carries a 50-word decree of the Turkmen SSR Supreme Soviet Presidium announcing the fifth session of the Turkmen SSR Supreme Soviet tenth convocation on 6 July 1982 in the city of Ashkhabad.

'PRAVDA' ON INCREASING UNREST IN SOMALIA

PM071029 Moscow PRAVDA in Russian 3 Jul 82 p 5

[TASS report: "Somalia: Increasing Dissatisfaction with Authorities"]

[Text] New York, 2 Jul--Fierce fighting flared up this week in Somalia's second biggest city, Hargeisa, between government troops and forces of the opposition Somali National Front, AP reports from Bahrain.

A representative of the front asserted that the rebels had "killed and wounded 150 servicemen in the government army." According to him, the organization, formed last year, now numbers 8,000 militants. The statement condemns the repressions of the Mogadishu regime, which is "bringing the country to the brink of civil war."

In this connection observers note that there is growing dissatisfaction in various strata of Somali society with the authorities' orientation toward the United States to the detriment of national independence, which is aggravating the already serious economic situation.

Western news agencies recall that antigovernment demonstrations have become more frequent in the country recently. Last January a rising flared up in a number of military units in northern Somalia. There, too, in February and April, there were mass protest demonstrations leading to serious clashes with the army and police. The agencies regard President S. Barre's recent government reorganization as evidence of the regime's instability.

LATVIA'S VOSS ADDRESSES ALL-UNION NATIONALITIES CONFERENCE

Riga SOVETSKAYA LATVIYA in Russian 29 Jun 82 pp 4-5

[Speech by A.E. Voss, first secretary of the Latvian CP Central Committee at All-Union Scientific-Practical Conference "The Development of National Relations Under Conditions of Mature Socialism. The Experience and Problems of Patriotic and International Education" held in Riga, Latvia on 28 June 1982: "Topical Questions of Further Strengthening of Patriotic and International Education of Workers"]

[Text] Dear comrades!

All of us listened with tremendous attention and interest and with much gratitude to the cordial greetings of General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet Leonid Il'ich Brezhnev to the participants of our All-Union Scientific-Practical Conference. These greetings will serve as a guide for all of us in the successful solution of one of the chief tasks of the party's ideological work, namely the patriotic and international education of workers.

Comrade L.I. Brezhnev makes a tremendous personal contribution to the theory and practice of national relations, to the development of the dialectics of the national and international under conditions of developed socialism and to the patriotic education of the masses.

The name of Leonid Il'ich, his vast theoretical and practical work, his reports and speeches, articles and books are connected with the establishment of many of our historical gains, such as the building of mature socialism, the formation of a new historical community of people--the Soviet people and the solution of the national question. We are indebted to him for the appearance in scientific practice of new categories and concepts in the field of national relations.

A striking example of a genuinely creative relationship to the theory of Marxism-Leninism is the Accountability Report of the CPSU Central Committee to the 26th party congress which Leonid Il'ich Brezhnev presented. It brings up topical questions relating to the further internationalization of Soviet society, its economy, social and spiritual life. It offers a deep analysis of the processes occurring in the field of national relations at the stage of mature socialism. Concrete tasks of patriotic and international education of workers are set.

Recent party documents--I have in mind in addition to the decree of the CPSU Central Committee on the 60th anniversary of the formation of the USSR the materials and decisions of the May (1982) Plenum of the CPSU Central Committee and the speech, full of revolutionary fervor, of Leonid Il'ich Brezhnev at the 19th Komsomol Congress--make an invaluable contribution to the depository of Marxism-Leninism, to the theory and practice of realization of the Leninist national policy of the CPSU.

These documents are for all of us, including the Latvian republic party organization, and for our entire ideological aktiv, a profound theoretical validation and practical guide to the solution of the complex tasks relating to the building of communism.

Comrades! The profound and rich in content document, full of theoretical and practical theses and conclusions, of candidate member of the Politburo of the CPSU Central Committee, Secretary of the Central Committee Comrade Boris Nikolayevich Ponomarev "The Leninist National Policy of the CPSU at the Stage of Developed Socialism and Its International Significance" discloses in detail the work of the Communist Party of the Soviet Union in implementation of the Leninist principles of creation and consolidation of the Soviet multinational state, assurance of full freedom and equality, genuine growth and rapprochement and the fraternal friendship of all the nations and nationalities united into the mighty Union of Soviet Socialist Republics.

The solution of the national question in our country--one of the most painful, most dramatic questions in the history of mankind--is an achievement which by right belongs among such victories in the building of a new society in the USSR as industrialization, collectivization and the cultural revolution.

The beneficial influence of this historical achievement has been strikingly manifested in the destinies of all Soviet peoples, large and small. This has been felt in full measure by the workers of Soviet Latvia who are celebrating this year the 42nd anniversary of the establishment of the Soviet power and the voluntary union of the republic with the USSR.

In slightly more than 40 years, Soviet Latvia has been transformed into a highly developed industrial-agrarian republic and is on a level with all the fraternal republics. It today makes a worthy contribution to the common cause of creation of communism on Soviet soil.

Surveying with a thoughtful glance the path that has been traveled, we cannot help but see that the secret of our social-economic achievements is to be found not only in the selfless labor of the working class, the kolkhoz peasantry and the intelligentsia of the republic but also in the great friendship of the peoples of our country and in the disinterested all-round aid and support of all the Soviet peoples and first and foremost the Russian people.

It is our good fortune as well as a guarantee of future successes and victories that the chief force, the backbone ridge to which both large and small peoples have become attached is great Russia and the great Russian people.

For the Latvian people, the Russian people have been a friend and brother from time immemorial. Together with them, the Latvian workers fought at the barricades of the first Russian revolution, overthrew the Tsar, raised the banner of Great October and advanced against the "hydras of counterrevolution and intervention" on the fronts of the civil war.

In the terrible time of the Great Patriotic War, all the Soviet peoples rallied around their senior brother—the Russian people. In union with him, they found a reliable defense against the danger of fascist enslavement. Taking from himself the most essential, he after victory helped the fraternal republics revive their economies ruined by the war and move forward to the summits of socialist progress.

In the years of the Soviet power, in Latvian SSR and in our multinational country as a whole, there has grown a new Soviet man—conscientious worker, a man of high political standards, a patriot and internationalist, brought up by the party, the country's heroic history and by our whole system, living the full life of a creator of a new world.

The stage of developed socialism marks a new level of internationalist maturity for Soviet society and the Soviet people. Patriotism and internationalism are today the realized norm of the active life of the Soviet people, a most essential trait of our socialist way of life.

At the same time, the solution of the national question does not at all mean that under conditions of mature socialism all problems have disappeared in relations between nations, in the dialectics of the national and international.

In one of his speeches, L.I. Brezhnev pointed out in this connection that in the society of mature socialism national relations are a reality which is constantly developing and bringing to the fore new problems and tasks. The party always holds these questions within the field of its vision and solves them in a timely way in the interest of the entire country and each individual republic, in the interest of building of communism.

"National relations" constitute a complex social-political category. These relations as we know are subordinated to two interconnected, interrelated tendencies, one of which is the undeviating growth of each nation, of each union republic and the other--their steady rapprochement.

Practice shows that the manifestation of these two tendencies is unthinkable without the subjective factor, that is, the conscious, purposeful work of the Communist Party, the Soviet state and public organizations and all workers of the ideological front; here one of the central places is occupied by the patriotic and international education of workers.

It is namely this that serves as the most important agency, a kind of "regulator" of the interrelation of the national self-consciousness of each individual and the socialist, internationalist consciousness as a whole.

It is no accident that V.I. Lenin even prior to the victory of Great October wrote that "if we want to be faithful to socialism we must even now engage in internationalist education of the masses" ("Poln. sobr. soch." [Complete Works], Vol 30, p 51.)

This directive of Lenin has not lost its topicality even today. Quite the contrary, the party calls on us not to relax our attention in regard to questions of patriotic and international education and to insistently "form in each Soviet individual a conviction in the rightness and invincibility of socialism..., to tirelessly strengthen the unity and solidarity of the Soviet people, to inculcate in workers the feeling of pride in their socialist Fatherland and the fraternal friendship of the peoples of the USSR" (decree of the CPSU Central Committee "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics").

Guided by party directives, realizing the exceptional importance of educating workers in the spirit of patriotism and internationalism, the Central Committee of the Communist Party of Latvia, party gorkoms and raykoms, state and public organizations and the ideological aktiv of the republic have never slackened their attention with respect to this important sector of ideological work.

Just in the past five years, the Central Committee of the republic Communist Party stated eight times in a straightforward formulation questions dealing with improvement of patriotic and international education. In 1982 in particular the Central Committee of the Communist Party of Latvia adopted a decree "On Conditions and Measures for the Further Improvement of Patriotic and International Education of Workers and Youth of the Republic." We seriously studied this work's organization at Yelgavskiy and Liyepayskiy party gorkoms and adopted appropriate decrees.

In determining criteria of an approach and evaluation of the state of affairs locally, the Central Committee of the Communist Party of Latvia strove to make broad use of the recommendations of scientific-practical conferences held in Tbilisi and Baku and the experience accumulated by party organizations of Moscow and Leningrad and the fraternal union republics.

No doubt the preparation for and the holding in Riga of this scientific-practical conference will serve as a definite stimulus for the republic party organization for the further activation of patriotic and international education.

On the basis of a recommendation of the Central Committee of the Communist Party of Latvia the tasks of communists and Komsomols for improving the education of workers in the spirit of patriotism and internationalism were discussed in detail in the first half of this year at plenums and bureaus of gorkoms and raykoms and at all primary party and Komsomol organizations of the republic.

The examination of these problems was also the subject of scientific-practical and theoretical conferences held in many cities and rayons of the republic, at the History Institute of the party attached to the Central Committee of the Communist Party of Latvia and at a number of production associations as well as at certain VUZ's and creative unions.

These conferences' materials, which are carefully being generalized, will make it possible for us to look more fully at the system of patriotic and international education developed in the republic, at the problems, difficulties and defects existing in this sphere and to determine optimal ways of solving them.

The system of work that has developed among us in this field includes the following basic elements.

First, unity of patriotic and international education.

As you know, patriotism and internationalism are not identical concepts; they differ in content, goal objectives and place in the complex system of our society's social values. But both international and patriotic education in the end have the same goal: the development in man of such qualities, norms and principles of behavior, which have contribute to a most rapid solution of the tasks of building a material-technical base for communism and the formation of communist social relations.

It is impossible to train a genuine internationalist without at the same time creating a convinced patriot, since a person cannot behave with respect toward other peoples and their cultural values if he does not love or respect his socialist Motherland.

It is impossible to inculcate successfully internationalist feelings without taking into consideration patriotic feelings and the feelings of national pride of people, as such inattention can bring about negative results and in some cases the rebirth of nationalist survivals.

The system that has been developed among us includes in the second place the following initial position: the process of patriotic and international education without fail must have two levels--ideological and psychological. If on the first, there is formed an internationalist, patriotic consciousness, then on the second--the development of corresponding feelings and qualities of will.

Third, our existing system presupposes that international and patriotic education constitute a component, constituent part of communist education as a whole and with reference to a labor collective a constituent part of the complex plan of ideological work.

In the general system of communist education, it comprises, as it were, a subsystem and achieves an ideological effect only in an organic connection with other of its directions: formation of a scientific outlook and political consciousness, labor, moral and esthetic education when it is done everywhere: in the family, school, at work and so on.

The scientific organization of patriotic and international education under conditions of socialism is a complex, multifactor system, all of whose composite parts are interconnected and interrelated.

Locally it is based on the operation of ideological commissions attached to party gorkoms and raykoms and party committees;at work it is handled by councils, sections and staffs of patriotic and international education. Party committees and party organizations try to see to it that in this system each ideological or operational unit performs its own concrete educational function.

At the same time, the Central Committee of the Communist Party of Latvia proceeds on the assumption that strengthening of the internationalist viewpoint of workers of the republic on the basis of their thorough assimilation of Marxism-Leninism and the historical experience of the CPSU is the main factor in the content of patriotic and international education.

I refer to a significant factor of that turn which is being made by us and the country as a whole in all sectors of ideological, political and educational work. This change naturally has affected the network of party education, economic education and Komsomol education and lecture and oral political propaganda. Not concerning ourselves with an excessive increase in the number of students, we turned our attention to improving the quality of propaganda. In particular, we try more deeply to explain to workers fundamentals of Marxist-Leninist theory and the program theses on the national question of the Communist Party. By analyzing the state of ideological and political-educational work and evaluating those positive changes which have taken place in it following the 26th CPSU Congress, we can today point out that the party organizations of Latvia have started to more carefully solve educational problems while taking into account the existing international situation and the increased ideological opposition of the two social systems. More attention is being paid today to a deeper explanation of the meaning of the socialist way of life, socialist democracy, Leninist national policy of the CPSU and together with this to the unmasking of the reactionary nature of bourgeois propaganda, the class sources of nationalism and its survivals.

The practical work of party gorkoms and raykoms is oriented toward the formation on a daily basis in workers and especially in the emerging generation a deep and lasting feeling of belonging to the Soviet people as a new historical community of people and a feeling of national pride. We are striving for the introduction into the daily life of labor collectives of truly international norms of living and the formation of high standards of international relations.

For the successful solution of these educational tasks, we have at our disposal a rich body of experience in patriotic and international education accumulated throughout the years of socialist construction. It includes various resources and measures of an economic, political, ideological and cultural nature.

Our mighty, priceless heritage, which has never become an obsolete means of teaching people in the spirit of patriotism and internationalism exists in the glorious, revolutionary, fighting and labor traditions of the Communist Party, the Soviet state and the heroic working class.

The Latvian people are proud of the fact that the chronicles of the Great October Socialist Revolution, its preparation, accomplishment and armed defense contain many bright pages on which the names of many of its glorious sons and daughters are inscribed in letters of gold.

This year marks 65 years since that memorable day when in May 1917 Latvian Red riflemen—our national pride—announced at their congress that they were going to be under Bolshevist banners and that they made Leninist decisions on all basic tactical questions of preparation and carrying out of a socialist revolution.

The Latvian proletariat advanced from its ranks and trained many outstanding Leninist internationalists, such people as Petr Stuchka, Yan Berzin'-Ziyemelis, Yan Fabritsius, Karl Yanson, Eyzhen Berg, one of the legendary Baku commissars, and others. For them the highest principle of life was strengthening of the international revolutionary fraternity of the working class and its unity without any distinctions of nationality.

Many of those who marched under the Lenin banners of October, forged in the underground of bourgeois Latvia the triumph of the socialist revolution, placed the first bricks of socialism on Latvian soil and fought with arms in their hands for a new life in the years of the Great Patriotic War and are still in the ranks.

The Riga section of the Soviet Committee of War Veterans, which includes the Latvian Red riflemen, alone contains more than 46,000 men. Councils of veterans and communists with long years of service are to be found attached to almost all gorkoms and raykoms of the republic's party.

They are conducting a tireless organizational and educational work and give of the ardency of their hearts, which know of no peace, to the education of new upcoming generations in the spirit of their devoted love for the Motherland and the Communist Party and faithfulness to the unbreakable friendship of the fraternal Soviet peoples.

The heroic work of fathers and mothers—internationalists—is our national pride, which is organically connected with a great and proud sense of belonging to the great international fraternity—to the Soviet people.

Comrades! As shown by the experience of many labor collectives, party, Komsomol and trade-union organizations of the republic, one of the most important elements in the system of patriotic and international education is education in the process of labor activity, education of the international character of labor itself under socialism.

This interconnection of internationalism and the labor process was accurately pointed out by Comrade L.I. Brezhnev in his speech in the city of Tashkent on 24 March of this year.

He emphasized that internationalism under the conditions of our multinational country is today first of all the honest, conscientious and fully returned labor of all the peoples of the country for the common good.

This is the ability of putting state interests above departmental and local interests and of ensuring precise operation by the unified national-economic complex of the country.

In the all-union division of labor, Latvian SSR performs an important task in providing for the needs of the country with respect to many products of machine building, radio and electronic industry, instrument making and the chemical, light, food, meat-and-dairy and woodworking sectors.

For the production of all these products, the republic receives from other regions of the country fuel, electric power, various raw materials and assembly items.

As an inseparable composite part of the unified national-economic complex of the country, Latvia's economy is connected through thousands of cooperative, economic contractual ties with the economies of the other fraternal republics. These ties are constantly being expanded and are becoming increasingly diversified.

Without these close operational and economic ties, it would be impossible to imagine any normal work by any sector, any large modern enterprise. And there are manifested in this not only the economic laws of mature socialism but also the concrete embodiment of internationalism of the country's economic mechanism and the friendship and mutual aid of the peoples of the USSR.

The Central Committee of the Communist Party of Latvia constantly directs the operation of gorkoms and raykoms and party committees of production associations toward reliable assurance of the continuous operation of this mechanism.

Each of us clearly understands that a well-defined production rhythm, an absence of crash work, planned, businesslike contacts with subcontractors, suppliers, the trade network and unconditional fulfillment of commitments with regard to deliveries create a healthy moral atmosphere in a labor collective and contribute in the best possible way to the inculcation in the individual of a feeling of pride and responsibility for his plant and the products it makes. At the same time all this basically serves as a favorable nutritive medium for the strengthening of patriotism and internationalism.

At the present time, we have a list of rayons, construction projects and enterprises in the country for whom the fulfillments of commitments is an immutable law as they are under the special control of Gossnab, Gosplan and other similar organs of the republic. Demands are increased on enterprises not fulfilling commitments with respect to deliveries and contracts.

The adopted measures are producing positive results. The start and middle of the second year of the 11th Five-Year Plan are marked by a stable tendency for reduction of the number of enterprises failing in their delivery commitments. Compared to last year, their number was significantly reduced in the first half of this year.

There is a growing number of enterprises in the republic which have shown themselves to be reliable partners in interrepublic operational ties.

But unfortunately, there are still many that fail to fulfill assumed commitments and thus put at times their colleagues in specialization and cooperation in a difficult position.

The Central Committee and the government of the republic try not to leave unconsidered and unattended such facts, inasmuch as they not only interfere with the fulfillment of general national-economic plans but also affect the formation of the internationalist consciousness of the respective labor collectives.

I would like to point out in this connection that internationalism today is to be found not only in timely but also in quality fulfillment of all interrepublic deliveries.

For party and operational organs of Latvia, the exceptional importance of this circumstance also results from the fact that products of Latvian SSR are sent to more than one hundred countries of the world, including to almost all the socialist countries.

When present in the export market, these products not only personify some particular Latvian enterprise but also our whole country. And the quality of products made in the USSR, I would say, is transformed into a political category influencing the development of international and foreign economic ties of the USSR and the strengthening of its international prestige.

This is why the Central Committe of the Communist Party of Latvia considers the unceasing struggle for high quality of production output as a patriotic and international duty of each labor collective.

An effective means of successful solution of this important national-economic problem is the republic system of quality, the development of which we began back in the Ninth Five-Year Plan. In these years it has absorbed the experience of many sectors, ministries, production associations and has been filled with concrete content in the form of a complex special-goal program and was highly rated at the 26th CPSU Congress.

Its introduction has made it possible for us significantly to increase the relative share of products with the Seal of Quality in the total output of production requiring certification. In 1981 it amounted to 40 percent.

In the process of introducing this system among labor collectives, a radical break occurs of obsolete moral and psychological prescriptions and new criteria of evaluation of their work, and new value orientations come into being in which an important place is occupied by patriotic and internationalist principles.

I think that those present will agree with me an educational influence on the formation of the personality and on the establishment of its outlook and civil life positions is exerted by different sides of the labor process.

This is why it is exceptionally important to see in operational practice not only plan fulfillment but also the education of the individual and to be able in practice to combine labor and the process of formation of the personality. This we try to teach our party and operational cadres.

This is being achieved most of all, as you know, through socialist competition. As a significant trait of the Soviet way of life, it exerts a profound influence not only on economic life but also on the entire moral and political atmosphere of production collectives and serves as a genuine school for labor, political and international tempering of workers.

It is possible to speak of different levels of socialist competition in our republic--from the labor rivalry of individual workers and kolkhoz farmers, brigades, shifts and sections, shops and plants to competition between cities and rayons. They all have their content, their specific character, but are united by the general patriotic motto: "For high quality of labor at each work place.

In the system of patriotic and international education, a special place is occupied by ties of cities, rayons and the labor collectives of our republic with the workers of other fraternal republics, especially the Russian Federation. The Central Committee of the Communist Party of Latvia devotes constant attention to the development of these ties.

Much that is positive exists in this work. The merit here is not only ours. For all this we are grateful to the many labor collectives of the union republics, first of all Moscow Oblast.

Back in 1967--the year of the celebration of the 50th anniversary of Great October--the Moscow Oblast Party Committee arranged a fraternal reception for the delegation of Latvia's party aktiv. Communists of the Moscow area generously shared their rich experience in the solution of economic and social problems. Then foundations were laid and parameters were determined of competition, sponsoring and cultural ties.

It is gratifying to state that these ties are growing stronger from year to year and are expanding not only on the level of labor collectives but also on the level of brigades, sections, among specialists of corresponding qualifications. An intensive exchange of experience and new technology is taking place, and a joint search is going on for the best methods of labor and management organization.

The competition with the collectives of Moscow Oblast has served as a good basis for expanding the geography of our contacts, friendly connections, which include today Leningrad, Pskovskaya and Kaliningradskaya oblasts of the RSFSR, Belorussia, Estonia and other republics.

We assume that such a competition would contribute in the best possible way to the patriotic and international conditioning of the republic's workers and to strengthening of their friendship with other fraternal Soviet peoples.

The socialist competition relating to the preparation for the 60th anniversary of the formation of the USSR is filled with a large patriotic and international content. The nationwide initiative "60th Anniversary of the USSR--60 shock labor weeks!" has been picked up by industrial enterprises, construction projects, sovkhozes and kolkhozes, workers in transport, communications, the sphere of trade and consumer services and all workers of the republic.

Shock weeks dedicated to the Russian Federation, the Ukraine, Belorussia, Georgia, Azerbaijan, Kazakhstan, Moldavia and Armenia were at a high level of enthusiasm. They turned into true celebrations of labor, celebrations of the great friendship and fraternity of the Soviet peoples.

In its work on patriotic and international education of the workers, the Central Committee of the Communist Party of Latvia and party gorkoms and raykoms attaches much importance to suitable measures being carried out at labor collectives.

Present-day labor collectives as a rule are multinational. At most large enterprises of Latvia, representatives of ten or more nationalities work. Is there any need to say that such collectives possess great educational possibilities.

Joint solution of general economic and social tasks by representatives of different nationalities, creative labor, training, participation in management of production affairs—all this affirms the internationalist traits of the Soviet people, contributes to their moral and spiritual enrichment and forms new, progressive national traditions and customs.

The multinational labor collective fosters the best traits of the moral character of the Soviet individual--collectivism, mutual support, comradeship. Figuratively speaking, it is a nucleus of our society, where there is born the dialectics of personal and public, national and international. Processes of internationalization, which are so characteristic of mature socialism, find their practical aspect via the multinational collective.

It is quite understandable that all this does not occur of its own accord, automatically, but only under the influence of objective elements of the labor collective or socialist way of life as a whole. Harmonious combination of the national and international is the result of systematic purposeful ideological educational and organizational work of the entire party, operational and ideological aktiv.

The Central Committee of the Communist party of the republic directs party committees in the organization of ideological and educational work always to remember Lenin's well-known advice to the effect that only tremendous attentiveness to the interests of different nations eliminates the soil for conflicts and creates lasting trust in workers and peasants speaking in different languages. This, by the way, was recalled anew by by the CPSU Central Committee in its recent decisions on questions of ideological work, where it is pointed out in particular that it is necessary to introduce a high standard in international contacts.

In the organization of mass political measures, we always try to adhere to the principle of bilingualism, that is, we try to implement all measures simultaneously or consecutively in the Latvian and Russian languages, inasmuch as persons of these nationalities speaking these languages constitute an absolute majority in labor collectives. Through appropriate notifications, workers are informed in what language a given measure will be carried out. There where technical possibilities exist for these, ear phones or other means of simultaneous translation are used.

Naturally, the political education network is also set up with language differences being taken into account. This also applies to measures relating to training and instruction of propaganda cadres and to visual agitation.

Work of the mass information media, the press, radio, television, is organized while taking these principles into account. In rayons and cities and at large production associations, where in addition to Latvians a certain percentage consists of other nationalities, rayon, city and large-circulation newspapers are published in two languages.

Almost one-third of republic television and radio broadcasts are, in addition to translations of all-union programs, in the Russian language. Names of streets, state and public organizations and enterprises engaged in trade, culture, everyday services and the like are as a rule in both languages.

It might appear that these are common trifles. But taken together, such details significantly influence the formation of standards of international relations.

All this must be considered in everyday practice, inasmuch as our aim is to create a truly internationalist moral and psychological climate at each collective. We want to see all members of our society become true internationalists.

At the same time, we believe that a most important condition for the successful functioning of the multinational collective and overcoming of the existing language barrier between people of different nationalities is work on the creation of conditions for universal study of the Russian language as the language of international contacts.

As has already been stated, most of our labor collectives are multinational; the composition of pupils of schools, vocational-technical schools and VUZ's is as a rule also multinational. Millions of people yearly change their place of residence and frequently cross boundaries of union and autonomous republics. And everywhere a problem common to all arises—the problem of human contacts. And the knowledge of the Russian language under the conditions of our multinational country undoubtedly results in the significant expansion of such contacts.

Judge for yourselves: any person of non-Russian nationality, knowing the Russian language, can freely mix with more than fourth-fifths of our country's population. And to what degree do his opportunities expand in mastering the achievements of science and technology and culture of other peoples as well as social and political information! We must not lose sight of public interests and especially of the need to defend socialist gains and to well perform service in our Armed Forces. The fact is that the army is also a multinational collective, requiring special discipline and solidarity.

The Soviet people well understand this. The desire for mastery of the Russian language is great everywhere and is being manifested on an increasingly broader scale. For this reason party organizations and Soviet organs must constantly concern themselves with the creation of all the conditions for the satisfaction of this need born of the objective logic of building communism in our country.

As shown by the results of the last census, more than one-third of the population of non-Russian nationalities still has a weak knowledge or no knowledge whatsoever of the Russian language. The possibilities of our school have not been fully utilized seemingly so far in the solution of this important problem.

In Latvia as apparently in other republics, a system of reciprocal language learning starts at children's preschool institutions, which in many cases are formed on a multinational basis.

This approach naturally is extended in subsequent years when the child attends school.

The Central Committee of the Communist Party of Latvia attaches great importance to operation of schools with parallel classes with instruction in the Russian and Latvian languages. We already have accumulated a certain amount of experience in their operation. There are now 130 such schools in the republic.

The practice of their operation shows that schools with instruction in two languages create favorable conditions and opportunities for purposeful formation in the course of the educational instruction process of friendly and united collectives.

In such schools, as a rule, both problems of instruction and problems of ideo-political, international education of children are successfully solved. They are always together—at work and at rest, on trips and in study. Major attention is paid to their joint creative artistic activity. The ideas and concepts of the friendship of peoples are assimilated by them not intellectually but in their own experience, in the process of active international intercourse.

We believe that the time is ripe in accordance with the needs of the population to expand in our republic and seemingly in a number of other republics the network of such mixed language schools. At the same time it is important for Russians and representatives of other nationalities obtaining their education in the republics to know the language of their native nationality. This makes it possible to more actively employ them in the national economy, in the party, state apparatus and in the field of culture.

In the seventies, the Central Committee of the Communist Party of Latvia twice examined questions of measures for further improving instruction and study of the Russian language in the republic's schools. In conformity with adopted decisions, there were improved school programs, textbooks and methodological teaching aids in the Russian language, which have been recognized in all-union organizations. A complex of measures has been introduced and is being implemented for raising the qualifications of Russian language instructors. At many schools for the study of the Russian language, linguaphone rooms have been established, library stocks have had Russian literature added to them and Russo-Latvian literary connections have started to be studied more deeply.

It is perfectly clear that all these measures have played a prominent role to the effect that today the overwhelming majority of the republic's population has a mastery of the Russian language. And I would like to stress this in particular--almost all the Latvian youth called into the ranks of the Soviet Armed Forces also have a mastery of the Russian language. I believe that this is a very concrete contribution to the military patriotic education of the youth. There is no doubt that these days a person of non-Russian nationality can successfully master modern complex military equipment only if he has a good mastery of the Russian language and can freely read technical literature in the Russian language.

In his speech in Tashkent, Leonid Il'ich Brezhnev pointed out the composition of the population of the Soviet republic is multinational and naturally all the nations have the right to due representation in their party and state organs. Of course, with strict consideration being given to the work and ideological-moral qualities of each individual.

The Central Committee of the Communist Party of Latvia constantly holds these questions within the field of its vision. We direct party gorkoms and raykoms and heads of ministries and departments in cadre selection and placement to adhere to the principle of equal national representation. We especially watch to see that in the republic Supreme Soviet and in local organs of government all the chief, most numerous nationalities residing on the territory of Latvian SSR are widely represented. This especially can be seen in the results of elections to local soviets held 20 June of the current year.

In the complex of measures for patriotic and international education of workers, the Central Committee of the Communist Party of Latvia attaches major importance to propaganda lecturing. It is conducted in our republic by groups of speakers from party gorkoms and raykoms and lecturers from the republic Znaniye Society.

Many interesting forms have been established. Of those used among us and at other republics are "single political days" where supervisory personnel meet workers directly at labor collectives and explain to the people the domestic and foreign policy of our party.

"Open letter days" also enjoy wide popularity. People meeting at their place of residence with supervisory cadres of party and soviet organs and public organizations get concrete replies to questions of interest to them from such personnel who by virtue of their supervisory work are in a position to resolve these questions.

I should especially like to dwell on the work of the republic Znaniye Society in this direction. In the past five years, the number of public talks on themes of the friendship of the peoples of the USSR and patriotic and international education has significantly increased. At the present time about 62,000 lectures are held in the republic on these themes. But, of course, it is not just a matter of number. The main thing is to see to it that the ideological level is raised and the content of the lectures is improved. At Znaniye Society a scientific-methodological commission for international education has been established and is operating actively. As the result of its thoughtful work, not only is positive experience generalized and popularized, but some lagging sectors and weak sides in our work on patriotic and international education of workers have been disclosed. Measures are being adopted for the elimination of the defects according to the recommendations of the scientific-methodological commission. Thus sociological studies have shown that in a number of cases listeners are not satisfied with the quality of lectures on questions of struggle with nationalism and chauvinism and criticism of bourgeois falsifications. In addition it was disclosed that such lectures in general were few.

Furthermore, detailed study of the matter showed that sometimes in lecturing practice peculiarities of audiences and the need of people to hear lectures in their native language are not taken sufficiently into account. And again the necessary concrete measures were adopted based on the conclusions of the commission.

The republic Znaniye Society is engaged in active work relating to training of lecturing cadres. In a number of the republic's rayons, lecture schools have been created. In the past five years, such schools have graduated more than one hundred persons. Publication has been started of the brochures "Ideological Opposition of Proletarian Internationalism and Bourgeois Nationalism."

Significant aspects of the theme "Patriotic and International Eduation of Workers" are such questions as:

--concern about ideological saturation and emotional effect of our measures devoted to the celebration of revolutionary, memorable and significant dates;

--creation and development of new, socialist customs and traditions--national in form, deeply international in their character and content;

--work along the line of well-based propaganda;

--development of excursions and tourism.

The Central Committee of the Communist Party of Latvia and party gorkoms and raykoms are directing our cadres to see to it that all this contributes in the best possible way to the patriotic and international education of workers.

For example, certain measures are worthy of attention, such as holding traditional and triumphal meetings on the Mound of Friendship. I refer to regularly held get-togethers in Ludzenskiy Rayon at the junction point of three republics --RSFSR, Belorussia and Latvia. Here the Mound of Friendship was erected as a symbol to the memory of the courage and heroism of partisans--Russians, Belorussians and Latvians, who fought side by side in these localities against Hitler's invaders.

Of significant importance is the work being done among us on the collection of materials of popular creativity, the creation of folklore, ethnographic ensembles and restoration of ancient monuments. But this antiquity is preserved, collected and restored not for the purpose of maintaining the exclusiveness of the Latvian nation but to comprehend the present through the prism of the past and to lend to customs and traditions hallowed by the centuries a new, socialist content.

Comrades!

I would like subsequently to return to the question of a differentiated approach to educational work.

As you know, this principle presupposes the strict consideration of the special features of the object of education: national and social affiliation, vocation and special age features.

It is especially important to take into consideration the specific features of international education of the youth and their special age features.

In speaking at the 19th Komsomol Congress, Leonid Il'ich Brezhnev noted that "youth is the morning of life. It is a time when the individual is formed both as a personality and as a citizen. This is why youth should... learn honest labor and the ability to see life with all its complexities from positions of Soviet patriotism and communist conviction."

Schools, vocational-technical schools, tekhnikums and VUZ's of the republic have accumulated much experience in the use of lessons of history and social science, language and literature and other social-political and humanitarian disciplines in the interest of forming in the upcoming generation an internationalist and patriotic outlook. Various forms are widely used of extracurricular work, social-political practice and sponsoring international ties. Diverse work is engaged in by 367 school clubs of international friendship. In many rayons, schools for international education have been organized. Special educational programs and methodological aids have been developed for them. An effective form of international education is to be found in student construction detachments and their participation in shock Komsomol construction projects of fraternal republics. In 1981 alone, about 2,000 students of Latvia worked in Kaliningradskaya and Irkutskaya oblasts, in Karelia and Tyumen', Ul'yanovsk and Kabardino-Balkarskaya ASSR. Hundreds of young men and women took part in the work of international construction detachments together with young people of the GDR, Czechoslovakia, Hungary and Bulgaria.

A good tradition is to be found in patronage by schools and production collectives of places of burial of Soviet soldiers who gave their lives in fighting for the liberation of Soviet Latvia from the German-fascist invaders.

An important form of heroic-patriotic education of the youth in the republic is trips to places of revolutionary, battle and labor glory, the military sports games of Zarnitsa and Orlenok, mass defense work months, republic sports days and games of youth in technical and military-application sport forms, competitions in all-round combined tournaments of GTO ["Ready for Labor and Defense of the USSR"] and sponsored ties with military units.

In organizing the patriotic education of the youth, we see one of the main tasks in their all-round training for service in the Soviet Armed Forces and the inculcation in each young person of hatred for the enemies of the socialist Motherland and readiness to defend it with arms in their hands.

In our opinion, this work recently has become markedly more active and has become more purposeful. This is felt in particular by the growing from year to year general educational level, cultural development and ideological maturity of the inductees.

The Central Committee of the Communist Party of Latvia directs all our cadres taking part in work with youth that they consider chief in their work:

--education of young men and women to be convinced ideologically, politically mature and stable;

--establishment in the consciousness of the young generation of the feeling of Soviet patriotism and socialist internationalism, pride in our multinational Soviet Motherland and readiness to staunchly defend socialist gains of our people;

--irreconcilability in regard to bourgeois ideology, readiness and ability to oppose alien influences, bourgeois, Beijing's and other inimical propaganda.

Thus the sacred feeling of love for one's socialist Motherland, the clear understanding that the great achievements of developed socialism must be increased and where necessary defended--such is the pivotal line of our ideological and political-educational work.

There can be no doubt that much is being done in the military-patriotic education of the youth while the returns from this work are marked.

Nonetheless I would like to direct your attention to the following.

Here and there, this work assumes at time an externally ostentatious, even a theatrical character.

Some Komsomols, Pioneers and school children participate passively in the conducted measures, as if on an excursion, and look upon the heroic past of the older generations as if from the side.

Knowing of these defects, the Central Committee of the Communist Party of Latvia directs party organizations, the ideological aktiv and teaching cadres to see to it that appropriate measures are used in which active principles are emphasized as strongly as possible.

Comrades! An integrated approach to the educational process presupposes the active employment of the entire diversity of forms and resources which the ideological front has today at its disposal.

The Central Committee of the Communist Party of Latvia and party gorkoms and raykoms constantly direct cadres of ideological workers to this.

I refer to the effective use of all the resources of mass information--the press, television and radio, the possibilities of the cinema, oral political and visual agitation and cultural-educational institutions.

Literature and art also play an important role here.

The Central Committee of the Communist Party of Latvia is working toward that position where artistic culture increasingly contributes to the satisfaction of the spiritual needs of the multinational family of the republic's workers and where the contributions of the creative intelligentsia to the work of patriotic and international education constantly increase.

And the results of these efforts are already evident. The themes of Motherland, the party, revolution, patriotism, military glory and valor and the international solidarity of peoples have become leading topics for the creative workers of all generations.

The republic's scholars are making a significant contribution to the process of patriotic and international education and to the development of its theoretical and scientific bases. In the last ten years alone, they have prepared and defended more than 30 doctoral and candidate dissertations dealing with topical problems of national relations and education of workers in the spirit of patriotism and internationalism.

The party's Institute of History attached to the Central Committee of the Communist Party of Latvia has worked out and is carrying out a broad program of thorough comprehensive research "Questions of International-Patriotic Education of Workers in the Activities of Party Organizations. A number of collective and individual monographs has been published dealing with problems of establishment of internationalist maturity in the workers of the republic.

Recommendations made by scholars have served as a good theoretical basis for party gorkoms and raykoms for the holding of scientific-practical conferences, training of propaganda cadres and raising the efficiency of ideological and political-educational work.

I believe that on this level the ideological aktiv will receive big help from the collective work "The Historical Experience of the CPSU in the Construction of Socialism in the Republics of the Soviet Baltic." This big joint research study is being completed by scholars of Latvia, Lithuania and Estonia.

Comrades! In conclusion, I would like to point out that what I have said by no mens signifies that all problems in the field of patriotic and international education among us have already been solved. Unfortunately, there are many complexities, difficulties and unsolved problems. The effectiveness of this work is not always as high as one would like it to be.

There are still to be encountered survivals of nationalism and occurrences of priority of local interests. In a word, more than enough grounds exist for further improvement of patriotic and international education.

The need for its improvement is dictated by the increasingly complex tasks relating to the building of communism, the subject of national relations at the stage of mature socialism and also as never before by the growing ideological struggle between the two systems.

Keeping in mind the last-named consideration, I would like to direct your attention to the special features of the region of the Baltic republics. This is their relative youth compared to the other fraternal republics and proximity to the ideological centers of the West, the existence of shameless antisoviet Latvian reactionary emigres and other factors.

Recently, we have encountered sharply increased "activity" of these subversive ideological center. The volume of inimical foreign broadcasting reaching Latvia has tripled; trade, scientific, cultural and even familial ties have begun to be used for ideological sabotage.

No social class basis for the manifestation of nationalism in Soviet Latvia or in our multinational country as a whole exists or can exist. I would not be in error to note that bourgeois nationalist propaganda exerts an influence on a certain portion of the youth, the intelligentsia and other social groups.

The practice of the republic party organization convincingly shows that nationalist survivals are manifested primarily there where ideological-educational work has become slackened and insufficient attention is being paid to the struggle against bourgeois ideology and inculcation in workers of a high level of political maturity and vigilance. Occasionally this can be explained by the fact that our party, komsomol workers and propagandists are unable or are not ready to conduct properly a well-grounded, offensive struggle against nationalist prejudices and sometimes turn out to be theoretically powerless before the various falsifiers of the Leninist national policy of the CPSU. For the purpose of overcoming this significant defect in ideological work, we have started to create in the republic a system of counterpropaganda and struggle against bourgeois ideology. A republic council has been created, lecturing cadres have been selected and the subject matter of their talks has been determined and republic seminars have been held. Much help in the creation of this system is being provided by the scholars of the Academy of Sciences and instructors of the republic's VUZ's, where counterpropaganda groups have been created whose duty is the elaboration of theoretical and methodological bases for conducting the struggle against bourgeois ideology and of propaganda materials for the aid of the ideological aktiv. I believe that this work should bring its own positive results.

A number of other theoretical and practical problems exist in the field of national relations which demand the close attention of party and soviet cadres and scholars of the republic.

We justifiably direct attention to the multinational labor collectives, to interpersonal relations in them and the forming of standards of international contacts. And each new publication, each grain of practical experience is always accepted with gratitude by the republic's party organizations. But attention is no less important to one-nationality collectives. In Latvia, as seemingly in the other republics, there are cities and rayons where the population of the root nationality comprises 80-90 percent. This means that the labor collectives here are more or less homogeneous in regard to national composition. And this present its own specific tasks and problems that cannot be ignored.

The processes of internationalization of all spheres of life of the republic require further deep study and comprehension for the purpose of timely and correct solution of arising practical questions and problems.

The Central Committee of the Communist Party of Latvia is constantly reminding party gorkoms and raykoms and everyone who is called upon to make a contribution to the cause of patriotic and international education of workers that any sort of errors are intolerable in these matters. Where defects are found, they must immediately be eliminated. This is exceptionally important both on the internal and on the international plane. The fact is that practice has shown more than once that any sort of lapse on our part is immediately attempted to be used by our ideological adversaries: they exaggerate in every way possible, they blow up our defects and try to make "political capital" of them in their unbridled antisoviet, anticommunist propaganda.

Comrades! I have only touched on some questions of the further strengthening of patriotic and international education of workers. I have spoken of the basic directions, forms, resources and methods of this work utilized in the republic.

Undoubtedly, everyday life and practical activity of party, trade-union and Komsomol organizations and the ideological aktiv in this oblast are significantly richer and broader. Much evidently will be discussed at section classes. Much you will be able to see locally in visits to the republic's labor collectives.

Genuine patriotism and internationalism presuppose that the ardent love of the Soviet people for their Motherland and the fidelity to the friendship of the peoples of the USSR overflow into concrete affairs, into the desire of every Soviet individual to contribute with his dedicated labor in every possible way to the implementation of the grandiose plans of building communism.

And in this sense, the topic discussed at our all-union conference is most immediately connected to the questions and problems which were studied one month ago at the May Plenum of the CPSU Central Committee.

In accordance with the report of General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet Comrade Leonid Il'ich Brezhnev, the Plenum analyzed from all sides the results of the development of the agroindustrial complex of the country and outlined ways and means of fulfilling the food program.

The adoption of the food program brings up new tasks before agriculture and the entire agroindustrial sector of economy—tasks that are big, difficult and responsible. These tasks, as Comrade L.I. Brezhnev pointed out at the Plenum, vary in regard to time periods—they are long-term, medium-term, immediate and urgent.

The Central Committee of the Communist Party of Latvia and the communists of the republic consider it their urgent task to transform the decisions of the May Plenum of the CPSU Central Committee into a militant program of action for each labor collective and to do everything possible so that the struggle for fulfillment of the food program developed by the party brings about perceptible results as early as this year, the second year of the 11th Five-Year Plan.

KUZNETSOV STRESSES 'ORGANIC' CONNECTION OF SOVIET ECONOMIC, FOREIGN POLICIES

Moscow PRAVDA in Russian 16 Jun 82 p 2

/Article by N. Mironov, PRAVDA correspondent and A. Belikov, TASS special correspondent: "On the Level of the Tasks"/

/Text/ Making use of the increased economic potential of Bashkiriya, the workers of the autonomous republic are taking on commitments to make a weighty contribution to the fulfillment of the USSR Food Program as early as this year. This was emphasized at the plenum of the Bashkirskiy obkom which on 15 June examined the results of the May (1982) Plenum of the CC CPSU, and the tasks which follow from Comrade L. I. Brezhnev's report at it.

The plenum was addressed by the Candidate Member of the Politburo of the CC CPSU and First Deputy Chairman of the Presidium of USSR Supreme Soviet V.V. Kuznetsov who was given a warm reception by the assemblage. He conveyed to the participants in the plenum and to all the Communists and workers of Bashkiriya Comrade L. I. Brezhnev's warm greetings and best wishes for their success in their work to carry out the decisions of the 26th Party Congress.

The May Plenum of the CC CPSU, the speaker continued, was a major social and political event in the life of our party and state. The central place in its work was occupied by the vivid and profoundly rich report of Comrade L. I. Brezhnev. Developed on the initiative of and with the direct participation of Leonid Il'ich the Food Program is a component part of the party's economic strategy for the comprehensive social development of society and improvement of the people's well-being and life. And it is supposed to yield its first results as early as this year.

The workers of Bashkiriya have the task of making an important contribution to this cause of our whole people. The measures which have been planned by the party will produce the necessary yield only if we learn to make much better use of machinery and fertilizers and everything that agriculture possesses and will possess. There is still quite a bit of mismanagement, losses, and squandering here. Recently the newspaper PRAVDA wrote about the shortcomings in the transportation, storage, and use of fertilizers in your republic. In Bashkiriya some of the agricultural equipment is not in working order, especially feed harvesting and preparation equipment.

The realization of the Food Program will depend to a large extent upon punctual and high quality supplies of equipment, spare parts, mineral fertilizers, herbicides, fuel and lubricants and other resources. A considerable proportion of them is produced in Baskiriya. Unfortunately, individual enterprises in the autonomous republic, including those which produce output for agriculture, do not always meet their planning assignments and have losses from defective goods.

During the last five-year plan Bashkiriya's construction workers proved that they are able to work efficiently. All of the most important planned objects were put into operation, and a good part of them were in the village. The construction of objects for agriculture and for the entire agro-industrial complex, especially those which will make it possible to rapidly produce the largest increase in foods has to be taken under unremitting control.

A large share of the work for the realization of the Food Program rests with the Soviets of People's Deputies. Their tasks have been clearly defined in the speech by Leonid Il'ich Brezhnev on 31 May at a meeting of the Presidium of the USSR Supreme Soviet. The CC CPSU and Comrade L. I. Brezhnev are showing constant concern for the agencies of people's power. In recent years the party has worked out and executed a large number of major measures to activate the Soviets of People's Deputies. There has been an important renewal of the legislation concerning the representative agencies of power, and their authority has been expanded. Everywhere the Soviets have increased their attention to economic construction, and to the key problems of the overall social and economic development of their territory.

Good experience has been accumulated in this direction also in Bashkiriya. It has to be made completely widespread in order to speed up the realization of the Food Program.

Today the soviets have been granted broad rights to coordinate and control the work of all of the enterprises and organizations located on their territory, and they are making increasingly active use of these rights. The strengthening of the coordination authority of the soviets is making it possible to achieve appreciable results both in the economic sphere and in social and cultural services for people, and to have the best combination of the branch and territorial principles in management and in the development of production and of the social infrastructure.

The councils of the agro-industrial associations will become the chief managerial element. They will be created at the sessions of the rayon, oblast, and kray soviets and Supreme Soviets of the Autonomous Republics. The agro-industrial association councils have to tie together kolkhozes and sovkhozes and all the organizations which service them with their common responsibility and concerns. Final results are now becoming the chief criterion for the evaluation of work and, moreover, not only for the kolkhozes and sovkhozes, but also for the organizations and enterprises which service agriculture.

Under the leadership of party agencies, the Soviets of People's Deputies will have to exercise daily direction and control over the work of the agro-industrial associations. It has to be said that this experience already exists with certain Soviets of People's Deputies. The Presidium of the USSR Supreme Soviet recently examined the experience connected with the creation and work of agro-industrial associations in Abashskiy Rayon of the Georgian SSR and Talsinskiy Rayon of the Latvian SSR. The results of their work have proven to be positive. For a number of years these rayons have achieved higher indicators for the production of all types of output than the average ones in their republics.

The party agencies and the Soviets of People's Deputies have to skillfully coordinate and unite the efforts of all of the subdivisions participating in the fulfillment of the Food Program, increase their interest in achieving high final results, and provide the new managerial agencies with comprehensive concrete assistance that takes account of local conditions.

Committies of the Presidiums of the Councils of Ministers, or other agencies to work on the agro-industrial complex are being created in the union republics. A committee on the agro-industrial complex of the Presidium of the USSR Council of Ministers has already been created.

In a few days the election campaign for the local Soviets of People's Deputies and the rayon and city courts will come to an end. Around 2.3 million deputies will be elected. This is an enormous force, and party organizations have to show concern that the newly elected soviets join in the work to accomplish the tasks which follow from the plenum's decisions immediately and without delay.

The work of our cadres and of all of our workers to bring about further progress in agriculture is unfolding during a period when preparations are taking place in the country for the 60th anniversary of the formation of the USSR. Socialist competition is gaining strength. It is necessary for the commitments to fulfill the Food Program to find a worthy place in this patriotic movement.

The initiative, discipline and responsibility of our cadres, and, above all, of the leaders of our associations, enterprises and farms will be a guarantee of success in accomplishing the tasks posed by the Plenum. The realization of the Food Program is for all of the workers, but Communists have to be at the front line of the struggle for its realization.

For 37 years the Soviet people have been enjoying the goods of peace. Every step on this path is connected with the great and many-sided work which is being performed for the good of peace by the leadership of our party and country and by Comrade L. I. Brezhnev--an outstanding statesman and political leader of our time, and a tireless fighter for peace. And today, V. V. Kuznetsov emphasized in conclusion, we again see how organically connected are the economic and social line of our party and its foreign policy strategy.

In the report of the First Secretary of the Bashkirskiy obkom M. Z. Shakirov and in the speeches of others it was noted that the republic's workers had achieved definite successes in the development of agriculture. After the March (1965) Plenum of the CC of the party the branches' gross output increased by 68 percent, including grain--85 percent, sugarbeet--2.4 times, meat and milk--2 times, and eggs--4 times.

The participants in the plenum devoted a large amount of attention to the further development of grain production. A concrete and demanding conversation took place on the development of animal husbandry and on an improvement of social and domestic living conditions in the village.

V. V. Kuznetsov had a conversation in the obkom and the Presidium of the Supreme Soviet of the Bashkiriya SSR, and visited the Ufa Motor Building Production Association and the Yumatova Cattle Fattening Animal Husbandry Complex.

SOLOMENTSEV ON NEED TO IMPROVE LIVING CONDITIONS IN RURAL AREAS

Moscow PRAVDA in Russian 16 Jun 82 p 2

/ Article by V. Shvetsov, PRAVDA correspondent, and A. Sivtsov and A. Trifimov, TASS special correspondents: "The Chief Direction" /

/ Text / To convert the Non-Black Earth Region of the RSFSR into a zone of highly productive intensive agricultural production--this is the task which the party and government has set for the republic's workers. Major measures are being carried out to further develop the village's productive forces and the branches connected with them, and profound social transformations are taking place. New horizons for the development of the region are being opened up by the decisions of the May (1982) Plenum of the CC CPSU and by the USSR Food Program which was approved by it.

This was taken note of at the 15 June Plenum of the Ryazanskiy obkom. The tasks of the oblast party organization in light of the decisions of the May (1982) Plenum of the CC CPSU were discussed.

The plenum was addressed by the Candidate Member of the Politburo of the CC CPSU and the Chairman of the RSFSR Council of Ministers M. S. Solomentsev who was warmly received by the assemblage.

The May (1982) Plenum of the CC CPSU, he emphasized, was a major political event in the life of our party and state and an important historical landmark in the Soviet people's struggle to improve the country's economy and the well-being of Soviet people.

The decisions of the plenum and the theses and conclusions of the report by Comrade L. I. Brezhnev are a major contribution to the development of the party's agrarian policy and of the Marxist-Leninist theory of communist construction. Never before has the party taken such a broad look and so closely coordinated the problems of agriculture and connected branches of industry and of social and cultural and domestic construction in the village.

The example of the RSFSR, the speaker noted, shows what great attention the the Communist Party is devoting to the progress of agriculture. On the kolkhozes and sovkhozes there has been a substantial increase in fixed productive capital and energy capacities, millions of hectares of improved lands have been put into operation, and supplies of mineral fertilizers have increased.

The essence of the qualitative changes in development of the republic's agriculture consists in the fact that it has been put solidly on the road of intensification.

While taking note of the positive changes which have been achieved in increasing the production and consumption of agricultural products, the party is not overestimating them, especially since there are still definite difficulties with supplying the population with certain foods. In view of this, the May Plenum of the CC CPSU mapped out more rapid rates for the development of agriculture and the industrial branches connected with it, and defined the concrete ways for achieving these goals. The kolkhozes and sovkhozes of the Non-Black Earth Zone of the RSFSR have to play an important part in the realization of the Food Program. The party is attributing great importance to the accelerated improvement of their economies, which is clearly visible from the example ofRyazanskaya Oblast. Agriculture here is gradually being moved to industrial track and is becoming an increasingly mechanized branch. However, the existing possibilities are being used far from fully and in recent years the development of the agrarian sector has slowed down.

The inadequately rapid development rates of agriculture are explained by the fact that on many kolkhozes and sovkhozes the scientifically substantiated system of cropping is violated, and improved lands, equipment, and fertilizers are used with a low yield. There are shortcomings in the organization of production.

The key problem in agriculture continues to be a further acceleration andstable increase in the production of grain. In the future, Ryazanskaya Oblast has to become the largest producer of grain in the RSFSR Non-Black Earth Zone. Wide use has to be made of the achievements of advanced kolkhozes and sovkhozes, shortcomings have to be eliminated in the development of grain production, and it has to be seen to it that every kolkhoz and sovkhoz and every team and link obtains high grain yields.

The farmers are faced with large tasks in increasing potato production. Ryazanskaya Oblast potato growers have quite a few glorious accomplishments. Unfortunately, recently they have begun to lose their positions. The reason is a weakening of attention to the development of this highly important branch. A great deal also has to be done to increase the production of vegetables, fruit, and berries.

The USSR Food Program maps out fundamental measures to develop animal husbandry and to sharply increase the production of meat, milk, and other products. Ryazanskaya Oblast is a large "milk shop" in the republic. It also occupies a large share for the production of meat. The oblast party organization is doing much for the development of animal husbandry. The production of this branch's output is increasing; however, the rates are insufficient and the productivity of the livestock remains low. This is occurring because of an insufficiency of feed and its low quality. The speaker emphasized the necessity for a fundamental improvement of feed production.

The population's private subsidiary farms play an important role in increasing the production of agricultural output. The country's Food Program provides for the creation of all of the conditions necessary for every family living in the village to be able to have a subsidiary plot and to keep livestock and poultry.

The speaker gave detailed consideration to an acceleration of scientific and technological progress and the strengthening of the material base of agriculture and of all of the branches of the agro-industrial complex.

The paramount duty of party, government, and agricultural agencies and of all of the oblast communists is to make maximum efforts for a more efficient use of equipment, capital investments, and other material resources and to adopt exhaustive measures ensuring a maximum return from every ruble of capital investments, every quintal of fertilizer, and every machine.

Industrial enterprises which supply agriculture with equipment and spare parts, and also mineral fertilizers and construction and other materials have to make an important contribution to the realization of the Food Program.

The successful realization of the Food Program depends to a decisive extent upon cadres, upon their expertise and knowledge, and upon the creation in every kolkhoz and sovkhoz of stable labor collectives.

The necessity for ever-increasing attention to cadres is a result of the fact that under the influence of the scientific and technological revolution the character of production is changing in the village literally in front of one's eyes and is increasingly acquiring the features of industrial production involving the use of complex modern equipment and technology. It is very important to use specialists in such a way that their knowledge and experience help the solution of current and long-term production development problems to the maximum.

The CPSU Central Committee and the USSR Council of Ministers regard measures for the social transformation of the village as a component part of the Food Program.

A further transformation of rural populated points into comfortable settlements, a substantial expansion of housing, municipal, and cultural and domestic construction, an improvement of medical and trade services, and the construction of roads will promote the permanency of cadres and improve the well-being of rural workers and their production activeness.

These issues are of especial importance for Ryazanskiy Oblast. Although in recent years work has been performed here to rebuild villages, the rates have been inadequate.

We have to put the tasks of the present day, M. S. Solomentsev emphasized in conclusion, at the center of our work, since the foundation for a fundamental improvement of the food situation in the country is being laid now.

It was noted in the report of the obkom's First Secretary N. S. Priyezzhev, and in the addresses of the Hero of Socialist Labor and machine milking operator on the kolkhoz imeni Lenin R. I. Sekacheva, the Chairman of the "Svetlyy Put'" Kolkhoz A. N. Akimov, the First Secretary of the Mikhaylovskiy Raykom V. D. Saprykin, and others that the oblast's agriculture is developing along the path of intensification.

Compared with the 7th Five-Year Plan, productivity has increased by 1.5 times. However, the overall level of the development of the oblast's agriculture still does not accord with the increased needs of the population for food.

Ways were mapped out at the plenum to eliminate shortcomings and increase the efficiency of agricultural production.

M. S. Solomentsev visited the "Ryazsel'mash" Production Association, the "Iskra" Swine Breeding Complex, and the"Rossiya" Kolkhoz.

ROMANOV, LENINGRAD OBKOM ON MAY PLENUM

Moscow PRAVDA in Russian 5 Jun 82 p 2

[Article by PRAVDA correspondents V. Gerasimov, P. Petrov and V. Senin: "To Work More Efficiently"]

[Text] To even more consistently and steadily carry out the line of intensification in all elements of the agroindustrial complex, to more widely employ advanced labor methods and scientifically sound recommendations in production planning and organization and on this basis to ensure the stable growth of productiveness in the fields and farms--from these positions the participants of the Plenum of the Leningrad CPSU Obkom held yesterday in Smol'niy discuss the results of the May (1982) Plenum of the CPSU Central Committee and the tasks of the oblast party organization stemming from the report of Comrade L. I. Brezhnev "On the USSR Food Program for the Period Up to 1990 and the Measures to Implement It."

Giving the report at the plenum was G. V. Romanov, member of the Politburo of the CPSU Central Committee and first secretary of the Leningrad Party Obkom.

"The communists and workers of the city and oblast unanimously approved the decisions of the May Central Committee Plenum which serve as a convincing confirmation that the party has carried out and is steadily carrying out its highest principle: everything for the happiness of man, everything for the good of man!" stated the speaker. "The report of L. I. Brezhnev at the plenum analyzed the diverse work of the party in developing the agroindustrial complex and clearly outlined the ways and means for actually implementing the Food Program which would provide progress in the entire national economy."

The Leningraders are to make a weighty contribution to developing agricultural development. The report and speeches at the plenum pointed out that over the last decade the rural workers have increased the volume of product output by 1.8-fold. Milk yields have reached 3,300 kg of milk per cow, vegetable production is 280-300 quintals per hectare and for potatoes 135 quintals. Calculated per 100 hectares of agricultural land, over 1,000 quintals of milk and 270 quintals of meat are produced.

For the Leningrad communists, an important point in the report in implementing the party's agrarian policy was the recommendations of L. I. Brezhnev voiced in December 1971 at a meeting of the oblast party organization aktiv on the need to more fully supply the city and industrial centers in the oblast with locally produced products. The following fact is particularly indicative. Over the decade the population in the city and oblast has increased by more than 800,000 persons while the deliveries of milk, meat and eggs produced by ourselves over the same period calculated per inhabitant noticeably rose. Over the last 3 years, the oblast has fully supplied itself with a local assortment of vegetables.

The self-supporting sovkhoz associations have become the main structural elements in agricultural production. In using the advantages of concentration and specialization, they help to industrialize labor on the fields and farms as well as increase the return from fixed capital.

In properly assessing what has been achieved, the speaker and persons participating in the debate such as the first secretary of the Leningrad party gorkom Yu. Solov'yev, the brigade leader of vegetable growers from the Detskosel'skoye Sovkhoz Association V. Parshina, the general director of the Ruch'i Sovkhoz Association V. Pashinskiy, the chairman of the oblast executive committee, R. Bobovikov, the secretary of the Tosno party gorkom N. Fedorov, the brigade leader of machinists from the Fosforit [Phosphorite] Association V. Grigor'yev and others focused basic attention on the unsolved problems. It was emphasized that it is essential to make more efficient use of the production and scientific potential. There are very significant opportunities for this. It is essential to strengthen the economy of the backward farms and bring them up to the level of the leaders. For example, we must not tolerate such contrasts as the following: the Petrovskiy State Breeding Farm milks 5,720 kg of milk per cow while the Komintern Sovkhoz in the same Priozerskiy Rayon produces over 2-fold less. Analogous facts were also given from crop-raising practice.

In drawing attention to the need to use scientific and practical achievements in all areas of the agroindustrial complex, the speakers said that the party and Soviet bodies must strengthen control on the spot for the content and implementation of the plans for scientific and technical progress and must in every possible way support the useful initiative and creative search of the rank-and-file farm workers and leaders.

Large amounts in the total capital investment volume are to be channeled into the development of feed production as well as the processing and storage of products. The early completion of a number of major enterprises as well as the reconstruction of existing ones in the food, meat-dairy and combined feed industry will make it possible in a short period of time to bring about a significant increase in the output of food products. The urgent question remains of improving transport services. The needs of agriculture for transportation are not fully satisfied. Frequently, precisely this becomes the reason for product losses. The plenum urged the communists to study the questions of reconstructing and technically reequipping the enterprises, concentrating the storage and processing of agricultural product at the points of their procurement and strengthening the responsibility of the party and economic leaders for production efficiency, the saving and safekeeping of agricultural raw products and food products.

As was pointed out at the plenum, not only the rural workers but virtually all sectors of Leningrad industry and science should be involved in carrying out the Food Program. For completing full mechanization, the Kompleks [Complex] and Gatchinsel'mash [Gatchina Agricultural Machinery] Associations, for example, over the five-year plan must double the output of farm machinery and spare parts. The deliveries of equipment for the food industry and production lines for vegetable packaging from the Prodmash [Food Machinery] and Torgmash [Trade Machinery] associations will rise by one-quarter. The output of the Kirovets tractors is to increase. The scientists are focused on accelerating the technical reequipping of the countryside, on creating economic production methods and introducing progressive materials and structural elements.

Labor effectiveness depends directly upon the conditions under which people live and work. The plenum participants devoted great attention to the social changes in the countryside. They are vast. Over the two five-year plans, 2.7 million m^3 of housing were completed in the oblast along with schools, clubs and houses of culture for tens of thousands of places. The development of the settlements and villages is being carried out on the basis of a unified general plan.

Rural construction will be carried out at a rapid pace in the current five-year plan as well and here the emphasis is to be put on integrated development. Preference is to be given to building housing with few stories with plots of land and farm buildings. The local soviets on the questions of the reconstruction of the countryside should show more initiative and utilize their rights and duties. To a significant degree they determine the development of the private subsidiary farms which are capable of providing a tangible increase in food products for our table. The measures outlined by the decree of the obkom bureau in further expanding and developing the subsidiary farms of the industrial enterprises and organizations must be also carried out more steadfastly.

The end result in any undertaking depends upon people, upon their competence, initiative and executive discipline. The professional level of the cadres in agriculture and the related sectors has noticeably risen. Here one can feel the fruits of the current system for training and retraining the leaders and leading specialists. For the party organization a matter of particular concern is the training and retaining of workers in the mass professions in the countryside. The experience of the Leningraders in indoctrinating a worthy replacement for the working class was recently highly praised in the greetings of Comrade L. I. Brezhnev to the participants in the traditional meeting of eighth-grade graduates who after school decided to continue training in the vocational-technical schools. However, along with the undoubted successes in vocational and technical education, there are also oversights. For example, we have not overcome the lag in training specialists for the combined feed industry or for the system of procuring and storing agricultural products.

The carrying out of the Food Program requires clear organizational and political support and an improvement in the style of party leadership, the plenum participants emphasized. In analyzing the tasks of the party organizations, they emphasize the questions of ideological support for the designated plans. At present a study and propagandizing of the decisions of the May Plenum of the CPSU Central Committee and the Food Program are underway everywhere. The activities of the communists are aimed at thoroughly explaining the goals and creating an atmosphere of high responsibility on the part of each worker for achieving them.

The plenum participants assured the CPSU Central Committee, the Central Committee Politburo and Comrade L. I. Brezhnev that the oblast party organization as well as the city and oblast workers will do everything necessary to successfully carry out the decisions of the 26th CPSU Congress and to fulfill the USSR Food Program which meets the interests of the people.

ROMANOV ATTENDS FOOD PROGRAM DISCUSSION AT LENINGRAD CITY SOVIET

Moscow IZVESTIYA in Russian 4 Jul 82 p 3

[Article by V. Mikhaylov, IZVESTIYA correspondent, Leningrad: "A High Duty of Deputies"]

[Text] Tasks of soviets of people's deputies of Leningrad stemming from the decisions of the May (1982) Plenum of the CPSU Central Committee and the report of Comrade L.I. Brezhnev "On the Food Program of the USSR for the Period to 1990 and Measures for Its Realization" were discussed at the first session of the new convocation of Leningrad City Soviet. L.N. Zaykov, chairman of the executive committee of Leningrad Soviet, presented a report.

The session noted that everywhere--on kolkhozes and sovkhozes, at many enterprises of the food, procurement and baking industry of the country--a good reputation was enjoyed by products bearing the names of such well-known enterprises as Kirovskiy Zavod Association, Neva Plant imeni V.I. Levin, Elektrik Plant imeni N.M. Shvernik and many others. The city's construction organizations have built large animal-husbandry complexes, hothouses, dwellings, schools and children's institutions in Leningrad Oblast.

At the same time, the speaker and those deputies taking part in the discussions --First Secretary of Nevskiy Raykom of the CPSU Yu.G. Tsaregorodtsev, master baker of the bakery and confectionery combine O.A. Pavlenko, chairman of the executive committee of Kalininskiy Rayon Soviet A.N. Makeyev and others gave serious attention to unsolved questions. It was noted that certain soviet and operational organs do not give due attention to the fulfillment of orders for agriculture and do not display perseverance and initiative in this work. At many industrial, trade enterprises and fruit and vegetable depots, unsatisfactory work is being done in regard to mechanization of loading and unloading processes and improvement of spur tracks and platforms. It was pointed out in the discussions that broader use should be made of the rights granted to soviets to strengthen their influence over the operational activity of enterprises.

The session noted that the solution of the tasks set by the May (1982) Plenum of the CPSU Central Committee is closely connected with the fulfillment of the decree of the Presidium of the USSR Supreme Soviet, which examined the work experience of the soviets of people's deputies of the city of Leningrad and Leningrad Oblast on assuring integrated economic and social development on their territories.

At the session, the executive committee of the Leningrad City Soviet of People's Deputies was elected. L.N. Zaykov was elected chairman of the executive committee.

Member of the Politburo of the CPSU Central Committee, First Secretary of Leningrad Party Obkom G.V. Romanov took part in the work of the session.

USSR ACADEMY OF SCIENCES CONFERENCE HELD IN TALLINN

Tallinn SOVETSKAYA ESTONIYA in Russian 9 Jun 82 pp 1-2

[Unattributed article of the Estonian Telegraph Agency: "The Guarantee for Success is in the Coordinating of Efforts"]

[Text] Under the conditions of modern economic development, the problem of providing energy has become one of the most important national economic tasks. Expenditures are growing for mining and transporting fuel and raw materials from remote areas. Many of the new deposits are being developed under unfavorable geological mining conditions.

For this reason it is no accident that the role of fundamental research has increased so in developing the fuel and energy complex of the nation and because of this the importance of the coordinating activities of the USSR Academy of Sciences has also grown.

The session of the Council for Coordinating the Scientific Activities of the Union Republic Academies of Sciences under the Presidium of the USSR Academy of Sciences has summed up the results of the activities carried out by the scientists over the year. This meeting opened on 8 June in Tallinn.

The president of the USSR Academy of Sciences and Council Chairman, Academician A. Aleksandrov, gave the opening speech to those present.

"At present, there is an energetic process underway in the development of science in all of the fraternal republics of the USSR," he said. "The skilled collectives from the republic academies help in creating the overall front of Soviet science. It is possible to give examples where scientific collectives from the republic academies hold leading positions not only in the nation but also in the world.

"One cannot help but note that contribution which has been made by the Estonian Academy of Sciences in solving the problems of the fuel and energy complex. The experience of Estonian scientists in the area of the integrated use of cheap solid fuel is important also for the other republics and areas which are rich in shale deposits."

Then speaking was the First Secretary of the ECP [Estonian Communist Party] Central Committee, K. Vayno.

On behalf of the Bureau of the ECP Central Committee, the Presidium of the Republic Supreme Soviet and Council of Ministers, he warmly and cordially welcomed the participants of the 29th Session of the Council for the Coordinating of Scientific Activities of the Union Republic Academies of Sciences and wished them successful, fruitful work.

Comrade K. Vayno said that the meeting being held in the capital of Soviet Estonia for the scientific leaders of all the fraternal republics during the year of the 60th anniversary of our great multinational motherland is profoundly symbolic. It is still another vivid confirmation of the practical realization of Lenin's nationality policy and the diverse work of the Communist Party and the Soviet government in the area of developing science in the Union republics.

The accomplishments of Soviet Estonia over the last 4 decades clearly shows what heights can be achieved by a republic which is part of the friendly family of fraternal peoples. Today Soviet Estonia is a socialist republic with a dynamically developing industry and agriculture, a developed social structure and high educational and cultural levels of the population. Our republic's economy is a component part of the unified powerful national economic organism of the land. In relying on fruitful cooperation with all the fraternal republics, our republic has come to hold a firm place in the united family of Soviet peoples and in the national division of labor. It has achieved significant advances in increasing its economic and scientific potential and in increasing the well-being of the people. Suffice it to say that at present the republic's economy in 8 days produces the same amount of product as in all of 1940, while the gross volume of agricultural product is double the prewar level, although the number of persons working in agriculture has declined by more than 3-fold.

The republic workers are proud of the high praise which the CPSU Central Committee gave to their achievements in intensifying production at the 26th CPSU Congress. Much has been done in the republic to utilize the local oil shales and to develop the production of electric power, mineral fertilizers and consumer goods.

The republic has gotten off to a good start in the second year of the 11th Five-Year Plan. The industrial workers ahead of time, on 29 May, fulfilled the 5-month plan quotas. More than 38 million rubles of industrial product were produced above the plan, with an annual socialist obligation of 50 million rubles. The growth of labor productivity and the reconstruction and technical reequipping of existing enterprises are a determining factor for the development of the republic's industry.

The rural workers have successfully handled a crucial stage, the spring sowing. The sowing of the spring crops was completed within the optimum times, almost a week earlier than last year. At present, everywhere in the republic we have begun to solve the key problem in the development of livestock raising, the providing of feed. The republic livestock raisers are also hard at work. The rural workers of our republic see their task in implementing the nation's Food Program in intensifying production and achieving an increase in meat and milk. For this reason primary attention is being paid to this in the Food Program being worked out in the republic. The rayon agroindustrial associations must play a major role in solving this. The experiment of creating these associations was approved at the May (1982) Plenum of the CPSU Central Committee.

The May Plenum of the CPSU Central Committee raised responsible tasks for science, Comrade K. Vayno went on to say. We see our task in helping our scientists be up to the high demands and in helping them clearly understand the social significance of their personal involvement in carrying out the party's magnificent plans. Fundamental research and its results create that basis, in relying on which, science can carry out its role of the "disrupter of complacency" and the catalyst of scientific and technical progress. For this reason it is very important that the efforts of scientists, along with elaborating theoretical problems, to a greater degree be concentrated on solving important national economic questions and on discoveries capable of introducing truly revolutionary changes into production. The essence of the question is to more closely tie science to production and to even better introduce the scientific discoveries and inventions. The question was raised in this manner at the 26th Congress of our party and the necessity of this was pointed out again at the May (1982) Plenum of the CPSU Central Committee.

At present specific program research is becoming the mainline of scientific development. Life itself has convincingly confirmed the effectiveness of these programs. The nine programs created by the Estonian Academy of Sciences successfully focus the efforts of the scientists on introducing effective methods for mining and processing oil shales in the aim of supplying the nation's Northwest with electric power, liquid fuel and chemical products. They are also working on the rational use of the Estonian phosphorites, a source of fertility and a powerful means for fulfilling the Food Program, on developing new biologically active compounds, including for medicine and agriculture, and on developing modern high-speed automatic equipment and microprocessor systems to automate production processes essential for scientific institutions.

At present, the republic scientific institutes and design organizations, under the leadership of the Academy of Sciences and in close contact with the Estonian ministries, departments and Gosplan, are carrying out responsible work to draw up the Estonian 20-Year Comprehensive Program for Scientific and Technical Progress. Over the long run, this will become a truly scientific basis for planning our economic and social development. This creates important prerequisites for converting the national economy to an even more intense path of development and for the greatest possible rise in the effectiveness and quality of all our work.

On a national scale the USSR Academy of Sciences plays the main role in developing mutually enriching scientific ties. It in every way possible contributes to the creation and successful operation of the republic academies. From the example of our republic one can see and assess that enormous and complete aid which the USSR Academy of Sciences and the outstanding scientists of the nation, Moscow and Leningrad have given Estonian science.

We have our own Academy of Sciences which presently fruitfully employs around 4,300 persons, including more than 1,100 scientific workers, 80 doctors of sciences and 580 candidates of sciences. The constant coordination of research within the system of all Soviet science and the disclosing of its leading areas accelerate the process of scientific developments which are being carried out in Estonia and they improve their quality. Each year in the reports of the USSR Academy of Sciences scores of projects by Soviet Estonian scientists are mentioned among the most important.

In noticing the successes of our scientific institutions, said Comrade K. Vayno, it is also essential to critically assess their work. The scientific organizations also have unsolved problems and unfinished work. At times, an excessive number of projects and the scattering of resources are observed and there are also shortcomings in coordinating the activities of the scientific institutions. But here the main thing is that our scientists see these shortcomings and take specific measures to eliminate them.

Soviet scientists are on the leading edge of the struggle for communism, Comrade K. Vayno went on to say. They take a most active part in carrying out the party's plans and in strengthening the motherland's economic potential, its defense capability and the material and cultural level of the people. But in the present difficult international situation, when our nation is making an enormous effort to preserve and strengthen peace, the fate of our peaceful life depends as never before upon the increased economic might of the USSR. And this means that the role of science will rise even more and the responsibility of scientists for the results of their labor will grow.

In conclusion, Comrade K. Vayno said:

"Allow me to express confidence that the important matter for all of us of coordinating Soviet science will develop fruitfully in the future. Let the present, 39th session make its weighty contribution to mobilizing the creative potential of our science."

Academician M. Styrikovich, member of the Presidium of the USSR Academy of Sciences, gave a report on the tasks of the republic academies of sciences, the scientific centers and affiliates of the USSR Academy of Sciences in developing research in the area of the fuel and energy complexes.

The significant changes in the development of world energy as a whole, the increasing economicness of replacing petroleum by other energy resources, the carrying out of an energy-saving technical policy by the party and government and the increased demands for preserving the ecological equilibrium and protecting the environment, the speaker commented, determine the direction of research by Soviet scientists. The coordinating of their activities in energy is carried out by the Scientific Council of the USSR Academy of Sciences for interdisciplinary energy problems. However, the work being carried out in the area of the fuel and energy complex, and particularly energy-saving technologies, requires a further improvement in forms and methods.

The President of the Estonian Academy of Sciences, Academician K. Rebane, spoke on the problem of the integrated use of oil shales from the example of Estonia. He pointed out that particular attention should be paid to the process of the heat processing of fine-grained shale in line with the increased mechanization of its mining. He said that even now it is essential to prepare scientifically and technically for the development of a new major national economic sector, that is, the production of liquid types of fuel from oil shales, bituminous sands and coals.

The Vice President of the USSR Academy of Sciences, Academician P. Fedoseyev, told about the preparations of the USSR Academy of Sciences and the Union republic academies of sciences for the 60th anniversary of the formation of the USSR.

The preparations for and holding of the jubilee general assembly of the USSR Academy of Sciences, the division sessions and the enlarged meetings for the scientific councils of the USSR Academy of Sciences institutes as well as other measures devoted to this date have been carried out under the banner of further strengthening the friendship of peoples and successfully developing the creative initiative of scientists.

N. P. Fedorenko, academician-secretary of the Economics Division of the USSR Academy of Sciences, told of the coordinating of economic research in the nation.

A decision was adopted by the Coordination Council which pointed out that the republic academies of sciences, the scientific centers and affiliates of the USSR Academy of Sciences are to carry out significant work in improving the forms of ties between science and production. In the republics plenums have been held by the central committees of the Union republic communist parties, meetings of the party-economic aktives and joint sessions of the presidiums of the academies of sciences and gosplans on the questions of concentrating efforts aimed at further developing science and accelerating scientific and technical progress in the national economy.

The nation's scientific institutions and VUZes have been involved in drawing up the interdisciplinary plans for scientific and technical progress. We have begun to more widely employ across-the-board planning of scientific research and the introduction of developments on the basis of the joint plans of the ministries and scientific institutions.

The session's decision also pointed out that the Estonian Academy of Sciences has strengthened its work to utilize the republic's scientific potential in the area of fundamental problems. The Presidium of the Estonian Academy of Sciences has outlined and is implementing specific measures to conduct joint scientific research by the republic VUZes and the industrial enterprises on a basis of scientific collaboration contracts.

Participating in the work of the session were Comrades I. Kebin, V. Klauson, A. Kudryavtsev, O. Merimaa, R. Ristlaan, A. Ryuytel' and N. Yuganson, the deputy chairmen of the Estonian Council of Ministers B. Saul and G. Tynspoyeg, the department heads of the ECP Central Committee A. Aben and A. Zamakhin, the sector head of the CPSU Central Committee I. Rozanov, leaders of the republic ministries and departments, party and Soviet workers and scientists.

RUSSIAN RELIGIOUS PROTEST AGAINST AFGHAN WAR REPORTED IN MOSCOW PAPER

Moscow SOTSIALISTICHESKAYA INDUSTRIYA in Russian 11 Jul 82 p2

[Article by S. Baymenov, lecturer, Oblast Committee of Communist Party of Kazakhstan, Dzhezkazgan, Kazakh SSR: "Caught In the Net of Religious Sects"]

[Text] The members of a commune of Baptist Initiativists had gathered in the semidarkness of the stuffy room. The voice of the preacher is heard in its ingratiating tone. The pastor begins, as usual, with the reading of the Bible, but soon he comes crashing down onto the "godless world," calling upon the coreligionists to pronounce an anathema against everything that is dear to the hated "satanists."

Telling me about this, my conversational partner frowns uneasily. Shamil S., a young worker from the city of Nikol'skiy, was himself recently in the ranks of the Baptist Initiativists. He had found himself there during a period of spiritual crisis, drawn by the compassionate attention shown to him by a friend at work, who had turned out to be a member of the sect.

For approximately three years Shamil visited the commune's prayer meetings. As a member of the organization's youth group he underwent psychological processing for a rather long period of time. In the sermons and in individual discussions the "older brothers" interpreted with him the age-old topics -- the meaning of life, the soul, ideals, love of one's neighbor. And it was only after they had decided that the proselyte had been tightly caught in their net that the leaders began to regale him with spiritual food of another kind. Without any particular difficulty Shamil caught the main idea, which sounded clearly in all the words that he heard. Everything that lies outside the confines of the sect is bad, and if you are a true follower of Christ's teaching, you must oppose yourself to worldly society.

But let us return to the episode with which we began. Why, exactly, doesn't the pastor like our "red" holidays or the Soviet way of life in general? That is approximately the question that Shamil once asked his mentors. Because, they explained to him, this is a manifestation of "satanic" forces that oppose God.

A young person with a biography just the same as millions of others his own age, a person who had seen only good from his country, Shamil could not fail to subject to doubt these "conclusions." Soon he found for the statements made by his leaders a completely worldly, rather than celestial, explanation. It seemed that the pastors were railing not at everything on earth, but only at that which surrounds them in the Soviet Union.

At one of the meetings of the commune an "older brother" reported in a melancholy voice that Soviet soldiers had shot to death in Kabul a peaceful demonstration by children.

"Do you think that the pastor invented that nonsense himself?" Shamil asked. "No! Approximately one week before the discussion at the prayer meeting, slander with the same content had been broadcast by one of the hostile 'radio voices'". . .

And here is another fact that newly attests to what kitchen is providing the spiritual food for the commune leaders to feed their flock. A local sect authority, R. Dik, repeatedly said in the sermons that in the works of the classic authors of scientific atheism, in particular in the works of Marx, Engels, and Lenin, there is no mention of the idea of "denying God," and he even alleged that one of the founders of revolutionary theory at the end of his life repented his godlessness and wrote a work about it. But the atheists do not want to translate it into Russian. That absolute absurdity was drawn, like many other similar ones, from the theoretical arsenals of the leaders of the illegal center of the Baptist-Initiativists -- the council of churches of the Evangelical Christian Baptists (ECB), who, in their turn, receive these revelations straight from the hands of the chefs who are concocting imperialistic propaganda.

A considerable place in the discussions that the commune leaders have with their flock is occupied by discussions about the alleged persecution of believers in the USSR. There is not a single meeting in which the members of the sectors do not pray to the Lord for the fate of the latest in a series of "martyrs for the faith," whose life, according to the preachers, because of the machinations of the "state atheists," has been converted into a chain of tortures. And so, today, in the the Nikol'skiy commune, prayers are being said for G. Vins, who was deported from our country because of anti-Soviet activity.

Here that toady of the West is an example to be imitated. His bosses, even while Vins was still in the USSR, portrayed to the entire world by radio the "sufferings" of the Baptist leader, but now, true, with every passing year he is given the opportunity less and less frequently to use the microphones to tell the believers in the Soviet Union weepingly about his bitter lot.

At the commune's youth meeting, Shamil recalls, the preacher gave the traditional speech about the "martyrs'" sufferings, which, upon checking, proved to be the text from the illegal Baptist journal "Herald of Truth." The author of the publication, D. Minyakov, is one of the "spiritual inspirers" of the movement of Baptist-Initiativists. That "servant of God" in 1943 had entered the service of the Hitlerites, and then, in the ranks of the "Russian Liberation Army," had taken part in the atrocities against Soviet citizens. The leaders of the commune know about Minyakov's criminal past, but they hold their tongues about it and eagerly take advantange of his "compositions," since that has the blessing of the ECB Council of Churches and -- climb a bit higher! -- the transoceanic bosses themselves.

The canonization of criminals occurs not only in words. For greater plausability, the sect's center frequently holds meetings with the "martyrs for the faith."

Once Shamil saw one of these "saints." A person appeared at a prayer meeting who was identified as a secret "brother in Christ" and who was named as the author of one of the underground works that were known to the believers and were being passed around in handwritten copies. He launched immediately into a sermon that represented a retelling of his ordeals -- a collection of cock and bull stories with an obviously antisocial foundation. The visitor spoke well, was in complete control of his voice, and, where needed, he would shed a tear. He produced quite an effect. One of the fanatically-minded young people, at the end of the sermon, crashed to his knees in front of the "great martyr" and began to repent his sins.

These visits produce a large effect not only upon the flock, but also upon the provincial leaders themselves. For some time the preachers A. Gizbrekht, R. Dik, and the commune presbyter himself, E. Shil'ke, also began to portray themselves as martyrs for the faith who had allegedly been persecuted in labor collectives where they worked. But the paradox lies in the fact that in production it frequently happened that no one knew that those people were believers, much less the place that the notorious "persecuted individuals" occupied in the ranks of the sect members.

In poisoning the souls of the coreligionists by the venom of distrust in their environment and hostility to our way of life, the sect authorities obviously spare the "satanic world" of the capitalist West, and even extol it. On instructions from the organization's fraternal council, Shamil visited meetings of the Leningrad commune of Baptist-Initiativsts. At the conclusion of the sermon, the presbyter there read aloud a letter from the "brothers" abroad. It became known from the message that its authors had visited a country in Africa where "Negroes have a miraculous opportunity to pray" and where, in turn, the deeply moved guests discussed the mythical oppressions that Christians in the USSR are subjected to. For a long time the pastor waxed enthusiastic about the "temporal" conditions of that wonderful country. None of the believers noticed that the country being discussed was Namibia, occupied by the South African Republic, where Negroes are denied even the right to call themselves persons because of the color of their skin and where all that remains to them is just one right -- the right to pray, so that they will at least have the hope that their hell on earth will be replaced by celestial paradise.

Letters like this also arrive at the Nikol'skiy commune. For the most part they are written by those who, having left their Motherland, now have found themselves in the embraces of the longed-for West. Former presbyter A. Vibe, who is now living in West Germany, from time to time sends to his successors lengthy exhortations in which every line is filled with anti-Sovietism.

"We must pray for the minds of our leading brothers," a young Baptist once told Shamil. He was the very same fanatic who had confessed his sins to the visiting "great martyr." And how could he have thought otherwise? Because the leaders of the commune painstakingly develop their ardent followers, guarding them in every way against outside influences. When casually besmirching the life in our country, the leaders of the organization attempt to achieve a situation in which nowhere, under no circumstances, does the flock obtain any proof to the contrary, and they fear more than mortal sin any discussions with the "satanists."

Once, a commission from the city executive committee came to a meeting of the commune in regard to a collective letter sent by the local members of the sect to higher governmental agencies to "defend" the not exactly unknown "brother Rumachik." The representatives of the authority stated, "We have brought our reply."

And what happened? The first to leave the meeting, shouting "We don't want to listen to you!", was presbyter E. Shil'ke, assuming that all the other faithful would follow him. But Shil'ke had to come back into the room three more times until he finally managed, with the aid of the "older brothers," to chase the coreligionists out.

Using a rich variety of means, up to and including coercion, the pastors keep the "sheep of Christ's flock" in obedience. The incendiary speeches by the preachers encourage certain believers to commit direct violations of Soviet laws. Not too long ago, under the influence of the commune leaders, one of the young "brothers" declared his refusal to serve in the ranks of the Soviet Army, for which he was brought to criminal responsibility and was sentenced.

That incident did not grieve, but, rather, pleased the local leaders of the sect. The list of "martyrs for the faith" was supplemented by yet another victim. Now the leaders of the commune can boldly report to the ECB Council of Churches: the instructions from the top are being carried out successfully. And new slanderous material has been obtained for publications from the sect center and for the numerous Western "radio voices."

And now just one more small line. After the publication in an oblast newspaper of an open letter written by Shamil S., the labor collectives where the sect leaders work saw his true face. At a meeting at which there was a discussion of the antisocial behavior of presbyter E. Shil'ke, he was asked: why didn't he go to the West that he praised so much, if he was so dissatisfied with everything in our daily life? Without a shadow of embarrassment he replied that, on the contrary, he liked living here. This is a striking example of double-dealing, of lack of principles, in a person to whom his "brothers and sisters in Christ" have entrusted their spiritual health.

The presbyter cannot become accustomed to being hypocritical. The presbyter knows it is only here that he represents an asset in the eyes of the ECB Council of Churches and the bosses of the imperialistic propaganda system as the preacher of their criminal plans among the believers. In any other role he is nothing for them.

SPEECHES AT GEORGIAN CENTRAL COMMITTEE PLENUM

Information Report

Tbilisi ZARYA VOSTOKA in Russian 3 Jul 82 p 1

[Text] The regular 8th Plenum of the Central Committee of the Communist Party of Georgia was held on 2 July.

The Plenum was opened by Candidate Member of the Politburo of the CPSU Central Committee, First Secretary of the Central Committee of the Communist Party of Georgia E. A. Shevardnadze.

The Plenum considered organizational questions.

The Plenum elected Comrade D. L. Kartvelishvili as member of the bureau of the Communist Party of Georgia.

The Plenum relieved Comrade Z. A. Chkheidze of his duties as secretary of the Central Committee of the Communist Party of Georgia because of his tranfer to another job.

Comrade S. Ye. Khabeishvili was elected secretary of the Central Committee of the Communist Party of Georgia. He was relieved of his duties as chief of the section for party-organizational work, Central Committee of the Communist Party of Georgia.

The Plenum confirmed Comrade Zh. K. Shartava as chief of the section for party-organizational work, Central Committee of the Communist Party of Georgia, relieving him of his duties as chief of the propaganda and agitation section, Central Committee of the Communist Party of Georgia.

Comrade N. Sh. Endeladze was confirmed as head of the propaganda and agitation section, Central Committee of the Communist Party of Georgia.

(GruzINFORM [Georgian Information Agency])

Shevardnadze Opening Remarks

Tbilisi ZARYA VOSTOKA in Russian 3 Jul 82 p 1

[Text] Comrade deputies!

Today a Plenum of the Central Committee of the Communist Party of Georgia was held, and that Plenum considered organizational questions, including the question of the Chairman of the republic's Council of Ministers.

It is difficult to convey to you the tremendous pain that we have all felt from the tragic death of Zurab Aleksandrovich Pataridze. As a result of blind circumstance we have lost a candidate member of the CPSU Central Committee, deputy to the USSR Supreme Soviet, deputy to the GSSR Supreme Soviet, bureau member of the Central Committee of the Communist Party of Georgia, and Chairman of the republic's Council of Ministers, Zurab Pataridze.

We have lost an ardent Communist, an indefatigable organizer, a person of inexhaustible energy, kindness, and responsiveness. He was typified by an unlimited devotion to the job at hand, his industriousness, and his capacity for work. That is how we knew Zurab Aleksandrovich Pataridze, and that is how he will always remain in our hearts.

The bureau of the Central Committee of the Communist Party of Georgia recently adopted a decision to perpetuate the memory of Z. A. Pataridze and made the appropriate recommendations to the republic government.

It is planned to give Z. A. Pataridze's name to the Akhali Itkhvisi Mine Administration, and the Chiaturmarganets Production Association, where he worked for a number of years. A memorial plaque will be installed at the construction site of the Marabda-Akhalkalaki Railroad. That plaque will state that Z. A. Pataridze was the manager of the construction staff for a long time. The executive committee of the Tbilisi City Soviet of People's Deputies has been instructed to give his name to one of the streets in Tbilisi.

The Plenum of the Central Committee of the Communist Party of Georgia has given me the responsibility of submitting for consideration by the session of the republic's Supreme Soviet a proposal to appoint Comrade Dmitriy Levanovich Kartvelishvili as Chairman of GSSR Council of Ministers.

Dmitriy Kartvelishvili was born in 1927 in the city of Tbilisi. He is a mechanical engineer. Upon graduation from Georgian Polytechnical Institute he worked for 20 years at the Kutaisi Automobile Plant: as engineer, laboratory chief, deputy chief designer, chief designer, and chief plant engineer. Then, engaging in Soviet work, he was the chairman of the executive committee of the Kutaisi City Soviet, and head of the industry, transportation, and communication section of the republic's Council of Ministers. In 1976 he began working as first deputy chairman of GSSR Gosplan, and then was made head of the planning and financial agencies section of the Central Committee of the Communist Party of Georgia. Since 1979 he has been deputy Chairman of the GSSR Council of Ministers and chairman of GSSR Gosplan.

Comrade D. L. Kartvelishvili has had a large amount of experience in economic, party, and Soviet work. He has a thorough knowledge of questions of the economics of production and the planning of the national economy. What is also of great importance is that he is a specialist with a high level of erudition and qualification, an energetic, well-principled Communist, a good organizer, and a modest, attentive, demanding, responsive, and staid administrator.

On instructions from the Plenum of the Central Committee of the Communist Party of Georgia, I would like to request the GSSR Supreme Soviet to support the proposal to appoint Comrade Dmitriy Levanovich Kartvelishvili as Chairman of the GSSR Council of Ministers and to relieve him of his duties as deputy Chairman of GSSR Council of Ministers and chairman of GSSR Gosplan.

Please allow me to congratulate Comrade D. L. Kartvelishvili on the large amount of confidence that has been shown to him by the session, and to wish him great success in his official activities and happiness in his personal life.

I express my deep conviction that Comrade D. L. Kartvelishvili will execute with distinction the extremely important duties that have been entrusted to him and will justify the large amount of confidence that the Politburo of the Central Committee of our Leninist Communist Party, Leonid Il'ich Brezhnev personally, the party organization of Georgia, our session, and the republic's workers as a whole have placed in him.

We are convinced that he will not spare his efforts or energy, his knowledge or his experience, but will do everything to assure the even greater flourishing of Soviet Georgia in the fraternal Union of Soviet Socialist Republics.

We consider it to be one of our most important tasks not to lessen the attention devoted to the State Planning Committee. Today it has been entrusted with an important role in the formation, preparation, and fulfillment of plans for the national economy, in improving the economic mechanism, and in the republic's socioeconomic development.

It is precisely for that reason that the bureau of the Central Committee of the Communist Party of Georgia, and then the Plenum of the Central Committee of the Communist Party of Georgia, recommended Comrade Zurab Amaros'yevich Chkheidze to fill the position of deputy Chairman of GSSR Council of Ministers and chairman of GSSR Gosplan.

He has a large amount of experience in party, Soviet, and economic work. For a long time he worked in the metallurgical industry, was director of the Zestafoni Ferro-Alloys Plant, First Secretary of the Rustavi City Party Committee, and GSSR Minister of Communications. Then he worked as secretary of the Central Committee of the Communist Party of Georgia.

The republic's party and economic activists know Zurab Chkheidze as an energetic, conscientious, well-principled worker, who is characterized by a thorough knowledge of the job at hand, a high level of qualification, and his good organizing qualities.

Taking into consideration the leading role of the State Planning Committee in the republic's socioeconomic life, we have decided that the Chairman of Gosplan should be part of the bureau of the Central Committee of the Communist Party of Georgia.

I request the Supreme Soviet of the Georgian SSR to support the propsal to appoint Comrade Z. Chkheizde deputy Chairman of GSSR Council of Ministers and chairman of GSSR Gosplan.

Please allow me to contratulate Comrade Zurab Chkheidze on the large amount of confidence that has been shown by the session of the GSSR Supreme Soviet and the Plenum of the Central Committee of the Communist Party of Georgia.

Vardzelashvili on Agriculture

Tbilisi ZARYA VOSTOKA in Russian 3 Jul 82 pp 2-3

[Excerpts] "In the Interests of the Nation's Welfare" -- The tasks of the GSSR Soviets of People's Deputies in implementing the Food Program in the light of the decisions of the May 1982 Plenum of the CPSU Central Committee, the June 1982 Plenum of the Central Committee of the Communist Party of Georgia, which discussed the results of the May Plenum of the CPSU Central Committee and the tasks of the republic's party organization in carrying out the Food Program in the light of the report given at the Plenum by Comrade L. I. Brezhnev, and concerning the rate of fulfillment of the decree of the Presidium of the USSR Supreme Soviet, dated 10 March 1982, concerning the work experience of the Abashskiy Rayon Soviet of People's Deputies in administering agricultural production.

Report by Deputy Chairman of the GSSR Council of Ministers, Chairman of the GSSR Interdepartmental Coordinating Council for the Administration of the Agroindustrial Complex, Deputy O. G. Vardzelashvili.

Comrade deputies!

Profound changes in the economic life of our republic occurred after the CPSU Central Committee's decree on the Tbilisi City Party Committee, a decree that is historic for us. There was a sharp rise in the level of intensification of agricultural production.

However, one should not be deluded by those indicators, since, in the final analysis, the chief criterion is the satisfying of the public's need for foodstuffs. In this area we still have a lot of work to do. All of us remember well and perceive as a combat task the justified criticism by Comrade L. I. Brezhnev, who reproached us for producing an insufficient amount of products of agriculture, especially products of animal husbandry, per capita of population.

The elaboration of the Food Program for Georgian SSR, which is in the stage of completion and which is supposed to become a component part of our country's Food Program, has been subordinated to the party's fundamental goal -- the reliable, continuous supplying of food products to the public. Simultaneously the process of working on the program has indicated that, along the path of forming and implementing it, we cannot and must not duplicate the programs of the other union republics, krays, and oblasts, by virtue of our own specific natural and economic conditions and the peculiarities of the consumption structure that has developed historically here.

Naturally, the resolution of the Food Program is closely tied in not only with agricultural production, but also with all those branches which deal with the delivery of means of production, transportation, and the storage and processing agricultural output. Therefore, our republic's Food Program, like that for the country as a whole, represents a complex series of tasks that require the application of efforts, essentially speaking, by all the workers in the national economy. In the party documents one can clearly discern the idea that the participants in the carrying out of a Food Program that contributes to the socioeconomic development of society must be every inhabitant, every able-bodied citizen. It is precisely this route that will take us straight to the attainment of the average-national level for the most important economic and social parameters.

At the same time it must be stated outright that not all the Soviet agencies in the outlying areas have been engaged concretely in the formation of the Food Program on the level of the rural Soviets, kolkhozes, sovkhozes, or the individual household of the rural inhabitant. The comrades in the outlying areas must realize that we are dealing with the scrupulous calculation of our reserves and capabilities. Without a doubt this work cannot be done in a single day and it will require the involvement of a large number of people in it. Otherwise all our local programs will be of a formal nature that at times will border on a reply that is prepared for form only.

The executive committees of the rayon Soviets of People's Deputies and their subordinate agencies, when carrying out the Food Program, should devote special attention to the taking of all steps to promote the most rapid increase of the effectiveness of the branches that are part of the agroindustrial complex. We have in mind first of all the need for the further intensification of agriculture, the path to which lies in the application of intensive methods for running the economy, that is, putting it more simply, the raising of the level of efficiency of vegetable husbandry. In this matter the Soviet agencies have a broad range of work both with regard to the organizing of production and the monitoring and running of the agricultural operations. In the practical regard, the Soviet agencies in the outlying areas will have to engage more meaningfully in questions of introducing progressive technological methods for cultivating agricultural crops. And yet, what kind of technological methods can one speak about when, from year to year, in a number of rayons, no provision has been made for the procurement of high-grade seed material, when people fail to meet the deadlines for the carrying out of technological processes to cultivate the agricultural crops, for using means to introduce chemicals into the land, for using the opportunities provided by land reclamation, etc.?

At the present time in the management of agricultural production, the factors that are brought to the foreground are the intensive ones. It seems to us that every rayon can and should have and should carry out a well-directed concrete program for the comprehensive mechanization of the cultivation of agricultural crops, and fodder production with a consideration of the local conditions. This means, under conditions of the constant reduction in the total area of plowed land, assuring that in absolutely no instances is there a reduction in the volumes of production of grain or other annual crops. Morever, a minimum task is assigned: increase by 40-50 percent by the end of the present five-year plan the harvest yield of grain crops, and by 1990 raise that harvest yield to 40 quintals per hectare.

Among the many other problems that pertain to intensification, it is also necessary to note the intensification of state supervision over the use of fodder-preparation technology, as well as in the matter of assuring the smooth operation of the proper zootechnical work on each animal farm, and, in general, the guaranteeing of strict discipline, high demandingness on all those who are directly linked with care of the animals.

The Soviet agencies in the outlying areas have been called upon to intensify the work of assuring the further increase in the role and importance of mechanizer personnel in rural localities. The decisions by the party and the government in recent years and even the recent months provide the opportunity for the local agencies of administration to proceed boldly in applying on kolkhozes and sovkhozes the job-rate-plus-bonus system of paying for labor with time advances. We already have work experience that shows graphically that among the labor collectives the highest production indicators are achieved by the brigades that employ precisely this kind of payment for the labor with time advances (brigades operating without work sheets) and operating on permanently assigned land. In those collectives that use the brigade contract with payment in kind, the harvest yield of agricultural crops and labor productivity, as a rule, are considerably higher than in other production formations. This is attested to primarily by the experience of Abashskiy Rayon. These brigades, which assume the obligation of achieving a sharp increase in the harvest yield, in this instance of corn, are being created this year in Lanchukhtskiy, Tskhakayevskiy, and certain other rayons. In this matter it is completely inadmissible to take a formal approach to organizing non-job-sheet brigades and teams without the appropriate training. The Soviet agencies in the outlying areas have been called upon to monitor strictly the questions of providing those brigades with equipment, seeds, fertilizers, and other necessary materials. All this is for the purpose of not discrediting the very idea of the brigade contract.

As is well known, the Food Program includes the further proportional development of industrial branches that are linked with agriculture. But with regard to that problem we also have serious difficulties, and our activists have been sufficiently informed about them.

Comrade deputies! You all know the great amount of attention that is currently being devoted to the search in the outlying areas for all the reserves and opportunities for increasing the production of foodstuffs. In this regard the problem that moves into the foreground is that of assuring the taking of all steps to develop personal plots among the rural population. That problem is an especially important and vital one for our republic, since the share of that sector is a considerable part of the volumes of production and procurements of agricultural products. And yet it is far from all rayons that can boast of the fact that they have a clear-cut program for developing the personal-plot management and are carrying it out in a purposeful and planned manner. And it is precisely this that explains the fact that there is still a considerable percentage of rural households that do not have any livestock, that is, do not maintain any cows, sheep and goats, or hogs, and which, in essence, are pure consumers. And this is occurring against a background of many years of propagandizing the experience of Abashskiy Rayon and certain other rayons.

The Central Committee of the Communist Party of Georgia assigns to the Soviet and economic agencies the task of taking all steps to accelerate the rates of broad cooperative actions between the social farms and the public in the matter of producing output from animal husbandry. Every rural Soviet is obliged to make its contribution to this important state matter. Reserves for this will probably be found everywhere. All that is necessary is to think seriously about the question and to begin to carry it out in a businesslike manner, with sufficient energy.

It is necessary to dwell separately on the state of animal husbandry on the personal plots themselves, where, thanks to the consistent carrying out of the course of the Central Committee of the Communist Party of Georgia, the undesirable tendencies toward a reduction in the number of head of livestock and the volume of production of output have been stopped, but the desirable tendencies have not yet achieved any tangible scope. The matter lies primarily in the fact that we still observe the unsatisfactory fulfillment of the assignment for the restoration of the previously existing pastures and pens for the public's livestock, and for the allocation of new ones. The resolution of this question is a matter of vital importance for the local Soviets. As one can see, the agrarian sector of the Council of Ministers is also insufficiently active. Without the allocation of pastures it will be impossible to achieve an increase in the number of head of livestock, especially dairy livestock, which is intended for the personal use of the public. The local agencies must not become reconciled to the fact that the economic leadership has been ignoring the public's interests. We are thinking of taking a systems approarch to this question. In particular, we plan to establish a minimal norm for pastures per standard head, and we shall instruct the economic agencies to select areas that are needed for maintaining the livestock. This is no easy matter. We may also have to reduce somewhat the area of the socialized farm that is occupied by intensive crops, but we must take that action. It is required by the Food Program and the republic's vital interests. Moreover, the allocation of plots must outstrip the increase in the number of head of livestock that are intended for the personal use of the public.

An additional reserve for carrying out the Food Program is felt to be the subsidiary farms at industrial enterprises and associations of collective orchard and vegetable-garden management among the urban population. We informed the deputies last year about the benefits of these associations, at the request of one group of participants in the session, but I would like today to sharpen the attention on certain aspects. We have allocated for use as subsidiary farms at industrial enterprises considerable areas, including areas for the past period. However, the republic's agriculture is probably incapable of satisfying everyone who wants such plots (the requirements of the major enterprises have been taken under our supervision and we shall find ways to resolve them). An inspection pointed out that many industrial enterprises, organizations, and institutions either do not make any use whatsoever of the allocated plots, or use them with one-tenth of the effectiveness that the kolkhozes and sovkhozes do. In addition, they require the allocation of concentrated fodders from state resources, at a time when the production of meat requires the expenditure of a much greater amount of fodders than the agricultural enterprises require. I would like to explain to everyone that we do not have the possibility of allocating concentrated fodders for this purpose, but even if we had that possibility, it would be inefficient. I emphasize that the areas that must be allocated for use as subsidiary farms at industrial enterprises are the areas which, practically speaking, are unused. By switching in the technical means there, those areas must produce output, and that kind of output will be acceptable even with high production costs.

As of today, organizations that deserve the special attention and support on the part of the Soviet agencies are the new agencies for administering the agroindustrial complex, which replaced -- and rather successfully -- the administrations of agriculture. The May 1982 Plenum of the CPSU Central Committee, as everyone knows, approved the decrees of the CPSU Central Committee and the USSR Council of Ministers that were submitted by the Politburo of the Central Committee, including the decree "Improving the Administration of Agriculture and Other Branches of the Agroindustrial Complex."

That document and the ideas contained within it are the logical completion of that large and creative job which, for a number of years, has been carried out by the party, Soviet, and economic agencies in a number of rayons and oblasts of the RSFSR, the Ukraine, Moldavia, and the Baltic republics.

Without a doubt, consideration has also been taken of the rich experience in improving the administration of the agroindustrial complex, which has been accumulated in our republic, because, as long ago as 1974, for the first time in our country, there was created in Abashskiy Rayon a rayon agricultural production association, which included all the enterprises and organizations engaged in the production, processing, transporting, and storage of output of vegetable and animal husbandry. It is precisely Abashskiy Rayon which became that testing ground where successful tests were made of the bold forms of providing material incentives for the rural workers, and for concentrating technology and technical means with the purpose of increasing the effectiveness of their use; various methods of cooperative actions between the socialized farms and the public in the matter of producing output from animal husbandry; etc. The "Abashskiy experiment" was repeatedly the subject of discussion and consideration at various levels of administration of the republic's economic life and in the country as a whole, and it received the approval and complete support of the CPSU Central Committee and the Presidium of the USSR Supreme Soviet.

With regard to Abashskiy Rayon it can be said that the experiment made it possible first of all to improve the organizational form of administering the branch, to achieve a considerable intensification of the work of economic organization within the rayon, and to mechanize in a comprehensive manner the cultivation of the basic agricultural crops, primarily corn. In this instance the chief factor lies in the fact that in Abashskiy Rayon success was achieved for the first time in finding a sufficiently efficient mode for eliminating the interdepartmental dispersion, and economic levers were found for guaranteeing the accelerated increase in the production and sale to the state of agricultural output.

Subsequently the experiment was transferred to the economically much more powerful Makharadzevskiy Rayon. There, immediately after the organizing of the rayon agricultural production association, more than 2 million rubles were put into the centralized associations, and this was without any particular strain on the members of the association. Currently the centralized funds of the rayon association have already exceeded 7 million rubles. Moreover, a sphere of application for them has also been found. These funds were channeled into the narrowest sectors that have been retarding the further expansion of the production of agricultural production. These sectors, under the conditions of Makharadzevskiy Rayon, proved first of all to be the enterprises in the processing industry, the production of building materials, and the fodder base for animal husbandry. It is well known to the broad public in the republic that in Makharadzevskiy Rayon, by the efforts primarily of the rayon association, there has been constructed a plant that produces tea concentrates. By means of the more thorough processing of the tea leaves, that plant produces annually additional output valued at 7 million rubles. There has been erected a microfactory with an annual processing capacity of 1,200 tons of high-quality tea leaves (by the end of the present season, four additional microfactories of this sort will be activated and their overall production capacity will be 6000 tons of high-quality raw materials); and a shop for producing whole-milk substitute for the feeding of calves has been activated. A new building-materials combine is operating on the base of local raw materials. That combine has made it possible to improve the supplying of construction sites with building materials and to guarantee the repair of the animal-husbandry facilities by use of their own resources.

We are witnessing a greater and greater number of similar examples of the skillful use of centralized assets, the search for local resources, and the maneuvering of labor, material-technical, and financial capabilities.

Clearly expressed changes toward the better in the sphere of administering the agroindustrial complex on a rayon scale, based on the example of Abashskiy and Makharadzevskiy Rayons, have been determining factors in the decision by the republic's directive agencies to create similar agencies of administration in 14 more rayons, and then, as of the beginning of the current year, in all rayons of Georgian SSR. Thus, the republic was sufficiently prepared to meet the nationwide decree concerning the improvement of the administration of the agroindustrial complex. At the same time one should by no means forget the fact that the administrators of the party, Soviet, and economic agencies in the republic had a broad opportunity to become acquainted with the work experience in the sphere of administration in other union republics and even in countries within the socialist community.

At the present time the newly created rayon agroindustrial associations are confronted by very serious tasks, primarily in developing their own style and work methods, in creating the economic conditions for increasing the degree of self-interest on the part of all the enterprises and organizations that are participating as partners in the associations, that is, self-interest in the final results both of the agricultural labor and in the final results, for example, of the food-canning industry, the tea industry, the wine industry, etc.

Every rayon association, with a consideration of the specific local conditions, will have to develop a comprehensive work program to assure the broad involvement of the rural population in the job of producing agricultural output on their personal plots. As a whole, the administrators of the rayon associations are required to take bolder steps to carry out economic experiments both on the kolkhozes and, in particular, on the sovkhozes. The Central Committee of the Communist Party of Georgia poses for the rayon associations as a task of primary importance the search for additional resources and opportunities for building up the production of output from vegetable and animal husbandry, and for increasing the effectiveness of the work performed by the entire agroindustrial complex. The weather conditions this year dictate the extreme necessity of working intently and efficiently in all links of agricultural production in order to prevent absolutely all losses of the harvest at all stages of its cultivation, transportation, storage, and processing.

As is well known, since January of this year the Georgian Republic Interdepartmental Council for the Administration of the Agroindustrial Complex has been in operation. A number of sessions have already been conducted by that council. Those sessions have considered normative documents, as well as problem-directed matters of developing individual branches of the republic's agroindustrial complex. The Georgian Republic APK [Agroindustrial Complex] Council has a large amount of work ahead of it. Much will still have to be done to achieve the smooth carrying out of current and long-range planning of the development of the agroindustrial complex, to direct skillfully the activities of the rayon associations, to find in each separate instance the optimal versions for the combining of the branch and territorial principles of administration, to make the most effective use of subsidy and centralized funds, to develop businesslike interrelationships with other branches of the national economy that are not included in the agroindustrial complex, and also with interdepartmental agencies, etc.

Comrade deputies! The 7th Plenum of the Central Committee of the Communist Party of Georgia has sharpened the attention to the need for the taking of all steps to intensify the economic service in rural areas. The situation that has been created with regard to certain items in the effectiveness and economy of agricultural output is, to put it plainly, intolerable. Despite the fact that during recent years there has been a considerable increase in the purchase prices for a number of agricultural products, and considerable amounts of money have been allocated from the republic's subsidy fund for the economically weak kolkhozes and sovkhozes, there is still a considerable number of agricultural enterprises which are in an economically unfavorable condition. The republic has more than 60 kolkhozes and as many as 140 sovkhozes which finish their fiscal year with losses. More than 35 percent of the kolkhozes and as many as 32 percent of the sovkhozes are operating with low profitability (15 percent or less). The overall profitability of the kolkhozes and sovkhozes in 1980 was: for kolkhozes, 22.4 percent, and for sovkhozes, just 7.3 percent.

The improvement of the economic indicators, naturally, is linked with the problem of the effective use of the agricultural land. In this regard, during recent time some of our economics have raised the question of the optimal distribution of our land among the branches of USSR subordination and those of republic subordination. There are several factors to consider here. Our basic wealth is 1.1 million hectares of cultivated land, and it is precisely that land that we must divide. As of today, of that area we have already set aside approximately 29 percent for the growing of perennial crops, that is, for the production of output for the USSR. It turns out that we have left only approximately 71 percent for the growing of crops for the production of output for our own republic. Our plans stipulate a further reduction in the percentage of the arable land and the bringing of it to 50 percent by 1990. Certain of our economists see in this regard a nonobjective disproportion, giving as their argument for this the fact that, on the average for the USSR, the percentage of arable land in the land being cultivated constitutes more than 98 percent, and in such large-scale producers of perennial crops as Moldavia and Azerbaijan that percentage is, respectively, 94.7 and 89.5.

We cannot agree with this posing of the question, since the republic has been and continues to be only a part of the country's single national-economic complex, and only a small part at that, and the development of our region's productive forces relies upon that complex. Correspondingly the proportions must be analyzed there, rather than proceeding from the republic's indicators. In the nationwide complex these proportions indicate the inadequate providing of the population with products of southern and subtropical crops and the impossibility of producing them in most of the country's regions. Consequently, we must increase the production of output from perennial crops, insofar as our cultivated land and our labor resources permit that. But simultaneously it is extremely necessary to make for all the agencies, including the Soviet agencies in the outlying areas, the correct conclusions from the situation that has been created. First of all we do not have the right to have a situation in which our arable land, under conditions of a high degree of provision with solar energy, produces a harvest at the level of the country's average indicators or even slightly higher than that. Our agricultural land must be an example of high efficiency in vegetable husbandry, and must yield the maximum amount on the level of the most advanced ones in the corresponding branches.

At the same time a problem that deserves the most serious attention is the problem of combatting losses. In one of his statements Comrade E. A. Shevardnadze commented with complete justification that we do not even have a precise accounting of all the losses of agricultural products. But random inspections do not always provide the real picture. Nevertheless they attest to the fact that losses during the harvesting of certain agricultural crops constitute from 2 to 10 percent of the harvest, and during transportation, processing, and storage, from 3 to 14 percent!

The entire work in the area of agriculture and the processing branches of industry is carried out in our republic at the present time under the sign of the carrying out of the decisions of the May 1982 Plenum of the CPSU Central Committee and the 7th Plenum of the Central Committee of the Communist Party of Georgia. Judging on the basis of the results of the period that has elapsed during the current year, it is graphically obvious that our tasks in the branches mentioned have been made many times more complicated because of certain objective reasons: the unprecedented damage from hailstorms, the torrential rains and strong winds, and particularly in the rayons of Eastern Georgia, where various degrees of damage were caused to more than 100,000 hectares of vineyards, fruit orchards, annual crops, and other agricultural land. As a consequence of the poor weather (with a consideration of the losses on personal plots) we may underproduce more than 250,000 tons of grapes, 40,000-50,000 tons of grain, and almost as much fruit.

All the ministries and departments that are part of the agroindustrial complex in our republic have developed and are carrying out rather energetically an operations plan that is aimed at retaining the harvest that has remained, at the complete or partial resowing of the damaged areas with annual crops, the considerable increase of area planted to stubble-sown crops, and the assimilation of small-contour plots for the purpose of obtaining an additional harvest of grain and fodder crops. In order to make up for the losses felt by the winegrowers of Kakheti, the republic's directive agencies and the party and Soviet agencies in the outlying areas mobilized the local resources, primarily the people and technical means, including the capabilities of aviation, in order to achieve the maximum amount of harvest in all the republic's grape-growing rayons. Special attention is being devoted to the search for means to render effective assistance to the public in caring for the vineyards on personal plots, and the creation in the outlying areas of an atmosphere that would make it possible to attract into the state resources almost the entire amount of grapes grown on personal plots.

In fruit-growing we must take absolutely all steps to achieve a situation in which this year's indicators for procurements do not prove to be worse than those during last year's season. And this is despite the fact that the orchards received serious damage in the rayons of industrial fruit-growing -- Goriyskiy, Karel'skiy, Kaspskiy, etc. Serious attention must be devoted this year to the harvesting of wild fruits, the resources of which, unfortunately, have been used by us by a maximum of half, while last year there was a complete disruption in this regard.

Many people know the large amount of work that has already been done this year for the purpose of improving the qualitative indicators in tea-growing. The thorough organizing work carried out by the party committees in the outlying areas is yielding tangible results. It is especially gratifying that there has been an increase in the quality of the high-grade leaf, and this proves once again that, even with the present-day technology of collecting and processing the raw materials, there is still an opportunity for the fundamental improvement of the quality of Georgian tea. The task now consists in taking all steps to prevent the loss of the achieved positions and, at the same time, to increase the rates of its procurement and improve the quality of processing.

The successful implementation of the republic's Food Program depends to a definite degree upon the state of vegetable and potato growing. Plantings of early potatoes both in Volnisskiy and in Marneul'skiy Rayons are so good that, in the opinion of specialists, they guarantee the obtaining of an excellent harvest, and the volumes of procurement will exceed 110,000 tons, as compared with the 92,000 tons according to plan, that is, all the conditions exist for fulfilling the plans for shipment of early potatoes both to the customers in the republic and to the nationwide fund.

Unfortunately, the situation is much worse with regard to the production of vegetables in variety, especially such important types of produce as onions, tomatoes, and eggplant.

In the face of all this, an area that remains one of the most difficult sectors in agricultural production, and one that exerts an immediate influence upon the problem of providing the workers with valuable food products, is animal husbandry. Admittedly, the weather conditions this year have not been spoiling the people in animal husbandry. You know that as a result of the frosts and icy snows at the beginning of this year, a large number of sheep died at the Kizlyar winter pastures. The protracted rain subsequently had an effect upon the conditions for maintaining the animals, especially in the rayons of Eastern Georgia and Southern Nagor'ye. To this one must add the almost universal shortage of fodders, the poor quality of the available fodders, and the shortage of concentrated fodders. Because of all these factors, the rural and economic agencies in many rayons have not yet been able to guarantee completely the mobilization of all efforts to overcome the difficulties in animal husbandry.

In order to rectify the situation the republic's directive agencies are striving first of all to achieve an intensification of the work in the outlying areas to lay in supplies of fodders. At the present time it is extremely necessary in all rayons to have a sharp intensification of the rates of the procurement campaign and to establish state supervision of the use of all the harvesting technology, as well as all the capabilities for drying the grasses by the active ventilation method.

The fate of the Food Program is also dependent upon the results of our work during these days, weeks, and months. The fulfillment of that program will require the intensive labor by workers in the republic's entire agroindustrial complex. The knowledge and organizing art that our personnel possess, the entire rich experience of working among the masses -- all this must be put into action. When searching for and using the reserves, the workers of Georgia are firmly resolved to take important steps this very year along the path of the successful fulfillment of the Food Program -- a program for raising the standard of living and the subsequent flourishing of our republic. Communists and all the Soviet activists have been called upon to do everything to assure that the workers in the fields, the plantations, the animal farms, the procurement agencies, the transportation organizations, and the processing branches of industry work together, with the maximum upsurge of their spiritual and creative efforts for the welfare of our great socialist Motherland.

ESTONIAN LEGAL, ACTUAL DEVELOPMENTS IN EDUCATION

Information Report

Tallinn SOVETSKAYA ESTONIA in Russian 6 Jul 82 p 1

[Text] The fifth session of the tenth convocation of the Estonian SSR Supreme Soviet was held on 5 July at the Toompea in Tallinn.

Ten o'clock. The seats in the loges are occupied by Comrades K. Vayno, I. Kebin, V. Klauson, V. Kyao, L. Lentsman, O. Merimaa, R. Ristlaan, A. Ryuytel', D. Visnapuu, M. Pedak. I. Toome, L. Shishov, Deputy Chairman of the Presidium of the ESSR Supreme Soviet M. Vannas, Deputy Chairmen of the ESSR Council of Ministers Kh. Bel'di, A. Gren, B. Saul, G. Tynspoyeg, Secretary of the Presidium of the ESSR Supreme Soviet V. Vakht.

The session was opened by Chairman of the ESSR Supreme Soviet Deputy Yu. Suurkhans.

The following agenda were approved:

1. On progress in the fulfillment of the Estonian SSR Law on Public Education.

2. Report on the work of the Commission for Protection of Nature and Rational Utilization of Natural Resources of the Estonian SSR Supreme Soviet.

3. On approval of the Ukases of the Presidium of the Estonian SSR Supreme Soviet.

Deputy Chairman of the ESSR Council of Ministers Deputy A. Gren gave a report on the first question of the agenda. A supplementary report was presented by I. Toome, chairman of the Commission for Public Education and Culture of the ESSR Supreme Soviet.

There took part in the discussion R. El'bak (Nuyaskiy Election District No 275), A. Kivilaan (Tallinskiy-Sirbiskiy Election District No 24), E. Grechkina (Tallinskiy-Petkeskiy Election District No 70), R. Vakhtras (Loksaskiy Election District No 160), I. Nuut (Tartuskiy-Vezrikuskiy Election District No 139), R. Naumova (Narvskiy-Shkol'nyy Election District No 117), B. Tamm (Tallinskiy-Politekhnicheskiy Election District No 83), M. Ustinova (Tartuskiy-Pervomayskiy

Election District No 147), L. Murtazina (Tallinskiy-Tedreskiy Election District No 9), First Deputy Chairman of Estonian SSR State Committee for Vocational-Technical Education E. Alas, Deputies L. Piyrsalu (Pakvereskiy-Kingiseppskiy Education District No 235) and Kh. Kallaste (Kaarliskiy Election District No 225), L. Laagus (Khyaedemesteskiy Election District No 222), Chairman of Vyruskiy Rayispolkom E. Tiyt.

The ESSR Supreme Soviet adopted a decree on progress in the fulfillment of the Estonian SSR Law on Public Education.

Commission chairman Deputy Ye. Filatov appeared with a report on the work of the Commission for Protection of Nature and Rational Utilization of Natural Resources of the ESSR Supreme Soviet.

In the discussion of the report, there spoke Deputies Yel Nikolayev (Tallinskiy-Maardusskiy Election District No 60), A. Pyldroo (Vuryskiy-Promyshlennyy Election District No 279), E. Paap (Kokhtla-Yarveskiy-Shakhterskiy Election District No 91).

The session adopted the decree of the ESSR Supreme Soviet on the Work of the Commission for Protection of Nature and Rational Utilization of Natural Resources of the ESSR Supreme Soviet.

A report by Secretary of the Presidium of the ESSR Supreme Soviet Deputy V. Vakhta was heard on the last item of the agenda—on approval of the Ukases of the Presidium of the ESSR Supreme Soviet.

The session approved the Ukases of the ESSR Supreme Soviet.

In connection with the appointment of Deputy A. Kullaste as chairman of the Estonian SSR State Committee for Television and Radio Broadcasting, the session released him from the duties of deputy chairman of the Commission for Public Education and Culture of the ESSR Supreme Soviet.

The session granted the request of Deputy Yu. Suurkhans on releasing him from the duties of chairman of the ESSR Supreme Soviet. Deputy M. Pedak was chosen chairman of the ESSR Supreme Soviet. In this connection, he was released from duties as member of the Commission for Health Care and Social Security of the ESSR Supreme Soviet.

The session released Deputy K. Lebedev from duties as a member of the Presidium of the ESSR Supreme Soviet.

Deputy A. Kyutt was elected chairman of the Commission for Public Education and Culture of the ESSR Supreme Soviet. He was released from duties as member of this commission.

With this, the fifth session of the ESSR Supreme Soviet completed its work.

Ye. Kozhevnikov, head of a department of the CPSU Central Committee, M. Zhuravleva, deputy ministry of USSR Education and Yu. Korolev, head of a department of the Presidium of the USSR Supreme Soviet took part in the work of the session.

Deputy Minister Gren Speech

Tallinn SOVETSKAYA ESTONIYA in Russian 7 Jul 82 pp 1-2

[Report of Deputy Minister of Estonian SSR Council of Ministers Deputy A.K. Gren: "On Progress in the Fulfillment of the 'Estonian SSR Law on Public Education'"]

[Text] Our country is preparing to celebrate the important dates of the 65th anniversary of the Great October Socialist Revolution and the 60th anniversary of the formation of the Union of Soviet Socialist Republics.

In these years we have traversed a tremendous path of development. This is graphically reflected in the field of public education and the intellectual development of society. Whereas the articles of the first Constitution set the task of providing free education to workers and peasants, today the requirement of the society of developed socialism has become obligatory secondary education of all youth, the training of all-round developed skilled workers and specialists with secondary specialized or higher education and scientists in the volume and at the level required by the development of present-day science and technology.

The system of public education has been reorganized and improved in accordance with the set objectives.

An important event in this field was adoption by the USSR Supreme Soviet on 19 July 1973 of "Fundamentals of the Legislation of the USSR and the Union Republics on Public Education."

In conformity with these Fundamentals, the draft of the "Estonian SSR Law on Public Education" was developed and adopted as a law at the session of the ESSR Supreme Soviet on 26 April 1974.

The Law on Public Education made provision for obligatory 8-year education and for general secondary education of the youth. It established a unified system of public education, including preschool and adult education, secondary vocational-technical, secondary specialized and higher education. This system makes it possible to go from the lowest rungs of study to the highest.

The USSR Constitution, adopted 7 October 1977, declared the obtaining of a secondary education by young people to be compulsory. A Ukase of the Presidium of the Estonian Supreme Soviet of 23 November 1979 introduced necessary changes in the Law on Public Education, and it was brought into conformance with the USSR Constitution and the Estonian SSR Constitution.

Eight years have passed since the adoption of the Law on Public Education and five years since the introduction of obligatory secondary education.

The tasks in the field of public education in this period have found reflection in Basic Directions of the Development of the National Economy in the 10th and 11th Five-Year Plans approved by the 25th and 26th CPSU Congresses.

In conformity with decisions of the Communist Party and the Soviet government and with consideration of the conditions of the republic, decrees and decisions were adopted of the Central Committee of the Communist Party of Estonia and the ESSR Council of Ministers.

Questions of instruction and training of pupils of secondary general educational schools and vocational-technical schools were discussed in March 1978 at a meeting of the republic aktiv. On 27 June 1979, the Estonian SSR Supreme Soviet of the ninth convocation discussed at a session the question "On Progress in the Fulfillment of Measures Stipulated by the State Plan of Economic and Social Development of Estonian SSR for 1979 on Further Improving the Conditions of Life and Education of Children."

A significant role in carrying on of ideological-political education of pupils was played by the decree of the CPSU Central Committee "On Further Improving Ideological, Political-Educational Work."

Questions connected with instruction and training of children and young people were discussed in detail among permanent commissions of the ESSR Supreme Soviet and the Presidium of the ESSR Supreme Soviet. In February 1982, the question of communist education of student youth in the light of the requirements of the 26th CPSU Congress was discussed at a plenum of the Central Committee of the Communist Party of Estonia.

All this to a significant degree has contributed to the detection and elimination of bottlenecks and dissemination of positive experience.

Thus significant improvements have taken place in preschool education in nurseries and kindergartens, and the network of children's institutions has expanded.

Certain changes are taking place in the operation of children's preschool institutions in connection with the transition to teaching children beginning with six years of age. This has already been done for several years on an experimental basis in a number of our republic's schools. This experiment was expanded during the 1981/82 year. Education beginning with six years of age was introduced in entirety in Khiyumaaskiy and Kingiseppskiy rayons. It will gradually be extended to all rayons and cities. This presents the possibility of changing over to a five-day teaching week for elementary schools. The planning decisions of children's institutions have become better. An innovation is being worked out--a plan for a combined kindergarten-nursery and elementary school.

Despite the fact that the network of preschool children's institutions in the republic is constantly expanding, it still does not meet requirements. Waiting lists are still excessively long for preschool institutions, while plan targets for construction and putting into operation of kindergartens-nurseries are not always met.

The USSR Council of Ministers has set the task of expanding the network of preschool children's institutions with the objective of completely meeting the need for them by 1990. During the 11th and 12th Five-Year Plans, permission has been granted to use the monetary sums provided for the construction of production facilities without any reduction in this connection of the startup of production capacities. Corresponding basic guidelines have been worked out for city and rayon ispolkoms as well as for ministries and departments.

General educational schools face most responsible tasks in the education of children and teenagers. The role and responsibility of secondary vocational-technical schools and secondary specialized educational institutions have significantly grown in this field. All those departments that are interested in the training of cadre replacements should take an active part in this work.

The network of general educational schools has changed and improved in conformity with the tasks facing the public education system.

The number of rural schools has stabilized in recent years; efforts have been directed toward the preservation of rural elementary schools and where necessary toward opening additional ones there where the interests of agricultural production require it.

Changes have also been made in the content of the teaching-educational process. Education in general has been brought to a larger extent than before into conformity with the level of science and culture and social progress of our society. Beginning with the 1980/81 educational year, new teaching plans have been introduced for a number of subjects and with the 1981/82 educational year, teaching programs have been improved. Educational work has begun to have a more purposeful and integrated character. The role of educational discipline and of out-of-class and out-of-school measures in ideological-political and moral education has been increased.

In our days, school is acquiring a special significance in society, changing from an educational institution in the narrow sense into an important source of satisfaction of long-term requirements of the national economy for cadres, Comrade A. Gren emphasized.

Beginning with the 1980/81 school year, labor training of pupils in senior classes is done in depth. A great deal of work has been done on revising the list of specialties, with account being taken of the needs of industry, the service sphere and agroindustrial associations for manpower.

The task of the schools is to provide pupils with prevocational training and general labor skills and to prepare them for the deliberate selection of a certain vocation and its subsequent mastery. But so far there has been a relatively small number of young people who continue their studies or start work in a specialty learned at school.

Today the republic has five interschool educational-production combines (in Kalininskiy Rayon of Tallinn, Kokhtla-Yarva, Narva, Pyarnu and Vil'yandiskiy Rayon), significantly expanding the possibility of selecting a specialty. But the creation of an educational-material base for educational-production combines is still proceeding slowly among us.

In accordance with the long-term plan, it is contemplated during the 11th and 12th Five-Year Plans to open an additional six educational combines (in Morskiy and Leninskiy rayons of Tallinn, Paydeskiy, Pylvaskiy, Khar'yuskiy and Yygevaskiy rayons), to expand and add to existing ones and to create new classrooms and shops at schools, base enterprises and farms both through the means of state capital investment and through the means of funds from the base enterprises and farms themselves.

In the system of vocational orientation and labor education, an important place is occupied by socially useful labor, the greater part of which is done during the summer vacation. The problem of organizing socially useful labor during the educational period has still not been solved, while the evaluation set on this labor is frequently presented formally in the tables. Teachers sometimes complain about the lack of possibilities of attracting pupils to labor, especially in city schools. But if one were to visit many schools and look at the state of their quarters, furniture and grounds and the state of squares and parks, one could firmly assert that there are more than enough objects for the application of their energies. Pupils could be of help in improving the grounds of enterprises sponsoring schools. Enterprises must find more space, time and means and locate preceptors for involving pupils in labor and having them make products within their power. This objective is specified in the decree of the Central Committee of the Communist Party of Estonia and the ESSR Council of Ministers on labor training.

Like the entire educational process, socially useful labor requires first and foremost organization and initiative from the school. Here an important role is played by technical and agricultural groups.

There has been a sharp increase of attention with respect to organization of the summer rest period of pupils. In all cities and rayons during the 10th Five-Year Plan there were created the requisite staffs headed by supervisory personnel of party raykoms or rayon ispolkoms. As a result, most pupils were engaged in socially useful labor during the summer vacations.

In 1981, more than 6,300 puplis from 9th-11th year classes worked in the 250 detachments of the Estonian group of students--and more than 10,200 pupils of 3rd-6th year classes worked in labor and rest camps. Wide use was also made of other forms: labor and rest camps organized by schools and farms, brigades for public services and planting trees and shrubs, school forest tracts and so forth.

In accordance with the Estonian SSR Law on Public Education, the main educational institutions providing vocational training and educating worthy additions to the working classes are schools belonging to the vocational and technical educational system.

The ESSR State Committee for Vocational and Technical Education and the pedagogic collectives of vocational and technical schools, with the cooperation of party, soviet and operational organs of the republic, have done a great deal of work on further improving teaching and training of pupils within the system of vocational and technical education. The network of vocational and technical schools, and the reorganization of vocational and technical schools into secondary vocational-technical and technical schools has been completed. During the 10th Five-Year Plan, three new secondary vocational-technical schools were opened and the total number of young people studying in vocational-technical schools increased 21 percent.

But the requirements of the national economy for workers are still not being satisfied completely. Taking this into consideration, the decree of the Central Committee of the Communist Party of Estonia and the republic government adopted in 1979 outlined concrete targets for the construction of new vocational and technical schools during the 11th and 12th Five-Year Plans.

Much work has been done in vocational and technical schools on improving the teaching and training process. Secondary vocational-technical schools and technical schools have adopted new educational plans and programs. Serious attention has been given to raising the methodological level of instruction and the creation of a unified system of theoretical training, teaching practice and the entire out-of-class and out-of-school work. The problem of establishing a world outlook and an active life position in young members of the working class is being resolved in an integrated manner.

Many vocational-technical schools of the republic have become recognized as educational institutions putting out young qualified workers possessing solid knowledge, vocational skills and high social-political consciousness. They include Secondary Vocational-Technical School No 3 imeni A. Myurisep, Secondary Vocational-Technical Schcol No 8 imeni A. Kreysberg, technical schools Nos 19, 15 and 4.

Much work was done in establishing traditions for vocational-technical schools and improving patriotic and international education. Ties of the republic's vocational-technical schools with young people of other fraternal republics are constantly being expanded. The economic education of pupils and training of young efficiency experts have been improved. Just in the Secondary Vocational-Technical Schools No 3 imeni A. Myurisep, projects of pupils during the past five-year plan were awarded almost 50 medals of the Exhibition of the Achievements of the USSR National Economy. Good training was demonstrated by teams from the republic's vocational-technical schools at all-union competitions of vocational mastery.

But, in spite of all that has been done, it is too soon to rest on one's laurels. We have not succeeded in establishing a good teaching base for certain specialties. There are cases where pupils are sent not to the best shops and brigades of enterprises and that they are not assigned preceptors from among pacemakers and innovators of production and also that they are not provided with work corresponding to their teaching program. The dropout rate of pupils from vocational and technical schools is still great. The improvement of educational work especially in teaching groups and dormitories should be continued.

The introduction of universal obligatory secondary education has brought up new and significantly more important problems before secondary specialized educational institutions, Comrade A. Gren noted.

In conformance with the requirements of modern industrial and agricultural production, certain changes have been introduced into the list of specialties, admittance was increased at secondary schools, educational programs were expanded and teaching methods have been improved. But the quality of training of young specialists was especially stressed. As a result, indicators of training and educational work were improved and there was an increase in the number of graduates of secondary specialized educational institutions and in the relative share of specialists with secondary education among workers.

At the same time, certain specialties (zootechnics, veterinary science, preschool education, medicine) are experiencing a shortage of middle-level specialists. At the present time, the network of agricultural tekhnikums and rural vocational-technical schools is being reexamined with consideration being given to cadre requirements, especially in agriculture.

A sizable portion of young people acquire a secondary education with the help of evening and correspondence forms of education. During the 10th Five-Year Plan, evening and correspondence general educational secondary schools graduated almost 24,000 employed young men and women.

At the same time, there are in the republic several tens of thousands of persons basically from among working young people 16-29 years of age who do not have a secondary education and are not continuing their studies. In recent years, plans of filling evening and correspondence secondary schools have not been fulfilled, and the dropout rate of pupils has been very high. In the work of review organization commissions "For each young worker--a secondary education," quite a bit of formalism was found in Leninskiy and Oktyabr'skiy rayons of Tallinn and in Tartuskiy Rayon. Operational directors who believe that problems of education and indoctrination are the job of personnel departments and public organizations have still not been transferred.

Higher educational institutions of the republic are basically coping with the main tasks relating to the training of specialists with higher education, A. Gren said. From one year to the next, the number of VUZ graduates is growing. In the planning of admittance to higher educational institutions, the needs of the national economy are taken into account: new specialties have been introduced, their scope is expanding, and parallel specialties are being eliminated.

The administration of VUZ's has become more effective, and the training level of specialists is higher. The complex plan of communist upbringing, which encompasses the entire period of study, has become the basis of the educational training process.

However, it cannot be said that everything is just fine in the operation of VUZ's. We are not satisfied with the progress of the students. Nor is their dropout rate being reduced.

The Ministry of Higher and Secondary Specialized Education, the Ministry of Agriculture and the administrators of VUZ's of the republic must painstakingly analyze the reasons for the low level of progress and be more demanding in regard to additions to the student contingent and together with the ESSR Ministry of Education to systematically conduct work on vocational orientation. Special attention should be given to the organization of the work of correspondence divisions, since their role is growing in the present five-year plan and their effectiveness is low.

VUZ's play a big role in the development of our science. The volume of scientific research performed by them is constantly growing. At VUZ's, there are in operation 15 problem and 12 sectorial production laboratories; in 1979, the Institute of General and Molecular Pathology was created at Tartu State University on the basis of several problem laboratories.

In 1981, the economic effect from the introduction of scientific research performed at VUZ's exceeded 1.8-fold the expenditure on them.

For outstanding achievements in the field of scientific research, introduction of their results into practice and the development of economic ties, Tallinn Polytechnic Institute was awarded the international prize "Golden Mercury" and Tartu State University received the transferable Red Banner of the CPSU Central Committee, the USSR Council of Ministers, the AUCCTU and the Komsomol Central Committee for achievements in educational training and scientific work in 1981.

In the matter of communist education of pupils, an important place is occupied by out-of-class and out-of-school work.

In recent years, the network of out-of-school children institutions has been improved. During the years of the 10th Five-Year Plan, 6 Pioneer Houses and a House of Young Technicians were opened. At the present time, the system of the ESSR Ministry of Education includes 61 children's out-of-school institutions, 30 of which are in cities of republic subordination.

Almost 88,000 pupils are engaged in school groups and more than 25,000 pupils are to be found in groups belonging to club institutions. The relative share of groups with a technical slant is growing.

Labor collectives, especially in the selection of heads of groups, provide big help in organization of the work of the groups. In a number of cities and rayons, work has been inadequately organized on assuring effectiveness of out-of-school education. Interdepartmental cooperation is not always adequate in organizing the leisure time of pupils and creating the best conditions for this.

It was emphasized at the 26th CPSU Congress that concern for children's health is inseparable from physical culture and sports. The educational institutions of our republic have achieved certain success in this. Indicators for fulfillment of norms of the complex of GTO ["Ready for Labor and Defense of the USSR"] at our general educational schools are among the best in the country. The level of sports skills has significantly risen.

Sports schools are creating good opportunities for sports activities in our system of physical training. There are now 50 of them in Estonian SSR. Of these 36 are comprehensive, dealing with many types of sports, 14 specialize in one type of sport; 10 sports schools of the republic have gained the status of Olympic reserve for their good work.

Despite the significant growth in the number of students engaged in physical culture and sports, no reasons exist for complacency. Many students are freed from engaging in physical culture. The pupil's day is not always so arranged that he has time for engaging in sports or simply being out in the open air.
